Nevertheless it must be acknowledged that it was not till the Reformation that preaching again returned to its task of expounding the Bible. Apart from exceptional cases like Mathesius's sermons on Luther's life, Sermons on the Catechism or the Hymn-book, or even the modern expository preaching of Mr. Miller, the Holy Scripture is acknowledged in all Protestant denominations as the exclusive foundation of the sermon. It cannot be denied that, partly through the coercion of the pericope system, but chiefly in consequence of the scholastic tendency of thought in the orthodox period, its connexion with the text often became very loose. In Pietism, however, the connexion again gained strength, and to-day it may be laid down as the general requisite of Protestant preaching that it should be in keeping with the text, or, in the words of Bishop Egestorff, "that after we meet again with the exposition of whole books in a series of sermons—a form that has lately gained much vogue (e.g. the four Gospels in 'Predigten und Homilien', ed. by Kögell, in association with Dryander, Froumel, and Park)."

Even where, in opposition to the style of homily which follows the text step by step (developed with special success by Menken), the so-called thematic sermon is preferred, not only is the theme drawn out of the text or chosen because of its connexion with the text, but the elaboration the effort made to exhaust the text as far as may be.

* F. Wiegand, in Bonnentacht-Seebberg, Studien zur Gesch. der Theol. u. Kirche, i. 5.
† G. Morin, Anec. Maresii. i. 1892.

In addition to this, we have within recent times the Bible-class by way of supplement to the sermon. It was introduced by Hitzig (Collegium biblicum directed by Spencer and A. H. Francke), and is becoming more and more common. In entire freedom from the compulsion of the pericope, which is still followed in some churches, it supplies a connected system of interpretation of the Bible-history. It is not a new idea, for it is common to all methods of Bible-study, and its place is determined in the Church for the guidance of the individual in his religious life. It is, however, in the church of the protestant schools regard to its typological and allegorical significance. A splendid instance is given in the newly-discovered work of Ireneus entitled *et similia in apostolico scripturam* (TU xxxi. 1907). In the case of sermons for Lent, it is the Bible-passages daily given to this instruction (Perser. Silvias, p. 97; cf. Augustine, de Catechiz. rudibus).

With regard to the catechumen, the teacher could take for granted their wide acquaintance with the Holy Scriptures. The reading of Scripture took place during the first part of the service, to which catechumens were admitted (missa catechumenorum); they, indeed, were the 'hearers' (exorantem). Over and above this, Cyril of Jerusalem exhorted his catechumens to diligent reading in private of the Scriptures recognized for the Church (Cat. iv. 38 ff., PG xxxii. 405). In the West, indeed, the creed (symbolum) was more emphasized than the sacred Scriptures, and so it happened that, as time went on, instruction in the Bible received less attention. The age of Charlemagne was content with the Decalogue and the Paternoster.

This categetical tradition influenced even Luther, although, so far as was possible, he strove for the widening and deepening of Bible knowledge. When he wrote the 'Table of the Heidelberg Catechism' he did not aim to make the Biblical history yield to other narratives (Märchern, Robinsson Crusoe) undervalues the religious and moral, and therefore the pedagogic, value of the Scriptures. Modern theology of the historico-critical school, too, has raised many objections to the old method of treating Bible-history. It is not, however, merely a matter of history, but of the spirit in which it is handled. Bible-history is not now what it was in the Middle Ages, the history of humanity. For it is history of the spirit. The individual's feature is not the knowledge of history, but the perception of faith. The aim must be to get the child to reach beyond the history into the spirit of the prophets and the perfection of Christ. This being so, the newer critical Biblical science sets religious instruction
the difficult task of making the Bible a cherished and beloved book to the child, of investing it with honour and authority in his eyes, and at the same time of making him adopt such an attitude towards it as to counteract the negative attitudes in the literature of history and natural history will not disturb. See art. Catechism and Catechization.

4. Prayer and praise.—To the direct devotional value of the Bible in reading and exposition there have to be added yet other elements of Biblical origin. Nearly all the liturgical formulae—Amen, Alleluia, Hosanna, Kyrie Eleison, Gloria, and Pax—find a place here. The single exception to this in the ancient Christian liturgy is the *Stemmata Corda*, whose origin still remains uncertain. The Lord's Prayer, which is to be heard at every Christian service, is Biblical, and so also are the different forms of the Benedictions. The Reformed Churches have the *Veni Creator* as a part of the service, while—the difference is significant—the Lutherans adhere to the Credo of the Catholic mass, usually in the form of a hymn of faith. The foundation and the language of most prayers are Biblical. The Psalms of the Psalter are used over and over, single passages from the Psalms are worked in. The Psalter as the prayer-book of personal devotion is dealt with in vi. 1 and 3.

Then also there is the singing of Psalms. In the ritual of the Temple this formed a most important part of the service, almost all the spoken part. In meetings of the Synagogue also it had a part to play. So it was immediately adopted by the Christians and diligently cultivated. It is disputed whether by *psalai, ἐπάρχον, ψαλις πνευματικά* (Col 3:16, Eph 5:19) we are to understand the Psalms of the OT or specially Christian poems (or both together). The canonical Psalter was of course completed, but the poetry of the Synagogue was not yet exhausted, as is witnessed by the eighteenth *Psalms of Solomon* from the period subsequent to B.C. 200. Not only was the new Christian Church, in the wonderful experience of the new salvation, must have fostered poetry. 1 Co 14:26 as well as Pliny's statement *Christo quasi deo carmen dicere* suggest new Christian poems. We find such proof of the Psalms in 1 Cor 10:14. [161] But these fragments, like the hymns in Luke's Gospel (Magnificat 1:26, Benedictus 1:8, Nunc Dimitis 2:30, Gloria 2:4 [cf. 199]) show clear dependence upon the OT patterns. In their form, too, they follow the Semitic rhythm and not the Greek prosody. The same may be said of the eleven psalms of repentance in the *Pistis Sophia* which are modelled on the Biblical psalms. The Greek form was first brought into Christianity by the heads of Gnostic schools who were possessed of literary culture. The Muratorian Fragment mentions Marcionite and Basilian psalms. The Naassene hymn in Hippolytus, v. 10, already possesses the Greek form, as does also the hymn to Christ in Clemens Alex. (Paed. iii. 12 fin.). The hymns of the Syrian Bardesanes and his son Harmachis, of Pseudo Ephraim, and it was said to express them that Ephraim wrote others. At the same time, Ambrose in the West laid the foundation of Latin hymnology. The poems of Gregory of Nazianzus and Symesius are not much concerned with congregational prayer. At this point Bp. Boëtius, a tendency made itself felt in the Church to have the congregational prayer restricted to the Canonical Psalter (which included, in addition to the 150 [161] Psalms, the 9[10] *Psai, cantica*: Ex 15, Dt 32, 1 S 2, Hab 3, Jon 2, Dn 3 [Apoc.], Lk 1, 2, as they are gathered together in Codex A and in a great number of subsequent MSS and liturgies) in order to counteract the attempts of the Apollinarists, etc. to misuse the Church hymns for their own special ends (see Conc. Laod. 365 [1], Can. 59: οὐ τοις ἐκ τινος ψαλμοῖς γένεσθαι εἰς τὸν ἑκκλησίαν ἕνα ἀνακοίνωσιν βιβλία; cf. Theodorot, *HE* ii. 24[19], iii. 10[6]; iv. 22[10]). The *Apost. Concilii* (ii. 57) require the singing of the Davidic psalms between the readings from Scripture. Two tendencies thus run through the whole history of Church praise. The more severe of these adheres to the Biblical psalm and uses only those for liturgical worship, and still holds the chief place with Roman Catholics and Anglicans. In the strictly Calvinistic Churches they were in invariable use, though in paraphrastic versions. On the other hand, the Church has never ceased to produce poetry. Influenced by the Syrians, Romanus brought hymns to the Greeks in the 6th century. John of Damascus put in place of such free compositions the more correct and formal Canon, which is still used by all the Oriental Churches, Greek and Slavonic. The first attempt to produce hymns in Latin, down to the end of the Middle Ages, there was an unbroken line of hymn-writers, and soon alongside of the Latin hymns of the Church others in the popular speech were abundant. In Germany these were specially numerous, and the Reformation introduced a new and powerful stimulus. By their paraphrases of what was ancient and their new compositions, Luther, Paul Gerhardt, and many others have supplied us with the highest that is possible in the strong and fervent expression of Christian faith and pious feeling. Here the Biblical psalm is found usually in the form of the motet, which is sung by the choir as an addition to the congregational praise. From the very beginning the Lutheran Churches have devoted special attention to praise, and thereby not only has the Roman Catholic Church been roused to new activity, but the later Calvinistic Church has been induced to permit, alongside of the Psalms, hymns which in the meantime displace the old psalms more and more. In view of what has been said about the importance of the psalms in Christian worship, it is more than an opposition that in Dissenting circles hymns play such an important part. A pious Moravian legitimizes his opinions by declaring them to conform to Scripture and the hymns.

*Ti* has to be said that the distinction between Biblical and Christian psalms and hymns is in the main a formal one. Often the hymn is nothing but a free poetic rendering of the psalm; e.g. *Luther's Ein feste Burg* with Ps 46 and *Aus tiefer Not* with Ps 130. The congregation is rightly kept in an attitude of this by the quotation of the text in the hymn-books. The best and most effective hymns are of this nature, and they show to great advantage when compared with the martyrlogy of Greek and Roman hymns and the sweet emptiness of the hymns belonging to modern sects. Instead of any opposition between Biblical psalms and Church hymns, it is, in fact, more correct to speak of the direct and indirect effect of Biblical hymns upon Christian worship, and it will be found impossible to rate either too highly.

VI. THE BIBLE IN PRIVATE USE.

The Bible in the Christian home.—The Bible was not only a book to be used by learned theologians or for liturgical purposes. From the first and always it aimed at being the devotional book of every Christian. That was its special end and value. At the time of the NT itself this was the case. Wollfhausen says, 'Die Bibel war die Bibel,' 'The Bible was the first reading-book.' Timothy knew the Holy Scriptures 'from a child' (2 Ti 3:15). Some of the books of the NT were written as aids to private devotion (Lk 1:5). The passage 2 Ti 3:15 applies not only to the public but also to the private use of the Bible. It is probable that in the early period many Christians were limited to the public reading of the Bible, as they possessed no books of their own. In the opinion of the present writer, however, the idea of the Bible as a book to be found in private houses in the first three centuries has been under-estimated by Prof. C. Bigg (The Church's Task under the Roman Empire, 1905, p. 29). Paul presupposes quite a remarkable acquiescence in the idea of the OT Scripture books as part of the resources of his Churches. Pollyarp writes to the Church at Philippi (12): 'Confido enim vos bene exerci- tatos esse in sacris litteris.' We learn from Tertullian that the reading of the Bible in common was one of the practices of the Christian home, and he urges this fact as an argument in support of mixed marriages, because in such a case the custom becomes impracticable (ad Uzoren, i. 8). In the Didascalia of the Apostles (ch. i.) Christians are exhorted in the following terms: 'Sit at home and read in the Law, in the Book of Kings and in the Prophets and in the Gospel which is their fulfillment,' while in ch. xxii. the rod of discipline (Pr 13:24 198 23:26) is interpreted as the word of God, in which youth must be diligently instructed. Family prayers, as well as those of the Church, are Biblical in character. The morning prayer makes reference to Lk 2:4, the evening-prayer to Ps 115 and Lk 2:21. The grace before meat, preserved in Const. Apost. (vii. 49), is drawn from Gn 48:15 Ps 131:1 Ps 13:1. The prayer that is the Psalter: Christian maidens sit at the distaff and sing about the Divine revelation (Tatian, Oration 33): instead and wife entertain one another with psalms and hymns, and vie with one another as to who shall best sing to God's praise (Tertullian, ad Uzoren, ii. 8). On the occasion of Monien's death, when Augustine and his son Adeodatus were overcome by grief, Eunodius took the Psalter and intoned the 100th Ps., all present making response (Augustine, Confess. ix. 31). All the teachers of the first centuries counted upon this private use of the Scripture, and encouraged it (Justin, Apol. 44: Cyprian, Ep. i. ad Donatum). Pamphilus is said always to have kept copies ready to give to Christians who desired them (Hieronymus, ad Ruf. i. 9). The Acts of the Church indicate the extent to which the Christians honoured and defended the Bible as their sacred possession and their dearest treasure. More than one martyr was discovered while reading the Scripture, and some of the acts (e.g., those of St. Epaphroditus) show that even St. Euplius of Catania, who read Mt 5th 10th before the judge, and, when asked why he had not obeyed the Emperor's injunction (dated 24th Feb. 303) to deliver up all Bibles, quietly answered: 'Quia Christianus sum et tradere non licet magis'; expedit morti quae peril equidem ad honorem et elationem meam ducet.' (Eusebius, Hist. Eccl. vi. 20). The reproach which
was made against the Catholics by the Donatists, 'vult traditores in persecutione divinariae scripturam,' was keenly felt by the former as an attack upon their Christianity. No difference was made later on when the time of Constantine began to see the Church of Rome assuming to itself the Church of God except that exhortations to use the Bible at home were rendered more frequent by the neglect of the custom. Chrysostom assumes that his hearers possess a Bible, in which they can read the text at home; if they do not buy one in many places a Bible was probably laid out for public use. The lending of sacred books was considered to be pleasing to God. The diligent reading of the Bible took a specially high place among the virtues and merits of holy men and women. The acquaintances which these people had with the Bible was really astonishing. The sermons of the great preachers of the time were composed of Biblical quotations, and preachers counted upon their hearers to take note of and understand them. Pilgrimages to the scenes of sacred story, which at one time were more common, added to the knowledge of the Bible a certain knowledge of localities, however superficial and superstitions it may have been. The Aquitanian pilgrim (Silvia or Etleria?) informs us that at the moment of entrance the sacred peroration of Scripture was read to the pilgrims.

With the collapse of the ancient civilization and the decay of learning, the following centuries, naturally enough, brought a decline in the reading of the Bible. There came times when it was rare to find the art of reading outside the monasteries. Perhaps in the boudoir of a great lady there was still opportunity for the study of the Bible and Virgil. The laity, whether prince or peasant, and even the secular priests, were illiterate. We hear complaints about the uneducated clergy. The Bible is no longer to be found even in the ranks of the clergy. Charlemagne had to insist upon every priest knowing at least the Catechism. Petrus Damianus (+1072) and Aeneas Silvio (+1146) complained similarly of the small knowledge which priests possessed as compared with heretics. The Bible exerted only an indirect influence through the medium of preaching, poetry, and pictures, and even that was shared with much other material. It was not till the 12th cent. that the people again began to show a wide interest in the Bible, and to increase rapidly, though viewed with suspicion by the Church, and occasionally violently opposed, continued and increased in intensity and extent in proportion as ecclesiastical theology and piety became dissociated from the Bible. There were circles where Biblicalism went so far as to remove from the Bible everything that was not strictly Biblical, as, e.g., the prefaces—a purism to which sometimes even the prologue to the Gospel of Luke (114) was sacrificed. But though the Bible was really the devotional book of these circles (Thomas à Kempis, George of Kaysersberg on Right Reading of the Bible), the circles themselves were limited. Only few possessed a Bible, and the attempts to make it accessible to all in the adjoining rooms of churches benefited only individuals, and helped study rather than devotion.

With the aid of the new art of printing the Reformation first made the Bible in reality the people's book. From that point onward one can speak of daily Bible-reading as a Christian duty. Along with the hymn-book and the Catechism, it is the only book that most educated Christians know. It is their manual of devotion, and still more their reading-book. The wider circulation of the Bible, which followed the improvements effected upon printing, made its acquisition increasingly easy. At the same time, however, competition increased. Thus we find that, simultaneously with the widest circulation of the Bible which has ever been reached, there is a decline in the pious use of it. Here, however, there is this comfort to be laid to heart, that where it is read a really pious desire is the motive. Many German family Bibles are an exception to the rule. In Fine 'Kurzer Unterricht, wie man die h. Schrift zu seiner wahren Erbauung lesen solle.' Then also the emphasizing of the supreme verses of Scripture by special type, which we find in many Bibles, is significant. These are the utterances in which the patristic and medieval Expositions and Annotations ever reveals itself in experience, in which the troubled soul finds richest consolation, inspiration, and strength. We find this illustrated in an old family Bible mentioned by Hesselbacher. It was underlined by his great-grandfather in four different colours. 'What touched the sin of my heart:—Black. What inspired me to good:—Blue. What comforted me in sorrow:—Red. What promised me the grace of God in eternity:—Green.' With this the Gospels mentioned above, p. 563, belonging to the 14th cent. and written in four colours of ink, in order to see the difference between the objective treatment of the Bible by the Catholics and its subjective treatment by the Evangelicals, who always kept in view the literal sense of the New Testament. Naturally, we have no documentary evidence of the reading of the Bible in families or in retirement. An unusually favourable opportunity is afforded in the letters of Bismarck to his wife, from which we learn that the Bible was read daily by one of the greatest statesmen, one, too, who was certainly no pietist. Naturally, in biographies and memoirs there is little said of the devotional reading of the Bible in the quiet closet or in the small family-circle; it is taken for granted, and considered part of the daily routine. Of course, the idea of Bible-reading takes place in secret. So far as it is possible to observe, it would seem that the desire for God's word and the eternal truth which the Bible contains is again on the increase (A. W. Robinson, Co-operation with God, 1908, 114).

2. Bible-reading by the laity.—In the ancient Church every Christian could obtain access to the Bible, and this is the best test that the idea of late Judaism, that certain Scriptures were to be confined to a select circle, is to be found only in the pseudo-Clementine Homilies—a fact which is to be connected with the sectarianism of Jewish Christianity and esoteric literature elsewhere. Elsewhere the warning is limited to the reading of heretical works (Cyril of Jerusalem, Catech. iv. 33). The sacred Scriptures included those which were for use in church and those which were for private devotional use (cf. Murat, Canon on the Shepherd of Hermas, and the canonical Scriptures were to be within everybody's reach. Anathematis proclaims heretics with preventing people from reading the Bible. Chrysostom combats the idea prevalent among the laity that the reading of the Bible was a thing for the clergy and monks. Later on this giving up of the Bible on the part of the laity led to its being withdrawn altogether, exactly as in the case of the communion cup. There came a time when laymen could not read, and when they had again learned the art they were not allowed to read the Bible. This was part of the medieval system of keeping the laity in dependence upon ecclesiastical authority, and was based upon the idea of the unfathomableness of the mysteries which the Scripture contained. The traditional exegesis of the Church was that by reading these, and the laity, left to themselves, always
wandered from the track. As a matter of fact, where Bible study was fostered in lay circles, there was to be found, as a rule, an anti-hierarchical, anti-clerical, sectarian tendency. It was believed that, in the Bible-reading conventicles of South of France and Lorraine, Albigensian and Catharist tendencies were to be found. Thus, Innocent III. wrote to the Bishop of Metz that conventicles of the laity for the purpose of reading the Bible were to be suppressed. The study of the Bible was to be encouraged, but theological training was necessary: the profunditas of the Scriptures was so great that even scholars could not quite understand it; the arcanum fidei were not for every man. Ex 19:4, the passage which was founded upon in this connexion: the beast that touched Mount Sinai was to be stoned. Of course this did not amount to a general prohibition of the reading of Scripture by the laity, but it bore a close resemblance to it, and without doubt the tendency gained ground. Against the Bible in the popular tongue especially, a continual, though sometimes veiled and certainly unsuccessful war was waged. Where the Church had no patience with these conventicles, people were driven into the arms of the sectaries, because it was these—especially Albigensians, Waldensians, Wyellites, and Hussites— who actively encouraged the popular reading of the Bible and a free field for its exegesis, which developed in increasingly acute form upon anti-papal, anti-ecclesiastical lines. This made the Church all the more anxious to keep its members apart from the movement. Soon it came to be that the reading of the Bible brought people under the suspicion of heresy. The decrees passed by Councils of the 13th and 14th centuries against the reading of the Bible by Waldensians, Wyellites, Beghards, and Beguines were followed by occasional local prohibitions. Like the Edict of Mainz (1458) this caused printers of the Bible not perhaps to suspend operations, but to omit their names from their work. In the period prior to the Council of Trent, therefore, we cannot speak of any general prohibition of the Bible. It was a time of unreality and confusion, and mystery pieté contended with ecclesiasticism for the supremacy. The crisis was brought about even in Catholicism by the Reformation, which successfully established the uncritical reverence in her quarters, and the reading of the Bible. It rested upon the perspicuitas, that is to say, the intelligibility of the Scripture to the ordinary pious mind—the victory of the devotional use of the Bible over the theological—and compelled Catholicism to take up a more definite attitude to the whole question. In England the first endeavour to spread the gospel brought about a persecution which recalled the time of Diodoletan. The Council of Trent (Sess. iv. Deor. de editione et usu sacrorum librorum) decreed, ad corcordia publicitatis tigenzis, that the exposition of Holy Scripture was to be guided by ecclesiastical tradition or the unani mai consensum patrum (cf. Conc. Vat., Sess. iii. Const. de jide, c. 2). Resting on this decree, the Pope announced that all Bibles containing annotations approved by the Church could be published, and their use was dependent upon the special permission of the parochus, or the bishop of the diocese. Practically this was almost the withdrawal of the Bible. The Protestant Bible was no antithesis to the Catholic, and had as falsified and dangerous to the soul. The same treatment was meted out to the Janissaries, especially in connexion with the translation and exposition of du Quesnay (Clem. i., Const. Unigenitae, 1713, prop. 79-82). In 1713 Prince Charles, propr. 67, of the Synod of Pistoa, which stated that the neglect of Bible-

**BIBLE IN THE CHURCH**

**3. The Bible in monasteries and reading-circles.**—From the moment when the masses entered the Church, and a distinction came to be drawn between half-Christians and whole-Christians, that is to say, between the secular world on the one hand, and monks, ascetics, and conventuals on the other, Bible-reading among Christians as such decayed, while in ascetic circles, where religion was taken as seriously, it increased. The controversy of the opinion popularly entertained that the Bible was for priests and monks. As a matter of fact, it was in ascetic circles like those which gathered round Jerome and Rufinus that Bible-reading was most diligently fostered. Melania, e.g., a noble Roman lady who renounced the world entirely, read the whole Bible four times every year, and knew large portions of it by heart. Jerome was quite pestered by the puzzles which his admirers put him from Scripture. Marcella showed intellectual and spiritual gifts, and above all, was a great lover of the easy and the less gifted Paula adopted more the style of the modern Biblical riddle. The same thing was repeated in the court of Charlemagne, where Alcuin was looked upon as an oracle for the solution of all difficulties. We possess the correspondence of two nuns of the 6th century, and find it to be entirely composed of passages from Scripture. In these pious circles the Psalter, as the daily prayer-book, played the chief part. The Egyptian anchorites passed days and nights in reciting the psalms which they learned by heart. This was held to be the surest weapon against the temptations of Satan. In the monasteries the Psalmodia (chanting of psalms) was regulated (at Studium and St. Maurice chanting never ceased, one choir relieving the other (Aememula)). At the same time, a free field was left to the pietas of the individual. It was in the monasteries, too, that the reading of Scripture was most practised. Not only were several services held every day (or were provided for by the regulations), but at meal-times, etc., some portion was read aloud. Sometimes it was the Scriptures, sometimes it was legends of the martyrs or lives of the monks. In the early period of the Middle Ages the monasteries were the only places where the Scriptures could be found. It is known how to use them and communicate them in some degree to the people. The monasteries
were the homes of writing, reading, meditation, and study. In the schools of the various orders we have already seen that Biblical sciences were fostered.

This condition of things was altered by the Reformation, in so far as the distinction between what belonged to Christians and what belonged to the Church was done away with. It was impossible, however, to remove the distinction between those who desired with their whole soul to be Christians and those who were Christian only in appearance. With all the emphasis on the Church and the duty of all Christians to read the Bible, Protestantism also possessed small circles of particularly zealous friends of the Bible. Just as these circles occur here and there in modern Catholicism, often in connexion with some monastery, e.g. Port Royal, so in Protestantism the influence of Pietism made itself felt. The necessary impulse was given by the *pia desideria* of Spencer, who thus came into line with the work of his opponent, Carpzov, in Leipzig. Thus there originated *Collegia Philobiblica*. At the outset, the mental features of the exegetical lecture and the devotional meeting, as was also the case with the Zürich *Prophecy*; but afterwards the strictly scientific lecture of the university became more and more separated from the devotional meeting of the Church. The latter frequently distributed the material of the former in the shape of a weekly service. Thus there evolved the necessary condition to the Church service, as in the case of the Lay-preachers of Württemberg and the Stundists of Russia; but it found acceptance outside the strictly Pietistic circles, and came to be a regular part of Church life in the shape of a weekly-day service. The more strongly Pietistic circles possess reading-circles of their own, as well as Bible-classes for students and schoolboys. It is here that extraordinary achievements in the way of continuous Bible-reading are accomplished. It reminds us of what we are told about the ancient Church, when we hear that the whole Bible from Gn 1 to Rev 22n was read through several times in one year (A. H. Francke is said to have read the Hebrew OT seven times in one year). The tables of lessons which are published by many societies (e.g., the Prussian Bible Society) distribute the material of the year, not in continuous portions, but in selected passages.

**LITERATURE.—Falk, Bibel am Ausgang des Mittelalters, 366.**

4. Substitutes and favourite passages. — It was not only its occult form that the Bible was in use. The substitutes which existed alongside of it were of great importance, and in the Middle Ages exerted a greater influence than the immediate use of the Bible. There were the select passages for Sunday in the so-called Plenaries, *Postilien*, and Books of the Gospels and the Epistles.

These were intended to be used not only in the services of the Church, but also, as is shown by the MSS and copies printed in the popular tongue, in private devotions, partly at least to explain the readings in the Church service. These were also excerpts from the Bible in the form of *Bible histories* (Bible historiale, *History-Bible*). These were characterized by the almost complete absence of the more important Didactic Books, the Prophets, and the Apostolic Epistles. Then also there were rhymed Bibles, containing the same material, but in verse, which, though not by any means good, was easy to remember. To these must be added the picture-Bibles, with their short descriptive paragraphs, including the so-called *Biblia Pauperum* (*Bible of the Poor*), which contained from 24 to 48 woodcuts illustrating the most important events in the OT and the NT in harmony. Lastly, there was the *Ars Memorandi*, where the contents of the four Gospels were suggested in rhymed form. Towards the end of the Middle Ages these were widely circulated instead of the Bible, not only because the great majority of the people were still too ignorant to read the Bible, and because the Church did not wish them to do so, but also because the piety of the age took more delight in the marvellous stories which the Bible contained than in the Bible itself. The Prophets and the Epistles of Paul. Even for the Psalms a substitute existed in the *Psalterium Puerorum*, a collection of certain Psalms much employed in Divine service, and of other important features in Christian instruction, e.g. the Lord's Prayer and the Creed.

The Reformation demanded that the whole Bible should be given to the people and made free to everybody. Some difference of attitude, however, can be observed in the two Protestant Confessions. In Lutheranism the Catechism, with Biblical notes, took the place of the Bible to a large extent both in private use and in ecclesiastical teaching, while Calvinism adhered to the Bible itself. At the same time, the medieval substitutes continued in use, especially in schools, where Bible-history formed the foundation of the entire religious instruction. The school- and home-Bible that shall be intermediate between Bible and Bible-history is to be looked on with suspicion, both from the educational and from the ecclesiastical point of view.

The present Bible-reader of the old school read the whole Bible as the word of God. But it may be observed that various parts of the Bible produce various effects, according to the period and the people. In the ancient Church and the Middle Ages, Paul is little understood and valued, and yet Pauline reactions mark the critical epochs both in theology and in the Church. Mysticism adheres either to the Song of Songs or to John. The Spiritualists who broke with the Church, the fanatics of the Reformation period, and many sects of modern Protestantism, build almost entirely upon the Gospels. In the Middle Ages there were wide circles where the historical parts of the Bible were the only parts known, and even these only indirectly, through the so-called history-Bibles—that is to say, Scripture excerpts—by a way with many passages from extra-Biblical sources. The Didactic portions, the Prophets and the Apostolic Epistles, had to be re-discovered. The *Enlightenment* laid supreme value upon the moralizing Wisdom-literature. As has been recently noted, Frederick the Great's favourite book was Ecclesiastes. Of the Gospels, Luke's edifying narrative has enjoyed the greatest vogue among pious readers, while speculative theology (e.g., Schleiermacher's school) prefers John, and the historical school abides by Mark. Modern socialistic tendencies are manifest in the Gospels of James, which Luther once very wrongly threw into the fire as an *epistle of straw*. Speaking generally, interest in the Bible, which under the influence of materialism and naturalism was reduced to a very low ebb at the close of the 19th century, has again happily revived. The chief motive is the aesthetic one. Pearls of Biblical poetry are selected for books of wisdom and beauty (Freiherr von Grothus). Works on the beauty of the Bible (A. Wünsche, 1906) and on the poetry of Christ's gospel (O. Kommel, 1909) find a grateful public. Modern investigation and criticism of the Bible are beginning to create interest (Schiele's Religionsgeschichte, Volkbücher, and the more conservative Bibelze Zeit- und Streitspragen, by Kropatschek). More and more space is being given to Biblical
material in popular collections, which are meant to provide a general culture (Goethe's Saemmung, Teubner's Aus Natur und Geisteswelt, etc.). As the inevitable result of this, the religious interest in the Bible must receive a powerful stimulus, and Christian concept was forced to become more real.

5. The Bible and the Classics. — The Bible satisfies Christian piety, but it nevertheless has its place in history as a link in a long process of civilization. This fact explains the speedy development of two tendencies. On the one hand, there were those who placed the Bible, the book of Christian devotion, side by side with universal literature. In their opinion, both were possessed of rights, and the Bible was in alliance with culture. On the other hand, there were Biblicalists who put the Bible, and the sacred law, and even the language of the Bible, on a level with the Bible only the devotional Christian literature of a distinct ascetic colour. This was the view entertained in ascetic and monastic circles. Even in the ancient Church we meet with it in Syria, the home of ascetic tendencies. The Didascalia of the Apostles, e.g., ch. ii., contains the following exhortation:

"Keep away from the books of the heathen. What hast thou to do with the strange words, the laws, and the visions which tempt young people from the faith? What fault hast thou found in every house? Why dost thou take heed to the heathen tables? Why dost thou read the book of the Kings; wise men and philosophers? Then thou hast the Prophets, in whom thou wilt find more wisdom and knowledge than in the wise men and philosophers, because theirs are the words of God, who alone is wise; dost thou wish songs? Then thou hast the Psalms of David; an explanation of the world! then thou hast Genesis, by the great Moses; laws and commandments! thou hast the Divine law in Exodus. Keep entirely away from them, and the heathen books which are in the hands of these.

Later we find the same way of thinking in the monastic circles of Syria and Egypt, although it is to the everlasting credit of Syrian Nestorians that these Jews of Tyre, of Antioch, and his commentators— to the Arabs, from whom they were taken over again by Christians in the West. There is a typical presentation of this sentiment in the famous dream of Jerome. This master of rhetoric, who prided himself on his classical knowledge, wants the pious Eustochium to believe that he had been thoroughly chastised in the night-time for his admiration of Plautus and Cicero, and compelled to give up the Classics (Ep. 22)—a delicate little piece of rhetoric that quite gives its author the lie. This combination of reading, Jerome was not to be taken seriously. Later he insisted strongly that in education there should be a union of Christian and general culture, of the Bible and the Classics. But his fiction produced its effect, and in many a cloister-cell during the Middle Ages the dream was actualized.

It is true that the Greek theologians, and also the monastics, among whom were Basil and Theodore of Studium, etc., never quite gave up the idea of the churchmen and the clerics. Thus the Alexandrian Clement and his commentators— to the above-mentioned—were the chief of the thanksgiving speech of Gregory Thaumaturgus. But his opponent Methodius, the Biblical realist, also writes a Christian symposium. Special noteworthy, because they regulated the succeeding age, were the great orators of the 4th cent., Basil and the two Gregorys, who as young men at Athens had, along with their heathen comrades, familiarized themselves with the whole profane culture. Chrisostom, the public preacher, believed his duty to apologize for the rusticity of Biblical Greek; the Apostles were unculti- vated fishermen, but that only made the miracle which the Holy Ghost effected by them the greater. At the same time, Chrysostom himself was very sensitive for the strength of the Biblical language. He adored his brilliant orations with Scripture quotations, and so gave them the impressiveness which lifts them above the contemporary speeches of heathen orators, with their hollow phrases. The monastic tendency in the 6th cent., sought to introduce the popular Greek, which resembled more closely the Semitic element in the Bible (John Malalas of Antioch). It would be a valuable service to investigate the influence which the language of the Bible exerted, and the power of literature and Christian revisions of older material like the Romance of Alexander. But although monastic circles prided themselves no less on their modesty than on their simplicity of language, classicism, or the union of Christian and Greek culture, was always maintained in Byzantium, and after short periods of decline it never failed to revive. This was the case after the iconoclastic struggle in the 9th cent., chiefly through the instrumentality of Photios and Patristic writers, and after the Latin invasion of the 13th cent., through the Palaeologi.

Aretas, the Archbishop of Cesarea (f. c. 932), wrote a commentary on the Apocalypse, and studied Plato and Lucian diligently. Eustathius, the Homeric commentator, who was afterwards Archbishop of Thessaloniki, wrote bitterly of the want of culture on the part of the monks, who could not appreciate the treasures of the monastic libraries. This classicism was specifically Greek in character, and it was not transmitted by the Byzantines to the Slavonic peoples converted by them.

In the West the development took a somewhat different course. There Jerome and Augustine provided a model of the noble union of Biblical and secular culture. But, just as Jerome sometimes felt that the letter of the new revelation was enough, so the case of Augustine, from the moment when he entered the service of the Church, an increasing Biblical element is found to colour his views and language. Cassiodorus and Boethius were still familiar with pagan culture, but such familiarity soon ceased. What little culture survived the migration of the peoples is monastic and Biblical. At the Court of Charlemagne the first revival of learning occurred. Along with the Bible, Virgil was studied. The Emperor himself was liberal enough to appreciate the value of the German epics. But so early as the time of the monk-emperor, Ludwig the Pious, this disappeared. As a matter of fact, Plautus and Terence were still read even by pious monks, but Hwold also endeavoured to suppress these heathen writers by his Biblical imitations. In the time of the Swabian dynasty there occurred another revival, and after the fall of the Empire (from middle of 13th cent. onwards) the foundation was everywhere laid of a real national secular culture, in opposition to the classic Latin. This spread from France to England and the German Imperial cities, and in an entirely independent manner it united Biblical and extra-Biblical material. Much more dangerous was the infiltration of the new citizens of the ancient form the Humanists made sport of the ancient religion as they understood it, and
some of them were ashamed of the Biblical element. This led to a strong Biblical reaction, especially in Calvinistic countries, while Lutheranism tried to reach a combination of both tendencies. The Enlighten-ment' became a new form of paganism, and while general culture, characterized in some cases by tendencies hostile to religion and the Bible, spread more widely. Here, too, a wholesome reaction can be hoped for only from the perception that the Bible, in its true character as the supreme book of devotion, cannot come into collision with any other means of culture.

6. Misuse of the Bible: Our sketch would be incomplete without some mention of the abuse of the Bible by misguided Christian piety. Although the idea that the Bible had fallen from heaven was never entertained, yet the conception of its sanctity had become so strong among the Jews that the roll of the Law was held inviolable. And it is not to be wondered at that one of these rolls was executed by the Procurator Cumanus to please the Jews (Josephus, Ant. xx. v. 4, B. i. xii. 2). Copies which had grown useless had to be carefully preserved in sacred burying-places made for the purpose (the Genizah at Cairo has yielded a rich harvest of extremely valuable ancient copies of the Bible). This material notion of sacredness, which was familiar both to heathenism and Judaism, was at first quite foreign to Christianity. It soon found its way into the Christian Church, however, and made the Bible, like other sacred things, taboo. Especially was this the case with the book of the Gospels which, along with the Host and the likeness of Christ, speedily came to be one of the most effective guarantees of the presence of Christ Himself and His miraculous power. This was the origin of kissing the book—still an important feature of the liturgies of the East—and also of the double procession, first with the Gospels and afterwards with the Communion elements. The official veneration by the Church gave to the Gospels the representative character of Christ, the place of honour. In the consecration of a bishop the Gospels were laid upon his head as the means of communicating the Spirit and Christ's indwelling, whereas they were placed in the reader's hand only as means of the literal reading of the text. They played a similar part in the consecration of the highest grade of Catharists. From the 4th cent. it became the custom to take the oath upon the Gospels, and on these occasions it was usual to turn up the beginning of John. In the Middle Ages we find, along with or in place of the Gospels which represented Christ, relies as representing the saints. The idea here is no higher than that which is embodied in the monastic legend that a Christian who was sorely beset by fleshly lust was enabled to resist temptation by having the Gospels hung upon his neck by a cord. One must beware of spiritualizing this to the extent of making it the psychological effect of reflexion upon the content of the book. It was to the book itself that the meaning of lips or 'dipping' in the Bible is similar. The method which the Romans followed with Virgil and other authors whose works were considered inspired and sacred was taken up by Christians and applied to their sacred books, according to the Latin and, in Spain, the opposition which met at the beginning from ecclesiastical authority, this method of consulting the oracle the future was long maintained among the people. We can observe the material view which was entertained of the magical qualities resident in the book, from the practice of writing the answers of the question on a scrap of paper or thread, and when the answers were read out of the Gospels they possessed a greater guarantee of being Divine oracles.

The magical effect of the Bible reached still further in the form of human superstition. There were certain passages of Scripture which were considered specially effective in defence and attack. The Lord's Prayer, inscribed upon a disc of clay found at Megara, was certainly possessed of this significance, just as in ancient and modern times Jesus' letter to Algar was attached to the doors in order to keep all evil and harmful influences far away from the house and its members. A sheet of lead inscribed with the 80th Psalm, which Hilper von Gärtringen found in a vineyard on the island of Rhodes, belongs rather to the ancient formulas of malediction, by which evil person was supposed to be brought upon some definite person. Chrysostom complained of the superstitious abuse of sayings from the Gospels (διαλογισμος ευαγγελιων) by the sick,wrapped round their neck. Augustine relates how the Gospel of John was laid upon the head of those who were ill with fever. Gregory M. sanctioned by word and example what the Church till then contended against as abuse. In the later Middle Ages the only reason why this superstition in regard to the Bible decayed was the keen competition which it had to face in the superstitious valuation of saintly relics.

The Reformation destroyed the material notion of sacredness which lay at the basis of all this error. The bibliolatry which Lessing and others opposed in the time of 'Enlightenment' had nothing in common with this Biblical magic. It was the domineering valuation of the Bible as possessed of infallible authority. Evangelical Christians have in the Bible not a book that is to be handled with timidity and awe, but one which is for the intimacy of home and private devotion. Where searching with the finger or 'dipping' in the Bible still exists as a practice in Protestant circles (Pietists and Moravians), it is but a sign of spiritual significance. At the same time it has to be said that the practice in Evangelical circles of making the Bible serve for pastimes (e.g. Biblical riddles) amounts to excessive familiarity and abuse of its religious and devotional functions.

VII. THE BIBLE IN THE LIFE OF THE PEOPLE.

1. Bible and language.—The Bible has exercised great influence on the development of the language of the Middle Ages. Not only were the countless copies of the Bible made available to a whole array of peoples by giving them a written language in the same way as missionary enterprise still does, but in other ways language has been powerfully influenced by the Bible. The Latin Vulgate circulated in Western Europe, and thence the Romance and German languages, with the terms 'manna,' 'Passover,' 'Sabbath,' 'angel,' 'devil,' 'Paradise,' etc. The Biblical structure
of sentences—loose co-ordination of clauses and parallelismus membrum—has been largely adopted as a model. It may be noted that here three methods are to be distinguished: (1) The conscious imitation of the solemn music of the Philistines, which hardly exists in the Bible, but of which Lanmanais is a modern instance. (2) The allegorical use of Biblical names and expressions—a method specially favoured among the Greeks, who applied the typical names of the Bible to the men of the times (τὰς Ἰσραήλ ἡμῶν, Οὐραίος υἱὸς, etc.). (3) The adoption of the Jews of this period dated 1238, which is composed in this style, shows that one can learn the history of the Philistines, of Samson, and also of Jacob from it better than that of St. Francis. In later times the 'speech of Cannan' has been much adopted in pietistic circles, while it has been abhorred in others. (3) The unconscious absorption of familiar Biblical phrases—the normal and most widely spread form. Not only do the great preachers of the ancient Church and moderns like Bishop, and Dante, and other poets adopt the language of their Bible, but the masters of literature do so also. If Dante is the creator of modern Italian, Luther deserves the same title in regard to modern German, and it was through his translation of the Bible that the language was spread. In reading Goethe, one becomes aware of his lifelong familiarity with the Bible. The style of many Catholic authors shows that they do not have the same familiarity with it. It is an obvious mistake when Janssen's school attempts to transfer the credit which belongs to Luther to an obscure chronicler of the 13th cent., Eike of Repkow. In English-speaking countries the Authorized Version possessed the same importance. It came too late for Shakespeare, but even he could not have written his Faerie Queene without translations. The best age of French literature has more than a temporal connexion with the Biblical activity of Port Royal. The influence which the Bible has exerted upon literature deserves to receive more attention than it has done in the past. That, however, would require a wider acquaintance with the Bible than most moderns possess. More than any other book, the Bible has contributed to the familiar phrases used by numberless people who know nothing of their origin. But, that the Bible is a valuable source, these phrases are often used in a sense quite false and entirely opposed to their original meaning.

2. Bible and views of the world and human life.—To the language of the Bible must be added the general view which it takes of the world and human life; speech and thought are intimately related, the Bible contains no conception of the world peculiar to itself. What we find in it is the view entertained by the ancient world, and especially by the ancient Hebrews. The Philistines there was nothing strange in this, because their own view resembled it, and where there were differences it was easy to harmonize them. The Scriptures themselves, covering as they did a span of 1500 years, do not show many changes. The transition from the Semitic to the Greek method of thought was effected as easily as in the domain of language. Plate and Aristotle were read into the Bible involuntarily. This is shown very clearly by the abundant literature on the Hexameron. The Middle Ages looked upon this mixture of old Oriental Biblical ideas and Greek philosophy as authoritative ecclesiastical doctrine. It was surrounded by the mystery of the times, and there was then no possibility of a critical examination of the subject, and so the theory was widely accepted. It was by no means infallibly true. Every consideration against it and every attempt to account for the world empirically (as Bacon, e.g., demanded) was authoritatively suppressed. The effect of this was that the concept of the Bible was felt till within recent times. Luther was so far from seeing how little of the Bible there was in this ecclesiastical theory of the world, that he called Copernicus a fool (Table-Talk, Förstemann-Bindseil, iv. 575); the Roman Inquisition compelled Galileo to retract; Kepler encountered great internal and external difficulties in accepting the credibility of the Bible as it was conceived in his time; while Newton combined with the exactitude of his physical theories a Biblicalism which we find difficult to understand. The 'Enlightenment' settled the dispute in which it sees God's hand in everything. It secularized science and emancipated views of the world from all Biblical ecclesiastical authority.

The great discoveries of the 16th cent., the transition from the speculative methods of scholasticism to empirical research, not only in the domain of natural science but also in that of the Bible and the Church, were the result of a growing dissatisfaction with the Biblical view of the world. Here we come upon the leading problem of the Bible for moderns. Can the Bible still possess value when it contains views about the world and man belonging to a stage of human thought now outgrown? That heaven (or the 3 to 7 heavens) arches over this earth, that the stars encircle it, that the earth is surrounded by the great ocean (only the parts bordering on the Mediterranean being then known), that its central point is Jerusalem, that all the peoples on the earth are descended from the three sons of Noah, who was rescued from the Flood, that their languages can be traced back to one single confusion—all these ideas represent only the primitive thought which the Biblical authors shared with their contemporaries in Babylon and Egypt. It cannot be denied that man has engraved these notions nowadays. But this admission does not by any means overthrow all Biblical authority. What the theology of the last decade has toiled to show and has succeeded in showing is gaining increasing recognition, viz., that the Bible is not a revealed text-book of nature and history, but that God speaks in it to men about the salvation of their souls. To every pious conception of the world and its course as a whole and in detail, the Bible will always be possessed of validity because of the way in which it shows God's hand in everything and teaches people to see God's saving intention in fortune and misfortune, the way in which it places the whole history of mankind under the point of view of an education to the stature of manhood and independence in Christ. In a word, the Bible will always remain the book of pious devotion, and such pious devotion will always be easily able to surmount any difficulties which arise from different conceptions of creation. As in language, a kind of adaptation of Christological apologetics must learn, however, is to abandon the desire to justify every Biblical utterance, and after every discovery in natural science and history to begin at once to search about for some statement in the Bible which has been forgotten. The danger of confusion where what is needed is clarity. It is true that, so long as men read the Bible, the
BIBLE IN THE CHURCH

613

Biblical view of the world and human life will remain popular. Without regard to the millions of stars, men will speak of heaven as the Divine dwelling-place and the goal of pious desire, and of the earth as the central point of the Divine plan of salvation with man as its special object. In their thoughts of good and evil, love and hatred, righteousness and sin, they will speak of the heart and not the brain. But what there must be no doubt about is that these are only poetical forms of speech, which, though fully justified in ordinary life, ought not to be put on the same platform as what is strictly true.

3. Bible and law.—Of greater practical significance is the influence of the Bible upon the life of the people. The adoption of Christianity by the State made it necessary that the revealed book of Divine law should regulate the civil and the ecclesiastical law. As early as 340 a Colleto administrator of the Ostrogothic Kingdom (ed. Th. Mommsen, 1890; Collectio librorum inuris antieristiati, iii., ii.) of ancient church legislation even more than that of all other nations, but declares that, since the time of Christ, the only obligatory law is that of Christ given through the Christian church, Constantine, Theodosius, and Leo 4. As a matter of fact, this was more than anything else; for the legislation is drawn almost wholly from Greco-Roman law. The same thing may be observed in the case of German law. Alfred the Great placed the Decalogue in front of his Laws of England. The ancient Bavarian and Frisian codes, as well as those of the Swabians and ancient Saxons, contain introductions full of ecclesiastical Biblical ideas. The law itself, however, is national. There are only a few traces of any Christian Biblical influence to be observed. The law was to be made one with, not based on, Constantine's legislation. The abolition of branding the face is based upon the Biblical doctrine of the Divine likeness (C. Th. ix. 40, 2); the second marriage of a divorced person is punished except when the first marriage was of displeasure and the other party was guilty of adultery (C. Th. iii. 16, 1, ed. Mt 5:32); two witnesses are required (C. Th. xi. 39, 3, ed. Mt 19). The influence of Christianity becomes commoner under Theodosius, Leo, and Justinian, whose 'novels' (i.e. supplementary laws) refer directly to the sacrae scripturae (e.g. Nov. clx. 1). The severe language of the OT is echoed in the legislation of Charlemagne; the continually recurring morte maturi of the pitiless Saxon law is Hebraic. Justification was found for the bloody persecution of the OT condemners of the OT condemnation of the obedient. Demands which were originally made by the Church to safeguard Christian morals were all incorporated in constitutional law under Charlemagne: keeping the Sabbath-day holy, the prohibition of interest, etc. What is still more important for Charlemagne's conception, however, is that the whole theocratic idea was considered to possess immediate significance for the present. He felt himself a modern David, Solomon, Hezekiah, Josiah. This state of things, however, soon gave way under the influence of the ecclesiastic idea that the State was opposed to God and was to receive recognition only in the service of the Church. The conflict gave birth to the modern State, which takes no interest in ecclesiastical or Biblical authority. In Biblicalist circles the obligation of the OT, and especially of the commandments of the Gospel, is more and more emphasized. This gave rise to the refusal to take an oath (Mt 5:5, Ja 5:5) among many sects down even to the Mennonites, while the Church sought to Christianize the oath by furnishing it with the Trinitarian formula and the three benedictions. In the Council of Trent the church of the Middle Ages on the relics of saints. It was from the OT that ecclesiastical law derived the prohibition of marriage with a sister-in-law. From it also Joseph Smith drew the Mormon commandment of polygamy. In a purely legal way the party of the Reformers also sought to realize the theocratic idea, as Calvin aimed at training Geneva to be a city of God. The Sabbath commandment still calls for Sunday rest in Calvinistic countries. These genuinely Biblical influences are to be distinguished from those which are due to the century-long effect of Christianity upon the life, the customs, and the legislation of the nations. It is to this latter influence, e.g., that we owe the abolition of slavery—not in the 1st or in the 4th, but in the 13th century, for N. Europe, and in the 19th century, for S. Europe. Over all this the Bible had no direct connexion, for in the American Civil War both sides took their stand upon Biblical authority. Here too, however, there was an indirect and educative influence exerted by the Bible upon the moral and social thought of mankind.

4. Bible and art.—Specially interesting is the powerful effect which Biblical motifs exercised upon art and through it upon the national consciousness. The Christians of the first centuries adorned with Biblical symbols not only the graves of their dead in the catacombs, but also the articles which they employed in daily life—lamps, tapers, etc. Noah in the ark with the dove. Jonah swallowed by the whale or lying under the gourd, Abraham's sacrifice of Isaac, etc., were favourite subjects. At first these scenes were of a purely symbolic nature. The 4th cent. began to show interest in the story, and continuous Bible illustrations were made even before 10 in the apse in the famous tomb of St. Lawrence in Brus. The first Bible with all the Gospels, a Latin Bible dated 1598, contains no illustrations. But the picture became separated from the text: the illustrations suppressed and took the place of the text. In the famous Joshua-roll in the Vatican, supposed to be a 9th cent. copy of an ancient Christian original, there is a series of scenes with small inscriptions like those upon the Trajan and Marcus Aurelian pillar. Towards the close of the Middle Ages the picture-Bible shrank more and more to a picture-book. Great favour was accorded to the Biblia Pauperum, a pictorial representation of the Bible in simplified form, occasionally with explanatory notes. Picture-Bibles of this kind without any text, or with at most brief explanations like those which were made by Hans Beim (1537) and Mich. Graf (1538–53), were known occasionally also in the 17th and 18th cent., while the 19th returned again to the complete Bible and illustrated it. Besides Bible illustration, however, there was the art of painting in general. The long walls of the basilicas were picture-books of Bible-history, and every city had its Cabinet of Churches. The fall of the empire, and the beginning of the Renaissance period (cf. above, p. 600). Gothic art changed the telling of a story into the sculpture of individual figures, and preferred the multitude of ecclesiastical saints to the Biblical characters. Then the Renaissance went back again to Bible-story, and at
this stage it was ancient mythology instead of the legends of the saints that interfered into serious competition with the Bible. The Churches were ornamented with stories from the Bible (Giotto's cycle in Padua, Madonna dell' Arena, indicates the beginning; and the culmination is found in the two walls of the Cellas of the Sistine Chapel by Tintoretto, Botticelli, etc. Religious rooms also contained similar ornamentation, and it was in the loggie that Rafael executed his famous Bible in fifty-two pictures. So far as altar-pieces, stained windows, and other ornamentations are fostered in the Catholic Church, it is a mistake always to draw them from the Bible instead of from favourite stories of the saints, as was the custom earlier.

Besides the sculpture of sarcophagi in the 4th and 5th centuries, there is also the stone and wood work of the doors of churches (S. Sabina in Rome, S. Ambrogio in Milan). At a later date bronze castings became usual (baptistery at Florence). The art of weaving was also employed in Bible illustration. We hear of Biblical scenes not only upon tapestries and wall hangings but upon private drapery (Asterius of Anaesia). In the Middle Ages, besides the rich ecclesiastical vestments, there were embroideries for household use. From the 13th cent. onward the crafts received a great impulse from the new Biblical and legendary material. Painted and inlaid cupboards and presses of the 16th and 17th centuries, show whole rows of Biblical pictures, and even the easy-going Rocco period ornamented the toilet tables of its ladies with pictures from sacred history. Nor did this custom, in itself a profanation of the Scriptures, cease until the art of the 'empire' began to look for themes in the Classics. The following period made extreme simplicity its goal, while the eyes of modern naturalism Biblical themes present no attractions. This, however, is not to be deplored, for Biblical art must always be of a pious character.

The number of passages employed for illustration naturally varied very much. In certain branches of art a strict tradition came to be formed. Walls provided scope for more scenes than sarcophagi, and book-illustration made more detail possible. It would be a useful task to investigate systematically the differences which mark the various series of illustrations. Great interest attaches to the scenes which were preferred by individual artists. It is possible in this way to discover what acquaintance with the Bible different periods possessed, not only in regard to the artists who were dependent frequently upon a pattern, but also in regard to the beholders upon whom the pictures, usually explained by notes, produced their effect.

It must not be overlooked here that the subjects were often drawn not directly from the Bible but from some intermediate source or other. The peculiar choice of scenes which the early period of Christian art made has been connected with their employment in sermons or in prayer. In the Middle Ages, St. Augustine's De Civitate Dei, the Historia scholastica of Peter Comestor, and the Speculum historiale of Vincent of Beauvais provided artists with their Biblical material. This explains the Apocryphal tales, the story of Christ ranging from the birth of the Virgin Mary to her ascension and coronation. Not till the advent of Protestantism did the immediate influence of the Bible become dominant. Then there was a different choice of scenes and a different arrangement of them. Much legendary material was dispensed with, and in its place much that had long been unobserved was utilized. The finest service was here rendered by Rembrandt. As a good Calvinist, he was so familiar with his Bible that he could always find new and uncommon subjects for his paintings. He could always count, moreover, upon his being understood both by the public. See Art (Christian), vol. i. p. 555.

Besides the graphic arts, the art of language and tone is also naturally concerned with the word of Scripture. Poetry has found its highest impulses in the Bible. In this field is much bazing had to meet with, and literary recreations like the turning of the Gospels into Homeric and Virginian cents are common (4th and 5th cent.). There are also the rhymed Bible epics of the Middle Ages, and in the 15th century influenced by humanism, we find the Christiales and Christiast. But there are also masterpieces to be included here—the old Anglo-Saxon poetry, the Heliod, Milton's Paradise Lost, and Klopstock's Messias. This is to take no account of the inspiration, the images, and the expressions for which the greatest poets, Walther von der Vogelweide, Dante, Shakespeare, and Goethe, are indebted to the Bible. As a rule, Biblical poetry is epic, but occasionally, and especially in imitations of the Psalms, the Biblical and legendary material is specially interesting. Not the clumsy Byzantine Χριστός πάσχας (about 1100), which lays hands upon the verses of Euripides but despises all stage-craft and probably was never produced, not even the Biblical and legendary materials of the pious Hovius of Gandersheim (+1001) tried to suppress the comedies of Plautus among the nuns, but the ecclesiastical dramas of the end of the Middle Ages, which, with a gradually increasing and finally almost exclusive participation of the laity, brought the Bible-history to the popular eye and ear simultaneously in the most effective manner possible. Adam's fall, the stories of the patriarchs, and above all the life and bitter sufferings of Jesus, were lived over again by actors and audience, sometimes in the most emotional realism. Medievalism was naive enough simply to transfer the story to its own time in matters of costume and background. There was besides, however, a reciprocal action between the ecclesiastical drama and the reports which pilgrims brought about the holy places of Jerusalem. Here, too, there was an admixture of the Apocryphal element. A complete play (four days) begins with the creation and goes on to the judgment day, following the Church practice rather than the Biblical. Only in single places, as in the English Passion play, the Dormion Passion, has survived, in a greatly altered form, to our own time. Humanism and the Reformation opposed those plays equally, though from different motives, and when modern dramatic art makes an attempt to bring Biblical material upon the boards, cultivated Christian taste rightly feels it to be a profanation.

Protestantism possesses something which the more ancient period entirely lacked—the Biblical musical composition. The 'Bible songs' of Joh. Kuhn (1516) contained trilling, but the oratories of Heins. Schütz (+1672), J. Seb. Bach (+1750), and G. Fr. Händel (+1759) have attained to the most perfect artistic rendering of Biblical material. A distinction is marked by the fact that while a Palaestrina felt his task to be the creation of Masses and Requiem, they devoted their attention to Cantatas (Psalms) and Oratorios. And if the Catholics Joseph Haydn (+1809) and H. von Herzogenberg (+1869) joined them, they were fewer under Protestant influence. When a Passion by Bach, with its moving arias between the recitatives, is compared with the medieval Passion Play, the same difference meets us which we found in our comparison of the two coloured Bibles (see above, p. 607). In the one

BIBLE CHRISTIANS—BIBLIOLATRY

615

BIBLE CHRISTIANS—BIBLIOLATRY.

This term usually means the excessive veneration of a book regarded as being Divinely inspired. The phenomenon is applied to a religious one, and is found in the faiths known as "book-religions." It is to be noted, however, that our view of the merits of any given book-religion or sacred book will deeply affect our judgment as to the possibility or unreasonableness of that particular case. One who rejects the infallible authority of a certain book will see bibliolatry where another sees no more than a legitimate reverence. Hence, if we would accurately define the term, we must lay down the limits of its exact usage, seeking to determine not merely the qualities that give it a relative and variable applicability, but rather its essential characteristics. For this purpose a preliminary historical survey will be of service, after which we shall seek a more precise definition and then present the rules of the causes and consequences of the phenomenon.

1. Historical survey.—Nearly all the higher religions are book-religions, i.e., their teaching is deposited in a sacred book, which ranks as a Divine revelation. These religions usually have in them who regards himself as the official interpreter of the book, and bases his authority upon it, and whose concern it therefore is to have the book recognized as of Divine character. So true is this, indeed, that even when the book is of no set purpose given to the people for their private instruction, the cleric still retains its accredited interpreter. This is precisely what we might expect, since the homage paid to the book rests upon the authority of the community and of their representative, the cleric. This authority, however, commonly involves a perfectly definite doctrine as to the sacred volume—a doctrine which sets forth its unique position in the most express form. In fine, the cleric supports the authority of the book, and the book the authority of the cleric; and there are few exceptions to this general rule.

We must, however, bear in mind that no such sacred book is ever a complete whole from the outset, and that the several parts which go to the formation of the Canon are never appraised as absolutes. The religions usually have in them, indeed, that the deification of the work is always a later process, as will be shown by the following examples:

(a) The Veda (which, as it be remembered, were not committed to writing till long after they had been collected, but were handed down orally from one generation to another by precise and highly elaborate methods) were not regarded by their writers as they are now regarded by the Brahmins. The Vedic poets compare their work to that of the weaver or the carpenter. Their words are 'shaped in the mouth' by the scribe;' or they are inspired by the Soma-cup. But at a later period they are looked upon as of Divine origin; the gods themselves are the authors. The poems are collected, and form a sacred code, declared to be infallible. Their authority, in the period of the Gitas, is the most successful. The Vedic singer, the poet, is the objective proof of its beneficent operation.

In order to rob the Bible of its value, it has been pointed out that other religions make the same claim for their sacred books. That is true only to a limited extent. But the Bible does not need to dispute its position with the book of any other religion. This portion of universal literature is the most influential book that ever existed, says Jülicher (Introd. p. 2); and Harnack (Ikonen und Aufsätze, ii. 105) speaks as follows: 'It is enough to reflect upon the book as the ancient world, the book of the Middle Ages, and—though not perhaps in the market of the book of modern times. Where does Homer stand compared with the Bible? Where the Vedas or the Qur'an? The Bible is inexhaustible. Each succeeding period has revealed some new aspect of it. The Bible itself has given the Dogma of the Sacred Scriptures. It is upon and round the Bible that all the studies of the theological faculties ultimately concentrate and group themselves. Whenever a single individual—layman or theologian—has been enabled to draw fresh and full out of the Bible and present to others what he has thus obtained, the inward life of Christendom has been raised to a higher level.'

E. VON DORSCHÜTZ.

BIBLE CHRISTIANS.—See Methodism.
for a sacred book holds no such place in Buddhism as it does in Buddhism as such. Its reception is, on the other hand, not revealed to the Mahayana doctrine; it is said to have been obtained by Buddha himself from the breasts of the serpents which listened to his discourses. With this point of contact the minds of his disciples, notably Vangisa, by inner illumination. However, the doctrine of the Buddhists is not so much built on trust, but distorting from it the earthly exemplar as the work of human hands. The Arabian philosophers Avicenna and Aver- Saraiah's view; that of the, essential character of a doctrine; and that of the scholar, asserting that it is the task of philosophy to furnish proofs for the faith which spake in popular metaphor, and that a distinctive Christian character is necessarily inspired, even to letter and sound, with punctuation and vocalization to boot, as an appeal for acceptance, to co-ordinate with the Qur'an. Muhammad had explained that in matters regarding which he had given no instructions men must rely on the judge's judgment after his death. The need for an authority became dominant, precepts being desired for every detail of life. Accordingly there grew up the Sunna, the collection of the early pronouncements and utterances of the prophet. It was compiled by Abu Hurayra, his successor, and the need was felt of a written word, the Qur'an, as extinguished all liberty of thought. (c) Finally the law of Zaraushtha plays a great role. This religion, which has been described as the basis of all the religions of the world, became a marked and authoritative character. He who would claim the cause of Ahura Mazda must stringently keep the law of Parsism or Mazdaism. Parsians deny absolutely the existence or knowledge of the transcendent being, and word in this case is regarded as the soul of the holy spirit, the holy frasazi of the sacred book, the Avesta, is still acknowledged as a Divine revelation, even if the religious significance of the book might be misunderstood. The guardians of the tradition and of the authority of the sacred book, the priests, are the living embodiment of the Divine character of the sacred writings with the authority of the Ahatians, or priests of the later Avesta, being the interpreter of the sacred writings.

(d, e) The two great Semitic religions, Judaism and Muslim- The Alexandrian version of the LXX had come by the time of Christ to enjoy such a preeputation that the OT quota- tion of the sacred books is for the reader an extension of the text. After the destruction of Jerusalem, however, the Jews in their growing exclusiveness began to rank the LXX as no other book. So the question of the Canaanite script and of the Cana- 

dination is that the writings should be of Apostolic authorship, and conform to the Rule of Faith. This was the case with the Bible of Tyre, in the case of the LXX, with the Bible of Alexandria, of which the 

and illustrated were also the writings of the Apocalypse. They were read at the Council of Laodicea (A. D. 360) was declared that none but canonical writings should be read in churches; and Augustin- 

ecnons, and the doctrine held regarding the inspiration and authority of the sacred writings. The general rule was that the Canon was the complete body of canonic literature, and this was the rule applied to the New Testament. The New Testament, moreover, was to be interpreted by the Sacred Scripture authority to its final conclusions, as the Reformers, following the example of outstanding personalities who lived at the close of the Middle Ages (Wyclif, Hus), and in view of the frequent errors of the Church tradition, and of the fallibility of the Church and its representatives, believed it possible to fall back upon the authority of the Bible itself. In such a case the whole question of interpretation and the theory of the 'manifold sense' of Scripture. But, such questions notwithstanding, the word 'canon' entered into a new kind of usage. The word, it was interpreted on traditional lines, i.e. according to the regulus fidei and the decisions of the Councils, which were now becoming recognized as infallible. The word 'canon' was engendered by the sense of incompatibility between a fixed interpretation and the doctrine of the 'manifold sense.' In reality an infallible Scripture without an infallible interpretation would have been of little value. Only with the rise of the Church of the Reforma- tion, however, was the doctrine of the Canaanite with authority, since it was the Church that laid down the conditions of canonicity. Though inspiration and sufficiency were ascribed to the Scriptures, this gave them prominence over all other literature, as containing a Divine revelation, yet they were read with the Church's eyes, and the doctrine held regarding the inspiration and authority of the sacred writings. The general rule was that the Canon was the complete body of canonic literature, and this was the rule applied to the New Testament. The New Testament, moreover, was to be interpreted by the Sacred Scripture authority to its final conclusions, as the Reformers, following the example of outstanding personalities who lived at the close of the Middle Ages (Wyclif, Hus), and in view of the frequent errors of the Church tradition, and of the fallibility of the Church and its representatives, believed it possible to fall back upon the authority of the Bible itself. In such a case the whole question of interpretation and the theory of the 'manifold sense' of Scripture. But, such questions notwithstanding, the word 'canon' entered into a new kind of usage. The word, it was interpreted on traditional lines, i.e. according to the regulus fidei and the decisions of the Councils, which were now becoming recognized as infallible. The word 'canon' was engendered by the sense of incompatibility between a fixed interpretation and the doctrine of the 'manifold sense.' In reality an infallible Scripture without an infallible interpretation would have been of little value. Only with the rise of the Church of the Reforma-
in matters of faith. Philo’s doctrine of inspiration is thus again to the front. Inspiration was held to be the gift of God to the Church. The author of the Gospels in the pens (collina) of the Holy Spirit. It implied great naivety to suppose that Scripture was self-inspired, but it was a notion that was to be entertained in this instance too; it was interpreted in the sense of the Confessions.

The theory of the ‘manifold sense’ had now been abandoned, and that of the ‘personal, grammatical, and literal interpretation’. But it is obvious that an absolutely infallible Scripture could be of no service without an infallible interpreter, which, according to the Church, was the Church itself. It was the Church, which, in fact, sought in dogma. This view still survives, though, as an instance of the indescribable way in which those who desire to possess the Divine in a finite form, immediately present to the senses, who in their religious life all claim to self-reliance, i.e., the absence of the infallible worth, will always hold with a community that proffers guarantees of salvation, in virtue either of its alleged possession of the Holy Spirit, or of its adherence to the Church, which, alone, either as the Host or a sacred book. When the early Protestant dogmatics took their stand upon Scripture alone, they forgot that the corpus of Scripture, the canon was a product of the Church, and that only an infallible interpretation of the Canon could make the infallible book infallibly intelligible. A matter of fact, the logical outcome of the situation was the institution of a ministerium verbi dietici, an office of the means of grace, to which was the proper execution of the office—the work of the clerk.

The Reformed Church also maintained the view of verbal inspiration, but its permanent and distinguishing feature was its doctrine of predestination. Hence the Scripture was for this Church but the infallible document from which men could assume that the plan of God was to be enshrined in all its purity. In this case it is the need of an authorship by which the infallibility was rendered necessary. But no means of grace was not put in place of God, or, more generally, as the distinction between creature and Creator was still a distinction in the mind of God, the infallibility was not absolute. The Reformed Church was satisfied to see in Scripture the absolutely inerrant revelation of the Divine will, as something to be personally appropriated; but the inerrancy recognized by Scripture gave no information regarding the election of any particular person. Men have no need of an interpretation of the Book of Scripture from other sources; such certainty was in fact given by the Holy Spirit. But the claim for the unconditional recognition of Scripture as the infallible document from which the Divine will was to be clearly read, is, so to speak, the Divine will in person, in which man must acquiesce. Again, indeed, we see that the absolute infallibility is a requirement of the inspiration of the Book, and not the principle of inner certainty. If such certainty be a fact, infallibility is superfluous. But if infallibility be necessary, the infallibility of Scripture is at least functionally the same as the depository of the Divine will, and inner certainty is a chimera. Besides, the community from the Canon is corroborated by the fact that the Reformed Confessions expressly enumerate the several books contained therein; and that scholars interpreting in the sense of these Confessions is beyond the need of proof.

Bibliolatry, then, as the foregoing survey shows, is found in book-religions generally. Its essence lies in the belief that the group of sacred written books is the plenary depository of the Divine Spirit and that, as such, it is of eternal duration and of superhuman origin; that it transcends all created things, or that, at all events, it possesses the quality of absolute infallibility, being, in the latter sense, unchangeable revelation. Of this latter view, in the eyes of those who so estimate it, such a book proscribes all criticism, and ranks as the one all-sufficient standard of appeal in questions of belief. We are thus dealing with a conception which is to be defined not quantitatively but qualitatively, i.e., which marks out the particular sacred book as possessing qualities absent from all other literature, namely, exclusively Divine authorship, absolute infallibility, immortality from all natural influences in its origin; and hence also its recognition as an authoritative fact, a matter of no small interest in comparison with all individual judgment. Absolute submission to this sacred book is the obligation of the bibliolater. Outside it there exists no final tribunal in matters of faith. It is all-sufficient, and shares in the sovereign prerogative of God.

2. Causes of bibliolatry.—We would first of all observe that bibliolatry never exists where religion has the character of spontaneity, or where there is no conscious busyness that finds free and natural utterance. But whenever religion takes the form of this spontaneous enthusiastic character, when the Deity is no longer supposed to manifest Himself directly, then, in place of such immediate intercourse with the Divine, there comes into operation the mediating function of the community and of its religious institutions. Men, in fact, have a guarantee of salvation, of eternal authority, and this they find in Scripture only when they regard themselves as being, so to speak, yet in their nonage, i.e., at that stage of consciousness when man assumes his entire incapacity of making judgments regarding the Divine, and when the individual makes full surrender of his private judgment. The necessary condition for the acceptance of any new revelation is that it must move the souls of men. But it is only after a society has been persuaded that a superficial revelation that means are employed, in the succeeding generations, to preserve the original message. Accordingly the message is committed to writing, and in its written form is looked upon as the authentic source of the revelation. Now, the less capable people are of personally experiencing the truths thus won, the more eager are they to find guarantees thereof, and such they believe to exist in the inspiration and Divine character of the written word, and not in the actual message, which the written word itself cannot convey. In fact, even when the sacred writings contain such a maxim as ‘Prove all things; hold fast that which is good’ (1 Th 5:20), men still prefer not to ‘prove’, but rather to give a blind adherence to the authority of the Divine book. But now, such a course can be justified only upon the assumption that this book is free from all human elements, and thus arises the theory of unconditional inspiration and the act of dedication. Wherever we find men holding to a revelation in external and perfect form, we find also the need of infallibly preserving the revelation to all time, i.e., of a Scripture whose inspiration is absolute, pure, and Divine.

The origin of bibliolatry is therefore in part subjective; it presupposes the complete religious ignorance of man, and his need of an absolute authority, as also his lack of such genuine religious emotion as might furnish a personal experience of the Deity. But bibliolatry has likewise an objective source, viz, the belief in an external revelation supposed to be infallibly and unchangeably embodied in Holy Writ.

This explanation, however, does not cover the whole case. Since the seal of sacredness is stamped upon the Scripture not by the individual but by the community, bibliolatry in the event leads the former to bind the revelation of the Divine, and when the individual assumes his entire incompetence in religious things, he will pin his faith, not to his own understanding, but to that of the expert, i.e., the clerus. Thus bibliolatry brings us back to the infallibility of the Church, upon which it originally rests, since it is the Church that determines the Canon. Such has been the process in the religions of India, as in Muhammadanism, in Judaism as in Christianity. And if the same cannot be said of all, as, e.g., Protestantism, which puts the Bible freely into the people’s hands, the exception is but apparent, particularly in professionally orthodox circles, since, for one thing, the sacred book owes its prestige to the Church, which brought its contents together; and for another, the clerus and his judgment is an institution, which finally, orthodoxy holds to the necessity of a ministerium verbi dietici, an office of the means of grace, by which Scripture shall be interpreted in the sense of the Confessions. The moment, however, that the Bible-worshiping becomes an institution, as it does when bibliolatry begins to wane, and is seen to be a mere transition stage; the unmethodical exegesis of non-experts reveals
such diversity as convinces even the unprejudiced observer that these interpreters are the victims of a subjectivity which but ill accords with their assumption of the purely Divine nature of Scripture. It thus becomes obvious that bibliolatry either issues in the recognition of an infallible Church, which delimits and interprets the Canon, or, in other words, in the supremacy of the clerus, of whose authority the Scripture provides the grand support; or else it disintegrates itself by subjective exegesis, thus losing whatever significance it may have had—a result ever the more certain the more religion is required to meet the needs of the age.

5. Consequences of bibliolatry. The consequences of bibliolatry is that the people upon whom it is laid as an obligation become bound hand and foot to a fixed point of view—a result specially disastrous when the sacred book not only prescribes religious or ceremonial ordinances, but also enacts laws for social and political affairs. Mahommedanism wrecks itself upon the Qur'an. The Christianity which is tied to a stereotyped interpretation of a supposed infallible book becomes ossified; and the same may be said of a Christianitv which would make the Bible the standard for life as a whole, or which in particular cases uses random passages as oracles, thus assuming the individual's incapacity for moral freedom. The existence of innumerable commentaries to the sacred books of all religions is at least partly explained by the effort to find a ready-made interpretation which shall be of service to the contemporary generation, or to harmonize the writings with some private point of view. Men have often tried the experiment of combining their recognition of the absolute authority of Scripture with the gomers of, or by, the sect or church to which they belong, of virtually emancipating themselves from the burden of the book, while preserving their nominal adherence to it by exegetical means, they have striven to satisfy the demands of progress. Such methods, of course, do scant justice to the requirements of historical veracity. Then the ossification resulting from bibliolatry is sometimes kept in abeyance by dint of associating tradition, especially a traditio constitutiva, with Scripture. But in truth both interpretation and tradition are more palliatives. Only on condition that religion be a living fact, and that the personal element therein be given its full due, and not suppressed, is the escape from bibliolatry sure. For then the venerable documents become but invitations to the personal experience of religion, and are no means to be ignored without examination. It is impossible that a genuine piety should curb the spontaneity of the individual soul; it should rather animate the same in its various manifestations. Accordingly it is the privilege of the soul, if it is granted in conjunction with the sacred volume answers to his own experience, and at the same time to subject the documents themselves to a continuous process of criticism, in order to separate between what is merely temporary therein and their permanent eternal truth.

BIGOTRY—BINDING AND LOOSING

This page contains a passage discussing the concept of bibliolatry and its consequences, particularly in the context of religious interpretations and the effects on personal freedom. The text critiques the binding nature of religious texts as infallible, leading to a form of idolatry that restricts individual freedom and perspective. It argues for a more open and dynamic approach to religious texts, allowing for personal interpretation and the spontaneous experience of the spiritual life. The discussion is framed within a larger context of religious history and the evolution of religious thought, exploring themes of tradition, interpretation, and freedom in religious practice.
hands of a Gentile on the eve of the Sabbath (Jerus. Shabb. fol. 4. 1), the beginning of voyages, or the gathering of wood (Jerus. Tom. Tobh. fol. 61. 1). They are used, in doctrinal and judicial matters, of things allowed or not allowed in the Law. The reason of this is that Hillel and Shammai, "The House of Shammai binds . . . the House of Hillel looses." Interpreting the former passage in Mt. by the normal usage of the time, we shall conclude that our Lord declared St. Peter to be a competent Rabbi, whose decisions in the matter of conduct (halakha) would be ratified by the Heavenly Tribunal. In the exercise of his authority, he would forbid (bind) certain things, and permit (loose) others. In view of the close connexion in Mt 16:19-19 between the keys and the power of binding and loosing, we may note that the power of the keys (e.g.), equally with that of binding and loosing, belonged to the office of scribe or teacher; the scribe, when admitted to office, received 'the key of knowledge' (Lk 11:52). Thus St. Peter was qualified to be a scribe fully in- structed in the office of the Holy Ghost, endowed with legislative power concerning things, not judicial power concerning persons. In Mt 18:18 the sense of 'bind' and 'loose' has developed in view of the context, and its positive content has become greater: the power to exclude from the society in view of Mt 18:19, to retain to judicial action is involved; vv. 19, 20 as well as vv. 12-17 show that the new society is regarded as possessing powers of self-government from God, and that its decisions will be ratified by God.

Mt 16:16 and 18 cannot legitimately be connected with Jn 20:23 ("whose soever sins ye forgive, they are forgiven unto them; whose soever sins ye retain, they are retained"), though, as we shall see, the identification began very soon and became more and more common. Jn corresponds to Heb. נקבות and Aram. κακοί; נקבות to Heb. נקבות and Aram. כקרים. The most that we can say is that in Mt 18:18 the context seems to show that the power of binding and loosing implies, among other things, the power of treating sin as pardonable or the reverse, with reference to admission into, or exclusion from, the community. And this conception can be obtained only from the context; it must not be read into the words, for whereas such a phrase as δια τὴν ἡμειαν might be allowed, the corresponding בכרה את לא מיは何ה in the Vulg. (Wof. 151) Jesus, 216) partially supports the Patristic connexion of Mt 16:16 and 18 with Jn 20:23. He thinks it doubtful whether Matthew understood Jesus as merely bestowing on His disciples power to give authoritative decisions in matters of conduct, and points to the exclusion from the community, which, admittedly, is involved in the context of Mt 18:18. Therefore, with the inclusion of the conception of St. Peter as the steward of God's house on earth, who possesses the keys, and has power to open and shut, we allow to St. Peter the latent in the passages of Mt., since 'exclusion from the community on account of some offence includes the "retaining" of the sins; the re-admission of the sinner includes the "remission" of his sins.' Yet, while the natural connexion in thought between the passages in Mt. and Jn. is not to be denied, we ought not to interpret the Matthew passages by the later passage in Jn.; nor can we say that the gift of the power to open and shut, to bind and loose, was only promised in Mt 16:19, 19, and not afterwards in Mt 28:18-20—a position adopted in The Papal Cutiment. The power to remit and to retain sins is not without analogy with the power to bind and loose; but it was a distinct and additional power. The restricted interpretation of 'bind' and 'loose' in accordance with the practice of the Rabbinic schools is the natural and obvious one. Neither Lange's objection, in his commentary on St. Matthew's Gospel, that Christ would not have spoken merely after the Rabbinic pattern, nor Dalman's inference that Mt. can hardly have understood Christ in that sense, since διατεταγμένος and Αυτή οὐκ εἶναι λύγος do not in his Greek mean 'forbid' and 'permit,' is really a serious objection to this view. We may give adequate weight to the fact that our Lord and His disciples must have interpreted the power to bind and loose, as possible in accordance with the Jewish usages of the time, while Dalman's objection to the interpretation of the Greek translation given in Mt. is that agreed that the Aramaic words used by Jesus were the same as those so constantly found in the Talmud. But the evidence indicated in Mt. is no need to suppose that Mt. found in the passage some force other than 'forbid,' 'permit'; he used διατεταγμένος and Αυτή οὐκ εἶναι λύγος as being the nearest equivalent in their meaning to the English words. We may regard as instances of loosing and binding in the Apostolic Church, the action of St. Peter in having intercourse with Gentiles (Ac 10), and the letter of the Church of Jerusalem with reference to abstention from things offered to idols, blood, and fornication (15:2). The same assembly refused to bind distinctively Jewish customs upon Gentile Christians. St. Paul's action with regard to the incestuous person (1 Cor), which was ratified by the community, and led to the excommunication of the offender, was one of considerable information as to the influence of these texts, and the manner in which they were utilized in the interests of disciplinary authority. In the Clementine Homilies, ad Jac. ii., St. Peter is represented as communicating to Clement the power of binding and loosing, 'so that with respect to everything which he shall ordain in the earth, it shall be decreed in the heavens. For he shall bind what ought to be bound, and loose what ought to be loosed, and shall judge the Church.' The natural, Rabbinic meaning of the words is kept here, though the sentences which immediately follow seem to point to a power extended over persons as well as things. Tertullian deals with the question in de Judic. cxxi. His strictness in his Montanist days led him to combat the notion of discipline and forgiveness generally prevalent in the Church. In the chapter referred to he distinguishes between the doctrine of the Apostles and their power, and argues that, even if they had that power now, this power will be against God, the prerogative to pardon which, in accordance with Mk 2, belonged to God alone, they did so in the exercise of power, not of discipline; such power was akin to their power of performing miracles, both of healing and destruction. Tertullian demands an equal display of power before he will recognize in the Catholic clergy the power to remit sin; since the mere fact that the functions of discipline had been entrusted to them carried with it no such capacity. As to the argument that, in view of Mt. 28:18-20, it is interesting to note that Mk does not deal with Jn 20:23, the Church has the power to bind and loose, Tertullian answers that this gift was conferred personally upon St. Peter, who made use of it by bringing men to Christian baptism, and so into the Kingdom, 'in which are loosed the sins beforehand bound, and these which have not been loosed are bound in accordance with true salvation.' The same power was exhibited in the death of Ananias and the healing of the impotent man, while both operations were seen in St. Peter's name. According to St. Paul, the two parts of the law were loosed and others bound. Tertullian does not give any proper weight to the fact that the letter of the Jerusalem assembly was the work of the whole local Church, and not the mere outcome of a number of individual opinions, of which St. Peter's was the first. In any case,
if we accept Tertullian's distinction between the doctrine (i.e., discipline) of the Apostles and their power, it can hardly be denied that the 'binding and loosing' letter falls under the former head. But Tertullian's chief anxiety in his discussion is the abuse of the power and the 'remitt sins against God'—the only point round which controversy could rage—been granted to the Apostles, much less to the Church.

Questions with regard to binding and loosing naturally arose in connexion with the controversies in which Cyprian was involved. While he urged with ever-increasing force against the Novatians that the power of loosing from even the gravest sins existed in the Church, Cyprian maintained against Stephen that outside the Church there was no one to bind and loose, to baptize and give remission of sins (Ep. 73, 1, ad Juba.). In the same letter he shows that he completely identifies the power given to St. Peter in Mt. 16 with the power with which the Apostles in Jn 20. To 'loose' is for him the same as to 'remit sins'; and as in Ep. ad Magnum 11 he seems to make of 'baptizare et remissum peccatorum dare' one idea, it is likely that 'loosing' was in his mind specially connected with baptism. The same idea is in Mt. 16 where with Jn 20 is reversed in the letter of Firmilian to Cyprian (Migne, PL iii. 1201); he insists on the power of forgiveness having been given to the Apostles, from whom it descended to the bishops ordained by them, and so on in continual succession. We see from this how the use of the power to bind and loose was being regularized in the interests of Church order and a ministry that was becoming increasingly sacerdotal. Ambrose, as well as Cyprian, attacked the Novatian restrictions on the Church's power to loose. Novatian and his followers had denied that the Church could extend forgiveness to the lapsed or to those who had fallen into any of the graver sins. Ambrose (de Don. i. 2), relying on Jn 20, replied that the Church had power both to bind and to loose, and turned the attack upon the Novatians by arguing that, as they rejected the power of loosing, clearly they had not the power of binding.

Origen, in his treatment of Mt 16 (Comm. in Mt., tom. xli) is more careful to insist on the spiritual character of the gift. According to his idea the power is given both with the keys of the Kingdom of Heaven, to open to those who were loosed on earth, that they might be loosed and free in heaven. While allowing that bishops also had the right to pronounce things bound on earth, which would then be bound in heaven, Origen insists on two qualifications for them, before they can exercise such power. (i.) They must possess that ἔγορα in virtue of which it was said to St. Peter, 'Thou art Peter.' (ii.) Their character must be such that the Church can be bound and loose—there are, however, the 'remiss sins' would bind and loose in vain. It is clear that Origen is maintaining the necessity for soundness of faith and life, if the bishop is to be able to bind and loose—a doctrine of the worthiness of the minister which not unnaturally alarmed the annotator of Jerome's exposition of the same passage (PL xxvi. 131). In another place, Origen shows the same tendency to urge spirituality rather than office as the essential thing for one so exalted. He insists that while we can all forgive sins against ourselves, we on whom Jesus has breathed as on the Apostles, and who can be recognized as made spiritual through the gift of the Holy Spirit, forgives what God would forgive, and, on the other hand, retains sins which cannot be healed. Of other Eastern teachers we may notice Chrysostom and Cyril of Alexandria. Chrysostom (in Mt., Hom. iv.), while interpreting binding and loosing as the power to retain and remit sins, which belongs to God alone, in which he agrees with Tertullian, differs from the African theologian in interpreting the power in Mt 19 also as that of second binding and loosing. Cyril (Com. in Mt. iv., commenting on Mt 16), postposes the actual delivery of the power of the keys till after the Resurrection, as recorded in Jn.; with Jn 20 he writes that Christ gives to those who have obtained the office of teaching the power to bind and loose, which suggests a possible appreciation of the original force of the words, and their connexion with Jewish custom.

The Apostolic Constitutions (ii. 11) connects binding and loosing with the bishop's authority to judge offenders, and interprets Mt 18 as specially addressed to the bishops. The great Fathers of the West came to connect binding and loosing more and more strictly with penalties and priestly absolution. Origen and Ambrose, for instance, differentiate between the 'loose' equivalent to letting go free, and makes use of the words of Jesus to Lazarus in Jn 11, λύσατε αὐτὸν καὶ ἔφεστε αὐτὸν ὡς γένεσα, to enforce his meaning. As Lazarus was awakened to life, and came forth at the word of Christ, so does the former speak of the one 'who has obtained the power to loose his sins'; but, as all had not been done for Lazarus till the disciples loosed him and let him go free, so the penitent needs the Church's absolution. Hilary interprets binding on earth as leaving entangled in the noose of sin, and loosing as receiving into the safety of pardon (PL xi. 1021). Jerome, commenting on Mt 18 (Comment. in Ev. Mt. iii. cap. 18), says that priests and bishops have no power to bind and loose of themselves, but can only decide who is pure and who is not, who is to be bound and who loosed, and compares Lv 18-20 elsewhere (in Ev. Mt. iii. cap. 16) he says that the Church has judicial power to declare those freed whom God's grace has freed within; those bound who are not so loosed. Gregory the Great (Hom. 26 in Evangeliis) says that the bishops have the power of binding and loosing, but that it is lost by those who use it for their own ends, and not for the advantage of their penitents. He also makes use of the raising of Lazarus to show that the Church has power to loose those who are bound, and that God turned and revived by His grace. Gregory warns against unjust binding; yet, at the same time, bids the penitent ever fear, lest, even if he be unjustly bound in connexion with the particular matter which he confesses, the binding may be merited, and therefore valid, owing to some other fault. Gregory connects the official sentence most closely with the sinner's inner feeling, which, in fact, the loosing and binding of the bishop regularizes. Rabanus (Comm. in Mt. 20, lib. vi.), differentiates the gift to St. Peter and the gift to all the Apostles, points out that, while the power of binding and loosing was given to all, as is clear from Jn 20, St. Peter had it conferred upon him in a special way, so that no one separated from the mass of faith and communion with him could be loosed, i.e., absolved. Paschasius Radbertus distinguishes between the power of binding and loosing given to St. Peter in Mt 16 and that given to all the Apostles in Mt 18. The latter, he says, are urged to do this which he himself before binding him, while St. Peter has the keys of all heavens, not merely the power of binding in heaven (Exp. in Mt. lib. viii. cap. 16). Bernard, Abbot Pontius Calidi, interprets 1 Co 5 as a possible instance of binding by excommunication. In Thomas Aquinas the power of the keys and the
power of binding and loosing are identical, and he distinguishes, in binding and loosing, between the power of authority, which belongs to God alone, the power of excellence, which belongs to Christ, and the power of ministering, which belongs to the priests (Stimmata Theol. 3° s. Qu. xvii.—xx.).

God has power to bind and loose equivalent to the power of the keys, and interprets it of absolving or retaining sins. Mt 16:19 was addressed to all Christians, and may apply to any one who confesses his sins privately before a brother. He does not distinguish between Mt 16:19 and Jn 20:23. These words are intended to call forth the faith of penitents, so that the word of the Divine promise may free them. A Christian should know that, if he believes and is absolved, he will be truly absolved in heaven. For Luther the power of the keys belongs to the Church, not to the Pope, and the Church's judgment, if the Church be truly spiritual, is God's judgment. Binding and loosing could be exercised both in preaching and in private absolution. The Church, which possesses the power, alone binds and looses the keys of life (Haller's Primary Works, ed. Wace-Buchheim; also Of the Keys). Melancthon (Loc. Comm., 'de Confess.') interprets Mt 16:19 of the giving of the power to his disciples. Calvin distinguishes Mt 16:19 and Jn 20:23 from Mt 18:18; the former passages have to do with the ministry of the word by preaching, the latter with the spiritual jurisdiction and discipline of the Church. Of Mt 16:19 he says that the keys apply to teaching, and he compares Lk 11:10. Loosing is directly connected with the forgiveness of sins; the doctrine of the gospel is applied to the loosing of our bonds—that being loosed on earth through man's testimony we may be loosed in heaven also; binding, on the other hand, is accidental to the gospel. In Mt 18:18 the discipline exercised by the Church is in question, and Calvin understands by the Church's sentence on the offenders, which God ratifies, the sentence pronounced by the Church. ('Harmony of Matthew, Mark, and Luke,' ii. 292).

The Council of Trent (sess. 14, vi.), in opposition to the teachers of the Reformation, insisted on the application of Mt 18:18 strictly to bishops and priests; already Luther had made the Church (Dium ecclesia) 5 argues that by the keys delivered to St. Peter the supreme power is intended, as may be seen from Mt 18:20, since in the Scriptures he is said to bind who gives orders and punishes. Cornelius a Lapide (Commentarius, tom. 15) goes with some fullness into the question. He argues that in Mt 16:19 'quodcumque' (6 et qui ergo) is equivalent to 'quemcunque,' but that the neuter is used as more universal, since the Pope binds and looses sins, vows, etc., as well as men. Binding is exercised by excommunicating, (1) enjoining penance, (2) excommunication and other censures, (4) laws and councils, (5) binding Christians to a confession of faith; while loosing is to release from these obligations. By a curious piece of exegesis he refers 'super terram' (18.19) to St. Peter, not to the thing bound.

Hooker (Eccl. Pol. vi. 4) discusses the question. He argues that the office of regent over God's Church consists of functions both of doctrine and of discipline, contained in the name of the keys; there is in the Church a perfect communication and makes sinners as heathens and publicans. God has promised to ratify what is done by His Church, first by the Apostles, then by their successors. The custom of binding by ecclesiastical censure and retaining till repentance leads to loosing has been adopted as the most expedient method for the cure of sin.

Modern commentators on Mt., while slightly differing among themselves as to the exact force of the words, agree in dissociating the passages in Mt. from Jn 20:23. For a point of view which confines the power to the ordained, and refers to any discipline in the visible Church, admission to or exclusion from the Kingdom of Heaven, or specific authority of the Apostles over the Jewish law, see Lyman Abbot's New Testament with Notes and Comments. He interprets the promised power as in the universal Church. See Another Christian, permit themselves, God will permit; whatever they prohibit, God will prohibit; the passage is therefore the spiritual Magna Charta of Christ's disciples. But such an interpretation is too individualistic, and does not do justice to the historic situation, or to the obviously present idea of a community in Mt 18:17. The idea of the power of self-government in the Church is the nearest modern parallel to the idea conveyed in Mt 16:18 and 18:17.

J. K. MOZLEY.

BIOGENESIS.—Biogenesis is a term used to express a fact of observation in regard to the present-day beginning of living organisms, that they arise from parents approximately like themselves, and in no other way. It is perhaps possible that they may arise in some other way, e.g. from not-living matter, or from parents quite different from themselves—both of these hypotheses have their supporters, but as yet no exception to the fact of biogenesis has been proved. The fact is often expressed in the aphorism omne vivum e vivo, which in most cases may read omne vivum ex ovo; and is under no circumstances applied of this as 'the law of biogenesis,' for the biologist who states that he does not know of any form of life arising except from a parent form of the same kind is not thereby denying the possibility of abiogenesis in the past, the present and the future. The term 'abiogenesis' is sometimes used to mean individual development—a usage which should not be encouraged. Thus Haeckel's 'fundamental law of biogenesis' states that individual development (ontogenesis) tends to recapitulate racial evolution (phylogeny). See RECAPITULATION.

J. ARTHUR THOMSON.

BIOLOGY (biōs, 'life'; λόγος, 'discourse') is the science of life in the widest acceptance of that term. It deals with the general conclusions of relating the different absolute facts, and the result of study of the structure and activities of all living things. As such it is as intimately connected with the activities of the human organism as with those of the malarial parasite that passes a stage of its existence in men's blood; it concerns itself with every feature in that apparently passive manifestation of the oak tree's vitality, as in that of the active gall-fly, whose developing eggs stimulate the gall-formations upon its leaves. In popular thought, life displays itself in two great, apparently unrelated, fashion—corresponding to the animal and vegetable kingdoms respectively—types which undoubtedly are sufficiently distinctive and apart in their most highly developed representatives, but which, as they are studied in a descending series, are found to become ever more
simple until forms are reached which, from the point of view of morphology, are practically alike in the two instances, although still differentiable physiologically; while eventually, certain forms are reached when the last \textit{differentia} ceases to hold, and partial changes pass through, are then passed upon their animal or vegetable nature. Yet let it not be imagined that to study life in these simpler forms does anything more than eliminate certain secondary constituent elements. ‘Liveness’ in itself is not more intelligible in the amoeba than in the elephant.

At the same time it is convenient to think of the subject-matter of Biology as comprising, in the first instance, the two great realms of animal and vegetable life, corresponding to the sciences of Zoology and Botany. An individual in either of these realms may be studied from the point of view of its gross build and form (Anatomy = Morphology, in the strictest sense of that term), or minute structure (Histology); from the point of view of general functional and adaptive relation to environment (Ecology); and the ability to do work, associated with definite organs (Physiology proper). Morphology and Physiology suffer, however, more than any other two aspects, from separate consideration, for in life they are modified in accordance with the forms into which conditioned by the function to be performed; in fact, they are the dynamical and statical aspects of one and the same thing. Further, the living organism may be studied stage by stage as a developing organism (Ontogeny), or the historical treatment may be extended to its ancestral ancestry (Phylogeny, expressed in some classes by Palaeontology); it may be regarded in connexion with its various \textit{habitatios} the earth’s surface (Geographical Distribution), or its place in a scheme of classification (Classification). Further, as is the case with all things, a study of the causes that have combined to make it what we find it to be (Etiology). Finally, in each of these subdivisions the individual may be studied in relation to other individuals more or less like it, which will give us, as in the first instance, Comparative Anatomy and Comparative Histology. Nor should it ever be forgotten in what intimate and often conditioning relation these different aspects stand to one another, so that biological interpretation is incomplete to the extent in which it is split up.

The importance of biological study, not merely as a discipline, but from the bearing of its varied subject-matter upon human life in general, can hardly be exaggerated. To recognize the truths of Biology, and the demands of them arising from the spirit of whole life, is to recognize that the life of the spirit is grounded in them. In connexion with questions of human health and food supply, and the various other economic aspects of living forms that stand in desirable and undesirable relation to man, a knowledge of Biology should be part of the equipment of every educated man; Psychology and Sociology are tenuis-like studies in so far as they are not recognized as grounded on Biology. In the same way Biology rests in great measure on Physics and Chemistry, while the relations to and influence on Philosophy, Sociology, and Theology of such an integral component of biological construction as Evolution are a leading element in modern thought.

The initial question of Biology is the nature and characteristics of living matter—the determination of that wherein ‘livingness’ consists. Curiously this may be best attempted by consideration of the simplest forms of life; yet to solve the problem of their ‘greatest common measure’ does not necessarily mean that we have determined the unit of life. Wherein, then, does ‘livingness’ consist? Possibility we should instinctively reply, movement —movement, either purely locomotive, or such as is involved in the maintenance of the functions of nutrition and reproduction. Yet in the case of any seed or egg, life is somehow there, but we see no movement in the eggs of the salmon or the egg. Is it alive? or, Is it capable of living? but these are obviously two very different questions. It is known that if dry seeds be kept for a long period in hermetically sealed jars they cease to respire, failing to manifest any chemical production of CO$_3$, one of the great signs of life. Has their chemical answer to the question, Are you alive? failed? But does it necessarily imply that they are dead? And again the answer is No; for, if released from their prison and placed in suitable conditions, they will germinate and produce new plants. ‘So that a seed, in so far as it does not manifest chemical change, is proved to be alive; and, inasmuch as it germinates, is proved not to be dead’ (Waller, \textit{The Signs of Life}, p. 5). Of course, the usual escape from this dilemma is to say that the seed is in a state of latent life, during which there is a complete suspension of all the chemical changes that are characteristic of the living state. But a more correct statement is that we have no means of chemical investigation sufficiently refined to reveal to us the infinitesimal changes that are probably going on in the apparently dry state. It is at least possible, if not more or less rapid chemical changes, which our methods are too crude to detect, are going on in the seeds, simply is the experience in the first place that seeds that are kept for a long time do wear out, and that the percentage of seeds that germinate and grow gets smaller and smaller the longer they are kept. The deterioration is more or less rapid to the nature of the seed and its costs, but in every known instance there is deterioration sooner or later—deterioration, i.e. change, chemical change. We do not know, but it is not unreasonable to suppose, that these changes are due to the instability of the part of the seed molecules because of the lack of stimulation. A stage is reached when no response is offered. Similarly, in the contrary direction, the process of growth when once begun cannot be arrested; it must proceed, or the organism will disintegrate immediately. Life is a process rather than a condition. When once, as in the case of the developing egg, a certain temperature has disturbed its statically arranged molecules, proper energy must be furnished for maintaining the structure and the structure comes tumbling down, and we say that the thing is dead.

Hence, with Waller, we ought probably to specify the character of the seed or the egg in this way: Matter—Not living.—Formerly living. Capable of living again. They are physico-chemical structures whose life may begin, rather than living things themselves. Further, it has been shown that the vitality of seeds can be tested by the electromotive method (electrical changes being taken as the token of chemical changes, which are in turn a sign of life); so that in addition to the question, Are you alive? we can put the question, How much are you alive? to the seed, and learn its answer in terms of electric units. Heat with which our previous discussion was full, the degree of chemical vitality will be shown corresponding with its age. At the same time we have made little advance in our inquiry as to wherein livingness consists. For the simple reason that we do not know what it is. Yet if we cannot tell what life is, we can state what living things do. It is possible to make a series of statements descriptive, if not definitive, of living things.

(1) All living things consist of a colloidal substance called Protoplasma. As seen in the simplest plants and animals, it is viscous and translucent,
generally colourless, immiscible in water, and yet composed of it sometimes to the extent of 90 per cent.
Chemically analyzed, after treatment by re-agents, which rob it of its essential character, it is found to consist of carbon, oxygen, nitrogen, hydrogen, together with traces of various salts; but this complex of proteins \((\text{C}_n\text{H}_{2n}\text{O}_m\text{N}_p=\text{possible minimal composition of a molecule of egg albumen})\) exhibits such a variety of qualities that the mere chemical synthesis of protoplasm is no longer a simple and obvious task. Whether these proteins can be compared with the actual constituents of protoplasm or its first decomposition products is difficult to decide.

Chief amongst these characteristic qualities is the fact of its organization. Careful examination shows that proteins or protoplasms are present, one of which, the more liquid ground-subsance, is continuously distributed throughout the meshes of the more active and, at the same time, firmer spongoplas or reticulium, as the second constituent is called in true histology. Here the greater divergence of opinion occurs, possibly because each of the two views that are most in favour expresses a part of the truth. Batschi, and with him a considerable and latterly increasing number of workers, subdividing the reticulum, see it as a truly liquid, or rather a mixture of liquids showing a foam-like structure in which the firmer portion forms the walls of separate chambers that are filled with minute, closely crowded drops of the more fluid portion. Any reticular appearance is therefore an illusion, being the sectional aspect of the alveolar structure. With singular skill that investigator has succeeded in preparing artificial emulsions which show a striking resemblance to actual protoplasm. The majority of the cell biologists, especially the younger generation of school, hold to the view that asserts the presence of extremely delicate, though coherent, threads which extend through the more liquid ground-substance, either forming an uneven but continuous meshwork like the fibres of a sponge (Klein, van Beneden), or consisting of disconnected threads and their branches (Flemming). Now, although it is undoubtedly true that in many instances protoplasm does present a vacuolar or foam-like structure, to admit this does not necessarily commit us to Battschi’s opinion.

On the other hand, the fibrillar network so often and so widely demonstrated, especially during cell-division, seems to be a general, perhaps the more typical structure. Hence we come with Oscar Hertwig to the conclusion that the protoplasm of different organisms varies in its material, composition and structure. Apparently, however, these important differences are due to variations in molecular structure. There is no universal mode in its structure; protoplasm is polymorphic, and it is just possible that the different types represent different phases.

In virtue of this organization, the attempt is continually made to offer a complete explanation of the living thing in terms of mechanics. The living organism is certainly more of a mechanism than of a chemical compound, and its activities will find a better explanation along these lines than in the mere consideration of its chemical nature. Doubtless the protoplasm of a cell can in some way be traced to chemical forces, just as in the case of the activities of the steam engine; but it is not at all evident what chemical forces explain the motion of the steam engine. The action of the living cell will be better explained in terms of its mechanism than of its chemistry, yet even here imperfectly. Superficial resemblance discloses themselves, that in their greater or less completeness simply serve to hide the critical points of difference. Thus it is obvious that the first place in this case is not the second law but the requirement to be more or less continuously supplied, that this fuel or food is subject to transformation by the processes in the mechanism of the process in which heat is evolved, and that waste products are formed. Yet the living organism is unlike a mechanism in various respects.

(e) The organism is itself continually being changed in the course of its automatic developmental activity. The engine may be said to consume the fuel supplied to it, but it is not incorporated with it. The food, self-procured, of an organism is in a sense its fuel, but it becomes directly transformed into the machinery that is, its work. (f) A mechanism has a provision for self-preservation, and this self-regulation amounting to self-preservation, which has not been added to it from the outside, nor is a necessary property of the machinery of a mechanism. The organism, on the other hand, is of no use to it in the line of preserving its integrity. (g) The organism has a certain reproductive power; in other words, it is the actual machinery, and food repairs both the gaps left in the mechanism and any imperfection by which it may be inflected. The coal supplied to an engine does nothing to repair its tear and wear, nor can the engine execute its own repairs. (h) A mechanism is constructed to perform a certain function or limited number of functions, and these it perpetually performs in the same way; the organism’s range of activity is inconstant and varied as its method of organic growth. The organism can completely reproduce itself by means of parts thrown off from itself; there is nothing analogous to sexual reproduction in the biologic kingdom.

(1) The activity of a machine is usually the sum of the activities of its constituent parts, but in the case of the organism it is something more, for its living unity is not merely represented by the sum of its organs, but involves a certain subtle interplay of all the material. Therefore it is an organism; the true activity of the organism is the activity of its organs in their interrelationships, i.e. the activity of the organism is the activity of all its organ systems, including the organ system of self-regulation, which is quite as real as the organ system of self-provision, the nutritive activity. (2) The activity of the organism is the activity of its organs. (3) The organism has a certain reproductive power; in other words, it is the actual machinery, and food repairs both the gaps left in the mechanism and any imperfection by which it may be inflected. The coal supplied to an engine does nothing to repair its tear and wear, nor can the engine execute its own repairs. (h) A mechanism is constructed to perform a certain function or limited number of functions, and these it perpetually performs in the same way; the organism’s range of activity is inconstant and varied as its method of organic growth. The organism can completely reproduce itself by means of parts thrown off from itself; there is nothing analogous to sexual reproduction in the biologic kingdom.

In conclusion, it is to be observed that the term "living" indicates some characteristic of a living thing that is not found in the lifeless. It is the essence of the living thing that is thereby indicated. And the essence of the living thing is that it is self-regulatory and self-reproducing. It is this characteristic to which the term "living" is applied. The term "living" is applied to all things that possess this characteristic. It is not applied to inanimate things, because they do not possess it. It is applied to all living things, because they all possess it.

transformations. Certain physical and chemical characteristics abide with the cells in death as in life; but when the typical energy phenomena are no longer in evidence, we say that the thing is dead. Life, then, has to do with energy, but is not itself energy, not even a specific kind of energy; its characteristic is seen in the way in which the energy is directed and controlled. Every living thing is not merely a centre at which energy is being constantly transformed—a mechanical energy-transformer—a centre, further, at which the tendency to degradation of energy is resisted, but it also acts as a direct channel along which energy can flow to accomplish specific work: as long as the organism is alive it is continuously disturbing the equilibrium which should otherwise arise between itself and the environment. Life is unceasing, directive, and selective control of energy; but it is also accumulation of energy, e.g., in specific tissues, and a transformation of it leading to further availability. The organism up to a certain stage appears to be continually gaining energy at the expense of the environment, and in reproduction the process is perpetuated. Other controls of energy: temperature, e.g., controls its passage in the form of heat from the hotter to the colder body. But this passage involves not merely degradation in that particular form. Hibbert brings out very clearly the great difference in temperature as a determining factor, and that in any calculation of the work done it will find a place; whereas it is impossible to show that life is a factorial element in any calculation of the work done by a living organism. The nearest parallel, yet hardly a parallel, would be in the unique characteristic of reproduction, when, owing to the accumulation of energy, it may reasonably be conceived that the control or potential factor exhibits itself in the process of division. This control is supertensively seen in the development of the segmented egg to its predestined goal in the typical adult form. Accordingly we conclude that after the methods borrowed from the analysis of inorganic nature are exhausted, there is a residuum of fact which is untouched by them, viz., the directive control and co-ordinated activity of the organism by its own end. The biological whole is greater than the sum of its physical or chemical parts. And it is no objection to urge that we are not objectively aware of this particular control, for the same is the case with physical actions, as, e.g., gravitational attraction. Life is known to us as control and guidance of energy, interacting with matter in ways that, if not yet wholly intelligible to us, are clearly not covered by what we know of its physico-chemical properties.

(3) All living things are characterized by cellular structure. Life, that is to say, so far as we know it, appears only in one form—that of the cell. The further apart living forms are from the point of view of classification, the deeper is it necessary to go to find community. In extreme cases this may be found only in their cell-structure and protoplasm; hence the fundamental importance of these aspects. Briefly, the cell-theory amounts to the statement that the bodies of every form of life, plant or animal, are composed of one or more minute structural units known as cells, out of which, in the case of higher forms, directly or indirectly, every part is built; all organisms consist of cells, bacteria being but a sideline. The body is a mosaic rather than an asphalt, but the cells are in communication, unisolated by cement. From the view-point of this cell-theory, the animal kingdom (as likewise the plant kingdom) may be regarded as an ascending series, at the bottom of
matter. Already in 1833 Dujardin gave the name of 'narcocyte' to the substance composing the bodies of the ciliate protozoa, he was examining. But it is not till we reach the names of Schleiden and Schwann (1837-1839) that we have before us the foundation of the true line of events. More recent work seems entirely composed of them, and that these aggregate to form the typical chromo-

some. The number of the chromatin granules is of the first importance in its relation to the chromosome. But are these chromatin granules ultimate units, and can we assign to them the value of individual entities?

The problem only becomes the more interesting when we begin to investigate the view of the existence of the chromatin network of the nucleus and cytoplasm. Recent research tends to confirm van linden's conclusion, reached already in 1855, that the chromosome network is not the nucleus, the reticulum, and even the nuclear membrane, but is built up of microscopic units by connective substance, and that even the nuclear membrane is formed in the cytoplasm, and is not the membrane of the nucleus, although close to it; sometimes, however, inside (acinus urinariae). It is generally surrounded either by a membrane, or by a reticulum, or by a cyto-reticulum, or by an attraction-sphere, or by a cyto-attraction-sphere or cyto-atmosphere; or by an area of protoplasm denser.

Next to protoplasm—the fundamental constituent of the cell—the second most important element is the nucleus: indeed, its significance is hardly less than that of protoplasm itself. The cell, with few exceptions, is a characteristic of every cell. Modern theories of heredity are theories of the cell-nucleus.

In any ordinary nucleus, the following structural elements may commonly be recognized:

(a) The nuclear membrane, which is probably a condensation of the general protoplasmic reticulum, although its existence has not been demonstrated in every case. It has a variable staining capacity.

(b) The nuclear reticulum, which is composed of two distinct substances—chromatin and linin. The former is the nuclear substance par excellence, in that it is restricted to the nucleus, and is generally seen as irregular granules and mass, when deposited, as it were, on the threads of linin; sometimes the relation is of a more intimate character, and the chromatin seems embedded in the linin, giving the impression of an intimate relation between the two substances. Some of the most recent work, in fact, suggests that the chromatin, on which hitherto such stress has been laid in connection with theories of inheritance, is nothing more than a secretion of the linin; the linin, on the other hand, is not destroyed by the identification of permanence and individuality should be associated. The most striking support for this view is found in the way in which during the main critical phases of the cell's cycle, and finally at the time of division, the chromatin decreases in amount, sometimes even to the vanishing point. It is supposed to have been employed in nourishing the cell during the stage in question. The linin likewise after treatment shows a granular structure, and seems similar in composition to the cytoplasmic reticulum. The quantity of chromatin in a cell is not constant, but in the processes connected with cell division and fertilization the granules form large units known as chromosomes, which are now regarded by many as the vehicles of inheritance. The ultimate units which constitute the chromosomes is constant for each species. It is still, however, an open question whether the chromatin-granules of the reticulum are individually identical with those forming the chromosomes (Wilson, "The Cell," p. 27). At certain stages the chromosomes appear perfectly homogeneous, and the same is sometimes true of the entire nucleus.

The evidence thus goes to show that in the great majority of cases the chromatin thread is built up of a series of minute deeply-staining granules (chromosomes) that are embedded, as it were, in the linin, sometimes irregularly, sometimes with such regularity, that the whole network seems entirely composed of them, and that these aggregate to form the typical chromo-

some. The number of the chromatin granules is of the first importance in its relation to the chromosome. But are these chromatin granules ultimate units, and can we assign to them the value of individual entities?

The demonstration of these microsomes—intra-cellular units of a lower order—has an interesting bearing upon biological theory. Dujardin's conception of the nuclear theory of protoplasm, ill-founded as it appears to be in relation to his own understanding of the protoplasm, regarded protoplasm as consisting of extremely small, or the most minute, or even elementary, units, which he called biolasts. In a real sense, these microsomes, evidence of the division of function, correspond to Atman's theoretical units, and invite consideration as more elementary individuals than the cell, standing between the latter and the ultimate units of the microsomes. Herbert Spencer's 'integral units,' Darwin's 'germules,' and Weismann's 'biolasts,' are analogous to Atman's theoretical units, and may be viewed in the same way as Atman's conclusions in the theories of regeneration, development, and heredity associated with these great names, would thus appear to correspond in a real sense to the view of the existence of a universal unit of life.

As to the ultimate independent unit of living matter—the smallest mass that exhibits to the biologist the phenomena of life, and which, however, perhaps, might be supposed to be able to make any precise statement. Everything depends upon the criterion that we use. If we demand in all cases to show the phenomena of life, we might suspend growth and assimilation, the division unit would have to consist of protoplasm plus nuclear substance; if we admit the absence of nuclear control, then the division of life is at an end. This has been experimentally proved on a very extended scale by merotony and numerous investigations in regeneration. On the other hand, it is irrational to believe that there will be a smaller and simpler form of division to which the manifestations of the life of the organism might exist, unless a metaphysical statement is made about the universal unit of life.
BIOLOGY

than the rest of the cytoplasm (archoplasm): sometimes in the 
vegetable state it is extended by and among the living 
materials, and is then very often difficult to demonstrate. Typically 
the centrosome, which stains deeply, is a single organ; but, as a 
rule, it is divisible into an axial mass of the succeeding division in 
which each of the daughter- 
cells receives one of them. The failure to substantiate its 
existence in the case of the cells of many higher plants, and 

the fact that in some instances at the close of cell division, 
or in very young animals, it reappears again as such, rather 
militates against the earlier view of its indispensable and dominant function, and tend to 
relate the centrosome to the time at which an organ that assimilates, grows, divides, and is in many cases 
passed on from cell to cell, it also answers to the conception of an 

independent organism essentially a centre of determining activity, and it seems finally to 
dissapoe with the loss of the power of reproduction.

With regard to the protoplasmic membrane, it has already seen 
that its importance is now perceived to be secondary. It is 
important without the aid of some other organ.

In the case of the higher animals and plants, the distinctive elements of irritability, studied 

singly as tactisms in the case of unicellular forms, may function in a specific way in the parts of a 

multicellular organism, giving rise to those move 

ments that are known as the various tropisms: 
such a characteristic turning towards the sun gives 
its name to the flower heliotrope. It is found that 
many movements of animals and attitudes of 

plants depend on the mechanical arrangements of 
the structural and symmetrical distribution 
of irritability on the surface of the body of the 
organisms' (Loeb, Dynamics of Living 
Matter, p. 5).

Now, if lines of force (e.g. light, heat, etc.) 
average in some way (e.g. by diffusion) strike an 
organism with greater profusion on one side than 
on another, the tension of the contractile elements is unequal, and if the animal moves, it 
tends to turn in such a direction that the lines of force 

having equal density at symmetrical points, and 

at the same angle on both sides, and will 
continue to move in that direction, or away from 
it, according as it is apparently attracted or 

repelled. Such automatic orientation is known as 
a tropism.

The external stimuli which act upon the world of 
life are manifold; but we may consider five 
important groups—(a) thermal stimuli, (b) light 
stimuli, (c) electrical stimuli, (d) gravitational 
stimuli, and (e) chemical stimuli. The reaction of 
an organism is, then, simply its response to particular 
stimuli. The experience of everyday life is sufficient to show us that, under 
the same stimulus, the reaction will vary con 
siderably with different individuals. In fact, the 
same stimulus may produce totally different effects 
on different individuals. The external stimuli are 
different response in the case of a stone, a bulldog, 
and a Skyte terrier; under electrical stimulation the 

salivary gland yields its saliva, the liver its bile. On 
the other hand, it does not strike one as 

quite so obvious at first sight that very different 
stimuli give identical effects upon the 
same protoplasmic body. Apply to a muscle cell 
electrical, chemical, in short any possible form of 
stimulus; it has but one answer,—it contracts. 
The same holds true for many Protozoa; they 
have but a single characteristic response to all 
kinds of stimuli. We have thought of the stimuli 
as exciting, or even producing, an increase of the 

specific activity in various forms of living sub 
stance: its action may, however, also result in a 
diminished activity, and under certain conditions the 
activity is considered to be a fundamental property 
of living protoplasm, but it expresses itself in 

specific actions, according to the specific structure 
of the organism, under the influence of the 

external world.

(a) With regard to thermo-tactism, it may be noted that the 
temperature of the environment is of vital importance to every 
organism. There is a limit above which the life of 
organisms is hindered, and indeed with the stage of 
its development. The maximum temperature for plants
627 through this some-. but plant could the pro- sort found free-moving the most they absorb stimulus 124). most is we symmetry galvanic animals. (59x714)
and earth while ture, zero distinctive. that accelerator refractive index, consist curiosity, creatures not in influ- ences rent. heliotropism. When the--heliotropic phenomenon is probable when the-- heliotropic occurs more due to the injury of the organism, the-- animal's reaction to the stimulus is determined the free-moving plant. The response of the--
(6) Chemotropism is the name applied to the reply made by plants to the presence of substances emanating from a centre of diffusion: those which are attracted or repelled move or itself in the direction of the lines of diffusion. The term is sometimes applied to the reaction of some animals. Chemotropism, inasmuch as the 'lines of diffusion are commonly dis- turbed by currents due to changes and variations in tempera- ture' (60). They are, however, an attractive power over freely moving experiments. Cells can be arranged by which that gas can be introduced into water crowded with free-moving. leucocytes are observed that very quickly surrounded the weed, for the sake of the oxygen that it liberated by means of its chlorophyll. It then only. leucocytes which are more might be used as a delicate test for minute quantities of oxygen.

The whole question of the chemical irritability of cells has a very luminous bearing on the question of the irritability of colours of blood corpuscles known as leucocytes. The modern germ-theory as applied to most diseases holds that inflamm- ation is set up by micro-organisms and their metabolite pro- ducts (i.e. the products due to chemical change in the micro- organisms themselves); these various toxins are carried in the circulatory system to all parts of the body. Now Mitchelskov has shown how certain of these colourless corpuscles, by their absorbing the injuring elements, constitute themselves the very guards of the organism. He has shown that, the--the cocci of erysipelas, the spirula of relapsing fever, and the bacilli of anthrax, are all rendered harmless or their toxins neutralised by the antidotes elaborated by these wandering ameboid, cells, and he considers the leucocytes as the first line of foreign micro-organisms and the leucocytes continual war is waged, and the life or death of the organism depends upon the result of this warfare. The leucocytes are stimulated to the destruction of the leucocytes are simultaneously stimulated by means of chemical sub- stances produced by the micro-organisms; such stimulation can turn the leucocytes from intelligent soldiers to idle--(by the leucocytes) are killed.

5) All living things are further characterized by continual change, physical and chemical, of the material of which they are made. Certain parts are being continually used up, and fresh material is brought in and built up into its place. This ceaseless internal cycle of supply and waste, and supply, is designated by the term meta- bolic. The living organism is as a flame that fed with oil preserves its outward form, yet all the while the substance by which the flame is fed is being decomposed into its constituent elements and passes off transformed. Biology, apart from Morphology, knows no limits. Nutrition and digestion, excretion, and circulation, are various phases of this comprehensive activity. In order to live, the cell must absorb nutrients substances which it proceeds to elaborate, retaining some portions within its body, and rejecting others. Continually, in the living cell, substances of complex molecular, and in that measure unstable, structure are being built up from substances less complex and more stable, with the absorption of energy; concurrently, other substances--food reserves or the leucocytes, for example--are being broken down in order to provide the energy required. The more intense the life, the more comprehensive are these parallel processes of construction and destruction. And yet, if parallel, they are hardly equal. In the period of youth the constructive is in excess of the destructive, and we say the organism grows.

Now all living things grow in a sense that is not predicable of other objects to which the word may be applied. For in the saturated solution of salt if a little more salt is added, the whole volume of solution is increased, the crystals grow. But in the living body, when new parts are added on the outside, layer by layer; living things grow by taking up particles of matter in between already existing particles at every point—interstitially, as it were. Then, following the crystal growth, the growth of the new parts,--in the case of the body--probably due to the stimulus of gravitation. Although the problem is still far from solution. Loeb (op. cit. p. 152) considers it prob- able that the reason for the tropism is that other animals are determined in certain cells of the inner ear, or in certain cells of the brain, through an influence upon the reaction velocity of certain chemical processes.
makes the materials of its growth, manufacturing particles like itself out of material different from the medium which it is transformed in. The metabolism of the ciliate protozoan, Paramecium caudat., if kept in a hay infusion at a definite temperature, will grow and reproduce by binary fission at a definite rate. This growth and reproduction are accomplished at the expense of elements in the medium which are transformed into the protoplasm at the same time other substances appear in the medium which are the waste from the growth process. If we call these last b, and let a represent the material that goes to form new Paramecium, then the growth may be constructively compared with that of any purely chemical equation, with the result that a striking difference is noticeable. In the case of an effective chemical reaction between different compounds, the result will be found to be of the general character A + B = C + D; i.e., different substances are found in the two terms (e.g. Zn + H₂SO₄ = ZnSO₄ + H₂). In the former equation the fact that P appears on either side constitutes a veiled expression of a characteristic of life: that it occurs in a greatly increased amount. As a matter of fact, however, this formula represents but half of what is actually in progress; for at the same time other processes of a contrary or destructive character are in operation, and the organism is alive only so long as they do not gain the ascendency over the processes of construction.

From the work of destruction, which may involve the breaking up of complex substances into simpler ones, or their combination with oxygen, various end products arise, some useful to the organism, e.g., bile, others not so useful, or positively harmful, as urea, carbon dioxide, and mineral salts. In the case of animals the whole of their energy is derived from waste; in plants only a small part is thus derived, the rest being obtained from sunlight. The metabolic processes that are going on in any higher organism, plant or animal, are manifold in the extreme, and even in the case of unicellular forms our understanding of them is far from complete. At the same time the unity of the entire organic kingdom is well illustrated in a restricted series of fundamental metabolic processes which are common to every living creature.

(a) Every plant and animal respires, i.e., it takes up oxygen from its environment, whereby it oxidizes the carbohydrate and aluminous substances of its own body, producing as final product carbon dioxide and water. (b) The food materials of all living organisms, plant and animal alike, are originally prepared from the inorganic through the instrumentality of chlorophyll. Further, while it is true that growing plants are able to live on simpler compounds than animals, yet a study of the development of the embryo in the seed (also the growing cells in a young stem or root) shows it to be without the adult capacity, and dependent on manufactured carbo-hydrates, proteins, and fats, as is the case of animals. The differences relating to the mode of supply in the case of the two kingdoms are ultimately reducible to differences in the cell structure. The exaggerated development of the vegetable cell-wall prevents the ingestion of solid material.

(c) In both animal and vegetable kingdoms, characteristic compounds are formed during the grouping and absorption, such as ptyalin in animals, and disaccharides in plants. These substances are known as ferments or enzymes, and particu

larly in the constructive process, as it occurs in plants and animals, they play a very important part. In many cases of destructive processes, i.e., in destruction of waste, it is reported that the cell produces an enzyme for this end. So fundamental is the action of these enzymes that there is a very true but obvious saying: that they may be said to be life of a series of fermentations. The evidence goes to show that to a soluble enzyme is added to every functional element of the digestive system and its diagram is due in part to the action of popin which breaks up proteins. Respiration is achieved only through the presence of oxides, which carry oxygen from the lungs, and transport it to and from the blood corpuscles of the body. Under certain conditions—commonly greater concentration of the solution—the action of some enzymes increases, they can produce, against what they have taken apart, and there are others that devote themselves solely to the breaking down of the matter. Still other enzymes in its inner nature is still unknown. It appears to be ciclopedia, and, in several cases, is certainly not protein; still, as a rule, in elementary structure it is more like a protoplasm than anything else. Positively it is produced through the presence of enzymes, and these enzymes, however, in large measure to be a hydrolysis; the substances of food lipids are then undergoing decomposition.

(d) As the result of these metabolic processes, corresponding products are obtained, the plant absorbing starch in plants and glycosides in animals, oxides and tannins in both. We have spoken of the point of view that likens life to a series of fermentations. Investigation into the nature of these enzymes promises instruction in many matters that have not been achieved in the separation of them and the investigation of them to work apart from the living environment (e.g. rennet). Nevertheles it should be pointed out that these enzymes may help our ultimate account of life, because no account of enzyme action, however complete, gives us any clue to the characteristic achievement of the cell in co-ordinated and regulating these various activities that take place within it. Each enzyme is usually able to act in its specific way only upon one definite type of molecular arrangement; but the cell as an energy transformer is distinguished by the way in which it connects the varied complex reactions effected by these enzymes which it has itself produced. Accordingly, to consider the cell activity as simply the sum of its varied enzyme activity, is to make the same mistake as to suppose that an organism is the sum of its organs. It is to offer only a partial account of cell life. If regard were had only to the action of the enzymes, the interpretation would be purely katabolic, and there could be no account of the building up of compounds with higher chemical potential, which is a constitutive a factor in life. Each enzyme is the study of isolated, yet highly selective, activities—each enzyme must fit its substratum like lock and key, or the reaction does not take place: but the changing cell is seen in the connecting of one reaction with another, and in the using of the free energy of one reaction to carry on another. In this direction we have the distinctive character of life.

In metabolism there are three great stages which may each be characterized by a single word—Absorption (of new material); Transformation (in the interior of the protoplasm); leading to Excretion and Excretion the intercellular process capable of absorbing or exerting matter in either a gaseous, a fluid, or a solid condition.

The differences between Metazoa and Metaphyla are based on broad lines, physiological rather than morphological. It is from the food that we have seen that all the organic substance in the world is ultimately created by plants under the influence of sunlight. Animals, so far from creating, are continually destroying organic matter and re-solting it again into its original components. The food of plants exists in a gaseous state in the atmosphere, or as salts in solution in water; it requires therefore no preparation, and can be directly absorbed by the surface of the roots and leaves. But the food of animals, being compound matter, is usually in a solid state in a condition, which necessitates the presence of an internal reservoir in which the food can be stored until it is reduced to a more or less liquid absorbable condition. That is to say, almost all animals require a stomach, and in the case of the Protozoa the whole creature functions as such for the time being.

Again, the food of plants is everywhere present. Every wind that blows brings food to the leaves: rain-water with salts in solution bathes the roots. Their food may be anything that they have to seek their food—food; it does not usually come to them. Hence the nature of animal food requires that they shall have a definite mouth, a digestive tract, organs to carry the body in search of food, organs to seize it when found, and definite-ex
cretery organs to get rid of the waste. Free locomotion in the case of plants, apart from the Protophyta, is confined temporarily to the male cells, and, with the absence of movement, the function of the female substance is lost. Plants and animals thus differ in the nature of their food, yet both are dependent on the environment for supply, and that food, when elaborated into 'the physical basis of life' by contact with the living body, shows little chemical difference as animal or vegetable prolapse.

(6) All living things exhibit cyclical phases of activity known collectively as a life history, in which they manifest various degrees of vitality, sometimes with accompanying change of form. Every living creature, unicellular and multicellular alike, passes through a regular cycle of changes mainly determined by forces within itself, to which there is nothing comparable in the inorganic realm. Reference has been made to a period of youth characterized in both cases by active cell-proliferation; the constructive (anabolic) phase of metabolism is then in excess of the destructive (catabolic), and the creature grows. This is followed by a period of adolescence, in which, although at first the two phases practically balance, yet the energy of either later diminishes and is accompanied by certain morphological changes in the cells previous to fertilization—that process whereby the energy for division is renewed. This in turn—particularly in the case of unicellular forms, when fertilization is not effected—is succeeded by the period of old age, in which destruction slowly overtakes construction, and eventually the organism dies. The unicellular organism dies from protoplasmic senile degeneration just as surely as does the multicellular form. Now this 'capacity for death' is one of the distinguishing features of all living things. In a very real way, moreover, death is the servant of life, holding the balance between unlimited reproduction and limited feeding area. To it is due the circumstance that life is periodic in appearance; the recurrence of the living individual is a phenomenon unique in the realm of nature. This intermittent character of life is, however, seeming only. The death of the individual that has reproduced by means of a germ cell divided from its body involves no break in that series of continued divisions which thus extends backwards to the dawn of the race.

To this cyclical movement there are apparent exceptions. Weismann long ago suggested the immortality of the protozoa, but this is disavowed by the process of reproduction. In some cases of parthenogenesis that procedure is apparently strictly followed throughout the specific history, but again there is always, ultimately, death of the individual. In some of the higher plants and trees, construction appears to be continuously in excess of destruction, and the tree may be said to grow as long as it lives; nevertheless the individual eventually dies, even although, e.g. by grafting, we have perpetuation of the race without fertilization.

Further, we remark that not merely during those internal changes of every part which comprise metabolism, but in those changes of the whole which are involved in the conception of its life history, the living organism maintains its individuality and its integrity. In spite of the constant metabolic change, in spite of growth and decay, the living organism possesses a more or less constant form which serves as the arena in which those changes are displayed. We are aware of the persistence of a state of dynamic equivalence between the organism and its environment; in the inorganic realm. Continuously it is alive, and yet its material identity does not depend upon identity of matter. The matter changes, but the form remains more or less constant, the indivisible characteristic of the whole.

(7) All living things are capable of reproduction. Having a definite term of existence, they must reproduce themselves; otherwise the organic kingdom would soon pass out of existence. The individual die—is intermittent in form—not, however, before having, in most cases, by a kind of discontinuous growth, given rise to forms more or less like itself, which in their turn grow and reproduce their kind. No non-living thing reproduces itself in this way.

(a) Cell-division. The simplest form of reproduction is by cell-division. The need for this arises directly out of assimilation. For the due interchange (e.g. respiration) between a cell and its environment, a certain ratio is necessary between surface and bulk. But this ratio is disturbed by the growth of the cell. Such growth is accompanied by a change in form, insomuch as, while the bulk varies as the cube of the diameter, the surface grows but with the square. Further, as we have learned, the nucleus which is so intimately concerned with assimilation, is limited in the area of cytoplasm which is affected through the continual intercourse between the two. Accordingly the requisite surface is gained through division of the mass, and the mother cell loses her identity in that of the two daughter cells. Such reproduction accordingly takes from the living texture of the race, and the whole, then, is primarily assimilation, secondarily cell-division—the multiplication of cells.

Since 1846 it has been clearly recognized that new plant cells arise only from previously existing cells by the division of a mother cell into two daughter cells (Biogenesis): it was not till many years later that enough was known about the genesis of cells in the animal kingdom to overthrow for ever the doctrine of spontaneous generation.

Today, then, we maintain that the cell has no other mode of origin than the division of a pre-existing cell; and knowing something of the importance and permanence of the nucleus, we are also prepared to believe that it plays a special part in the process of multiplication by division. Fifty years ago Remak very naturally thought that division must commence in the very centre of the cell, and he pictured the process as beginning by division of the nucleus, followed by constriction and division of the nucleus, and completed by constriction and division at the opposite end. He did not press the point about the nucleus, this description holds good for cases of division in protozoa, and animal and vegetable kingdoms. It is termed Direct Division (Amiasis Division).

Such a method of division seems very natural, and, if it were conducted with regularity, it would obviously result in a fair division of the total mass of nuclear substance. But so delicate is the balance of nature that this method is found to be in operation with comparative rarity; nay more, evidence is gradually accumulating to show that direct division, which is a division of the mass of the nuclear substance without formation of chromatic thread or chromosomes, rarely occurs in embryonic cells or in some tissues of the adult. The original point of view was that of the occurrence of such division, or conjugation, but an adequately large number of diseases of chromosomes, associated with highly specialized cells whose nuclei are commonly of unusually large size; here it has proved again and again that the chromatic thread is the basis of the whole. The other method typically called Indirect Division, or Mitosis (after 'a thread'), is complicated, and involves the breaking up of the equator of a spindle of thread, the breaking up of this thread into the characteristic number of chromosomes, their arrangement by the law of the equator on the equation of a spined form of ellin, their exact longitudinal halving, reduction towards the pole, centromeres, and re-construction of the nuclei. The nuclei are termed as the result of a division of the cytoplasm of the mother cell in the region of that same equator.

Biologists speak glibly of the separation of the chromosomes.
from the division of the fertilized egg remain associated together, thus forming a complex colony of cells, an organic individual, however, of a higher order than the Volvox community. In a sense this multicellular organism is in certain respects comparable with the sum of the cells produced by a-sexual division from two unicellular ex-conjugates. The cycle closes in the higher forms when the sexual cells have become mature, and separate from the parent to unite in the process of fertilization, which forms the starting-point for the new generation of dividing cells. All this, of course, is a very complicated process in the case of the vertebrates and invertebrates, but in the lower multicellular Algae it is relatively simple. The capacity which every cell, e.g. of Pandorina, exhibits of helping to reproduce the whole multicellular organism is not seen when the organism is somewhat more highly developed. For in that case the cells of the body sooner or later become differentiated into two great classes, the members of which Weismann has termed somatic and germ cells respectively. The former are of prime importance for the individual life, being differentiated into those various tissues which collectively form the 'body.' The germ cells, on the other hand, have a great significance for the individual life, but in eventually giving rise to new creatures are intimately concerned with the interests of the species. This differentiation is already noticeable so far down in the animal scale as in Volvox globator. Amongst the very numerous cells that constitute this colonial form some remain vegetative and others are transformed into reproductive cells. The eggs are large, and are fertilized by minute biflagellate male spores which are produced in dozens by the division of a mother sperm-cell. Indeed, we may consider that in the plant world egg- and sperm-cells are derived from reproductive cells which initially are similar in size, appearance, and origin, but have become differentiated through developing in different directions. The evolution can particularly well be traced in the group of the Alge. At the same time it is right to bear in mind that the distinction, even in the case of the higher animals, is only relative, since both sets of cells ultimately have a common origin in the parent germ-cell.

Associated with fertilization is the formation of these higher forms is at least one interesting phenomenon complicating the life history. We have seen, e.g. in the case of Paramaecium, that between two acts of conjugation a great deal occurs in the way and in the result of the division, both mother and father. The analogous state of affairs amongst higher forms. Sometimes the individual proceeding from the fertilized egg is unable itself to form reproductive cells. It can multiply only by means of buds, spores, or parthenogenetic eggs. These, or their asexually produced descendents, become sexually mature and produce eggs and spores. Such a cycle is known as an alternation of generations. It occurs in the life history of some worms, as also particularly in the case of some members of the Coelenterata.

There is, then, a stage in the development of every multicellular organism at which the progenitors of the germ-cells are apparently alike in the two sexes, and for that matter indistinguishable from the surrounding somatic cells. When in the course of development follows their differentiation from these somatic cells, and eventually a divergence in themselves corresponding to the different functions that they will have to perform later. The female germ-cell, ovum, or egg supplies most of the substances and nourishment that the embryo stores the food whereby it is nourished. Accordingly not only is it large, but its cytoplasm is laden with yolk or food-matter, and it is usually
surrounded by one or more membranes for the protection of the developing individuals. All its activities are, therefore, anabolic or constructive on the whole; for the early life of the egg consists in the accumulation of cytoplasm and the storage of potential energy. On the other hand, the metabolism of the male germ-cell or spermatozoon is destructive or katabolic. To the mass of the embryo it contributes merely a nucleus, centrosome, and a minimum of cytoplasm. Its early life is spent in the accumulation of food material; it has almost it not more protoplasm than is sufficient to form the typically single flagellum by whose active, rapid movements it seeks the ovum. Hence in their final mature state the ovum and spermatozoon have no external similarity. What we find is a physiological division of labour between the cells which are to join in the act of fertilization, in virtue of which one of them becomes active and a fertilizer, while the other remains passive and capable of being fertilized. In fact, we are forced to the conclusion that it is the arrangements and adaptations connected with sex have the same two-fold object, namely, to facilitate the meeting of the sexual cells and to arrange for the nourishment and protection of the egg. The organization that develops as a result of the sexual cells is the one that carries out the other we term female. These relationships are secondary and have nothing whatever to do with the process of fertilization itself, which consists of the union of two different and apparently similar nuclear substances derived from different cells. This means, in its turn, that the original morphological equivalence of the germ-cells (seen, e.g., in the Protozoa) is lost; what is left is an equivalence of nuclei. Hence the essential fact of fertilization and the conditions of its production consist in a union of two identical and apparently identical nuclei; and to this all other processes are tributary. Although the cell character of the ovum was perhaps recognized by Schwann, yet it is not so many years ago (c. 1878) since the fact that the spermatozoon is likewise a cell was universally admitted.

With regard to the growth and origin of the germ-cells, it may be stated that both ova and spermatozoa take their rise from the somatic cells which are not identical in the two sexes. These identical primordial germ-cells are produced in the case of species some animals like marsupials and eutherians that separates ectoderm and endoderm. In the Cestodera they arise in a germinal epithelium which may be either ectodermal or endodermal in origin, but in the higher animals it is mesodermal. What exactly determines the subsequent differentiation is not yet clearly made out. External conditions play an important, a decisive role, as some investigators, experimenting upon tadpoles, found that by increasing the richness of the nutrition in which the kept they the early undeveloped (3) forms, he could raise the percentage of females. Manseau seemed to show with regard to rotifers that a high temperature results in the production of males. A true reading of the facts shows that the higher temperature induced greater activity, resulting in a speedier exhaustion of the food, and, in consequence, a tendency to the production of males. It is doubtful, however, how far these experiments correspond to real facts. The decisive factor in the determination of sex is still unknown; indeed, there is considerable evidence that it may be determined by factors other than nutrition as well as previous fertilization, which simply in that case provides the egg with the material condition to develop.

The essential activity of these primordial germ-cells has been very carefully investigated by different workers (Hertwig, Hamburger, Stieve). They have been tracked very far back in the developing egg, and identified at their earliest appearance. In the case of the roundworm Ascaris, Boveri already recognized the first appearance of the germ-cells in the two-cell stage. Further, it has been shown that this progenitor of the germ-cells is a somatic cell, not in its greater size and richness in chromatin of the nucleus, but specifically in the manner of the subsequent distribution of this chromatin. It has been observed in the production of germ-cells that, on the one hand, the 2-4 of the egg-chromatin handed down from the parent, since the germ-cells in the early (6 or 9) divisions cast out a portion of this substance in the case of one of the daughter cells into the surrounding cytoplasm, where it degenerates, so forming somatic cells with less chromatin. Fertilization can now state to be a process by which the energy lost in a continuous cycle of divisions is restored by the admixture of living matter from another cell. It consequently entails the blending of two independent lines of descent. But when we ask—What then is the ultimate end of fertilization an answer cannot be given with certainty. It is perhaps more a question of the question involves that introduction of teleological considerations which is the bane of Science, according to some of her foremost exponents; yet every one has attempted his rationale of the phenomenon. Fertilization may be, as Manseau and others believe, rejuvenescence of the conjugating individuals; in the case of the Protozoa it certainly has this effect, for it is always the commencement of a new series of divisions. In fact, strictly speaking, the formation of a new individual in protozoan and metazoon alike. Further, the usual assumption in the case of Paramecia is that the two ectopic eggs are equally stimulated to divide; but the more recent work of Calvin shows that in the majority of cases, while one individual of the original pair is markedly vigorous after conjugation, the other one either forms a weak strain or dies off at an early period (Biol. Bull. vol. x. p. 242). Now, if this is the case, it suggests in these apparently inosaged conjugants a hint that differentiates results in a spermatozoon losing its original identity and becoming a union of half-equivalent nuclei; and to this all other processes are tributary. The sexual cells are perhaps recognized by Schwann, yet it is not so many years ago (c. 1878) since the fact that the spermatozoon is likewise a cell was universally admitted.

Previous to fertilization, a ripening process takes place in both ovum and spermatozoon, which is usually termed maturation. With this phenomenon is intimately connected a reduction in the number of the chromosomes to one-half the number characteristic of the species—in this way a progressive elimination of the chromosomes throughout succeeding generations is prevented. The procedure is very complicated, and still imperfectly understood; but it is probable that, previous to the penultimate of the two final divisions by which the definitive number is secured, the condensation of the chromatin thread (synapsis), and its appearance ultimately in a number of bodies corresponding to half the typical number of chromosomes, really represent in each case a conjugation of the maternal and paternal chromosomes, the paternal being hitherto remained distinct, followed by a division in which these double chromosomes divide longi-

BIOLOGY

Bovari has summarized the process of fertilization in the following words: "The ripe egg possesses all of the organs and qualities necessary for division excepting the centrosome, by which division is initiated. The spermatozoon, on the other hand, is provided with a centrosome, but lacks the substance in which the organs and cell-elements, i.e. their chromatin, are equal in amount from both germ-cells. In general terms the statement is true, but it is doubtful whether the actual centrosome of the spermatozoon identically persists as the organ around which the division centers in the ovum, or whether it is simply a locus, e.g. of enzymes, under whose influence a new centrosome is formed in the egg cytoplasm. Further, it has been questioned whether the sperm centrosomes are actually identical with the segmentation centrosomes, for there are cases where the former seem to disappear for a time, although this may be due to variation in staining capacity at a critical period. Still the general fact remains, that something certainly is introduced into the egg by the middle piece of the fertilizing sperm which either is the original centrosome, or has the power to stimulate the formation of one out of the egg cytoplasm—something that can divide and produce division of the cell-mass independently even of fusion of the nuclei, something that is in some way directly connected with the corresponding apparatus of the succeeding division. What it is, however, that actually starts the segmentation cannot be definitely determined; but it need not necessarily be the sperm centrosome or even its centrosome. Artificially fertilization has been induced in sea-urchin eggs by exposing them to sea-water whose concentration has been increased some 50 per cent. by the addition of Na Cl; development takes place right up to the larval stage (Loeb); Nathansohn has caused the parthenogenetic development of the eggs of a fern (Marilia) by simply keeping them at a sufficiently high temperature, thus suggesting that the mechanism of development is in the egg, and that all it requires is a certain stimulus to set it in motion; such a stimulus in this case is the difference in temperature by which the egg is warmed before its rupture. Accordingly we conclude generally that while the stimulus to development is normally connected with the sperm centrosome, yet this is not the only way of supplying the conditions requisite to initiate the process. While undoubtedly in some forms (e.g., the development of the Tarzona of fennel) the nucleus of the sperm-egg-nuclei takes place, and out of the mixed chromatins chromosomes arise, yet in other and probably the majority of animals the two nuclei simply lie closely side by side, and in that position give rise each to its own group of chromosomes preparatory to the first division. Thus the paternal and maternal chromatin may remain distinct and separate in the later stages of development, possibly throughout life. Accordingly the problem arises that the body of the child may receive from each parent not only half of its chromatin-substance, but one half of its chromosomes, as distinct and individual descendants of those of the parents (Wilson, op. cit. p. 208).

Every nucleus, then, arising by the segmentation of a fertilized egg-cell contains a double set of chromosomes, nuclear substance derived from both parents. As a matter of experimental fact, however, it has been ascertained in certain instances that either for the purpose of cleavage develop-ment, at least as far as the larval stages. The egg may be caused to develop without the presence of paternal chromosomes, while, conversely, development has been induced in a sperm-fertilized egg from which the maternal nucleus was removed.

For these and many other reasons the chromosomes are now regarded as the vehicles of inheritance.

The question of the individuality of the chromosomes has lately received very close attention. From a theoretical point of view the denial of their individuality seems to make mitosis meaningless. Why this careful and accurate division of the chromosomes, if after every such division the substance of the different chromosomes remains the same as that of the father's or mother's chromosomes? The assumption of their stability likewise gives us the better explanation of their constant number. From the physiological side Ray and Raper have maintained, as the result of study of mitosis in the epithelial cells in the salamander, that the chromosomes do not lose their individuality on segmentation, but are simply distributed in the cytoplasm of the segregated nuclei. He ideas was the reticulum arises as the result of a transformation of the chromosomes in the spermatid which gave off cytoplasm, the threads, causing the temporary appearance of a network that was again lost as the reticulum contracted at various definite points to form the typical number of original chromosomes. Bovari, in particular, and others have further shown that whatever be the number of chromosomes entering into the composition of a nuclear reticulum, the same number issues from it at a later stage, and in very much the same position. This is particularly striking in certain abnormal cases of fertilization, where it was noticed that the irregular number of chromosomes persisted from one cell generation to another. In such cases the number of chromosomes appearing in a nucleus during mitosis is the same as the number of chromosomes from which it was originally formed (Ray and Raper, The Essentials of Cytology, p. 156). In certain species the chromosomes can be distinguished during the resting stage of the nucleus; and even in most cases it looks as if the identity of the chromosomes was lost at this stage, yet this does not prove, of course, that it is so lost. In other species the chromosomes appear to show constant differences of size and shape, so suggesting that they may possess specific individual characters. Finally, Hacker, Hertig, and Zojer have shown that the centromeres (axial or equatorial plates) do the germ-nuclei not fuse, but they give rise to two separate yet parallel series of paternal and maternal chromosomes that remain perfectly distinct, as far as the chromosomes are studied in the twelveline-stage, and probably throughout life. Indeed, as the result of the later researches of Muntzing, it seems that we must as a synapse their differentiation of homologous chromosomes which are later separated in the reduction division; as a final result we have two series of whole chromosomes. Here then, in general, is an important—if it can be absolutely demonstrated—a epoch-making discovery. With Harvey's name we associate the discovery Of scions: a tree.
Virchow, we owe the induction Omnipus cellula e cellula. Stu- brander first clearly established the truth Omnis nucleus e nucleus. And with Boveri's name it is just possible that we shall have to establish the further truth that there are chromosome generations corresponding to cell generations, that the chromosomes of one generation arise endogenously in the chromosomes of a previous generation, that growth and reproduction, characteristic features of living things, are predictable of those intracellular units—in short, Omnis chromosoma e chromosomate.

Boveri has further shown experimentally that qualitative physiological differences exist amongst the chromosomes; complete development is apparently possible only in presence of a particular combination of them. This suggests that some definite relation exists between individual chromosomes (or possibly the chromosomes composing them) and the development of definite characters or groups of characters. What interaction takes place during the conjugation of chromosomes we do not know. If we assume that the hereditary characters are distributed amongst different chromosomes, then their segregation is achieved at the reduction division, the results are in accordance with the Mendelian view-point (see art. Haeckel), and the individuality of the chromosomes is fairly established. But in any case it is difficult to banish the idea of some more or less persistent morphological organization corresponding to what we at present roughly include within the conception of the chromosomes.

As a result of some form of stimulus consequent on fertilization, the egg commences to segment. These cleavage divisions are similar to what has been described in connexion with mitosis, except that very early they are accompanied by differentiation. Differentiation in the higher forms of life is expressed in the establishment of tissues and later of organs, in connexion with that physiological division of labour which usually means so much greater capacity for doing work. The more complete the organic structure the more detailed is this subdivision of labour; the greater the degree of co-ordination and unification of these activities, the higher the creature stands, as a general rule, in the scale of life. How all the different stages have arisen with their genetic continuity is the story of evolution, most interesting, if most difficult, in the lower grades of life, where, however, modern study, e.g., of the Protozoa, sheds floods of light upon the question. In the course of this differentiation considerable change is often noticed in the functions of organs; what at one stage played one particular role is found at a later stage to function in a different manner.

Again, the cleavage divisions of the developing egg are often effected in planes that show some definite relation to the structural axes of the adult body. Typically, the cells divide rhythmically into definite groups around the part of the egg, the plane of division tends to intersect the preceding one at right angles. Variations, however, occur not merely in the rhythm, but in the quantitative character of the divisions, as also in the direction of the cleavage planes; these variations are of regular occurrence. Not merely do the cells divide in accordance with the requirements of definite mechanical conditions, but also, and more distinctively, with reference to the future cell-orientation and structure of the animal; of this we shall speak more fully in the next section. 

Wilson has argued that the cleavage planes—i.e., the planes of division—are not chance events, but are fixed, as it were, determined endogenously by the egg. The speed with which cleavage begins is, however, subject to control by the conditions, and these may be quite different in different species. Again, a different is made, by Wilson, between final, or definite, and pre-localization, or pre-determination, of egg and stage. Final determination of the egg occurs before fertilization, and it is a matter of some dispute whether the whole egg, or only a part, is determined in this manner. 

The egg then is determined on every side. From the moment of fertilization it can be said to be a definite entity, and the whole process of development may be thought of as the functional expression of this determination. It is a most important point that the determination is much more definite in the egg than it is in the spermatozoon. The spermatozoon is a microscopically limited nucleus, specialized only for the process of conception; the egg, on the other hand, is a cellular and nucleated body, the determination of which is much more definite and permanent. It is this determination of the egg which, in Wilson's opinion, is the essential characteristic of the fertilized egg. The immediate result of fertilization is the formation of a new egg, which has all the characteristics of the original egg, and is a definite entity. 

BIOLOGY 633

Fig. 5.—Cleavage of the ovum of the sea-urchin Toxopneustes (Cten.). The successive divisions up to the 16-cell stage (f) occupy about two hours. 1 is a section of the embryo of three hours, consisting of approximately 126 cells surrounding a central cavity. (From Wilson's The Cell, by kind permission of the publishers.)
condition in the early cells, until at last in each cell there is simply left that particular determinant which controls it. But of these qualitative divisions, save in the reduction division in matura-
tion, there is no evidence whatever; and facts like regenerability, the ability of a single cell of the two- or four-cell stage to reproduce the whole of the embryo (Amphioxus), although on a reduced scale, 
seem to negative it; while in the cases where, as in the frog, the right cell of the two-cell stage appears to contain the material for the right half of the blastema, that cell does not itself give rise to anything different; in other words, its prospective value is a function of its position (Studien, iv. 39).

The suggestion bears a true relation to what does occur in many instances; but it is evident that now, merely by the position of a blastomere to its neighbours, the position of its own offspring becomes determined. Thus, to Morgan has shown that even in the case of the two-cell frog the single isolated cell may give rise to a half embryo or to a whole embryo of half size, as in Amphioxus, according as the isolated cell is left in its normal position, or turned upside down. This seems to indicate that all the material for a complete, if half-sized, embryo exists in the single cell of the two-cell stage, and that at this stage, as in Amphioxus, the blastomeres are not so firmly set that it can only develop into the half of the creature that normally it would. In fact, embryology discloses a whole series of forms in which this equivalence of the cells at the early stages is greater or less, some easily overcoming the tendency to develop only (as normally) into a part, others doing so with greater difficulty, and even failing, with the result that a monster (defective larva or adult) is formed. Accordingly it would seem as if primarily the egg cytoplast is equipotential, in the sense that the various regions do not stand in a fixed relation to one another, but are co-ordinate, and that sooner or later differentiation of these regions, resulting in a mosaic-like development, does take place from causes that we do not understand—sooner, as in the case of the molluse Dentalium, whose single cells when separated cannot completely overcome the tendency to form a part and develop into monsters resembling pieces of a single egg (and the same result is achieved by artificially cutting off pieces of the egg); later, as in the case of Amphioxus, where a cell of the two-cell stage, when isolated, develops into a complete dwarf adult, either half or quarter size. A suggested solution of this phenomenon consists in assuming the various protoplasmic constituents as arranged in bands or zones (cf. Wilson, Science, vol. xxi. No. 530). In Amphioxus the first division would separate these symmetrically and equally. In Dentalium the division may be apparently symmetrical but really qualitative, so that all of one band or zone passes into one of the others.

Further, it is difficult to avoid believing that differentiation of a kind, slight perhaps but still effective, has not occurred much earlier, even previous to fertilization, for the egg has a developmental history previous to that experience. These axial differentiations are probably due to the nucleus, and form the scaffoldings, as it were, within which the development after fertilization goes on. The ability to re-adjust or to develop the isolated blastomeres largely depends on the degree to which this scaffoldings has been effectively reared.

But the storehouse of the kind, these differentiations, which may be cast out of the nucleus, or dissolved, or be transformed into something else. The former circumstance has been indeed observed by Boveri in the early somatic cells of the developing Ascaris. Driesch's conception of the nucleus as a "storehouse of ferments which pass out into the cytoplasm and there set up specific activities," is at least interesting. Certain it is that 'specific protoplasmic stuffs' are distributed to the cells in a definite way from the very earliest stages of development, and since they have a definite arrangement, it would, to Morgan, to whom development is mechanical, and the cleavage mosaic is an actual mosaic. If it could be shown that initially protoplasm contains only a few of these specific stuffs, that, as development proceeds, new stuffs are progressively formed and finally that their number decreases and that they weaken as differentiation progresses, we should have an interpretation of development that is essentially epigenetic—progressive in the sense that now additional parts not already there are formed; and in this combination of the two older and contrasted view-points of pre-formation and epigenesis the truth is probably to be found.

Finally, we are unable to forget the dominating role of the environment in all development; without it the stimuli the inherited organization of the living creature would not work itself out. The living form is at any moment the resultant of external stimuli acting upon its inherited organization. This has been experimentally proved time and again: a normal development is the response to normal conditions. The development is thus reduced, and it may be modified by the environment; but the fundamental character and cause of it lie in the inherited organization. The developing organism and its environment react on one another. The progress of the adaptiveness the organism continually sets itself free from the control of the environment and proves itself the more constant of the two. Separation of the two is practically impossible; we are almost compelled to consider the organism and its environment as a single system undergoing change.

In conclusion, we re-affirm that of that marvelous co-ordinating power which guides development rhythmically and orderly to its predestined goal we have no explanation. As Wilson puts it, we have no more knowledge of this development of the germ-cell involves the properties of the adult body than we know how the properties of hydrogen and oxygen involve those of water" (op. cit. 433). Of the origin of that 'co-ordinated fitness, that power of active adjustment between internal and external relations,' that capacity of the idioplasm of the germ-cell to respond to the influence of the environment, so as to call forth an adaptive variation, we are in complete ignorance. This directive control, as we already saw, is the distinctive characteristic of life. See also art. DEVELOPMENT, EVOLUTION, HEREDITY.

BIRDS.—Soo ANIMALS.

BIRTH. (Introduction).

In the lowest stages of civilization the observations connected with pregnancy and child-birth are relatively simple, though the germs, and frequently something more than germs, are found of ceremonies which underlie elaboration as civilization advances. Such rites and observances may be considered under six heads:

1. The rite of the conception of child and birth.
2. The dangers from evil spirits and from witchcraft.
3. The preparation of the woman for her readmission to society.
4. The attempt to secure good fortune for the child.
5. The admission of the child, and the re-admission of the parents, into society.
6. The condition of tabu.

It is rare to find an expression like that made by an experienced missionary in reference to the Murray Islands, that 'the woman was not considered unclean after childbirth, but, whether marriage necessary, for her readmission into society' (JAF xxviii, 11). On the other hand, this condition of tabu is sometimes, as among many Bantu peoples, emphasized by the separation of husband and wife at an early stage of the pregnancy. It is continued right into the higher stages of development, in which, during the pregnancy, it is perpetuated in various ecclesiastical and traditional observances. The husband and sometimes all the household are also affected by the condition of tabu, according to the well-known law of its contagiousness. A condition of tabu is conceived of as a material infection communicated by contact with the person or with anything used by him, or even by relations of kinship or neighbourhood. Women are, during the whole of their reproductive life, specially subject to it. From the attainment of puberty, at which stage the first menstruation occurs, as well as at every pregnancy and parturition, they are under its ban. It is a condition associated with the mysterious, the awful, and the relations of beings more than human with mankind. The processes of generation and reproduction, so mysterious even to us, are in lower stages of culture the object of emotions, which we can hardly understand. Blood, too, is regarded with horror. The slaughter even of an enemy is enough to place a man under tabu: hence warriors returning from even a successful raid may be required to be purified. But of all the blood that inspires horror, that which proceeds from the female organs of sex is the most effective, perhaps because its normal cause is unknown. A menstruating woman is set apart; her touch defiles her; her ordinary utilizations to husband and household are suspended. It is therefore not wonderful that pregnancy and child-birth are conditions of tabu, and that others than the woman, especially her husband, are involved.

(a) Couvade. It would be a mistake, however, to suppose that all the prohibitions imposed on husband and wife during pregnancy and at child-birth have reference to the considerations just mentioned. Many of them concern the welfare, present and future, of the child. Such, it is now well recognized, is the intention of the couvade.

Even before the child is born, the father abstains for a time from certain kinds of animal food. The woman works as usual up to a few days before the birth of the child. At last she retires alone, or accompanied only by some other woman, to the forest, where she ties up her hammock; and then the child is born. Thereafter she goes back into the house, Oxford, 1905),

BIRDS.—Soo ANIMALS.
hair, otherwise his wife will speedily die (Riedel, Stiek- en broeikhare vraes, p. 292).

This mystic sympathy extends to parent and child. Many peoples are still at the stage in which relationship is not reckoned between father and child, and there is no purely matrilineal reckoning of kinship generally prece-
ded which that recognizes the father's relationship. The custom ofouvade proper does not appear to exist among purely matrilineal peoples, for the sufficient reason that they do not recognize the tie of kinship on which it depends. In the result of inquiries by Prof. Tylor and Mr. Ling Roth, it is found in the strongest force among those peoples in which matrilineal is in process of transition to patrilineal kinship, and its frequency and elaboration diminish with the gathering strength and prevalence of paternal kinship, although, even in the higher civilizations, where kinship is reckoned through both parents, observances linger which are based upon the same idea of mystic sympathy (J. A. I. xviii. 235; xxii. 204). Whether its gradual diminution is a result of migration into the south of Europe, of the influence of the civilization which has fallen into the background with the advance in civilization has not finally been determined. Another cause has been suggested. Bouchen (Mutterrocht, 1897, pp. 17, 235) saw in the conviuve the desire of the men to possess the child, and the mode by which he claimed it for his stock rather than the mother's. Prof. Tylor, after hesita-
tion, gave the great weight of his authority to this opinion, which is supported by some of the cases. But it is clear that the quasi-legal fiction which would be thus created must be founded on the pre-existing idea of mystical sympathy and the practices connected therewith. When patrilineal reckoning became fully established, the stage of legal fiction was past. The conviude became un-
necessary, and this with the patrilinearity, and there-
fore would in time be dropped. (In addition to the works cited above, discussions on the conviude will be found in Tylor, Early Hist. of Mankind, 1878, p. 291; Hartland, Legend of Perseus, 1894-96, ii. 400; Crawley, Mystic Rose, 1903, p. 416.)

(6) Delivery in seclusion.—It follows from the condition of tabu imposed on a parturient that child-birth must almost always take place in seclusion. Among many peoples, where the climate permits, the event takes place in the open air. In the Batu, the mother is delivered behind her mother's hut; and after the birth she is placed in a small hut, where she re-
 mains until the navel-string drops from the child (Dannert, Zum Rechte der Herero, Berlin, 1906, p. 19; S. Afr. F. L. Journ. i. 41, ii. 61). In British Columbia the Kwakiutl woman is delivered out of doors; the Sk'omcic woman retires to the woods, unless it be winter or retirement to the woods be for any other reason inconvenient, in which case she is delivered behind a screen of reeds-
mats in the general dwelling which is of considerable size (Boas, Brit. Ant. Rep., 1896, p. 573; 1900, p. 479). Among some of the tribes of New South Wales it is said that the spot to which the parturient withdraws is fixed upon by the elders of the band (Matthews, Ethnol. Notes, Sydney, 1900, p. 15). In tropical countries delivery frequently takes place in the forest; in the Babar Archipelago, on the seashore (Riedel, p. 354). The Indians of Rio de la Plata are delivered on the shore of a lagoon or river, where immediately afterwards they wash themselves and the infant (Graux, Travels in Patagonia, etc., art. 119). It is probable that in the other alleged case mother-right, though still the rule, has begun to give way. More information is desirable on the Arawak and their surroundings.

Rio de la Plata, Montevideo, 1896, p. 66). Where parturition does not take place in the open air, a special hut is commonly provided for the purpose.

In Japan this hut used to be a mere shed without a door (Aston, Shinto, 1907, p. 113). Where a separ-
ate dwelling is provided for menstruant women, as they often are, the moiety for whom the delivery is to be performed in the house, the other occupants also being under tabu, no harm can be inflicted on them by her presence. This is the practice, for example, of the Konos of the Nilgiri Hills and other tribes in the south of India. In comparatively civilized countries like Russia, among the peasants of the Government of Smolensk, the woman is placed for delivery in a barn or a hut at a distance from the house (L'Anthropologie, xiv. 716). The Vottak woman gives birth in the family dwelling, but behind a curtain, for it would be a bad omen for any one but the woman in attendance as midwife to see the birth (Rev. Trad. Pop. xiii. 254). This clearly means that it is not a desire for privacy on the part of the patient that leads to the seclu-
sion, but as a rule the part of the other members of the household.

Where the seclusion cannot be carried out by de-
livery in the open air away from the community, or where by custom or special circumstances delivery is artificially prevented, the woman takes place in the hut, or is otherwise protected from the house, just as when a person is dying there, else they would be unlucky (J. A. I. xix. 299). When a birth takes place in the house, the Indians of the Umpqua Valley in Brazil take everything out of the house, even the pans and pots and bowls and arrows, until the next day (Wallace, Trav. on the Amazon, p. 345). All these objects would be affected by the unclean-
ness of child-birth if allowed to remain, and prob-
elly would have to be destroyed, as is done, among some of the tribes of New South Wales, with the bodies of the men. A similar custom is also found in seclusion (J. A. I. ii. 268). So contagious is the tabu, that, if the men do not avoid the neighbourhood of the hut, they, it is widely believed, will be un-
lucky in their own occupations, as in the New Hebrides, where the yams they cultivate will be spoiled (J. RW. x. 516).

(c) Absence of the father at birth.—As a rule the husband, in common with all other men, is required to be absent on the occasion of child-birth. The reason of this requirement has been supposed to be the condition of tabu under which the parturient woman lies—a condition that would be communi-
cated to every one present. But the explanation will not fit the facts everywhere. Thus among the Opatas of Mexico a parturient is attended by her nearest relatives; but so little is seclusion deemed necessary, that men, and even children, may be present (Amer. Anthr. [N. S.] vi. 80). In the Loyalty Islands, again, the act of birth is a spectacle that everybody—men, women, and children—likes to see. Moreover, except the husband alone must be absent. During the whole of the woman's subsequent seclusion, which lasts until the child is big enough to crawl, her husband never pays her a visit, though he occasionally sends her food (J. A. I. v. 383). In Bolivia the husband is obliged to be present when she is delivered, or act as midwife, while all other
men must keep away. This is the custom of some of the wild tribes in the Malay Peninsula (Skeat and Blagdon, Pagan Races of the Malay Peninsula, 1906, ii. 20, 22, 25). Among the Yaroinga of Queensland the parturient is attended by an old woman as midwife, but the husband is at liberty to be present if he chooses. The act of delivery is contrary to the practice of the neighbouring Kalakadoon, who allow only a very old man or two to be present (Roth, Ethnical Studies, pp. 152, 153). The active assistance of the husband is expected in the Andaman Islands (J.A.F. xii. 206) and in the Babar Archipelago (Riecel, op. cit. 354), as well as among the Basques (ZE xxxii. Verhandl. 292); while among the Bontoc Igorot of Luzon he is at least present (Jenks, Ethnol. Survey, Philippine Islands, i. 59). In the Marquesas Islands he is not only at hand, but must have conjugal relations with his wife almost immediately after the birth when she goes to bath (L'Anthrop. vii. 546).

Moreover, presence at the birth is not necessary to render the husband unclean, or, in other words, to render him liable to the tabu. This is the case among the Pomoans of California (Black, Tlele. p. 197). In the Steppes the Kadoon, Queensland, and some other groups, the man is already subjected to it by the mere fact of his relationship to the parturient. In many cases his uncleaness is expressly affirmed; in others it is to be inferred from some of the tabus by which he is bound, and which are not to be explained by his conjunction with the mother. In the case of the tabu extending more or less to the whole household, or sometimes even to the whole community. The Kafirs of South Africa seem to regard all the members of the kraal as unclean, for they 'eat medicine,' as a result of the body death (Leslie, Among the Zulus, p. 197). The Sulkas of New Pomerania are similarly affected; and not only the men, but their weapons and the cuttings of plants they are about to put in the ground, require to be purified (A.A. [N.F.] i. 209). To the same origin we may probably attribute the stories, framed as they now stand at a period when the custom was no longer understood, of the famous couvade of the Ulstermen, when all the male population was annually laid up as a penalty for an act of cruelty to a woman about to be delivered.

In these circumstances an alternative conjecture may be hazarded that the husband's enforced absence is to be regarded as a relic of earlier social conditions, when the wife dwelt at her mother's house, and descent was counted only through the mother. Such a theory accords with the fact that the father of the child would be of small importance, and might even be unknown, and the occurrence would be one in which he had small concern. The conjecture is supported by the frequent, if not always, presence and assistance of the parturient woman's mother when alive and within reach. This might be supposed to be merely natural, were it not that the large divergences of custom and feeling between the lower culture and our own hinder any cautious anthropologist from laying down as a genuine and natural what is not. It is further supported by the custom of sundry African and Indian peoples, whereby a woman, particularly at her first confinement, returns to her maternal home, and is there delivered and remains in seclusion for a ritual period, apart from her husband and unvisited by him. Among one of those peoples at least (the Basuto) the first child belongs to, and remains with, the mother's parents (FL xv. 250).}

(d) Tabu of the child.—The condition of tabu thus far described, not being, perhaps, need not be said, to the newborn child. It is unclean, and must be cleansed by a rite of purification which assumes various forms among different peoples; and this purification, as in Christian baptism (q.v.), is the rite of introduction to, and incorporation in, the community. Sometimes father, mother, and child are all purified together in one and the same rite. Among certain Indians in the north-west of Brazil both parents and child remain in seclusion for five days. The parents neither work nor wash, and their diet is strictly limited. If either of them does not observe the obligation they will be injurious to the child. At the end of the five days the husband's father gives them permission to bathe and resume their ordinary food, and a common bath by the young parents and their child is the last tabu. Shortly before the close of the period, it may be necessary to refer to the father's and mother's marriage, to the child's birth, and to the marriage of others, and all men are expressly stated to be absent at parturition (Globus, xc. 351). The Swahili of East Africa, who are nominally Muhammadan, have a similar rite for putting an end to the forty days' seclusion and dieting of the mother. At the end of that period she and the father are required to resume cohabitation. After the first occasion of cohabitation, the father, mother, and child are considered together, and after the other in the same way. This ceremony is called by the Arabs, 'diet-breaking,' and it is held necessary for the child's health. Ordinary life is then resumed (ZE xxxi. 61). It was perhaps some rite incidental to the tabu and purification of the infant among the ancient Egyptians (see the references there). Indeed, it is said by Herodotus (v. 4) when he described the kinsmen as sitting round the child and lamenting the ills to which it was heir. That the Trausi, in opposition to the general sentiment and practice of mankind, were peculiarity philosophers of the type implied by the historian is hardly credible. They arise from two sources—evil spirits and witchcraft. Against them a pregnant woman provides by means of ceremonies (often with the co-operation of priests and shamans), abstinence, and amulets. Thus, in the Pomoans there is an alternative ceremony, the So-cem, for the protection of the newborn child. In Christian countries baptism is of all protective ceremonies the most effectual. It is probably due as much to the belief that the devil and other evil spirits have no identity with the Christian body, as to the ritual of baptism, which purifies a child and often for snatching it away, as to the theological doctrine of original sin, that baptism has been hastened so eagerly and widely. At Gossensass in the Tirol the devil is believed to have power over both mother and babe. Until the one is christened and the other christened, something may befall them. They must not be left in the house alone; and the nurse in attendance must not sleep, but pray without ceasing. It would be useless to make the sign of the cross by way of blessing an evil child, as it is in the nature of the devil, on an unbaptized child, and often for snatching it away, as to the theological doctrine of original sin, that baptism has been hastened so eagerly and widely. At Gossensass in the Tirol the devil is believed to have power over both mother and babe. Until the one is christened and the other christened, something may befall them. They must not be left in the house alone; and the nurse in attendance must not sleep, but pray without ceasing. It would be useless to make the sign of the cross by way of blessing an evil child, as it is in the nature of the devil, on an unbaptized child, and often for snatching it away, as to the theological doctrine of original sin, that baptism has been hastened so eagerly and widely. This ceremony is performed over the corpse of such a woman to prevent her returning for mischief (cf. FL ii. 289-274). To evil spirits are ascribed difficulty of navigation, the storms of the parturient, the infestation of the child, the infliction of disease on the child, the carrying off of a child or its exchange (see CHANGELINGS). Witchcraft is often practised by means of the evil eye (q.v.). Where the exclusion of all stragglers, as such, is rigid, the reason,
express or implied, very often, if not always, is the danger from this source. In war, sanitary reason precautions are observed, as in Macedonia (Abbott, Maced. FolkL, p. 123), in summoning the midwife. On the island of Kythnos, in the Greek Archipelago, all the mirrors are covered during labour, no one is allowed to enter the birth-chamber after sundown, and, during the first three nights, to turn away the evil eye and conciliate the Fates, all the mother’s trinkets (such as ear-rings, brooches, rings, and so forth) are laid out on the bed with a pot of jam (Hautecoeur, Folkl. Kors. 295). On the island of Karpathos the child is washed and swaddled in unbleached cloth, and no one is allowed to enter or leave the house until this ceremony is over and the priest has blessed the babe (Bent, Macmillan’s Mag., July 1886, p. 201). But witchcraft may also be practised by ceremonies, as in Ovid’s account of the birth of Hercules retarded by Lucina sitting before the door muttering charms, her knees pressed together, and her fingers interlocked about them, until the yellow-haired Galanthis, one of Aeneas’ attendants, prayed for a report of the mistresse’s delivery to spring up in surprise, and thus undo the spell (Metam. ix. 205). Difficult delivery may also be caused by the acts, even unintentional, of the husband. Among the fisher-folk of Lower Brittany delivery is harder when the husband has or has not the intuition that the island of fisherman (Schiollot, Folkl. des Pêcheurs, p. 3).

3. Attempt to obtain easy delivery.—Against the agony thus inflicted and the disasters which may ensue, various countervailing means are employed. It is not an unreasonable conjecture that this is the reason why delivery is often required among savage and barbarous peoples to be effected in the open air. Probably not merely the convenience of washing but the sympathetic influence of the free waves causes the seashore to be selected in some of the Moluccas as the proper place for parturition. In the Philippines the husband strips stark naked, and stands on guard either inside the house or on the roof, flourishing his sword incessantly to drive away the evil spirits until the child is born. The recitation of charms is common. Offerings and prayers are made to gods and spirits, wherever the development of religious belief sanctions them; and these are sometimes combined with a banning of the malevolent spirits. Thus, among the Chingaw of Upper Burma sacrificed to the powers of the sky, the image of the god is brought to the house, either inside or out; or they are laid or hung in or upon the bed of the lying-in woman, or the cradle of the child. When a population has passed into the age of metals, metallic objects are held to be of special value as amulets. But such various objects as parts of sundry animals and plants, stones of remarkable shape or rarity, egg-shells, bread, besoms, salt, pitch, the husband’s clothes, mirrors, crosses, consecrated girdles, magical or sacred texts, Bibles—anything, in short, that may be supposed, though for reasons often obscure to us, to cause difficulty or be repugnant to malignant spirits or evil influences—are employed; and they avail not only for assisting delivery but for protecting the mother and babe during the period of the child’s life and following birth. The use of fire and lights is almost universal. The rule that, where a mother and new-born child are lying, fire and light must never be allowed to go out, is equally binding in the Highlands of Scotland, in Korea, and in Basutoland; it was observed by Bent in the present century. The present time as attested by books of the Parisis enjoin it as a religious duty; for the evil powers hate and fear nothing so much as fire and light.

4. Attempt to secure good fortune for the child.

The child’s future must be divined and provided for. Before birth, means are frequently taken to divine the sex of the infant, or even to ensure the sex desired. There are lucky and unlucky times for birth. The qualities and fate of a child born on one day of the week or of the month may differ from those of a child born on another day—a superstition not quite extinct in England. In Greece the three Fates are believed to visit the child three days after birth, at midnight, and decide its destiny—another relic of pagan belief. To welcome and propitiate them a feast is provided. In Karpathos the ceremony is very elaborate. The child is placed, stark naked, on a pile of its father’s clothes in the wooden bowl from which the family eat on feast-days. This stands in the middle of the room, and is filled with honey. In every one stands a long candle specially made for the occasion. The priest blesses the candles, and they are named after various saints. They are then lighted, and the extinction of one of them is awaited in silence.
The first to go out indicates the saint who is to be the child's protector. In the evening, guests assemble round the bowl to eat from it a confection of flour, water, honey, and butter. When they disperse, the bowl is again filled with the same mixture and left all night for the enjoyment of the next day. So come and bless the child (Bent, loc. cit. p. 203). The child's destiny is supposed to be written by the Fates on its nose or forehead, and any little mark or abrasion of the skin is called 'the fretting of the Fates' (see Magessi). The child is expected to sport the lot of a wholly happy life (Rodd, Customs and Lore of Modern Greeks, 1892, p. 111). Elsewhere, ceremonies are performed to ascertain the child's fate and to provide, according to its sex, that it shall grow up with all the qualities necessary for its after-life. First, however, where exposure of children or infanticide is practised, a decision must be taken whether it is to live or die. Where the lineage is reckoned through the father, the child's life is usually in his hands, as among the ancient Romans and Scandinavians. In other cases the mother decides. The child is regarded as in a state of 'the mother's care' until death. If the mother dies in childbirth, savage peoples as a rule bury the child with her, on account of the difficulty in rearing it; or sometimes because they fear that she will not rest without it. In Sweden and New Zealand a similar fate befalls the child when the mother dies. Afterbirth is buried at the foot of a young tree. The Hupa of California split a small Douglas spruce, place the umbilical cord in the opening, and tie the tree together again. 'The fate of the tree is watched, and the future fortune of the disposal of the afterbirth and navel-cord, and of the caul when there is one. The Swahili inter the placenta on the spot where the delivery took place, in order that the child, through a mystic power, even after it has grown up, may feel itself continually drawn to its parents' house. The cord is worn round the child's neck for some years, and afterwards is buried in the same place. By this proceeding it is believed that the child's growth is promoted (ZE xxxi. 62). The Australian natives on the Pennefather River in Queensland hold that part of the cho-i ('vital principle,' 'soul') of the child remains in the afterbirth. The latter, as soon as it comes away from the mother, is buried in the sand, and a number of twigs are stuck in the ground to mark the place, and bound together at the afterbirth. It is called after the goddess of the dead, Anjea—a supernatural being whose business is the making of ladies out of mud and their insertion in the womb—recognizes the spot, takes out the cho-i, carries it to one of his haunts, and keeps it for the insertion of another child at a later date. When he has formed a baby, he puts it into, if a boy, a portion of the father's cho-i, or, if a girl, a portion of the father's sister's cho-i. He takes an opportunity of secretly placing the baby, thus completed, in the womb of the mother for whom it is intended (Roth, Bull. North Queensland Ethnog. v. 68). The Toba-bataks call the placenta the younger brother of the child. They hold that every man has seven souls. One of these abides with the placenta, which is buried, because it can live on its own without a father. If it belongs, or, if he be acting rightly, to encourage him and thus play the part of conscience. The Javanese believe that the souls of their forefathers are housed in crocodiles. In the interior of the island, after the birth of a child, the women are accustomed to take the placenta, surrounded with fruits and flowers, and lighted by little lamps, in the dusk of the evening to the river, and commit it to the waters as a gift for the crocodiles, or rather by way of dedication to the gods. The same view is held in the Kruy, Anonyme in den Ind. Archipel, pp. 25, 159). Europe, on the other hand, what is most dreaded is that the afterbirth and cord should be eaten by an animal, or exposed to the evil offices of fairies or sorcerers. In Spain, for example, if one part of the placenta were eaten by an animal, the infant would be possessed of all the bad qualities of the animal in question (Sébillot, Paganisme, p. 30); for the placenta and cord are regarded as being an essential part of the child. Moved by the same belief, the Kwakiutl of British Columbia take the placenta and cord away from the child and throw it down by the side of the placenta where it will be eaten by ravens: he will then have the gift of foreseeing the future. The same tribe bury a girl's placenta at high-water mark, in order that she may grow up an expert in clean-disguise (Boas, Rep. Brit. Ass., 1896, p. 574). The Swahili compiles a charm, a verse, of which not eating the cord is widespread. Even in Europe the cord is preserved and often worn as a talisman, or given to the child at different crises of life to suck. The custom of planting a tree at a birth is common among sedentary nations. Such a tree is regarded as having a mystic relationship with the child. It is an index of the child's condition and fate: it grows, prospers, and decays with the child. Very often the placenta and cord are buried beneath it, as in countries so far apart as New Zeal and Syria. Some Irish believe that when the afterbirth is buried at the foot of a young tree. The Hupa of California split a small Douglas spruce, place the umbilical cord in the opening, and tie the tree together again. 'The fate of the tree is watched, and the future fortune of the disposal of the afterbirth and navel-cord, and of the caul when there is one. The Swahili inter the placenta on the spot where the delivery took place, in order that the child, through a mystic power, even after it has grown up, may feel itself continually drawn to its parents' house. The cord is worn round the child's neck for some years, and afterwards is buried in the same place. By this proceeding it is believed that the child's growth is promoted (ZE xxxi. 62). The Australian natives on the Pennefather River in Queensland hold that part of the cho-i ('vital principle,' 'soul') of the child remains in the afterbirth. The latter, as soon as it comes away from the mother, is buried in the sand, and a number of twigs are stuck in the ground to mark the place, and bound together at the afterbirth. It is called after the goddess of the dead, Anjea—a supernatural being whose business is the making of ladies out of mud and their insertion in the womb—recognizes the spot, takes out the cho-i, carries it to one of his haunts, and keeps it for the insertion of another child at a later date. When he has formed a baby, he puts it into, if a boy, a portion of the father's cho-i, or, if a girl, a portion of the father's sister's cho-i. He takes an opportunity of secretly placing the baby, thus completed, in the womb of the mother for whom it is intended (Roth, Bull. North Queensland Ethnog. v. 68). The Toba-bataks call the placenta the younger brother of the child. They hold that every man has seven souls. One of these abides with the placenta, which is buried, because it can live on its own without a father. If it belongs, or, if he be acting rightly, to encourage him and thus play the part of conscience. The Javanese believe that the souls of their forefathers are housed in crocodiles. In the interior of the island, after the birth of a child, the women are accustomed to take the placenta, surrounded with fruits and flowers, and lighted by little lamps, in the dusk of the evening to the river, and commit it to the waters as a gift for the crocodiles, or rather by way of dedication to the gods. The same view is held in the Kruy, Anonyme in den Ind. Archipel, pp. 25, 159). Europe, on the other hand, what is most dreaded is that the afterbirth and cord should be eaten by an animal, or exposed to the evil offices of fairies or sorcerers. In Spain, for example, if the least
sarily that which the child will bear throughout life. These three objects are effected in Christianity by baptism; and there can be little doubt that Christianity has in infant baptism taken up and modified, to suit its own teaching, certain pre-existing ideas (see Birth). (a) Visit of friends.—Prior to the ceremony of reception, however, the relatives, and especially the female friends of the mother, despite her tabu, often pay her a formal visit to offer their congratulations and inspect the baby. It is an occasion for rejoicing, on which the relatives either bring or receive presents. It is not, however, without danger for mother or child. The evil eye is particularly dreaded, and the guests are expected to put themselves above suspicion by their expressions and conduct. They must, as usual at other times for this purpose, either salute the child in the name of God, or speak of it as a nasty, ugly little thing, or use some such offensive expression. This is the only way open to them of praising it; direct praise is dangerous. A very common rite is to give the newborn baby a cow, which is eaten (see EVIL EYE, SALIVA). In Austria, visitors are sprinkled with holy water. Among some peoples the neighbouring children are invited to examine the child, if the child and, as it is practised—a custom customary of the Continental Jews, the Watusiba Islanders, the ancient natives of Mexico, and others. It is perhaps a rite of sympathetic magic. (b) Recognition by the father.—Formal recognition of the child as his by the husband is among various peoples a preliminary to the actual reception into the community, though it is sometimes combined with that ceremony. Occasionally it is preceded by a test of legitimacy, as among the Baganda (T. p. 23), where the rite is performed not by the husband, but by his father. Recognition is effected in various ways. The Santal father murmurs the name of his ancestral deity, and puts his hand on the child's head (Hunter, Annals of Rural Bengal, p. 293). The Fijian father makes a gift of food (JAF, xiv, 28). Among the ancient Norse the child was laid on the earth when born, and not lifted up until the father gave permission. This permission decided the child's fate, for otherwise it would have been exposed to demons. But doubtless it involved also an acknowledgment of paternal recognition by the father involves reception into the immediate kin. Among the Amakosa a feast is given on the occasion; the father goes to the kraal and chooses a cow from whose tail he pulls a tuft of hair and hands it to the mother. She fastens it round the child's neck. Neither the cow nor any of her posterity may be sold or disposed of in any way to strangers; but if the child be a girl, they are handed over with her on her marriage (Frisch, Eingeb. Süd-Afr. p. 108). Among the ancient Welsh it was usual and seems that there was no binding recognition by the father until the mother had first taken a solemn oath upon the altar and the relics that he and none other was the father. If the father then did not doy the child by an equally solemn ceremony within a year and a day, he could not afterwards deny him. The mode of reception into the kin was by a kiss; for a kiss, says the code of Gwynedd, is a sign of affinity. If the father were dead, the ceremony was performed by the chief of the kin of the child of the first-born of the kin and the person of the kin, if there were no chief of the kindred, then by twenty-one of the best men of the kindred; and once performed it was conclusive (Anc. Laws of Wales, Venedotian Code, ii. 31). (c) Presentation of the gift—Sometimes the child is presented to the divinity. The Chinapaw of Upper Burma formally announce the birth to the house-spirit, and place the infant under its protection (Internat. Arch. xvi., Suppl. 60). In Mexico the Tarahumara mother on the fourth day after delivery goes to bathe, and lays the child down bare, and exposed to the sun for an hour, that Father Sun may see and may say (San Juan, 237). The Wichita present the child to the moon, praying for its growth and other blessings (Dorsey, Myth. Wichita, pp. 11, 19, 29). A somewhat similar ceremony is performed by the Bonga mother in South Africa; but, since the Baronga do not worship the moon, the words used are rather an incantation than a prayer: *Grow, grow, grow; there is thy moon!' (Janod, Baronga, p. 17). Among the Basuto, in the second month after birth, the child is made to look at the moon, which is called his wife if a boy, or her playmate if a girl (Bull. Soc. Neuchât. Géogr. ix. 121). On the island of Kytinos, if the child suffers from any complaint, it is presented to the new moon with the prayer: 'O new moon, I shall be as the cow and I will cure my child' (Hant-tecur, 9). In direct contrast to these practices is the Albanian forbidding of children to look at the moon. The Eauhlyi of New South Wales also forbid them to look at the full moon. Among the Hupa of California the most usual method of presentation to the divinities is practiced. A priestess then takes the child she helps to dress and the ceremony takes place in the house set apart for women in a state of tabu. The first ten days are a period of great danger to the child; and they are spent in rites to ward off evil spirits. At the end of the period a little of the child's hair is cut off and put in the fire. 'It was thought that the divinities on smelling the burning hair became cognizant for the first time of the child's existence.' The ceremonies culminating in the burning of the hair are thus, it would seem, not merely intended to ward off evil spirits; we are justified in thinking that they are ceremonies of purification. After they are over, the mother and child leave the parturition-house, though the mother is under tabu for some time longer (Goddard, Hupa, Berkeley, Cal. 1905-4, p. 51. The author states elsewhere that the mother remains in the parturition-house for a longer period (p. 18). (d) Ceremonies of admission.—The community into which the child in lower stages of civilization is more or less incompletely urbanized. It is that of the kin; and, wherever ancestor-worship or the cult of a divinity in the more accurate acceptation of that term is practised, reception into the community and presentation to the divinity are, as a rule, only two aspects of the same ceremony. Thus, among the Chukchi, on the fifth day after birth the mother and child are drawn in a sled round the tent, sunwise, to the place of sacrifice. The reindeer employed to draw the sled is then slaughtered; the mother and child, at least two other members of the family, the sacred amulets, and the three central poles of the tent-frame are painted with the blood. The mother then proceeds to divine which of the deceased relatives has returned; and, on this being ascertained, the name of the relative in question is imposed upon the child by acclamation of the people present (Jessup Exper. vii. 511). The painting with blood of the sacrificed reindeer has placed the mother and child under the protection of the divinities, and has also united them with those who have been thus blessed. The child has been painted and by the other persons present. And this is completed by the identification of the ancestor who has returned in the person of the child. The Herero of German South-West Africa perform an analogous ceremony, to which the child is released from her seclusion. She takes the
child to the sacred fire, which burns on the hearth in the open air at the eastern side of the hut where the chief of the verul lives. She is sprinkled with water by the chief’s eldest unmarried daughter, whose duty it is always to be in a state of purity and without any bodily defect. She daubs herself on the outside of a ox, and the chief spurs a mouthful of water over her and the child, afterwards addressing his ancestors: ‘To you is a child born in your village; may this [village] never come to an end!’ Then he rubs mother and child with fat and water, taking the child upon his knees in doing so. He takes the child in his arms, and, touching its forehead with his own, he gives it a name. The other men present repeat this action on the child, uttering the name already given by the chief of the verul or the mother, if they please, each giving a new name (S. Afr. F. L. Journ., ii. 66). Here both the mother and child are purified, and the child is presented to the ancestral spirits and received into the kin. Where, as, for instance, among the ancient Mexicans, the worship of gods had been evolved, the ceremony took place at the temple. There the child was presented to the god, and there it received the gifts which were a recognition of its membership of the kin (Payne, Hist. of Ancient E. E. 1899, ii. 47). Among the Bengalese a child is admitted into the family by a secret rite which includes the recognition by the father of his paternity. Admission into the clan is more public; it takes place three days after the birth of a girl, or five days after the birth of a boy. The child’s head is shaved. The clansmen stand round, and sip water mingled with a bitter vegetable juice. The father solemnly names the child, and the midwife thereupon sprinkles rice-water over each of the visitors, pronouncing, as she does so, the child’s name. The baby, which up to this moment has been unclean, is by the ceremony re-admitted with the newborn take into the clan, and the kinsmen on both sides sit down to huge earthen pitchers of beer previously provided. Admission into the wider circle of the race takes place some four or five years later. It consists in marking the child’s right arm with the spots indicating its Santal nationality, and the drinking of beer by the friends of the family, who, irrespective of clan, have been invited (Hanna, Bengalese, 1897, p. 293). The bestowal of a name among the Kikuyu and Kenyuhals of Borneo is accompanied with great formalities. It is the starting-point of the child’s life in its social aspects; before it is named, the child would not be enumerated as one of the family, and would not be mourned for any more than if it had been still-born—it is, in fact, non-existent (Furness, Born. Head-hunters, p. 18).

(c) Admission in the higher religions: baptism. In the higher religions, as in Muhammadanism and Christianity, the dedication of the child to God, and its entrance into a wider society than that of the kin, and the importance of the ecclesiastical rite tends to efface its social meaning. The ecclesiastical rite insists on the relation between the child and the Deity, and the effect on the child as a social being falls into the background. But outside the ecclesiastical rite the occasion is often made one of social interest. The Swahili, a Bantu people of East Africa, have accepted Islam, which they practise diluted with much of the ancient pantheon, and, at baptism, all friends of the house assemble for the baptism of the child. The whole night is occupied with ritual readings from a sacred book, repeated after the reader by all present. At four o’clock in the morning (the hour when the Prophet was born) the actual baptism takes place in the house, and the celebration is then closed with a feast (ZE xxxi. 67).

Throughout Europe the most curious ceremonies and superstitions attend the baptism of a child. The utmost importance is attached to the choice of godparents, for the child inherits their qualities. They must always be married, preferably in a state of purity and without any bodily defect. In the Sollinger Wald, for example, they must take care to rinse their mouths with water before going to the ceremony, and abstain from spirituous liquors until it is over (Am Urspel, ii. 198). In Provence, if one of them were one-eyed, a stammerer, badly-legged, or a hunchback, the child would be afflicted in the same way (Bercinger-Férand, Trad. de la Provence, p. 171). The invitation to become godparents is frequently of the most formal and deferential character, by special messenger or the father in person, or else by letter. It is sometimes, as in the south-west of France, given before the birth. This is a practical necessity where baptism follows speedily on birth. The number of godparents varies; in one German family as many as twenty-three are recorded on one occasion—a luxury in which only wealth could indulge. The child’s future depends on the conduct and even the dress of the godparents. On the way to the church they must not look round, or consult their personal needs. Their thoughts must not wander during the ceremony. Above all, they must make no mistake in repeating the Creed; nor must the clergyman stammer or make a mistake in the service. On the way back from church the same care is necessary; but now they are expected to give alms, especially to children. There are also rules as to the manner in which the children are held at the font, as to the order in which they are to be presented if more than one child be baptized. The child is kept dry for as long as much of the child’s luck depends. The parents themselves do not attend the baptism. They are (at least the mother) still under the ban, being as yet unchurched. But where this is the case, their occupations during the absence of the little one do not affect it an any the less. The Estonian father runs rapidly round the church during the service, that his child may be endowed with clearness of foot (Grimm, Teut. Myth. iv. 1845). The mother, in some parts of Germany, must read her经文 from the Bible and after she has completed it to learn easily. Elsewhere she has to perform nine kinds of work, that the child may become active. The child’s conduct at the font, too, is much regarded. If it cries, in most parts of England the devil has gone out of it. But this is not the universal belief. In Auvergne, if it does not cry, it will be good; at Liège, if it cries, it will become a bad character. At Marseilles, to cry is a sign of a good constitution; but it is also the sign of an arbitrary and choleric temper. In Germany, the child who cries will not live to grow old; in Portugal and elsewhere, on the other hand, the child who does not cry will hardly live. On leaving and returning to the house a special ritual has frequently to be followed. Among the Masurs about Gilsenburg the midwife carries out the child, stepping over an axe, on which three glowing charcoal brands are laid: this is held to be the best preservative against everything evil. A piece of steel is elsewhere among the same people packed in the child’s swaddling clothes, or laid in time to time upon its shoulders. As a baby ( suggesting ‘I take away a heathen and bring you back a Christian’ (Töppen, Aberg. aus Mecklenburg, 1897, p. 81)—a sentiment of very common provenance. The child, on returning, is carried thrice round the table. There are other ceremonies, too, to be detailed here, intended to affect the child’s after-life, are found
in some form or other all over Europe. When they are at an end, the feast begins, sometimes in the inn, sometimes in the parental dwelling, at which the child is now qualified to be, and frequently present. The godparents, the christening man and sacrist, and the midwife are joined by the relatives and neighbours. Christening cakes are everywhere a special feature of the meal. The godparents must taste of every dish, in order that the child may speedily learn to eat and may thrive accordingly. The occasion is one for merriment, games, practical jokes, and dancing. It need not be said that the godparents are expected to present gifts to the child and to the midwife. So far as the child is concerned, that is only the beginning of their duties. He will expect gifts and help from them whenever in the course of his life he needs them. In some places, as in the Tyrol, the godparents of the first child of a family fulfil the same office for the subsequent children: it would be an insult to them to ask for others. The unbaptized child is called drakos, or dragon. It is not yet a fellow-Christian. The epiphany, moreover, is probably deemed to have an influence on its future development by promoting its strength. At baptism the priest and godparents drink a chalice of red wine, and on the return home the mother meets the little procession on the threshold with a ploughshare, the hollow of which is filled with embers. She waves this before the child to secure for it strength and skill in agriculture. He will expect gifts and help from the godfather into her hands, no longer a drakos but a Christian; and sweets and raki conclude the rites (Bent, loc. cit. p. 204).

The christening feast is the analogue of the merry-making which very generally in the lower cultures follows upon the accession of a new member to the community. Children are the greatest asset of a people; they are a pledge of its continuance; and in a barbarous society they are often a source of wealth rather than a drain and an encumbrance. The ideas of barbarism persist in the peasant classes of Europe, among whom the various and complicated ceremonies roughly enumerated above are observed. The actual rite of reception into the community has taken an ecclesiastical form, that of baptism; but the rite of baptism follows the transition to civilized life. They present, it is true, the appearance of regarding only the child. But this is delusive. It is to the interest of the entire community that the new member should grow up well-conducted, strong, and well-sorted. In the paganized or half-paganized, the provision for securing the child's future luck, is an index of the importance which the community, first in the narrower sense of the family, and in a less degree, but still really in the wider sense of the village and neighbourhood, feels to attach to the moral and mental qualities and the material prosperity of the neophyte.

6. Re-admission of the parents into the community.—The tabu of the mother is in the lowest stages of civilization only comparatively light. Among the Arunta of Central Australia the mother leaves her husband's camp and goes to that of the unmarried girls, where she is delivered; and there she remains for three or four weeks. She then resumes her ordinary life, so far as marriage and congenial hospitalities are concerned and occupation. When among the Uaspe of Brazil birth takes place in the hut, everything, as we have already seen, is taken out of the house until the next day. The mother then washes herself and her child in the river, and returns to her hut, which is purified and walled up for the period of from five to seven days (Wallace, Trav. Amaz., 1853, p. 345). She is perhaps not yet completely pure, but the traveller's account does not enable us to say whether any further ceremony is performed. In the west of India the hut in which a Koragar mother is delivered is deserted by the other inmates for seventy days. In the same way the mother and child are restored to purity by a tepid bath, and the child is named. Rice and vegetables are presented to the mother; several coco-nuts are split, and given, one half to her, the other half to her husband (JAI iv. 375). When the mother is returning to ordinary life, in the southern part of New South Wales part of her hair is burnt off: this is doubtless a ceremony of purification (JAI ii. 288). The Maori have two alternative ceremonies to deliver the mother and child from tapu and make them noa (common). The one consists in the cooking on new fire (made by friction) of fern-root, which is waved over the child and brought into contact with it, and then offered to the atua (gods or ancestral spirits). In the other, mother and child are sprinkled with water by means of a branch, food is offered to the atua, and the branch is planted in the ground; if it grows, the child will become a warrior (JAI xix. 98).

Much more complex rites, elsewhere repeated, are required to restore the new mother to purity. The Hopi mother's tabu extends from the moment of her moccasins until the fifth day. She then bathes her head and her baby's with amole, and is at liberty to go out of doors and to resume the charge of household affairs. She is not, however, fully cleansed. She cannot eat most meats or salt, and may drink only warm water or juniper tea. The bathing must be repeated on the tenth and fifteenth days. On the twentieth day a much more elaborate rite takes place, including a vapour-bath administered to the mother, usually by her eldest husband's mother, at the same time that the house is thoroughly cleansed. The child is formally bathed and rubbed with corn-meal, named, and presented by the mother to the sun at the moment it rises above the horizon. In the house a feast is prepared, and presents are made to the guests in return for those which the mother has received from them during her confinement (Journ. Am. Ethn. and Arch. ii. 165). Here it will be observed that the unbroken series of ceremonies culminating on the twentieth day effects the restoration of the mother to purity and the admission of the child to the community. In some cases, as we have already observed (§1(d)), father, mother, and child are simultaneously admitted.

But while it may be possible in many stages of society for a mother to remain for a length of time under the ban, this would be very inconvenient, not to say impossible, for the father, upon whom lies the duty of providing for the wants of his family. As a rule, therefore, his tabu is light and easily got rid of, while that of the mother may extend over a lengthened period and be only progressively removed. Suckling often goes on for a lengthened period—two, three, or four years. Among many peoples the mother is in some degree unclean until the child is weaned; she may not eat certain food or have matrimonial relations with her husband. This rule is general, for example, among the Bantu and negro tribes of southern Africa, and is also observed for the polygynous peoples so largely practised by those peoples. The same rule applies to the Sakalava of Madagascar; but it is said that, although the Southern Sakalava woman is tabu at this time to her husband, she may admit to her any other male who offers her a fine payable to the husband if he discovers the infidelity (van Gennep, Tabou et Totémisme, 1904, p. 168).
The tabu on the mother is practised also in Europe. The rule is very general that she must not go outside her home until she goes to be circumcised. Before that ceremony she is distinctly regarded as impure. In some parts of Europe she must not go to church, but has to be taken to drive away the powers of evil. She must eat apart; she must not work; she must not enter another house lest she bring ill-luck. When she is to be circumcised (usually on the fortieth day), she steps over a hatchet or a knife fixed in the threshold of the house; a flaming brand or a packet of salt is thrown after her. On her return a feast is provided to celebrate her re-entering into ordinary life. In Karpathos the mother takes her child and a jug of water to church. The water is blessed and the mother put on the threshold of the house; she visits her neighbours, sprinkling water from the jug at each house, 'that your jugs may not break.' As she crosses the threshold she puts the handle of the door-key into her mouth, 'to make the plates as strong as the iron of the key' (Benet, loc. cit. p. 205). Newly fortified and cleansed by the rites she has undergone, she is no longer tabu, a centre of infection, but, with her child in her arms, a fountain of beneficent and in particular of pro-

LITERATURE.—The best general accounts of birth customs and superstitions amongst Semites are in German—W. B. der Welt, by W. F. H. 5, 4th ed., 2 vols., Leipzig, 1884, and Das Welt in der Natur- und Völkerkunde, by the same author, 3rd ed., edited by Max Hartel, 2 vols., Leipzig, 1891, and subsequent editions. For the customs and superstitions of particular peoples, reference may be made to the various works cited above, and to others too numerous to mention here. In this, as in other departments of anthropology, there is now a large accumulation of materials in monographs, works of scientific explorers and missionaries, the journals of anthropologists (including folklore) and geographical societies, and the publications of American and European museums and universities, and of the Bureau of Ethnology at Washington.

BIRTH (Assyrio-Babylonian) without the Assyrians, or with other nationalities, especially the Semites, the birth of a child was an event of importance, and all the more so if the newborn happened to be a male. It is true that records of births are rare, but the attention paid to such events may be judged from the reference to the geometrical number 'in Plato's Republic, viii. 546 B-D.* Even the ideal city, it is there stated, will come to decay, the cause thereof not being in the city itself, but from without. This degeneration was brought about by wrong or impartial marriages and births. Plato then constructs a geometrical number out of the elements which express the shortest period of gestation in man (216 days), the number in question being 12,960,000, which he calls 'the basis of the moon.' The connexion of 216 with 12,960,000 is rather complicated, but the former may be obtained by cubing 3, 4, and 5, and adding together the results. These numbers are also the elements of the Babylonian text (P.N. 90), which, multiplied three times by itself, produces the 'geometrical number' referred to. As that high number, and numerous others connected with it, are found in the Assy.-Bab. mathematical texts, there would seem to be no doubt that both that and the idea connected with it originated with the older of the nations which have handed down to us the tablets. It is natural that parents should desire to have their children a "geometrical number". Since to this, the Assyrio-Babylonians seem to have

BIRTH (Assyrio-Babylonian) without the Assyrians, or with other nationalities, especially the Semites, the birth of a child was an event of importance, and all the more so if the newborn happened to be a male. It is true that records of births are rare, but the attention paid to such events may be judged from the reference to the geometrical number 'in Plato's Republic, viii. 546 B-D.* Even the ideal city, it is there stated, will come to decay, the cause thereof not being in the city itself, but from without. This degeneration was brought about by wrong or impartial marriages and births. Plato then constructs a geometrical number out of the elements which express the shortest period of gestation in man (216 days), the number in question being 12,960,000, which he calls 'the basis of the moon.' The connexion of 216 with 12,960,000 is rather complicated, but the former may be obtained by cubing 3, 4, and 5, and adding together the results. These numbers are also the elements of the Babylonian text (P.N. 90), which, multiplied three times by itself, produces the 'geometrical number' referred to. As that high number, and numerous others connected with it, are found in the Assy.-Bab. mathematical texts, there would seem to be no doubt that both that and the idea connected with it originated with the older of the nations which have handed down to us the tablets. It is natural that parents should desire to have their children a "geometrical number". Since to this, the Assyrio-Babylonians seem to have sought the improvement of the race by trying to arrange that births should take place at the proper time—with them, the periods when the moon had reached certain positions, either in its phases or in its course, probably the former. The numbers expressing these positions are contained in the British Museum fragment 80-7-19, 273, and are all fractions of the geometrical number. They show the progress of the phases of the moon, culminating in the moon's "subhath," and decreasing afterwards.+

Naturally, there is at present much doubt as to how these numbers were used in deciding the times for propitious births, but certain celestial forecasts referring to the moon will give an idea of the method employed. Thus, if on the 16th of the month Tammuz an eclipse of the moon, or on the 16th of Chislev an eclipse of the sun, take place, pregnant women, it is said, will not have their offspring proper (a variant has 'their offspring lost') and are warned to act propitiously. (P.N. 505.) The moon was regarded as reaching its maximum fullness; and as that date would be an unexpected time for an eclipse, it seems to have been regarded as an evil omen. Independently, however, of the lunar numbers and dates influencing births, the moon was supposed to affect the offspring in other ways; for, when a halo surrounded our satellite, women, it was believed, would bring forth male children. Also, if the star Lugal or Saturn, 'the king' (Romans, Merodach), stood in its place, women would likewise bring forth male offspring.+

Notwithstanding the moon's importance in its influence over births, it seems to have been less regarded than Ishtar or Venus, and that goddess less than Zer-panitum, the spouse of Merodach, as is indicated by the name 'Ere-'a, 'conception,' or the like, which she bore. It is on this account that, in the bi-lingual legend of the Creation, she appears under the name of Aruru, as the one who formed, with Merodach, the creator of all things, the kind of mankind. Among the names of Ishtar-Zer-panitum (bearing the moon)—Ana-du-bat = ummu pillat burki, 'the mother who openeth the loins'; Nager-daga, 'the framer of the fetus'; Sarru, 'the goddess of the fetus'; Nin-tut, 'the lady of the womb'; Nin-zi-anu = bilit pinti, 'the birth ();' Aruru, 'the birth'; Zer-panitum, 'the mother of procreation'; Ani, Anu, Mama, and Mami, all, apparently, meaning 'mother.' It will thus be seen that the Assyri.-Bab. name of Zer-panitum (for Zer-lanintum, 'the bright one'), which she bore (often transformed by Assyriologists into Sar-

other gods, including the older ones, became merely his manifestations. The name which he bore in this connexion was Tatu,* which is rendered mātum in the inscriptions of the Akkadian period. 'Bēgetter of the gods, renewer of the gods.'†

Children being naturally desired, it is not to be wondered at that a letter should exist congratulating a woman that she was likely to become a mother. In this text Aṣīr-bani-apli, the father of Etana, whom he calls his sister,* 'My heart hath rejoiced that thou art conceive(lībbā dīšī (?) ti.tār).§ Notwithstanding this natural desire, however, the Babylonians believed in the existence of certain stones and plants, of which they presumably made use for the purpose of conceiving only love, but also conception and bearing—āban ēri, ēbrān là ēri, 'stone of conception, stone of non-conception'; ēbrān ēlādā, ēbrān là ēlādā, 'stone of bearing, stone of non-bearing'; šammī ēri, šammī là ēri, 'plant of conception, plant of non-conception'; šammī ēlādā, šammī là ēlādā, 'plant of bearing, plant of non-bearing.'† The 'plant of bearing' is referred to in the Etana-legend, in which the hero says to the sun-god Šamaš: 'Give me then the herb of bearing—show me then the herb of bearing; bring me forth, and my father shall call me by name.' Whether this implies that a glance at the plant was sufficient or uncertain; in all probability a potion was made from the herb which one or both of the prospective parents had to drink. The same, perhaps, is implied in the case when a man goes and asks the eagle, which is one of the personages in the legend. It was probably in search of this plant that Etana, on the eagle's back, mounted up to heaven, and apparently appealed to the goddess Istār; but the mutilation of the record deprives us of the sequel.‡

References to birth-rites in the Assy.-Bab. inscriptions are rare, but there is every probability that the present material will be greatly augmented by the discovery of further stores of inscribed tablets. In the account of the birth and exposure of the infant Sargon of Agade by his mother, there is no reference to any ceremonies or incantations which she may have made on his behalf. In all probability, however, the mother of a newly-born infant was regarded as being incapable of initiating the ceremonies necessary to consecrate the child and another person, possibly a priest, would seem to have been employed to perform the duty. The British Museum fragment K 879 has apparently part of a prayer, or incantation, recited on behalf of a newborn infant and her prospective offspring:* 'The woman. Her binding, which is before thy divinity, may it be relieved; safely may she bring forth—May she bring forth, and may she live; what is there prosper. If the presence of thy divinity safely may she go, safely may she bring forth, and may she perform thy service. This fragment, which has neither beginning nor end, is bi-lingual, having been used by the Sumerio-Akkadians as well as by the Semitic Babylonians.

A rather remarkable reference to creation and birth occurs in the 4th column of the legend of the Tatu-hymn,* 'begot,' begins: 'This Enuma Elish wasEnuma Elish was Tatu, of which Tatu is evidently a reduplicative form.' In what way Mesopotamia was regarded as the renewer of the gods is uncertain; the phrase may refer simply to the 'creative-gods,' who had been Tiamat's helpers in the fight with her. He is said to have visited them in prison and comforted them, apparently in order to save the existence of ultimate beings. Probably a term of affection for a beloved wife, as in Heb. (cf. Ca 4:7; 13:24; 21:1, etc.), Campbell The Thriving Babylonian Letters, 1906, No. 40.

The text is not certain in some places.†

1 Conform Texts from Babylonian Tablets, xvi., plates 28 and 29, and see Cassel the name of the plant of a woman who is not to bear; and pl. 27: šimmu mūtu šū-tur (or, šimmu mūtu šū-tub), 'plant of and the serpent of conception of the fetus.)

† See Jensen, 'Mythen und Epen,' p. 287; note thereon, pp. 543-545.

§ Note that Jensen * reads the name, Ater-basis (the Chaldean Noah, if this be correct). Apparently the mother-goddess, Mār or Māmi (Zēr-paumû, the spouse of Merodach), after uttering her invoca-

ation, threw down clay, and detached therefrom 14 pieces, laying 7 to the right and 7 to the left, placing a brick or tile between. Then, seemingly, she called out, 'Women, husbands! There were 7 and 7 fetuses (representatives of future living things)—7 were made male, and 7 female—fate formed (each fetus). 'Forms of human beings Māmi shaped them.' In the house of the undelivered woman about to bear, a brick was to be placed for 7 days, for the protection (?) of the house, Mār, Māmi. The spouse of Eṣû, 'time' (apparently the fetus) were to become swarrosse (?), and there was to be joy in the house of the undelivered woman. When the woman about to bear brought forth, the mother of the child was expected to withhold (?) her child. Two mutilated lines follow containing the words sikuru, 'male,' and elli-... probably part of ēllitu (-ti,-ta), 'pure,' suggesting that she was to keep from men, and purify herself. This text being exceedingly difficult, there is much therein which is unsatisfactory, but it is certain that a prayer would make it a valuable contribution to the subject of the ritual attending births in Babylon. It is not implied in this inscription that images of children were made when the birth of a child was expected, but the brick, which is referred to, was to have typified the building up of the house or family.

Tablets of late date show that the hour of birth was carefully noted, and celestial observations were made for the purpose of casting the horoscope, if the child was a male; and, probably, other ceremonies followed. If a conclusion may be drawn from the tablet K 1285, it would seem that, at least in the case of the children of people of note, certain ceremonies took place in the temple of Istār, and also, perhaps, at the fane of other deities:

* Young wast thou, Asīr-bani-apli, whom I (Nebo) left unto the Queen of Nineveh.

A suckling wast thou, Asīr-bani-apli, whom I satisfied on the lap of the Queen of Nineveh;

The fullness of the texts which are placed in thy mouth, twist thou therein, whereas, to thy face.†

The expression, 'Queen of Nineveh,' has the determinative for divinity before it, showing that the personage intended is none other than Istār, the patron of that city. The third line of the extract has been omitted, probably to have typified the building up of the house or family.

Naturally certain days of the month, and probably certain months of the year, were regarded as especially lucky for births. At the time of the dynasty of Babylon (about 2000 years B.C.), such names as 'the son of the 20th day' (Mār-smi-ēdar) are met with; and from a student's exercise-tablet of late date, we learn that the 20th was the festival of the sun-god, not because, according to the Calendar in the British Museum, eclipses could then take place (the days quoted are the 20th of Sivan, the 20th of Tishir, and the 20th of Chisley, the common expression, antalū ilu Šamaš, 'eclipse of the sun,' being used), but probably because, after the eclipse, the sun was regarded as shining visibly again. Ulülā (Ulūlā = Elūlāus), 'he of the month Elūlā, and Tobētā, 'he of the month Tobēt,' are also found; but though this, to all appearance, records the month of the

* Jensen, 'Mythen und Epen,' p. 287; note thereon, pp. 543-545.

bears' birth, it is doubtful whether any lucky omen was attached thereto.

In the case of a birth derived from the reference to fate forming each fetus, the Babylonians seem to have believed that the sexes were foreordained by the gods, who were the 'makers of fate.' A disturbing element probably existed in the influence of Tiamat, the spirit of confusion, and on this account the baboon and all that was nothing absolutely constant in nature, and that the species could change, so that a woman, or a sheep, might bring forth a lion, etc., and infants might have parts of the body like those of animals, such as the tail or the mane of a horse. To prevent these departures from the normal, omens were attached; and in all probability they were regarded as being sent by the gods for the information or the warning of man. The following will give some idea of the nature of these forecasts:

'It is said of the birth of a woman, there will be a powerful king in the land,
If a woman has brought forth, and its right ear does not exist, the life of the prince will be long.
If a woman has brought forth, and its right ear is small, the horse of the man will be destroyed.
If a woman has brought forth, and from the first her hair is filled with grey hairs, the life of the prince will be long.'

If a woman has brought forth 2 males, there will be hardship in the land, etc.
If a woman has brought forth twins for the second time, that country will be destroyed.
If a cow has brought forth 3, and (they are) 2 male and 1 female, hardship of a year—the harvest will not prosper.'

These omens are exceedingly numerous, and often very difficult to translate.

LITERATURE.—The literature has been given in the foot-notes.

T. G. PINCHES.

BIRTH (Celtic).—The data concerning the birth-rites of the pagan Celts are lamentably scanty. Polibius, viii. xx. [xivii.] 2 records that 'many of the barbarians have the custom either of plunging their newborn children (ἀφόβατον τὰ γένεα) into a cold river, or of putting on them scanty covering, as among the Celts.' The Emperor Julian states (Orationes, ii.) that with the Celts (though with him this may mean the Germans) the father placed his newborn child on a shield, which was put in the Rhine. If the child was legitimate, the shield would float, but otherwise it would sink, thus affording a test of its legitimacy to the bystanders.

The only other passage which seems to bear upon the birth-rites of the Continental Celts is the curious statement of Strabo (p. 165), that among the Celts, as among the Thracians and Scythians, 'the women themselves, after giving birth, go on with agriculture and also tend their husbands, putting them to bed in their own steads.' This implies the cowpade (above, p. 655); but this custom is reported in Europe only of the Coriscans (Diodorus Siculus, v. 14)—a fact which would seem to imply a confusion on the part of Strabo between the Celts and the Iberians, a race entirely different ethnologically (cf. Schrader, Recollektion der indo-germ. Altertumskunde, Strassburg, 1891, p. 347 f.; Hirt, Indogermanen, Strassburg, 1905-7, p. 717 f.; in favour of the Celtic explanation, Juliann, Recherches sur la religion gauloise, Bordeaux, 1903, p. 64 f.). At the same time, it should be noted that, whatever its racial origin, the cowpade existed, at least in clear remembrance, to a late period in Greece, as is shown by the Paean romance made up by Apollodorus (Rhetor. p. 333, ed. of the 13th cent.), ch. 39. Another apparent survival of ancient custom is recorded from a 14th cent. source by Ploss (Das Weib, Leipzig, 1855, ii. 70), to the effect that no woman was allowed to give birth to a child on certain islands in the mouth of the Loire, but when her time approached was sent to the mainland or placed in a boat in the river until the child was born. Hence we may have a reminiscence of an island, sacred to 'Dionysus,' at the mouth of the Loire (described by Strabo, p. 158), where only women dwelt, all sexual intercourse (which, like birth, would thus be ceremonially impure in Celtic religion) being held on the mainland (but cf. below, p. 692 f.).

The pagan Irish material on birth-rites is still more meagre. According to Stowe MS. No. 992 (ed. and tr. Meyer, ECel vi. 173 ff.), Ness, when about to become the mother of Conocbar, 'went to the new-born that was on the flagstone of the river. She sat her down on a flagstone (nos fuirim iarum for in lice cloichthl) that was on the brink of the river. So there came the pangs of child-birth upon her. Too much must not, however, be drawn from this, for the Côir Annamh, 213 (ed. and tr. Stokes, in Stokes and Windisch, Trische Texte, Leipzig, 1890-1905, iii.), states that a band of girls (inghenraidh) kept watch round a prospective mother. After the birth had taken place, they would wait for a lucky hour for the child (ib. 273), i.e. probably as indicated by the horoscope, etc. Thus the Druid Cathbadh observed omens from the stars, the clouds, and the age of the moon immediately after the birth of Dídeir (Hyde, in Æed. f. coll. Philologe, i. 143).

In the case of the infant who afterwards became Conocbar. There she sat her down on a flagstone (nos fuirim iarum for in lice cloichthl) that was on the brink of the river. So there came the pangs of child-birth upon her. Too much must not, however, be drawn from this, for the Côir Annamh, 213 (ed. and tr. Stokes, in Stokes and Windisch, Trische Texte, Leipzig, 1890-1905, iii.), states that a band of girls (inghenraidh) kept watch round a prospective mother. After the birth had taken place, they would wait for a lucky hour for the child (ib. 273), i.e. probably as indicated by the horoscope, etc. Thus the Druid Cathbadh observed omens from the stars, the clouds, and the age of the moon immediately after the birth of Dídeir (Hyde, in Æed. f. coll. Philologe, i. 143).

In the case of the infant who afterwards became Conocbar. There she sat her down on a flagstone (nos fuirim iarum for in lice cloichthl) that was on the brink of the river. So there came the pangs of child-birth upon her. Too much must not, however, be drawn from this, for the Côir Annamh, 251.

BIRTH (Chinese).—The customs which are observed in China, in connexion with child-birth, differ widely in the various portions of the Empire, and it would be as difficult to describe them in general terms as to include in one article 'Birth customs in Europe.'

Many of these customs are significant of religious prejudices, though not always possible to trace the connexion, owing to the gradual deflexion from the ancient usage; and modern explanations tend to emphasize the physical benefits which are supposed to accrue from these observances.

It should be remembered that the elaborate preparations which are made previous to birth are intended to secure not only a happy issue to the anxious crisis—the safety of the child and mother—but their first and primary purpose is to prevent the awful contingency of death before delivery, which would involve the mother in endless torments in the 'Lake of Blood,' which is the special department of the under-world reserved for such unfortunate. From this point of view, therefore, the anxious care which surrounds the birth-chamber may be said to be replete with religious significance.

A month previous to the expected date of birth, the bride's mother, or other near relative on that side of the house, is expected to arrive with the accustomed gifts, and perform the office known as 'undoing the fastening.' The gifts include cattals, various articles of clothing required by the expected arrival (in the South, it seems, no provision of this kind is made), and tonics for the mother with provisions to prepare for a quiet and successful parturition. Charms from the neighbouring temple are sometimes procured to fasten on the baby's body as soon as born, for the event is supposed to be attended by hosts of

* 15a. 'the days of the prince will be old.'

From W. and L. Jones, 2, 4. rev. fins 7; Boelée, Documents relatifs aux prêtres, Paris, 1894-99, p. 116, verso 11, p. 116, 19; and H. B. tablet K 78, ii. 5-3.
spirits with malicious designs upon both mother and child.

As soon as the birth-pangs begin to be felt, the female members of the family hasten to light candles and burn incense before the ancestral tablets, in the little shrine over the main partition of the entrance hall, and also in front of the 'god of wealth' and the 'kitchen god,' offering extemporaneous prayers, as no settled form is provided for the occasion, and taking vows of future deeds of merit in the event of a favourable response—and all with a view to securing the assistance of the birth-speeding goddess, who is supposed to have the infant on a hair's breadth of life and to have the same time summoned, together with other assistants, whose office it is to 'clasp the waist' of the expectant mother, who is maintained in a sitting posture throughout the ordeal, and is encouraged to drink a brew of dried 'longan' fruit and thin gruel to sustain her, together with certain medical potions which are held to be very efficacious. Red candles are lighted in the chamber, as for a wedding, and all words of illomen are carefully omitted—the idea being the ostentation of cheerful confidence and the avoidance of any suggestion of ill or fear.

As soon as the child is born, a messenger is dispatched to the nearest lake or pond to procure a small quantity of water, which is then heated at the child's side, and is administered to the infant. If it is not postponed till the 3rd day; in the farther North it is generally omitted, and a little oil dabbed on the body instead.) The use of such water is said to ensure that the child, when he grows up, will become an expert fisherman. After the bath the child's body is rubbed dry with alum (in some places a raw egg is applied). A pad of fresh cotton-wool is placed over the navel, and the umbilical cord, which is cut at about a foot's length from the body, is rolled up tightly bound, the long end sloughing away in about a week. The infant's clothes are then put on, in shape like the robes of a Buddhist monk, or monk, probably with a view to deceiving the malignant spirits. (In the South, old garments warm from the wearer's body are put round the child in lieu of baby-clothes.)

The infant is not supposed to sample its own mother's milk until it has first been supplied from another household, where a baby of the opposite sex is being reared. A bowlful of this milk is obtained, and artificially warmed before being given to the child. A secret ointment of garlic and mustard is applied to the 3rd day, and a great number of articles are presented to neighbours and friends, each symbolic of some good wish, and duck-eggs dyed red are also sent, with the idea of advertising the fact of birth.

At the end of the first month the elaborate ceremonial of head-shaving takes place, and the various gods are 'invited,' i.e. by offerings of food, lighted candles, fire-works, etc. The baby-hair is shaved off with the exception of a little tuft at the crown, and is called the 'filial lock.' In the afternoon the ancestors are 'worshipped,' and then follows a feast to which the neighbours and others are invited, each guest arriving armed with some gift, generally some object of superstition, such as silver necklets or bangles, which are supposed to moor the infant's feet to the earth and prevent the terrible mortality which prevails amongst young children in China. The child is sometimes taken out for an airing on this day, dressed in all the finery which can be imposed upon him, with buckles and charms to protect him from evil influences—a row of silver-gilt genii upon his bonnet, or perhaps a bright mirror to ward off the evil eye. In some of the country districts he is placed in a boat and subjected to violent rocking, to accustom him to the motion, or he is carried over a bridge in the hope that accompanied by a rise in life, and also be able to keep his head when high promotion comes.

On the fortieth day the mother goes to the temple to offer incense (in some places, in the case of a boy being born, she goes on the 50th day), and to acknowledge the good hand of the gods in her safe delivery and happy fortune.

BIRTH (Egyptian).—A tale dating from the end of the Middle Kingdom relates how the wife of the priest of Re in a local temple gave birth to three sons destined to be kings of Egypt. Four goddesses, Isis, Nephthys, Hôkî (Hôtî, the frog-goddess, counterpart of the Chinese Nei-wô, below), officiated as midwives, having disguised themselves as strolling dancers, while Khnum accompanied them as baggage-carrier. They accepted a bushel of barley for their services; and the mother, we are told, was purified for 14 days ('Le roi Khonfoui et les magiciens,' in Maspero's Contes popul. de l'Egypte ancienne, 1882, pp. 30-40; Petrie, Egypt. Tales, 1895, i. 38ff.). At Deir el-Bahari is pictured the divine birth of Queen Hatshepsout amidst a crowd of deities of birth, food, fortune, etc. (Naville, Deir el Bahari, 1898-1901, iii., plates xlvii.-lvi.), and at Luxor that of Amenhotep III. (Champollion, Monuments, 1825, pl. ccxxv-xlxi.; Gayot, Temple de Louxor, pl. lxxv.)

The name of Meskhôni, the goddess perhaps of female functions, is generally applied to a brick, referred to as 'the bed,' which supported the mother, or on which the child was laid. In Ex 14, where late Egyptian customs may be reflected, the Hebrew women are represented as delivered on 'stones,' i.e. bricks (1) (cf. Spiegel, Histoire des Papyri égypt. 2. vii. 81; cf. Steindorff, Geschichte des Ägyptischen Altschriftbuches, 4th cent. A.D., ed. Steindorff) still refers to the 'birth-stool' as 'the brick.' A wooden couch is also figured early as the 'determinative' of Meskhôni as well as in the birth scenes, and probably among the wealthy the brick had only ceremonial importance. The word tōbi, 'brick,' is feminine, and the birth-brick, figured with the head of a goddess, is present in detailed illustrations of the Psychostasia; in the Papyrus of Ani (Brit. Mus., ed. Budge) it is at the head of the goddesses Meskhôni and Emmûti (Rum't, 'the nurse'); in that of Anhai (Brit. Mus., ed. Budge) two bricks with female heads are named Shîn (masc.) and Emmûti respectively. In a funerary papyrus at Edinburgh of the year 11-10 B.C. the deceased is stated to have completed the years which Thoth wrote upon his birth-brick (Brugsch, Khânu' s Zwee Bilingue Papyri, 1865); and in the Westcar Papyrus, quoted above, it is Meskhôni who approaches the child laid on its back. Thus each child left its destiny.

In stories dating from the New Kingdom, the Hathors, seven in number in one text, pronounce the destiny; these may include the birth-goddesses already mentioned (Maspero, i.e. p. 51). Horoscopes have not been traced with certainty in
BIRTH (Finnns and Lapps).—The only important rites connected with birth among the Finns and Lapps are those purificatory ceremonies which belong to that which may be called a form of baptism (see also BAPTISM, p. 572). The existence of a non-ecclesiastical form of infant baptism among the Lapps is witnessed to by Norwegian missionaries of the 18th century. The fullest description of this ceremony is found in E. J. Berg's "The Moirnere, or Finnish Lapps Hedenase Religion," pp. 33-42 (printed as an Appendix to Knud Leem's Beskrivelse over Finnmarkens Lapper, 1676; cf. also ib. pp. 495-497). After the child was brought home from the official baptism in church, where it had received a Norwegian name, it could not be washed or brought into contact in any way with water until it was baptized anew with a Lapp name (samemna). The pregnant mother, who had placed herself under the protection of the sarakka ('creator who weds the link in her'), turned to her deceased partner in a dream, or she had been informed, by means of the magic drum, which of the deceased meant to come to life again in the child. The baptism was not administered by the magician but by a woman, usually the mother herself. The so-called rism-emde ('twig-mother'), who must not have acted as Christian godmother (Christ-rode), presented the child with a ring or plate of brass (nabma-skillo), which was thrown into the baptismal water. After the ceremony this piece of brass was placed upon the child to be worn as a talisman—in the case of a son, under the arm; in the case of a daughter, upon the breast. Before the baptism both the child and the water were dedicated to the sarakka. Baptism with the Lapp name was regarded as one of the two sacraments of the sarakka.

This baptism, which was resorted to in order to secure happiness and good health for the child, often proved insufficient. If the child fell sick or cried a great deal, it was once more re-baptized and consecrated anew. A similar rite is adde-namna, or saivo-namna ('under-world name'). This fresh bestowal of baptismal names might be repeated again and again in case of sickness, even in later years. It, too, was administered by a woman, usually the father of the child, with almost the same ceremonies as the other. Warm water was poured into a trough, and two birch twigs—one in its natural condition, the other bent into a ring—were laid in it. At the same time the child was thus addressed: 'Thou shalt be as fertile, sound, and strong as the birch from which these twigs were taken,' or 'a happy (or silver) talisman was cast into the water, with the words: 'I cast the nabma-skillo into the water, to wash thee; be as melodious and fair as this brass (or silver).' Then came the formula: 'I baptize thee with a new name, N.N. Thou shalt thrive better than this water, of which we make thee a partner, than from the water wherewith the priest baptized thee. I call thee up by baptism, deceased N.N. Thou shalt now rise again to life and health, and receive new limbs. Thou, child, shalt have the same happiness and joy which the deceased enjoyed in this world.' As she uttered these words, the baptizer poured water three times on the head of the child, and then washed its whole body. Finally she said: 'Now art thou baptized adde-namna, with the name of the deceased, and I will see that with this name thou wilt enjoy good health.'

In the so-called Näro MS of J. Randulf, published by J. Vigstadin (Det Kgl. norske Videnskabers Selskabs Skrifter, 1903, No. 1, pp. 53-55), there is mention only of a species of Lapp baptism which was administered immediately after birth, or baptism, or at latest within half a year, in cases where the child fell sick. In this baptism the child received a new name, udeneuno. The ceremony was performed on a Thursday, in the name of the three chief Lapp gods, borrowed from the Scandinavians, namely, Heru-Galles (Thor), Haralden-Oldmay (Freyr), and Biela-Galles (Njord). There was a thrice repeated pouring of water on the child. According to a supplementary note by J. Kildal, the child was baptized in the name of the three Lapp gods, and the baptism was performed by S. Kildal (Det skandinaviske Litteraturselskabs Skrifter, vi. 458 f.) that the name selected was that of the father or grandfather.

Outside the sphere of Norwegian Lapps, our only information concerns a formerly Lapp district in N. Finland, and is to the effect that among the Finn new settlers on the rivers Kemi and Ji, about the year 1750, a re-baptism with a new name (uami nimi-buste) was not unknown. As late as the year 1803, a peasant, Erik Lampa of Tervoja, who had been brought up to have caused himself to be re-baptized at Izak, and to have recovered (J. Fellman, Aanteckningar under min viste i Lappmarken, ii. 51-52).

That Lapp infant baptism is an imitation of the Christian ordinance is sufficiently attested by the existence among the Norwegian Lapps of a second sacrament of the sarakka, which is an imitation of the Eucharist. A similar 'nature-woman,' 'creatix,' in magic songs of the Finns is a metamorphosed form of the Virgin Mary; and in like manner the Runein (father, wife, child) on the magic drums of the Lapps stand for the Trinity in its popular-Catholic form. Another Christian feature of the ceremony is the thrice repeated pouring of water. The use of a talisman of brass does not point to an original stage of Lapp civilization; it is a case of borrowing from the neighbouring Scandinavians—a conclusion that is confirmed by the mention of the three principal Scandinavian deities. The latter still survived in the popular faith of the Lapps, and their presence is in no way conflicting with an original stage of Lapp civilization during the Catholic period of Scandinavia. It is possible, however, that Lapp infant baptism had already been introduced by half-pagan Scandinavians.

The baptism in question must be distinguished from that of the infant upon the mother's breast, a practice of an ancestor who was supposed to come to life again in the child's person. The determination of the
name by a revelation in a dream or by the oracle of the magical drum is no doubt a primitive Lapp custom. As late as 1834 the Finns under the dominance of Novgorod (the Chudes) had oracles—men who had names, swaying the child to and fro as it speaks; and that name which he happens to be uttering when the crying ceases is the one selected. The magician of the adjacent Chuvas—a Finn-Turkish hybrid race—is called to the child, and is received with tokens of the greatest respect, and the domestics and the assembled guests, who with one voice express the desire that he will give the child a name of good omen. He takes a bowl of water in his hand, mutters certain words over it, and gives both the mother and the child to drink. Then he works himself into an ecstasy, and at last bestows upon the child a name which he professes to have received by Divine revelation (see Julius Krohn, Suomen suvun pakonallinen jumalanpalvelus, pp. 104, 109).

KAARLE KROHN.

BIRTH (Greek and Roman).—I. GREEK.—Amongst the goddesses to whom the Greek matron prayed in her throes, Eileithyia, Hera, and Artemis are the foremost (Pfleider-Robert, Gr. Mythol. i. 511 ff.). After these come a number of others, e.g. the Hekate-like Eileiomae of Argos, to whom a dog was sacrificed to ensure an easy delivery (Plut. Quo. Rom. 52); Genetyllis, who received a like sacrifice (Hesych. s.v.; cf. Roscher, ii. 1270; Rohde, Philol. ii. 297, n. 33; Reinach, op. cit. 625 ff.; cf. F. G. Ballentine, Harvard Stud. xv. [1904] p. 74 ff.). Superstitions ceremonies, originating from the idea of binding and unbinding, whose purpose was to ease the birth, and whose age and origin cannot be fixed, are mentioned by Pliny (H.N xxviii. 33, 34, 42; cf. 50; see also Philologus, iivi. [1898] p. 131). When the birth had ended happily, the women brought their clothes to Artemis as an offering (Anth. Pal. vi. 271; schol. ad Catull. Hymn. i. 77); Artemis Brauronia also received the clothes of the newborn infants which they left there (Paus. viii. 19. § 3). When a child was born in Attica, if it was a boy, an olive-veste was hung on the outer door; if a girl, a woollen fillet was used, because of the spinning of wool (Hesych. s.v. σφίγων ἑφέσσω). This rationalistic explanation must, of course, be discarded; the underlying artificial differentiation is to be regarded as comparatively late, if, indeed, Hesychius' words correspond to facts. At any rate, a wreath with a woollen fillet attached must be considered as the primary form. The fillet enhances the effect of the wreath. The purpose of the wreath, which still hangs on the door at the amphidromia (see below; cf. Ephippos in Athen. p. 370 C), is not, as Rohde (op. cit. 72, 1) and Samter (Familienfeste der Gr. und Röm. 87) suppose, to illustrate the house, i.e. to cleanse it from impurity; it is apotropaic: the luck which it brings drives away ill luck. The woman who is lying-in and the newborn babe require such protection, for they are weak. The numerous amulets, with which it is the custom everywhere to deck small children, have the same purpose. And an olive-veste is expressly mentioned as one of the protective given to Ion by his mother when she exposed him (Eur. Ion. 1433, Kirchhoff). According to the belief of the Cors Indians, 'the child would come and lay its hand on (newborn) babe if (the father) did not fix branches of the zapotree into the door (Preuss, Archiv ix. [1906] p. 406). Photius lays stress upon the apotropaic character of a similar rite (Lex. s.v. ἀποτροπή), when he relates that, while a child was being born, the house was painted with pitch from horn-beds, in order to scare away the evil spirits.* A custom in modern Greece may serve as an analogy: newborn children are rubbed with sacred oil in order to protect them (Wachsmuth, D. alte Griechenland im Neuen, 79).

On the fifth day after the birth, the so-called amphidromia were celebrated (Plat. Theod. 109 E + schol.; Harpoer., Sud., Hesych. s.v.; Paravent. ii. 278). Some one, probably the father (the false reading τρέχως in schol. Plat. l.c. is explained by the preceding words; cf. Preuner, Hestia-Vesta, 54 n.), ran round the hearth with the child in his arms. Friends and relatives came, especially polypli and cuttle-fish. The women who had assisted at the birth and had thereby become unclean (cf. Stengel, Kultusw., 148) cleansed their hands on this day. Banquets were held (Ephippos in Athen. 370 D; Eubulus, 65 C); a special kind of bread was baked, if we can trust the incoherent record in the Etym. Mag. s.v.; a sacrifice was probably among the celebrations (Plant. Truc. 423 L). Perhaps the father decided on this day whether he wished to keep the child or to expose it (Plat. Theod. l.c.). Hesychius records an important rite (s.v. δρομάδως ὄμη; according to him the rite of running round the hearth was performed naked. This, too, is a case of ritual nakedness (cf. e.g. Deubner, de Incub. 24; Alt, 'Die Amphidromie, d. religiöse, Vers. und Vorb. iv. 240, 1).

Opinions regarding the meaning of running round the hearth are most divergent. The idea of the cleansing influence of the fire must probably be discounted (Plat. 79, 1); the child is not assumed to be eliminated (cf. Pipilis, D. Amb.-Philologus, 1900, p. 1138). According to some others, Samter has given the correct explanation (Familienfeste, 61), that we find here an in initi- rite, which places the child under the protection of the domestic hearth. But this gives no reason for the running. This rite is identical with the lowest stratum of the rites celebrated on this day. By a comparison with folklore parallels, S. Reinach (Cultes, mythes et religions, 1908, i. 137 ff.) has rendered it very probable that this running round is to ensure swift-footedness for the child.

In Estonia the father of the child runs round the village, while the child is being baptised inside, so that it may learn to run quickly. With this compare the custom noted by Wuttke (D. deutsche Volksber., 1300, p. 330), in accordance with which, when returning from the christening, the young godfather takes the child when they arrive at the front door, and quickly runs with it into the room to its mother. This is supposed to ensure that the child will become swift (brandsel- barn), or will lead a happy life in early (East-Prussia). In S. Greece, a magical formula promote the child's walking and talking (AWV x. [1897] p. 506). This suggests an ancient Mesopotamian influence, which gives an interesting analogy. During this festival the children born within the last three years are led round a fire, and also lifted up high, so that they may grow. The feast is celebrated with a sacrifice, a banquet and dance (Stoll, Ge- schichtsblätter in d. Volkerpsychologie, 119).

Reinach's explanation is very favorable to a people which gave its favourite hero the epithet ἀποτρόπαιος ('swift-footed'). The derisive answer of Virgil (Aen. xxxiv. [1906] p. 73 ff.) is not to the point. Scenes illustrating the amphidromia do not exist in Greek art.

On the tenth day after its birth the child receives its name. This day, too, was a festive one, celebrated with sacrifices and banquets for friends

* A very artificial explanation is given by Rohde, i.e., because he understands it as an apotropaic rite.

BIRTH (Hindu, Literary)

(Aeal. El. 1198, fr. 2 Nauck*; Aristoph. Bidera, 490 and 6224. + scholl.; Iesus, iii. 30, 70; Demosth. xxxix. 20, 22 [according to whom this festival signified the official recognition of the child], 24. xl. 28, iviiii. 40; Haproke, s.v. s. eβαδωνον and &νδεκτρας; Hesych. s.v. δνδατχ τθονος; Suidas, s.v., 3. 12; Bekker, Anecd. Gr. i. 237, 26). A cake called χαϕος was baked, and was given, among other things, as a prize for a woman's dance that was performed on this day (Enubulos in Athen. 636 D). Besides the tenth day the seventh was used for giving away the Aril' (An. vii. 12; Haproke, s.v. eβαδωνον; Hesych. s.v. eβοθαμα; cf. the eβοθα as a children's festival in Lucian, Pseudolog. 16). The day fixed for this festival has varied in different epochs and districts, whereas the amphidromia were more important as being a specifically religious custom, and therefore held to their fixed day. For, whenever these are said to have been celebrated on the 7th (Hesych. s.v. δρομανως ήμαρ) or 10th (schol. Aristoph. Lysistr. 167) day, or are brought into connexion with the 4th, 5th, or 10th day (schol. Plat. Theat. 160 E; Hesych. s.v. αμφοδρομος), this is doubtless due to a blunder (cf. also Gruppe, Berl. philol. Wochenschr. 1906, p. 1137). The schol. to Aristoph. l.c. even commits the error of supposing that the whole of the May (Hesych. s.v. i. p. 11991—92) mistakes occur elsewhere in our records; cf. e.g. the form τριχάων above, schol. Plat. l.c.) It is not warrantable to infer a coincidence of amphidromia and δνδατρα from Enul. El. 658 and 1126 (Frenuer, Hestia-Yesta, 54, 1), for i. 654 cannot be forced into closer concord with l. 1126. The un- certain notice about a sacrificial feast shortly after birth (Bekker, Anecd. Gr. i. 207, 13) probably refers to the δνδατρα.

Besides the presents brought at the amphidromia there were also so-called δεργενες gifts presented to the child by those to whom it was shown for the first time (cf. Spanheim and Schneider, ad Catt-Hymn. iii. 74). Slaves also gave the newborn babe a present (Terence, Phorm. 47). Censorinus (De Die Nat. 11, 7) mentions the celebration of the 40th (day 10 of the long month). Even in our time the 40th day is still celebrated (cf. Wachsmuth, op. cit. 73 f). But this would seem traceable to Jewish influence (Wachsmuth, op. cit. 74, 7). The rocking of the child in the cradle, the Greek byra, is described by Mannhardt (Mythol. Forsch., 1884, p. 396 f and Dieterich (Mutter Erde, 101 f).) must be eliminated from the birth-rites. Not only is the sense of the action not clearly thought out, but for such an explanation the rocking must form part of some rite, which it does not. On the other hand, the fact that the babe was put into the δεργες is easily explained, for it was the natural object to use as a small child's cot in a primitive household.

2. Roman. —Roman women made offerings to the Nymphs at the time of pregnancy (Festus, p. 77, 10), to ensure an easy birth. While the child was being born, Lucina and Diana (Tertull. de An. 39; August. Civ. Dei, iv. 11) or Numeria (Varro, op. Non. 32, 54) were called upon. A candle was lit (Tertull. ad Nat. ii. 11). As also in Greece in our day a candle burning in the lying-in room has the power of repelling evil (Wachsmuth, op. cit. 79; cf. M. Vassitt, 'Die Fackel in Kultus und Kunst der Griechen,' Münchenert Disa, Belgard, 1909, p. 75 f). The basin in which the women were bathed was made near the image of some god, therefore probably in a sanctuary (Tertull. de An. 39).

When the woman had brought forth a child, three men had to stand round (acconsidente) the threshold, beat it with a hatchet, then with the pestle of a mortar, and then sweep it (August. Civ. Dei, vi. 9). This is a cleansing ceremony, which originally was intended to beat the impurity caused by the birth (here felt as a concrete matter) out of the threshold, and to sweep it away. At a later period the ceremony was explained (August. Civ. Dei, vii. 12) by a story about Silvanus, who, as a goblin or nightmare, might trouble the woman in childbirth. In addition, there were three special deities who were regarded as protectors of mother and newborn babe: Itericonida (from intercire), Pilumus (from pilum), Deverna (from devenera). This is a fertility rite, in which gods grow out of rites. Pilumus (together with Picumum) even receives a sacrificial meal (lacteus) in the house, in order to protect the woman in childbirth (Varro, op. Serv. Verg. Aen. vi. 7, and op. Non. 32, 15; cf. Wisen, Religion und Kultur der Römer, 357, 1). In the same way Juno was given a lacteus, and Hercules a mensa, after the birth of a boy (Serv. Verg. Ecl. iv. 62); for a whole a week was spread for Juno, according to Tertull. (de An. 39). On the last day of the week the Fatida (Tertull. ib.) is given (op. cit. 214). It is Dieterich's merit to have drawn our attention to the custom described by Augustine (Civ. Dei, iv. 11), according to which the newborn babe was placed upon the ground and partially covered. The words (op. cit. 6 f)—a custom which may be identical with the toleira or enespere by the father (Santer, op. cit. 62, 3, 4). Only, the signification of this wide-spread custom cannot be that the child is placed under the protection of the earth as a goddess, but that the strength of the earth is to penetrate into the child and make it strong (e.g. Marcell. Empir. 32, 20). A rite which bears some affinity to this consists in placing the child erect on the ground, thereby ensuring its upright growth (Varro, op. Non. 528, 12; Tertull. de An. 29, cf. at Nat. ii. 11; Varro, op. Non. 532, 18; August. Civ. Dei, iv. 21). As in Greece, so also in Rome, wreaths were hung outside the door (Juvencul, ix. 85).

When the first week was over, the child was given its name on the dia lustrum: boys on the 10th, girls on the 9th (cf. Mommsen, Rom. Chronologie, 226).

BIRTH (Hindu, literary).—Birth, marriage, and death are the three most important events of the natural life; and popular belief has surrounded them with a number of ceremonies, which are designed to secure the accomplishment of good wishes and to ward off evil influences. To the advantage which students of Indian philology possess, as compared with those of other philologies, consists in the abundance of the materials at their disposal affording precise and detailed information on all the different branches of Indian culture.
The acts which accompany the events of the domestic life are described especially in the Gṛhya-śūtras, partly in the Law-Books, or, as circumstances require, in medical works. These books possess all the greater interest for the history of civilization, in that the ceremonies which they describe assumed the shape of Vedic ritual in the pre-historic epoch, and are related to customs which are found in a most primitive stage of human development, and, on the other hand, have been partially preserved in India down to the present day. Into all the details of these texts it is impossible to enter. The facts which seem to be most noteworthy may here be summarized.

The garbhādhāna, ‘the second marriage,’ the ceremony of consummation, which corresponds to the pātriya vihā of the medieal texts (Jolly, op. cit. infra, p. 50), marks in all cases the initial step. Although not usually referred to in the Gṛhya-śūtras, it is known to the Law-Books, and may be regarded as a universal practice. The appropriate time is ṛtu, the days or rather the nights (for the day time will be left over in the beginning of menstruation until the 16th day, when the consummation on the first four, the 11th and 13th, and certain dates especially named, e.g. the time of new and full moon. Peculiar importance is attached to the selection of the maṅgastasa. Yājñavalkya, for example, prefers and shuns the ṛtu, according to the Kalpa, and to be avoided. Other texts, especially the astronomical, go still further, and distinguish between constellations, the choice of which will be attended by complete or partial success, or, on the other hand, followed by failure. Manu (iii. 46 ff.), and to the same effect other texts (e.g. Yājñavalkya, i. 79), prescribe cohabitation on the even nights for the man who desires a son; daughters are born as a consequence of cohabitation on the uneven nights. The same texts, clearly under the influence of certain ancient teachers of physiology (Jolly, § 39, p. 51), represent the view that if the seminal fluid preponderates, a boy will be born; if the blood of menstruation is in excess, a female embryo is formed; if there is an equipoise of power, the issue will be twins or even a ‘not-man,’ ‘impotent’ (Manu, iii. 49). Bhagapada shows how it is possible to assist nature, and by the use of oily foods to increase the male seed. If other days than those named are chosen, e.g. the period after the ṛtu or the actual days of menstruation, a miscarriage may result.

The woman is impure during the first three days of the mensa; she must avoid excessive food, laughter, or the sight of other men. Several texts, however, allow, on the appearance of the first ṛtu, the use of garlands, scents, and betel-nuts. On the fourth day she takes a bath, puts on clean clothes, and at his call appears adored in the presence of her husband. Cohabitation is effected in an enclosed spot, and is subject, as regards the choice of place, to certain limitations. The Viṣṇuprakāra, for example, puts a limit to the places (i.e. on the plain and cross-roads. According to some authorities, a lamp should be kept burning, which is kindled by the woman at another light with the help of a small piece of wood, and may be extinguished only by her. The husband recites the text, ‘May Viṣṇu prepare thy womb,’ lays aside the gold ring that he may be wearing on his forefinger, and cohabitation is completed while he repeats various sacred texts on the subject, for the details of which we are referred to a very early (and lost) text of the Kāmaśūtra. The medical texts are still more precise in details than are those that describe the ritual.

If this ceremony proves unsuccessful, recourse is had, according to the statement of the Gṛhyaparīṣṭiṣṭa, to an act that serves the purpose of driving off the obstructing preta, or spirits. This is the so-called nārayanavādī, a kind of offering to the departed spirits or demons, by which Viṣṇu is to ‘purify’ the preta; or the preta that is supposed to have possessed the woman (viśam-pūrti) and nāgayādī, or offering to snakes, is also to be made, which atones for sins committed against snakes in the present or former births (a deadly blow, etc.), and which is merely a second offering to the dead for those who conceived of the dead as existing in the form of snakes. The pātriya-vihā, which Dāsaratha, for example, causes to be offered (Rāghuvamśa, x. 4), is different, and is designed to secure a son. It consists, according to the Tatātirīya-Sāmkhyā, in the presentation of cakes to Agni Putravat and to Indra Putri.

The Purāṇa and other texts prescribe for the time of pregnancy a large number of directions for both husband and wife, which are partly of a die- tetic and partly of a superstitious nature. Thus, for example, the woman is not allowed to allow her hair to be loose, or lie with the head high or low, or speak without adding an auspicious word, etc. The Law-Books also, such as Yājñavalkya (i. 79), interpose with various regulations, making it a duty, for instance, to fulfil the will of the wife if she die before her husband. Whatever is otherwise the embryo would be exposed to injury.

Of other observances which follow on conception, the best known is the puṁsavatara, the generating of a male, which takes place in the second, third, or even fourth month—as Pāraskara says, ‘before the child stirs’—and is to assure the birth of a son. Here also, as elsewhere, the selection of the constellation exercises an influence on the rite. But a magical character is most clearly stamped on those usages which give external expression to the wish, and seek to modify the course of events by means of spells. The Hiranyakeśins recite the text, ‘Thou art a bull,’ and place in the hand of the woman a barley-corn, with two grains of mustard-seed,—in obvious imitation of the male generative organ,—and drop a drop of sour milk, and cause the whole to be drunk as the ‘generating of a male.’ Or a shoot of a Nyagrodha tree, hung on both sides with fruit, a blade of Kusa grass, or a twig of the same plant, are pulverized and placed by the husband or other near relation in the nostril of the mother.

Even entirely different objects may be employed for the same purpose, as a silk-worm or a chip from that side of the north-eastern sacrificial post which is turned towards the fire. The inhaling also of the smoke from the fire kindled with the fire-sticks (aramite) is enjoined Saiskarūrvarnā (p. 815).

A further ceremony, which precedes or follows the puṁsavatara, is the samantonnayana, the parting of the hair of the head, which is performed on the woman when she begins her first child. Various acts (in order or at option) are necessary for the purpose; the quill of a porcupine furnished with three white spots, and a branch of the Udumbara tree or Ficus indica, bearing an even number of unripe fruits, are all prescribed by all texts. The former served to trace the parting, the latter was as a rule tied afterwards to the woman. Players on the hte concluded the ceremony with songs; and among these, according to the statement of some texts (cf. Hillebrandt, Bṛhat-hṛṣīkeśa-purāṇa, i. 3, 44), was the worn by the first woman during this period, since the former served to trace the parting, the latter was as a rule tied afterwards to the woman. Players on the hte concluded the ceremony with songs; and among these, according to the statement of some texts (cf. Hillebrandt, Bṛhat-hṛṣīkeśa-purāṇa, i. 3, 44), was the worn by the first woman during this period, since the former served to trace the parting, the latter was as a rule tied afterwards to the woman. Players on the hte concluded the ceremony with songs; and among these, according to the statement of some texts (cf. Hillebrandt, Bṛhat-hṛṣīkeśa-purāṇa, i. 3, 44), was the worn by the first woman during this period, since the former served to trace the parting, the latter was as a rule tied afterwards to the woman. Players on the hte concluded the ceremony with songs; and among these, according to the statement of some texts (cf. Whenever butter, is sesamum medicin, the actual delivery takes place in a separate house or room, into which the male members of the family have no right of entrance. At the door a fire is lighted to provide for ordinary purposes as well as to keep off evil spirits. Hiranya-kanda (vol. 8) directs that at the time of delivery a bowl of water should be placed at the woman's head and a Tārāntī plant at her feet; and enjoins the performance of various ceremonies with the recitation of texts, one of which is actually found in the Rigveda (v. 73, 79), to relieve and expedite the birth. Whether the several acts are due to a superstitious or to a medical motive is often difficult to determine, owing to the close relation between medicine and magic. Different plants are employed as emblems or internal remedies; one is the sākumi, valued for its roots for good luck; and fruits with a name of masculine gender are put into her hand. One text (cf. Sanskritāratanamātā, p. 527) prescribes a definite amount of sesamum oil to be stirred from left to right with the grass, a part given to the woman to drink; the rest placed you, given to the blades placed in her hair. The Yantraprakāśa ordains for the time of delivery a diagram of nine compartments, in which are entered from the N.E., N., N.W., etc., in succession the numbers 8, 3, 4, etc.

If the fetus is obstructed, a medical prescription (cf. Jolly, loc. cit.) lays it down that the vagina is to be fumigated by means of the skin of a black snake or with certain plants, or a particular plant given into the woman's hand. Various emblems facilitate the coming away of the after-birth, and the same purpose is served also by a decoction in which has been steeped, as the most curious medicine, the right ear torn from a living male ass. Continual fumigations with offerings of sesamum and rice are prescribed away all evil spirits while at that time imperil the life of the woman and her newborn child. Whenever the attendants enter they must throw fresh fuel on the fire. The climax of danger is reached on the sixth day, which up to that time is in India devoted to the Goddess of the Sixth. This day is especially perilous, because on it, or shortly after, the child is exposed to tetanus through unskilful severing of the navel-cord (Jolly). The Balatastra (quoted in the Sāhakāratanamātā, p. 540) knows of more detailed regulations, intended to ward off or consolidate this Sāstī and other hostile goddesses. It is prescribed that men with swords in their hands shall keep watch, women sing, lamps be kept burning, weapons and clubs laid in the house of the god, etc., while the father repeats om and the vajrayūtra, etc.

For the newb orn child ceremonies of 'animation,' 'endowment with understanding,' 'tendering of the breast,' and 'naming' are observed. At the first the father must thrice exhale and inhale over the child, or whisper into his navel or right ear, the original texts relating to a long life. Brahmanas are stationed towards the five directions of the heavens, and have to say in order prāna, vyāna, etc. Before this act the boy is fed with a food composed of butter, honey and certain other materials. This last as well as the former 'animation' are ceremonies which go back to a remote time, and, as Weber (Indianische Streiften, 1868, ii. 170) and Speijer (Jātakarmon, p. 103) have shown, are found also among other peoples. Hiranyakāśīn's instructions are to take gold, an axe and a stone, to hold the boy over them, and give him good wishes for his life. Further ceremonies are recognized by the medical texts (Jolly, 'Medicin,' GIAP, § 43, p. 58).

The endowment with understanding consists in three times inserting into the ear of the child the words, 'May the god Shiva grant wisdom,' or other text, or the word vīchār; or in placing butter in his mouth with a golden vessel, while reciting the text, 'May Mitra-Varuna grant thee understanding.'

The third ceremony is the first formal tendering of the breast, when the father lays the boy on the breast of the mother. The fourth is the important nāmokarana. On the giving of the name many peoples have laid great stress (Brinton, Religions of Primitive Peoples, 1897, p. 93 ff.; cf. also Kroll, ABW, viii. Suppl. p. 49 ff.); and this is no less true of the Indians, who give explicit directions in the ritual and astronomical texts. The ceremony takes place usually on the tenth day. The phonetic value of the chief name is often determined by the name of the constellation (Phalguna, from Phalgunī; Hillebrandt, Ritualisator, § 15). See NAMES.

Immediate consequence of the fire is that the woman rises up, and this may therefore be regarded as the closing ceremony of the births.

BIRTH (Hindu, popular)—A Hindu woman, when the time of her delivery is at hand, lies in a room on the ground floor, on a cot which must be strung with hempen cord, and not with the cotton tape which is used for ordinary beds. In the room is placed some iron article (iron being a powerful averter of evil), and the woman lies with her head to the north or east, as do all Hindus, for the other cardinal points are dangerous. Should the delivery be delayed, it is believed that, in spite of the precautions taken, the powers of evil are in the ascendant, and, with a view to bringing their working to an end, a woman adjoins a pyre to that part of the floor on which her cot stands, so that the evil spirits may be led to believe that they have to do with the purchaser (the midwife), who on account of her very low caste is immune from evil; (d) to drink upon the name of Shiva, or upon the maternal or paternal, and of some sūti (woman who has immolated herself on the pyre of her husband) who is famous on account of her act of wifely devotion; (c) to drink the water with which a charm, written by a Brahman, has been added, and to anoint the head, mother-in-law, her mother-in-law, or a young virgin have been washed; (d) in regions in which rice forms the staple diet of the people, to step seven times over the rice-pounder, this being supposed to hasten labor.
In many cases there is bound on the belly of the lying in woman a charm, written by a 'skilful man.' This may be a double equilateral triangle, or a collection of magic words such as this:

<table>
<thead>
<tr>
<th>brhm</th>
<th>brhm</th>
<th>brhm</th>
<th>brhm</th>
<th>brhm</th>
<th>kdm</th>
<th>kdm</th>
<th>kdm</th>
<th>kdm</th>
</tr>
</thead>
<tbody>
<tr>
<td>hröm</td>
<td>hröm</td>
<td>hröm</td>
<td>hröm</td>
<td>Name of the woman is written here.</td>
<td>kdm</td>
<td>kdm</td>
<td>kdm</td>
<td>kdm</td>
</tr>
</tbody>
</table>

The above charm is so powerful, that, were it bound on the woman's loins, instead of on her belly, she would never be delivered; so the present writer was assured.

As soon as the child is born, it is placed in a grain-sifting tray, in which have been put cow dung, ashes, turmeric, and a few coins, and is sprinkled with water. If it be a man-child that has been born, a brass tray is beaten to scare away evil spirits; and this is never done on the birth of a girl who, says, protects her against evil. The men of the family know when a boy is born, and fire guns to show their joy. Until the placenta is expelled, every one in the lying-in room must keep silence, lest the placenta again ascend into the womb. As soon as the after-birth is expelled, the child is washed with warm water, dried, and laid on the cot beside the mother, after the midwife has passed her little finger into its nostrils and anns, to widen these apertures so that the child may not suffer from shortness of breath or constipation. The umbilical cord is tied in two places, about 4 cm from the navel, and cut between these with an iron knife, or a strip of the outer skin of the bamboo, as soon as the placenta is expelled. The placenta is then put into a hole which has been dug in a corner of the room, and a fire is lighted on the spot and kept burning for four or five days. While the placenta is being disposed of, the head of the lying-in woman is bound up, and she is fumigated with the smoke of the burning seeds of Carum copticum, which have been thrown on a brazier. This is placed under her cot, and is kept there, however, for the first four days of the year, for ten days. The doors and windows of the room are kept shut, and light is given by an oil-dip lamp, which is kept alight night and day. As the clothes soiled by the discharges incident to delivery are not removed till the fourth or fifth day, the state of the atmosphere of the lying-in room, when the slade temperature is 41 °C., may be guessed. The woman may drink only of a decoction of ginger, cloves, and the seeds of Carum copticum and Helicteres isora, in which have been boiled some copper coins. The powder in which the decoction is prepared is touched by seven boys if the infant be a boy, and by seven unmarried girls if it be a girl; these children receive sweetmeats for their services.

Among the castes, to whom news of the birth has been conveyed, comes to the house, he takes the data on which the calculation of the child's horoscope is to be based, and fixes the time at which the infant is to be put to the breast for the first time, and that at which the mother may be fed: for four days she has borne a boy, and for five if she has borne a girl, she will be allowed only sweet meat balls made of coarse sugar, long pepper, ginger, cooco-nut, salfron, gum acacia, etc. Her ordinary food she may not have, because during this period the low-caste midwife stays in the room with her.

On the fourth or fifth day the soiled clothes are removed from the room and given to the washer man to be washed. The mother and child are then bathed by the midwife in water in which the leaves of the Nim (Azadirachta indica) have been boiled, after which she takes some of the water in the hollow of her hand, and waves it seven times, with the sun, round the head of the mother, in whose lap the child lies, and then throws the water away in the direction of the door of the room. In some cases this water-waving, which is designed to avert evil, is done only three times. Afterwards the mother sits on the cot, from which the soiled bedding has been removed, with the child in her lap, and dries her hair in the smoke of the seeds of Carum copticum, which have been thrown on the brazier: the hair is believed to be a favourite point of entrance of spirits into the body. For her ears the first earthen pots that are in the house are thrown away, and a feast is given, to which men of low caste are invited, as on the tenth day after a death (see DEATH [Hindu]). Of the food prepared for this feast the mother is given a small quantity, and on the following day she returns to her ordinary diet, the midwife being dismissed and her place taken by the barber's wife, who does not live in the lying-in room, as the midwife did during her term of office; but her name may take her away, the time at which the influence of evil is most to be feared, until thirty days have elapsed from the date of her delivery.

On the tenth day the astrologer brings the horoscope of the child, and on it are put some blades of grass, on which will be sprinkled a few grains of white rice and then water with which turmeric has been mixed; then a few grains of uncooked rice are scattered on the horoscope, and the name of the child is chosen by the father from a few names, appropriate to the time of birth, which the astrologer reads out. This name becomes the ceremonial name of the child, whose ordinary name is that given to it by a certain woman-member of the family, whose relationship varies in different castes.

After the tenth day the family barber is sent round to announce the birth to friends and relatives at a distance. He presents to those to whom he bears the news sweetmeats made of coarse sugar, clarified butter, almonds, raisins, coco-nut, etc., which have been prepared at the house in which the birth took place; and it is taken as an insult to omit to send these sweetmeats to any one who can claim the right to receive them.

From the fourth or fifth day till the thirtieth day after the birth of the child, it may be bathed only on Wednesday or Sunday on the full moon of the month, and then washed with sesame oil, with which some castes mix turmeric, which from its colour is an averter of evil.

LITERATURE.—H. A. Rose, 'Hindu Birth Observances in the Punjjab,' in JAI xxxvii. (1907) p. 239; W. D. Sutherland, in Münchener med. Wochenschrift, 1906; and the literature appended to the previous article.

W. D. SUTHERLAND.

BIRTH (Jewish.—1. Biblical.—(1) Notions and practices surrounding childbirth.—The mystery of birth and procreation is euphemistically expressed in the Bible by 'the woman knew Eve lived with Eve; and she conceived, and bare Cain' (Gen 4:1), the first statement in the Bible regarding conception and the condition, though a little earlier the condition, the child is fixed and.' I will greatly increase thy pain and thy conception; in pain thou shalt bring forth children' (Gen 39). Nothing further is found in the Bible as to the first stages of human life, before it enters the world in a concrete form. Many speculations were rife at a later period about these stages, and legends have been handed down concerning the birth of the child in the womb. The pains and pangs of travail are often referred to by the prophets, and used in a figurative sense to express the throes of a new birth of nations and of the heavens. According to Ex 1st, specially trained women assisted in childbirth, which took
place on the birth-stool, on which the midwives had to look, in order to ascertain whether the newborn babe was a male or a female. Moreover, we learn that the Hebrew women are not as the Egyptian women; for they are lively, and are de- livered without much difficulty (Ex 1:14). Cases of difficult and dangerous births are, however, also recorded in the Bible, in some of which the issue was fatal to the mother. Such was the case with Rachel (Gn 35:16), and with the wife of Phinehas, who died in giving birth to a son; for she died before the time of delivery, of an untimely death of her husband (1 S 4:18). While still in the womb, children, according to Biblical tradition, were believed to be fully conscious: Jacob and Esau 'struggled together within her' (Gn 25:22); and, when Tamar was delivered of twins, the children came out, not like Jacob holding the heel of Esau in his hand, but one put out his hand first, and then drew it back, and then the brother came forth first (Gn 35:29). Other cases of irregular birth and their treatment will be dealt with later. (Ex 2:3). That it was necessary to follow up the references, as much as possible, in some historical order, treating the Biblical period practically as one for our purpose.

(2) **Fruitfulness a blessing.** To have a large family was a thing greatly desired, and hence fruitfulness was blessed. The very first blessing mentioned in connexion with the creation of man is: 'Be fruitful, and multiply, and replenish the earth' (Gn 1:28); and the references throughout the Bible to this blessing of a large family and to the reverse—the misfortune of childlessness—are numerous. That woman is praised in the gates who has a large family, especially of sons (Pr 31:2). And the barren sits as a mourner in the midst of the festive gathering (1 S 4:1). Rebecca, Rachel, and Leah, Hannah and Elisabeth, and others are cases in point. Barrenness and widowhood stand on the same plane; both are objects of pity and commiseration. No wonder, therefore, that from the very beginning means were sought to remove this reproach and to get children. The *dâdâm* of Gn 30:14 have been identified with mandragora, a fruit credited with specific qualities for fruitfulness. But in the Bible the blessing is more prominent that, by means of prayer and intercession, barren women could obtain children. Isaac entreated the Lord on behalf of Rebecca who was barren (Gn 25:21). When Rachel was angry with Jacob, he replied: 'Am I in God's stead, who hath withheld from thee the fruit of the womb?' (Gn 30:1); and later on (30:2): 'And God remembered Rachel, and God hearkened unto her, and opened her womb.' Similarly in the case of Hannah (1 S 1). The same agency could work also in the opposite direction, and close the womb of the once fruitful, and render them barren. So, when Abraham prayed to God, 'God healed Abimelech, and his wife, and his maidservants; and they bare children. For the Lord had considered the case of Abimelech' (Gn 20:7).

No other means are mentioned in the Bible for assisting women in obtaining children. Nor do we find remedies or precautions mentioned, or aught else, preceding the birth. The children were, no doubt, born on the floor of the house. The child lay first on the ground. Then it was washed in water, rubbed with salt, swathed in swaddling clothes, and given to the mother to be suckled (Ex 2:25). Occasionally a wet nurse is mentioned in the Bible, like Deborah the nurse of Rebeca (Gn 35), or the mother of Moses, who was taken by the daughter of Pharaoh to suckle the child found in the river (Ex 2:9). (5) **Uncleanness of the mother.**—The birth of a child made the mother unclean, in the first place, for seven days; and then, if it was a son, thirty-three days; and if a daughter, sixty-six days. At the end of that period lustration or purification took place, and the woman brought an offering to the Temple (Lv 12:2).

(4) **Purification of the mother.—**Although the mother is unclean after giving birth, none of that uncleanness attaches to the newborn child. On the contrary, the firstborn, that which 'openeth the womb,' is consecrated to God, be it human, be it animal. The firstborn enjoyed special privileges, and although, before the patriarchal time, had the right of the firstborn leader. He probably had also preference in inheritance above the other members of the family (cf. Jacob and Esau). In the last dispositions of Jacob (Gn 49), Reuben is deprived of his privileges of primogeniture; and, although not expressly stated, the double portion, which, according to the Mosaic legislation, was given to the firstborn, is there given to Joseph. This is made evident in 1 Ch 5:1. The firstborn at a certain time was invested with sacramental rights; later on, his place was taken by the firstborn of the Lea, originally the family priest. The dedication, as in the case of Samuel, was evidently to the service in the Temple. Traces of sacrifice of the firstborn male, practised by the nations living in Palestine, are found in the period of Moses.

Since the Levites took place of the firstborn, these were 'redeemed' at the completion of thirty days after birth (see art. REDEMPTION). The succession to the throne and to the office of high priest went to the firstborn, with the exception of Solomon, who took the place of Adonijah (1 K 11:4), and of Eleazar through the death of his elder brothers (Lv 10:17). The priestly character of the firstborn has to a certain extent been retained in the service of the Synagogue, where, in addition to the absence of the mystical firstborn, the hands of the Kohenim (descendants of Aaron) before they ascend the rostrum in front of the Ark to bless the congregation.

(5) **Naming the child.**—After an indefinite period, ranging from one to three years, the child was weaned, and the occasion was celebrated by some public festivities (Gn 21:8, Ex 2:22). From the time of Abraham onwards the male child was circumcised on the eighth day, but it is not clear from the Biblical account whether the name was given on that occasion. The name of the child was settled before the birth of the child, and had a symbolical meaning; and on other occasions it had a commemorative character, being connected with events at the birth. Examples of the former are Isaac (Gn 21:1), Immanuel (Is 7:14), or Jerzeel (Hos 11:1); of the latter, the twelve sons of Jacob—may, his own name and that of Esau, etc. Nowhere is a definite date mentioned for the giving of the name. Nor do we find, except in rare cases, a change of name; e.g. when a king ascends the throne, his name is sometimes slightly or altogether changed. In the case of girls, names of animals are often taken as prototypes: thus Rachel, Tamar, Zipporah ('lamb,' 'palm tree,' 'bird'), in addition to other symbolical names. In later times, but still within the period covered by the Bible, the grandchild often gets the name of the grandfather, such as (2 S 5:5) Abimelech, son of Abiathar, son of Ahimelech.

A few more details concerning birth and early infancy could be gleaned from the Bible, but they would not carry our knowledge much further. The history of Israel is not comprehensively mentioned by the understanding of the development which took place in the course of subsequent centuries. The Biblical data form the starting-points or the justification for legends, beliefs, and practices which cluster round the birth of children. Each of these stages is governed entirely by the details found in the
BIRTH (Jewish)

Bible. Some have been greatly expanded; others have been interpreted in a peculiar manner; and for a number of practices borrowed, no doubt, from other nations, or survivals of popular habits and moods, a support has been sought in the verse and proofs that tradition in the spirit of which it was understood and accepted by the people, and upon the lines along which it developed.

2. Post-Biblical.—The second period, stretching from the 1st cent. down to modern times, embraces a variety of practices, of which few may claim universal acceptance. Some may have belonged to one country only or to one period; others were perhaps more widely spread. A good many of these practices are now known only from books, and are little followed in modern life. Others have been followed by succeeding generations, orcallations, and the like, as to the extent to which they are followed. They cover a large area—Western Asia, North Africa, and the whole of Europe. In some instances it can be proved that a more modern author has simply repeated the practices found in, or derived from, the collection of tradition. An endeavour will here be made to present the data in some chronological order, taking first the references found in the Mishna and the Talmud and other older Rabbinical writings from the 1st to the 6th cent., and then proceeding to works from the 6th to the 18th, finishing with a few quite modern practices, following, as far as possible, the order of the Biblical data.

1) Beliefs connected with the pre-natal period of the child's existence.—The mystery of birth is now no more explained; it is only in its literal truth that emerges that a special angel, 'Lailah,' presides at the very beginning of conception, and through his intermediation the embryo is brought before the Divine throne, where his fate is decided upon, his station in life is determined, and also whom he is going to marry. At the bidding of God, a spirit enters the sperm, and then it is returned to the womb of the mother. There the child lies folded up with its head between its knees. Two angels watch over it. A light burns over its head, by which the fire of God is kindled. Another angel is assigned to each of the mother and child. In the morning an angel carries it into Paradise, and shows it all the righteous who had lived a good life in this world; and in the evening he takes it to hell, and shows it the torments of the wicked. Finally he orders the child to come forth, and it strikes it, thereby extinguishing the light, and causing it to forget whatever it had seen whilst in the womb of the mother (cf. Chronicle of Jerahmeel, ed. Gaster, ch. ix. pp. 19 ff. and lxxii ff.). A later legend adds that the inden-ture, or the extraction of the child, is played, or is struck by the angel; hence that induration. Whatever the child hereafter learns is merely a remembrance of the knowledge acquired during its life as an embryo. Another equally ancient treatise contains an anatomical description of the gradual formation of the body of the child and the changes during gestation. But, in spite of the direct Divine influence assumed here on the shape of the child, other traditions say that external influences, especially at the month of the foetus' birth, has the greatest effect upon the shape and the mentality of the offspring. An ancient legend, preserved in many versions, tells how the superhuman beauty of the high priest Ishmael was due to the fact that his mother had returned to the bath, time after time, after the birth of her other sons and daughters, a process of air was carried along with him. Each time after such an animal which would have had an evil influence had met her, she returned, until at last Metatron, the Angel of the Face, came and met her on the way home, and she then conceived and bore a son as beautiful as the countenance of that angel. The meeting with a dog has the effect of making the child's face like a dog's; that with a ass was made stupid; and that with a pig would cause the child to have unclean habits. For that reason, R. Johanan placed himself at the gate of the bath-house, so that the women returning home should look at him, who was renowned for his beauty. As a proof of such influence is adduced the experiment of Jacob with the sheep (Gen 30:9). The black wife of an Ethiopian king was delivered of a white child; the father suspected the mother, but, having been asked by R. Akiba whether there were white images in his bed-chamber, he answered in the affirmative. This, then, said R. 'Akiba, was the reason why she had given birth to a white child. The same motive appears in the Ethiopica of Heliodorus. Other ailments in children are also due to the careless-ness of the parents, the presentation of the child, or discornentenent of impurity. Leprosy is one of the results, and dumbness and deafness, as well as other infirmities. A woman may not cut her nails during the period of her impurity and drop them on the ground, lest the man tread on them and be stricken with boils. The children may also be so affected during gestation as to be changed into animals or birds, or even locusts; whereupon the woman miscarries, and her ritual status is determined by the degree of human form which the thing born has (Mishin. Kiddah, iii. 2.; cf. Ch. M. Horowitz, Ursale Toasat .. aus dem 2-5 Jahrhundert, Krakau, 1890, passim).

2) Fruiture.—Means are mentioned to prevent barrenness. The women, we are told, mocked the wife of Manoah (Jg 13), and said to her: 'If you wish to get children, take the skin of a fox, burn it in fire, take the ashes and mix them with water, and drink of that water three days, three times each day, and you will get a child' (Horowitz, op. cit., p. 10). 'If a man is bewitched, and cannot bathe (ritual or instration bath?), a recipe is given, consisting of garlic and onions and the root of kala and the tail of rounsa fried on the fire; leek is boiled, and the other ingredients are mixed with the leek-water; the patient drinks of this mixture for three days, and is cured' (ib. p. 22 ff.). A pregnant woman, in order to avoid miscarriage, should not take hot bastes. She must not eat green vegetables, as they affect the heart of the baby; nor may she eat salt food or fat substances, or the child will be dull; but she must eat small fish and mustard (ib. p. 28).

3) Assistants at childbirth, etc.—In addition to midwives, medical practitioners are now mentioned as assisting in the delivery of woment. We hear also of operations which took place when the child was in a dangerous position or was dead; incisions were made on them and they were stricken with boils. The physician was exempt from many legal obligations when attending in childbirth. He could break the Sabbath, and all other ordinances were considered abolished in the case of a woman in labour. The primary function of the physician was to place the woman on the birth-stool, and to make all the preparations necessary for a safe delivery. In case of twins, his word decided which was first born. Very little is mentioned in the period relating to the easing of difficulties of labour: but, being of a more popular nature, they have, no doubt, been preserved in later writings in which the popular element predominates. The new-born babe was treated in olden times, but the child's sex was only known afterwards, of the existence of cradles. The name of the cradle is suggestive, for it is identical with
"trough"; and it is customary to this very day in the East to use troughs for cradles. It is mentioned only in writings of Palestinian origin (Mishna and Tosefta), and in one instance a glass cradle is mentioned (Tos. Ketub, vii. 12, ed. Zuckermandel, p. 598).

(4) Danger from demons, etc.—Dangers not mentioned in the Bible now surround the baby and the mother immediately after the birth of the child. The notion of demons possessing the mother, and then affecting the health of the child appears for the first time in the literature of that period, and the terror of these demons and the desire to drive them away or to counteract their evil influence grows steadily. In Tobit the demon Asmodeus puts the dam from and prevents him from becoming the wife of any mortal. Every bridegroom wended to her is killed on the night of the marriage, and only Tobit succeeds in driving the demon away by fumigating the bride with the liver of a fish. By this fumigation the charm is broken. This is then an example to be followed in later times on every occasion of difficult labour, as well as on breaking charms, or on driving away those evil spirits which haunt the chamber and bring ill on the mother and the child.

Prayers, now, assume a mystical character and have come in time to be used as amulets, and are also efficacious in laying the power of the evil spirit, and, according to a Talmudical legend, the Sunhadrin succeeded in capturing the demon of lust or amorous passion, the "evil inclination" as it is termed. The consequence was that three days afterwards not an egg could be found in the whole of Palestine to feed a woman in childbed. Whereupon they merely blinded the demon in one eye and released him (Sanh. f. 64a). They resorted also to prayer, which was told, to avoid the terrible ill of consuming fever like the thousand of the thousand. The cause of many of these diseases was ascribed to the influence of evil spirits. Lilith is the head of the female demons, and is mentioned as the chief cause of all the ills that befall children. Originally identified with the luimius and with a demoniac first wife of Adam, she became in the course of time the demon who bewitched, stole, changed, and killed the children as well as the mother in childbed. Another demon mentioned is Agrath, the daughter of Mahliath. (In both cases the Jewish tradition is derived from the "night demon" and Agrath the "roof demon," daughter of "illness," the demon that is born in the likeness of Lilith is described as being like a human being, but with wings on its back (Niddah, 249). No mention is made of the means of protecting mother and child, although no doubt they must have resorted to some magical amulets and also to other conjurations and mystical operations. Another demon Shimdon (or Ashmadon, "Destruction") is mentioned, who, according to a legend, was met by a child in a garland which he had before that day, whom the mother had sent to bring her a knife for cutting the navel. The demon then said to the newborn giant baby: "Go and tell your mother that the cock has crowed, otherwise I would have struck and killed thee"; to which the baby replied: "Go and tell your mother that my navel has not yet been cut, otherwise I would have struck and killed thee." (Genes. Rabb. ch. 36, § 1).

Various demons lay in wait for the newborn child. There were five demons more dangerous as the above-mentioned Lilith. This demon plays an important rôle in the subsequent development of superstitions in the common practices, if one might infer from the practice mentioned in the Mishna (Hullin, iv. 7), the "secundines," or after-birth, must have been used for the superstitious purpose, but the original motive to prevent miscarriage. It is forbidden to bury at cross-roads or to hang up on a tree the after-birth of the miscarried first-born of an animal, for that would be of the 'ways of the Amorites' (i.e., superstitious practices of the heathen). We shall see later on the use made of it. It was also preserved as a resource for some unnamned illness of children (Shab. f. 129b).

With the material at our disposal it is difficult to trace the influence of these evil demons (Lilith, Agrath, Shimdon, etc.) further back than the 1st century B.C., although traces of them are found in the Aposphotus literature of the preceding centuries, and the legends are so widely spread among Jews and non-Jews that the research is much further than any other Jewish literature. Lilith is, as stated before, also the demon of evil, sicken, and women learned not to sow scarlet, meaning a prayer to luscious demons and engender children, for female demons are anxious to join human beings and to obtain children from them. In the "Tosefta" it is said that Lilith, according to a different tradition in the Zohar, the woman that came up from the deep of the water (Tosam) and together with her immediately the round body of the newly-created Adam, until the real wife (Havvah) was created, when she was driven away by an angel and sent back to the surging sea. According to a third version, she was the real wife of Adam for a hundred years during the time when he was living in Egypt. They threatened to drive her in the name of evil spirits. Being afterwards driven away, she retained a hatred for man, and lies constantly in wait for man, either to join him in wedlock and thereby frustrate his offspring, or to guide her evil designs, a man must utter the following conjuration before he joins his wife: "Thy garment has become rent, it is loosened, it is torn. Thou mayest not come in for the prize. Thou mayest not come out, nothing for thee and no share for thee. Return, return, the sea is still. Where are the treasures is called the anonymous share of heaven. I, the share of God, I wrap (cover) myself with the holy king." And the man has to cover his face and that of his wife whilst speaking this. After finishing this prayer, he must pour clear water round the bed and he will be safe from attacks from Lilith (Zohar, Leviticus, fol. 103b). Another conjuration, which is the common one, is the following: the other conjurations of Lilith and evil child-stealing demons and witches is that found in the story of ben Sira, in which we have also a version of the original birth, for ben Sira is reported to be the virgin daughter of the prophet Jeremiah. In this story the king was dying, and the reason, and he then wrote out an amulet with the names of certain angels upon it, which he explained as follows: Together with Adam, a wife was collected. This woman was the officially the first wife of Adam, or, by equal, she refused to obey Adam, and in a moment of rage uttered the infamous name of God and flew away to the borders of the ocean. The request of Adam the Lord sent three angels after her to bring her back, and, if she refused to obey, to threaten her with the death of a hundred of her children each day. The angels went after her, and found the real wife waters through which the Israelites were to pass when going out of Egypt. They threatened to drive her in the name of the sea. She implored them to spare her, and in return as she had the power to hurt male children, to the eight day of their birth, she would give them to the women of the earth up to the twelfth month. They agreed to let her do so, but that she would not go near the house or hurt the child, or the mother where she should see the names of these angels written upon them. The angels remained and they saw it, and it was for this reason that ben Sira wrote the names Sinai, Sinai, Mishnah, Torah, on an amulet and put it in the room where the child was, thus driving Lilith away and preventing her from further molesting it (Alphabet, To-Sifra, etc.). Hirschenson, "M. Gaster, 'The Child-stealing Witch,' Folklore, xii., 1900, pp. 159-163.

(5) Amulets, charms, etc.—The amulet is no doubt a later stage. It is preceded, as a rule, by the very act of conjuration in which the conjurer utters those words, and through a process common to all magical operations identifies himself with those angels, and drives away the evil spirit by the account of another operation in which the demon had been vanquished by those powers. From the spoken recital we descend to the written amulet, in which the writing is considered sufficient to terrify away the demon. All the other amulets, like those used in the cases of bewitching or for protection, have gone through the same process, whether they be connected with sterility or birth, or with the protection of mother and child from evil eye and evil spirits, whether it be to facilitate the birth or to be carried by the child, to prevent him from joining his wife or to untie the magical knots. For we are proceeding now to the third period, or the second section of the second period, from the 6th to the 15th century. Sympathetic remedies, both medical and magical, reach us very likely in the writings of the 6th century and onwards. Ancient Greek medical
practices and recipes, popular superstitions and customs, were then gathered up and introduced into the medical science of the Arabs, together with all the popular beliefs and practices of the East, and to a certain extent, the practices of the West, with whom they came into contact. Translated into Greek (Byzantine) and into Latin, these magical, sympathetical, and medical compilations spread among the nations of Europe. Books of recipes and amulets, *astrologia*, as well as manuscripts of leechcraft, abound also in medieval Jewish literature. Most of them are still preserved in manuscripts. What has been printed from the second half of the 17th cent. onwards is mere reprint, and often very faulty, from older MSS. By consulting a few of these MSS (most of them in the writer's possession) we can go back at least to the 12th or 13th cent., but no doubt they contain materials which are far older and may be of extreme antiquity. We are not concerned here with purely medical prescriptions, though it is often difficult to draw the line between the dispensary proper and magical or sympathetic recipes. Nor can we pay any attention here to the astrological horoscopes and nativities, or to prognostications from the influence of the astral bodies, as to the importance and the value of which there is no agreement. As connected with births, these prognostications and nativities have remained the domain of the astrologer, and have seldom if ever formed part of popular practices. A selection of the latter culled from writings ranging from the 6th to the 18th cent., may now follow. Only such have been selected as have enjoyed great popularity and have been found repeated in MSS of diverse origin. Some hall from Spain, others from Italy and Turkey; some from Damascus and Yemen, and not a few from Germany. All twenty-five MS compilations have been used.

The bewitching of bride and bridgemoat may start from the day of marriage. 'Tie three knots during the ceremony, and the bride will be forbidden to her husband so long as those knots remain untied; or, 'Make a thread of wool on a live sheep and say, while twisting the cord: 'Shurah, Shurah, Shaburah; I tie the woman N., with the cord with which I tied the night and the day and the noon and the evening and the midnight. I tie her in every language and with every word by which the woman is known. Never be taken of her by the wind, under heaven and earth which cannot be loosened. And so long as these knots are not untied, woman N. I real these knots with the seal of King Solomon, with which he sealed the demons in the copper vessel and cast them into the abyss, and similarly shall no man be able to untie these knots but me.'

If he afterwards wishes to break the charm, he must kill a hen, drop the blood upon the knots, and untie them, and the charm will be broken.' Or, 'Three knots made by the woman in her girdle, when with her husband and he not knowing, it will affect him so long as the knots remain tied,' etc. More numerous are the recipes for breaking this tying. 'On both sides of a new-laid egg the verse from 2 S 2:27? 'Thou enlargest my footsteps,' etc., is written. Cut it in two with a knife or a dagger with which a man has been killed, give each one a half to eat, draw the picture of a small tree on uteine vellum, tie it on his left arm, put some quicksilver into a nutshel and tie it on his right arm, then tear a hole in the woman's skirt, etc., and the charm will be broken.' Or, 'Take flour from a 'living' mill, mix it with the mud of the river (or rain-water), make a cake of it, (write on it v. 5), put an unopened eye into (a great) a. Or, 'Pass a stick through a hole made in the door, burn it on coals and fumigate self and wife.' Or, 'Let the tied man go to the field, loosen an ass tied by its foot, take the rope with the knot and burn it, and put the piece of the ass (so done) with the man.' Or, 'Tie the right-foot sandal of the bridgemoat to the left-foot sandal of the bride, fumigate with sul-
in the ground. So long as the scissors remain in the ground, she will have no children.'

"Or, 'If the plate out of which a woman has taken her first meal after delivery is placed face downward under her bed, it will act as an abortions and will turn her heart upward.' Or, 'Pick up a grain that has dropped from the mother and put it in the navel of the child-bearing.' Or, 'The first tooth dropped by a child picked up before it touches the ground, and fastened round the neck, shall prevent the miscarriage.' Or, 'The weaving of a cat's paw cut off from the live animal stops fertility. Carrying of a hare's heart (or hare's droppings) will have the same effect, put in the front of the shirt in the front, the ashes of a wolf's heart.' Or, 'Extirpating three live coals in her menstruation blood, and bury them. If this charm is to be broken, the coals must be taken out and thrown into a burning fire.

'Great care is then taken to prevent the mother from mis-hap caused by various agencies. Of the diverse methods employed, a few may now be mentioned.

'Mare's milk, boiled with virgin wax and then kneaded and put in a bag of buckskin, or of pure linen, and placed on the navel, will prevent miscarriages.' Or, 'Wearing of an eagle-stone (settles) (Shab. I, 660). Or, 'Drink three days in the morning and in the evening milk of a pregnant ass.' Or, 'Wear a ring of wolves skins.' Or, 'A hare tail, thrown out alive.' Or, 'White and red corals pounded and drunk in wine, of the shape of three fingers, for three days.' Or, 'A ruby hung round the neck.' Or, 'A dead scorpion tied up in crocus-green cloth, and fastened on to the skirt.' Or, 'A ring with a large blue stone, worn by a woman, will prevent miscarriage. Or, 'A girdle made of snake's skin or of that of a she-ass, worn round the waist.' Or, 'A piece of the heart of a hare and chicken, mixed and powdered, drunk, prevents miscarriage.' Invaluable in preventing miscarriages are the stones of Kundra, which is found in the field, looks like glass, has a hole in the middle, and is on the size of an egg. If worn, it is infallible in its effect.

'All these are mere prophylactic measures. The real crisis begins with the travail of delivery. Here also dangers of the evil spirit are great, and amulets and incantations are far more numerous than in the previous stages of conception and gestation. Some of the incantations may now be mentioned:

"When a woman is in difficult labour, whisper in her ear: 'The angel Michael walking on Mount Sinai heard screaming and weeping. He said: O Lord, what is the reason for that screaming and weeping which I hear? And the Lord replied: A dove in the pangs of labour is weeping and screaming. Go and tell her. Come forth, come forth, the earth is seeking thee.' Or, 'Write certain letters on a pesharim, put it on the woman, and say: 'In the name of Asael, who have no son, do thou beget a son. Mother, may the child come forth in peace and in life, Amen.' Or, 'Write on the four corners of a piece of linen (or, take a basin of still water and write in it) (See the preceding woman): 'The gate of heaven was opened, and down came three (seven) angels with three (two) rods in their hands—one was white, the other red, and the third black. The white struck the heavens, and the rain came down; the red one struck the sea, and it parted; the third, the black one, struck the woman and brought forth a Child and after that put her back. And (give the woman to drink of the water); or, 'Wash the cloth in sweet water, give her the water to drink, and put the cloth on her head until she is safely delivered.'

Of general use has been another set of amulets and incantations with the verse Ex 11: written on pure parchment, beginning and ending with, 'Go forth' and 'I will go forth,' etc. Or, an annulet is prepared with letters in nine squares, which, in whichever way read, have the numerical value of 15, probably—one of the names of God, 'Jah.' Also the words 'Kur, kur, kur' are either written or repeated to the woman in labour; or, permutations of the word 'puk, would also mean 'go forth.' Permutations of the Tetragrammaton are also found in some amulets, and even the names 'Immanuel,' 'Soter,' and 'Salvator,' often mutilated beyond recognition, are used as sacred names on the Amulet words pack, would also mean 'go forth.' The conjurations of the Pentateuch are also found in some amulets, and even the names 'Sator, arepo,' etc.

As a supreme remedy in very difficult cases, the scroll of the Law or an ancient copy of the Pentateuch is brought from the synagogue and hung in the room where the woman is in pains of delivery. In addition to amulets and conjurations, other means were employed for easing the labor and ejecting the child or the after-birth.

'The woman must drink water gathered at cross-roads.' Or, 'Another woman's milk lapped from the palm of her hand; in some cases, a roll of parchments is burnt and the ashes from the grise off the sheath of the butcher's knife.' Or, 'Soak the efflorescence (of a pomegranate) in water. It will prevent miscarriage.'

All of herbs and plants none rivals in efficacy the mythical Eisenkraut, or Eisenkraut, as it is called in German. It is akin to the mythical Mandragora, and has great powers to destroy the charms and evil effects of every foul spirit. (One double of the modern German botany the name stands for 'Verbenas' (vervain). Another plant used is the Artemisia, or mugwort, on the stomach or on the thigh. Similarly, 'Dust from under the threshold of the room, wrapped in a piece of cloth and put on the womb.' Or, 'The woman is to keep between her teeth the right horn of a goat or hart.' Or, ashes of silkworms. Or, scraped ivy in wine or water cases difficult labour. We shall pass over the numerous ingredients recommended for fumigation; and also the many classes of remedies already referred to. The same are prescribed also in cases where the child dies unborn, and the mother is in grave danger. Drinking of such nostrums, as well as fumigation, was resorted to in cases of miscarriage.

'If a child born appears to be dead, pass a sleeve over its face to and fro and it will revive.' Or, 'Cover it with the after-birth' (Shab. I, 154a). 'If the mother wishes to satisfy herself as to whether the child is alive or dead, she must look into a basin filled with oil and if it is alive she will see her face in it; if not, she is to put her five fingers into a basin filled with honey, and lick them one after the other, and then drink the honey dissolved in warm water, and the dead child will be ejected without harm.' Or, 'If the woman observes a 'Sharfali,' i.e. Safa turbina (common sage), it will assist in the ejection of the after-birth.' Or, 'The eating of garlic and deeps' brains mixed with honey and boiled together in water.'

But the difficulties of labour may be due also to evil influences, for 'the burying of a pomegranate in the room of the woman will prolong the labour and prevent the birth of the child. The only remedy about is to cast it away.' The stone found in a viper's head hung on a woman will prolong labour and prevent birth.

As soon as the child is born, both mother and child are exposed to the evil demons, who are anxious to seize the new-born and do away with it, sometimes even bodily, and substitute for it a changeling. Every possible precaution is then taken to frustrate the action of the demons, and to grant as much protection as possible to the newborn babe. Lilith is the chief demon, but bands of other witches prowl about, and must be kept at a distance. Conjurations play the principal part. A circle is drawn round the walls of the chamber and on the floor, and in it the names of the three dreaded angels, Sinai, Sinoi, and Sumangrame, are written. These were the angels mentioned above who were sent to punish Lilith, and to whom she promised not to come near the house, or the woman and child, wherever these names should be found. A long conjuration is also written on the parchment or paper containing the names of the angels, and placed at the four posts of the bed in which the woman lies, or fastened to the curtains. The conjuration, a modification of the ancient charm against the demon Avezhia, occurs in almost every collection of Oriental and Western European folk lore.

'For this child-stealing or killing witch, then,' so the conjuration runs, 'is sent by the prophet Elijah, who stops her in her proceedings. If a witch should say, 'wherever she is going to is a certain house where a baby has been born, to eat its flesh, to drink its blood, to crush its bones, and to destroy it. Threatened by the prophet, she promises not to
BIRTH (Jewish)

The witches and demons melted away and left the baby behind, which he took and brought back to its parents. There he uttered another holy Name, and lo! the baby which the mother had been keeping with her in bed turned into a bundle of straw. Or, the child laughs in its sleep it is a sign that Lilith or some other demon is playing with it, and it must be awakened by snuffing the nose. In Rumania it is believed that an angel is playing with the child.

The child's clothes must not be left outside overnight; if owl drops fall on it or a feather, the child changes into a long hairlike worm, which enters the body and tortures the child (Egypt). By conjuring it, it comes out of the body in the form of black points, which must be carefully removed (Egypt). Neither mother nor baby is left alone all the eight days. On the eve of the eighth day children come with their teacher and read certain portions of the Law (the Shema, Deuteronomy 6), and they are regaled with sweets and with bags of peas salted and peppered (Rumania and Poland). The baby is not put into the cradle, almonds and raisins are put in, and the cradle is gently rocked in the belief that the child will do the same with other children. Under the pillow the book of Psalms is laid, and under the mattress a sword or horse-shoe (India). A lying-in woman must not see any one all the week (Turkey). Over the bed a satchel is hanging, containing black bead, some garlic, and a piece of broken glass (Syria and Palestine). On the Friday before the circumcision similar practices are observed to those on the eve of the circumcision, and visitors are entertained.

If it should happen that the mother is not at home when the baby is born, she is to go to a bitch, and put its head on a puppy, and say three times: "Take the dead and give me the living." Then she is to take the puppy and put it to her body, with its head to her right and its feet to her left side, and go to the water and loosen her clothes, and let the puppy drop into the water and say three times: "Give me the living and take the dead." This must be done when the woman is in the ninth month. Or, "Go to a dried-up nut-tree and bore a hole just over the head, and put into that hole some of the cuttings of the nails of fingers and toes and some hair, and ram a peg into the earth and cover the hole. The earth will be seen to be richer and to be humbler, and those who take these will be saved." Or, "Hang a crystal or emerald over the child, and its child will be saved.

As late as the year 1707 the seudim burned and the ashes given in milk were believed to destroy the charm of a wasting child. Or, a bag made of it, with snake-dragon, St. John's wort, and other flowers put in it and hung round the child's neck, was considered a powerful amulet against bewitching. It must be understood that the 'evil eye' is also considered as a form of bewitching but no reference is made to the 'evil eye' in any of all the ancient MSS. This notion and name appear for the first time in the 18th century. In modern times, to which we are refers to ring the child's head with gold and try to make the child laugh in the correct manner. Of these latter practices seem to have disappeared.

A gold coin is hung in the cap, against the evil eye or any other evil spirit (Turkey and Rumania), or a satchel with blue beads and 'ruota' over the bed. Regarding charms against wraiths, the head of the 18th century, who was invited to be present on the occasion of a circumcision. (All the attacks of the demons are concentrated upon the period from the birth of the boy to the eighth day. For seven days he is kept from the sun, and from his place to the house, he met on the road a large number of demons and witches, feasting and dancing round that very baby. He ordered his servant to bring him there, and then seven knives, seven swords, two knives, and two knives were used. He stuck a knife in each slipper, took his own head, washed his hands, and uttered the great Name.)
of dangerous illness the name is often changed, thereby suggesting a re-birth or change in the destiny of the patient.

LITERATURE.—I. MANUSCRIPTS.—Most of the material is taken from the following local MSS in the writer's possession: Cod. 659 (probably of the 14th cent., North Italy); Cod. 315 (Oriental Spanish hand, 17th cent.; contains also the work attributed to Rafael, 1644); Cod. 316 (2 vols., Italy, 1231 recipes, and ii. with more than 600); Cod. 675 (German, 14th or 15th cent., medical treatises, etc.); Cod. 448 (Tunis, 18th cent.); Cod. 444 (Rabat, 17th cent.); Cod. 443 (Syria, 16th-17th cent., with very ancient Babylonian material); Cod. 115 (Germany, 16th-17th cent., with old German con- juration and 400 recipes); Cod. 435 (Urschel, 17th cent., many hundreds of recipes); Cod. 932 (Germany, hundreds of recipes); Cod. 103 (the 'Zainab' of the 'Rechlin's') except the 'Kraut'!); Cod. 258 (Morocco, 19th cent., very full); Cod. 456 (Spanish origin, written in Bulgaria 16th cent., more than 400 recipes); Cod. 464 (Italy, 17th cent., with 390 recipes, many from Aben Ezra and other ancient authorities); Cod. 462 (Italy, 17th cent., with 300 recipes); Cod. 263 (Yemen, 16th-17th cent., some Arabic, others Hebrew, very full); Cod. 493 (Turkey, 17th cent., and some Spanish); Cod. 494, 495, 493, 377, 592, might be mentioned, for they also contain medical, herbal, and sympathetic recipes and a number of annals referring to birth, etc.; also Cod. 134 (Montefiore collection, 14th cent.).

II. PRINTED LITERATURE.—For Bible: Winer, R.E.F., etc., 'Kinder,' For Talmudic period: I. Lamperotti, Pehod Pehud (Lyons, 1723, with index); Anon, 'Sefer Be'zakhah,' Hamburg, 1823; Geburt,' p. 254 ff.; Gideon Brecher, Das Tsendentuntel, i. im Tirol, Vienna, 1850, p. 201 ff.—For modern times: H. Manasseh, the Jew in Portugal, p. 31 ff.; M. Grunwald, MJYJJ, Hamburg, 1876, p. 90 ff., v. 1900, p. 63 ff., and the following: Anon. recipes mentioned above from ancient MSS; Anonym., Todeth Adam, last ed., Lemberg, 1872; B. Benas, Amosbath Benigman, Wilensdorf, 1716; Anonym., Multa, Amsterdam, 1585; J. Joseph, Beth Dov, Wilensdorf, 1713; Anonym., at end of Erin Ve-Tunisim, Dyhrenfurth (a. s.); S. Pelagian, Sefer ha-Be'zakhah, Hamburg, 1806; H. Palaches, Re'huth ne-yamim, Smyrna, 1754; Reuben b. Abraham, Segaloth, Jerusalem, 1855; Moses b. Israel Benjamin, 'Yishtul Mohehe, Monsey, 1894; and one of the most curious collections in circulation in Lemberg, a certain J. Hentchin, Matseis Nefasot, Fgr. 1601 (Amsterdam, 1651), agreeing in many points with Cod. 115. M. GASTER.

BIRTH (Muhammadan).—Among Muslim peoples the birth of a child, or at least of a male child, is an event of the first importance. It is especially so to the mother, because a barren wife is held in no regard by husband or relatives. Women who undertake a resort or sortied to various shrines and superstitious rites, even to stepping across the corpse of a disappointed criminal and anointing their persons with his blood, in the hope of becoming fertile; and the intentional avoidance of body-washing, and of being at the head of the family or wife, practically unknown, though at the time of Muhammad such avoidance was permitted to men who did not desire offspring from slave concubines (Muhammad ibn-Muhammad, tr. Matthews, 1810, vol. ii. pp. 406, 407, 451, 499, 500, 501, 502, 503, 504, 505, 506), rest upon the recorded precepts of Muhammad; but there is a general agreement in the chief observances, which shows that they are to be respected also as a practical observance of the Arabs at the time of the promulgation of Islam. Two or three days before the expected date of the birth, the midwife (dikah) brings to the house of the woman to be confined the groaning-chair or 'birth-throne' (heqnah, etc.), upon which the birth is to take place, for Muslim women are delivered sitting down. The chair, which belongs to the midwife, is covered with a shawl or embroidery, and harinna flowers or roses are tied with an embroidered handkerchief to each of the top corners of the back. As soon as the child is safely delivered, the midwives stand hi, or, while the child stands the zagharit, or lililoo (as in the tale of King 'Umar b. al-Nu'man in the Alif Lāyghū wa Lāyghū: cf. Burton, ed. Smithers, 1895, i. 401). The child is at once wrapped in white linen, or linen of any colour but yellow, and the father or, in his absence, some other man (but never a female) sets a silver coin into the infant's ear, or the adhā' in its right ear. This is done in imitation of Muhammad himself, who is related to have acted thus on the birth of his great-grandson Isma'il (A.H. 180). Another custom, based upon the same authority, is for some learned man to suck a date or some sweetmeat and put it into the baby's mouth and rub it on its palate, whereby the suckler's wisdom is hoped to be communicated (Mushtik, ii. 315; Herkomer, Quaran, Letters, 1852). Among the well-to-do the mother retires to her bed for from three to six days; but poor women seldom rest at all after their delivery. Meanwhile re- joicing begins at once; but these are much more festive for the birth of a son than of a daughter. The men recite the fītāqh (Qur. ch. i.) and receive presents. Dancing men and girls assemble and perform before the house, and sometimes the father entertains his friends on each day of the week succeeding the happy event; but usually the feast is restricted to the day of the birth. There is that chosen for the chief festivities. Lane (Mod. Egyptians, 1800, ch. xxvii. p. 504 f.) has described the ceremonies of the seventh day as practised in Cairo about 1855:

"... on the ... seventh day after the birth of a child the female friends sometimes have a great feast, at which they present higher classes 'Aswellim (Aimanah) are hired to sing in the birthing, or to do the work of performing, or of chanting [of the Qur'an] below. The mother, attended by the diwāgh, and the kūrsi al-waddāgh (birth-chair), in the hope that she may soon have another. It is for its sake; for it is considered propitious. The child is brought, wrapped in a hand-some coloured shawl or something costly; and, to accentuate it, a noise is made by striking it; but afterwards it is laid on a fine mattress, with scarfs and other sounds of mirth, one of the women takes a brass mortar [bushan] and strikes it repeatedly with the pestle, as if pounding. After this the child is put into a sieve and shaken, it being supposed that this operation is beneficial to its stomach. Next it is carried through all the apartments of the house, accompanied by several women or girls, each of whom bears a number of wax candles, sometimes of various colours, but in two's or three's, and stuck into the child's hā'īnun upon a small round tray. At the same time the diwāgh or another female sprinkles upon the floor of each room a mixture of coloured grains and sand, which is thrown by the child, which has been placed during the preceding night at the infant's head, saying, as she does this: The salt is in the eye of the believer; the salt is in the eye of the prophet. This ceremony of the sprinkling is poured on the child's shārīč (circle) is customary for the child and mother from the evil eye; and each person present should say, 'O God, bless our lord Muhammad!' The child, wrapped up and placed on a fine mattress, which is sometimes laid on a silver tray, is shown to each of the women present, who looks at its face, says, 'O God, bless our lord Muhammad! God give thee long life!' etc., and usually puts an embroidered handkerchief, with a gold coin (if pretty or old, the more esteemed) tied up in one of the corners, on the child's head or in its side. This giving of handkerchiefs is considered as imposing a debt, to be repaid by the mother, if the donor should subsequently contract the child, and consequently a debt for a similar offering. The coins are generally used for some years to decorate the head-dress of the child. After these things (which are regarded as the first debt for the child), the name of the child is pronounced out loud (diwāgh). During the night before the sabā', a water-bottle full of water (a douayr in the case of a boy, or a yulūlah in that of a girl), with a hand-carved wooden hand-carved handkerchief tied to it, is placed at the child's head while it sleeps. This, with the water bottle, is carried by the child's nurse, who takes and puts the bottle over each of the women, who put their mu'āfī for her (merely money) into the tray. In the evening the husband generally entertains and presents to his friends."

On the same seventh day (or on the 14th, 21st, 28th, or 35th day after birth) the child is named, though this is often done a few hours after its birth, without any special ceremony; and the rite of 'aqtāq is to be observed, together with the shaving of the child's head, though both are more common. The custom is that, when the 'aqtāq is enjoined by a tradition of Muhammad,
who said, 'An 'aqiqah must be observed at the birth of a child; then slay a goat on its behalf and shave its head'; and again, 'The 'aqiqah for a son is two goats, and for a daughter one, either male or female.' (Mishkât, st. repr. 315. 246.; Abü-Dâ'â'îd, Sâhîh, Arab. text, ii. 36.) The 'aqiqah is properly the hair of the newborn infant, but the term is applied by nomeny to the sacrifice made on its shaving (Lane, Arabic Lexicon, s. v. 'Aqiqah'). It may be a ram or a goat, or two for a son and one for a daughter. The animal must be a male yeaning and without blemish, according to Abû-Dâ'â'd (Hughes, Dict. of Islam, art. 'Children').

The rite is held obligatory by Ibn Hânif, but the founders of the three other orthodox schools regard it as unimportant, in spite of Muhammad's example and the tradition prescribing the 'aqiqah (or, as he preferred to call it, naskâkh).

The person sacrificing should say, 'O God, verify this 'aqiqah is a ransom for my son such a one; its head, its back, and its right hand, (that) its bone for his bone, and its skin for his skin, and its hair for his hair. O God, make it a ransom for my son from hell-fire.' A bone of the victim should not be broken. A leg should be given to the midwife, but the 'aqiqah should first be cooked with water and salt without any part being cut off, and part should be given to the poor (Lane, loc. cit., and Thousand and One Nights, note 24 to ch. iv. (1859 ed., vol. i. p. 277)).

'It is a sumnal ordinance, incumbent on the father, to give a certain price (money) of the child, and to give, in alms to the poor, the weight of the hair in gold or silver' (Lane, Thousand and One Nights, ib.). Circumcision is also specially approved when performed on the seventh day; but in practice it is usually postponed to the fifth or sixth year, or even much later.

On the fortieth day, as a general rule (not universally observed, however), the purification of the mother is completed, and she goes to the bath; and on the same day the infant is introduced to its paternal and maternal family. (Note that this is a very widely accepted practice.)

The various additional ceremonies, many of them common to Hindus as well as Muslims, observed in India, may be read in Herklots (op. cit.); those commonly witnessed in Turkey in Europe are very fully described by a Consul's wife in The People of Turkey, edited by the present writer, 1878, vol. ii. pp. 1-10; but most of these are merely amplifications or variations of the customs described above.

With regard to evidence of birth, the testimony of one woman, be she the midwife or another, in addition to that of the mother, is required, according to Hânâfî law, to prove that the child is the offspring of the mother; but the father's sole testimony is accepted for his paternity. Further evidence is required, however, when the mother is passing her term of iddâh after a complete divorce (Hamilton's Hidddayn, 1791, p. 154; Hugh, Dict. of Islam, art. 'Birth').

LITERATURE.—The literature has been sufficiently cited in the article.

STANLEY LANE-POOLE.

BIRTH (Parsi).—1. The birth of a child is a very auspicious event in a Parsi house. It was so also in ancient Persia. According to the Vendidad (iv. 47), Ahura Mazda says: 'I prefer a person with children (pāthraēn) to one without children (dārmārē). The very groups of persons in whom this can live with his children is allegorically described as feeling happy (Vend. iii. 2). Cultivation and a good supply of food to people are recommended, because they make mankind healthy and able to produce healthy progeny (Vend. iii. 33). To be the father of good children was a blessing from the Yazatas (Vend. xvii. 27), and from the Prâvashis (Yastq x. [Mihir] 3; Yastq xii. 134). To be childless was a curse (Vasna x. 1, 3). Domestic animals, when ill-fed and ill-treated, cursed their masters that they might be childless (Vasna xi. 1). Childlessness was something like a punishment from heaven (Vasna x. 3; Yastq x. [Mihir] 38, 108, 110). Kingly splendour (kvarâe khwârênā) was associated with those who were blessed with children (Yastq xix. [Zamâyad] 75). A Zoroastrian woman often prayed for a good, healthy child (Vasna x. 22). A Zoroastrian man and woman prayed before their sacred fire for a good, virtuous child (Vasna xii. 5; cf. Vend. iii. 33). A woman without a child was as sorry as a fertile piece of land that is not cultivated (Vend. iii. 24). She prayed for a husband who could make her a mother of children (Yastq v. [Ahrâb] 87; Yastq xvi. 40).

Among the Achaemenians, a wife who gave birth to many children was held in high esteem; and a midwife, who did not like to displease her in any way (Herodotus, ix. 111). Children being the choicest gift of God, their lives were, as it were, pledged by parents for the solemn performance of an act (Herodotus, vii. 10). We read in Herodotus (i. 156) that 'next to prowess in arms, it is regarded as the greatest proof of manly excellence to be the father of many sons. Every year the king sends rich gifts to the men who can show the largest number, for they hold that number is strength.'

It is also observed by the Persians that when a woman becomes pregnant, a fire should be maintained most carefully in the house. The house or family that does not keep the fire of the house properly has no right to pregnancy of women in it (Shiastâ yâ-yâstâx xii. 3). The Soul-dor (xvi. 1) also gives this direction. We have the remnant of this injunction in the present custom that, among the modern Persis, on the occasion of the completion of the seventh and seventh months of pregnancy, a lamp of clarified butter is lighted in the house by some families. The reason assigned for this is that the fire so kindled in the house keeps out dâévis, i.e. evil influences, from the house. A fire or lamp burning is considered a cure of Candhyas (Herodotus, vii. 65). Cf. also those of Darius (Rekhast Inscriptions, iv. 10. 11). SBE v. (1889) pp. 316, 383.

1 Ib. xxiv. 277.
is even now taken to be symbolical of the continuation of a line of offspring. For example, it is not rare to hear, even now, words like these: 'Thy ship is always right, may your lamp always be burning.' This benediction means, 'May your son live long, and may your line of descent continue.'

3. According to the Avesta (Vend. xv. 8), a woman in the state of pregnancy is to be looked after very carefully. It is wrong for the husband to have sexual intercourse with her in her advanced state of pregnancy, which, according to the Rivayats, commences with the seventh month. She must abstain from coming into contact with things like a tooth-pick, which may contain germs of disease (Shayast la-Shayast x. 20, xii. 13; Sad-dar xvii. 2; SBE v. 323, 344, xxiv. 278).

4. The modern Parsis have no religious ceremonies or rites during the pregnancy of the woman. On the completion of the fifth month of pregnancy, a coconut is baked and broken in the presence of the priest, a ceremony known as pexelsminisan, i.e. 'the day of the fifth month.' Similarly, a day is observed on the completion of the seventh month, and is known as aghorni. These days are observed only in the case of the first pregnancy. They are not observed in accordance with any religious injunction or with any religious ceremonies or rites. The expectancy of a child being a joyful event, as said above, these days, especially the seventh-month day, are observed as joyous occasions, when the woman who is enceinte is presented with suits of clothes by her parents, relatives, and friends, and especially by the family of her husband. The husband is in turn presented with a suit of clothes by the wife's family. Sweets are sent out as presents by the husband's family to the bride's house and to near relatives and friends. Among these sweets, one prepared in the form of a coco-nut has a prominent place. A coco-nut signifies a man's head, and so it is a symbol of fecundity. Some of the customs observed on these occasions are more Indian in origin and significance than originally Persian or Zoroastrian.

5. The first delivery generally takes place in the house of the wife's parents. A room, or a part of the room, generally on the ground-floor, is set apart for the purpose. As the Vendidad (v. 46) says, the place for delivery must be very clean, dry, and least frequented by others. It appears that in ancient times such places were specially provided in Parsi houses on the ground-floor. Parsi houses in those times generally had spacious ground floors that were used for all purposes. The upper floors were low, and were rather like lofts than storeys. So the ground-floors provided proper places for delivery as enjoined in the Vendidad. But, as with changed circumstances, Parsi houses of to-day are not what they were before, and as, at present, in storeyed-houses, the ground-floor in big towns is generally the worst part of the house, it is properly condemned as a place unfit for delivery.

6. In the case of a house or a place where no delivery place before, religious-minded persons generally take care that a religious ceremony takes place in it before the delivery. In other words, they get it consecrated. A priest or two say and perform the Afringan prayer and ceremony in the place. At times even the Bija prayer (b. Dastmestet, Le Zend-Avesta, 1953, ii. 723 ff., 686 ff.).

7. On the birth of a child, a lamp is lighted and kept burning for at least three days in the room where the woman is confined. The Sad-dar (ch. xvi. 4) says, 'If at any time your lamp be always burning.' This benediction means, 'May your son live long, and may your line of descent continue.'

8. On delivery the mother is enjoined to remain apart from others. She must not come into contact with fire, water, or any of the furniture of the house (Vend. v. 45–49).

The Sad-dar (ch. lxxvi. 1–5) enjoins that, 'she should not change her clothes for five days, nor put her hand again on anything, ... After the twenty-one days, if she sees herself in such a state that she is able to wash her head, she washes her head. And, after that, until the coming on of the fortieth day, it is requisite to abstain from the vicinity of a fire and anything that is wooden or earthen; it is also requisite to abstain from everything of her cooking and pot-boiling. Afterwards, when it is forty days, she is to wash her head, and it is proper for her to do every kind of work. Till the lapse of a second forty days it is not proper for her husband to make an approach to her, for it is a great sin, and it is possible that she may become pregnant a second time, as within a period of forty days women become very quickly pregnant.'

In the case of those who give birth to still-born children it is enjoined in the Vendidad (v. 55 f.) that they must remain separate for twelve days. This period has been latterly extended, as directed in the later Pahlavi and Persian books, to forty days in all cases of delivery. Nowadays a Parsi woman is to remain forty days after her delivery. The Sad-dar (ch. xvi. 4) says, 'During forty days it is not proper that they should leave the child alone; and it is also not proper that the mother of the infant should put her foot over a threshold in the dwelling' (i.e. leave it).

9. Some families observe the fifth day after birth, known as patchori ('the fifth day'), and the tenth day, known as dasori ('the tenth day'), as gala days; but these days have no religious significance whatever.

10. During these forty days the woman must remain in a state of isolation. She must not come into contact with anybody or with any part of the ordinary furniture of the house, especially wooden furniture and linen articles. Her food is to be served to her on her plate by others. Those who have to come into contact with her have to bathe before they mix with others. Formerly, even the medical attendant had to do so, but nowadays the salutary rule is more honoured in the breach than in the observance. It is to be adhered to observe 'purity' in order to prevent the spread of puerperal fever and other such diseases to which women in this state are subject.

* SBE xxiv. 277.

* See ib. xxvii. 277.
11. At the end of the forty days, the period of confinement, the woman has to purify herself by a bath before mixing with others. At first she takes a private bath, and then goes public what is called nān (a contraction of the Sanskrit word swān), which is a sacred bath. A priest, generally the family priest, administers this bath with consecrated water. Even those who have contracted smallpox are not excluded; the days of her accouchement have to go through a ceremonial purificatory bath.

12. All the bedding and clothes of the woman used during the forty days of her seclusion after delivery are rejected from ordinary use. They are enjoined to be burned, and even the victuals that they carry and spread germs of disease among others. But nowadays that injunction is not strictly followed. They are now given away to non-Zoroastrian poor people of the sweepers class.

13. Formerly a mother in childbirth first drank a few drops of the sacred Haoma (q.v.) juice, squeezed and consecrated in a Fire-temple. The new-born child also was made to drink a few drops of this juice (Shāgāyat-tā-Shāgāyat x. 10). Anquetil du Perron refers to this religious custom as prevalent in the East. It is called the Haoma Yasht (Vasna ix. 22) Haoma is said to give fine healthy children to women who give delivery. Haoma was emblematical of immortality; hence this custom. Now, however, the custom is rarely observed, and, in place of the Haoma juice, a sweet drink made of molasses or sugar is given to the child as the first auspicious drink.

JIYANJI JANSHEDJI MODI.

BIRTH (Teutonic).—All the Teutonic peoples made a rigorous distinction between legitimate and illegitimate birth. They granted the full rights of consanguinity and tribal membership only to the children of legitimate unions, that is, to the offspring of a free father and a free mother joined in lawful wedlock. Whenever a child was born, it was laid upon the ground by the midwife in a clean white cloth. This custom is reflected to this day in the Scandinavian terms for midwife, jordgumma, jordamoder, 'earth-mother.' This rite has maintained its ground in many branches of the Teutonic stock (cf. A. Diez, E. H. Herdan, and others), signifying the old belief that the soul, and therefore the life, of the child issues from 'mother earth,' and that the child derives its vitality therefrom. The next step on the midwife's part was to lift the child up—hence the German term for 'midwife' Hebamme, O.H.G. hebenamme—and hand it to the father. If the latter wished to acknowledge and maintain the infant, he took it in his arms, but he retained the right to condemn it to exposure. This right could be exercised in cases where the child was feeble or deformed, or when the father was in doubt as to its legitimacy—a situation which often arose at the birth of twins, the popular belief being that such an event implied the mother's unfaithfulness; or, again, if it had been predicted that the child's existence threatened the father with danger, misfortune, etc. He felt himself unable to maintain the child. The father's prerogative, however, was annulled by law after the introduction of Christianity, though various fairy-tales assume its survival down to the present day. But even in heathen times the father's decision had to be borne with, and often few hours after the birth, for once the child had taken nourishment, milk or honey, in however small quantities, or had been laved with water, it was regarded as belonging to the family, and shared equal rights of ownership, save for the male, who generally named after some deceased member of the family, preferably the grandfather on the mother's side, as it was believed that the name carried with it the personal qualities of its original bearer (cf. G. Storm's article on nordisk filologi, ix. 199 ff.). If the father, upon whom these various legal functions devolved, died before the child was born, his place was taken, according to the most ancient usage, by the entire group of his blood relations, frequently augmented by some relations from the mother's side, and these chose one of their number to act as guardian and discharge all legal obligations in regard to the child. The same procedure was observed when the father had been proclaimed an outlaw; in the eye of the law the mother was then a widow and the child an orphan. If the father was unable to be present at the birth, the mother had to decide whether the child should be acknowledged or exposed.

A somewhat different course was adopted in the case of illegitimate birth. The children of slaves were themselves slaves from birth, and transferred to the owner of the mother. In primitive times, distinctions were made amongst the illegitimate children of free parents, and the Old Norse language had special designations for the different classes. If the child was lawfully recognized by the mother (frilla) with whom the father cohabited, though not in wedlock; hviring, the son of a free mother with whom the father's relations were clandestine; hjôborinn, the son of a free father by a slave. These distinctions, however, were gradually done away, and disappeared first of all in Iceland. In regard to the illegitimate, the first step was to find out who the father was; and when this point had been decided, the child, even in early times, acquired the right of inheritance—though in a limited degree—and a claim to the father's protection. Moreover, it frequently happened that the child was received into the family bond (fæl. atttelding), and this transaction, especially when there were no children of lawful birth and inheritance, was celebrated with feasting and high ceremonial. In all cases it was the duty of the father, or his family, to maintain the child till maturity was reached.

The event of birth became the nucleus of many curious practices and superstitions. In many districts of Germany, Britain, and Scandinavia, there prevails to this day the custom of lighting fires or candles round about the newly-born (cf. Liebrecht, Zur Volksskunde, 31), in order to prevent
their falling under the power of evil spirits. The same purpose was served by putting the door of the house or the cradle with a knife, placing some article of steel—a pair of scissors, a key, a horse-shoe, etc.—in the cradle, hanging amulets round the child’s neck, stopping the keyholes, or keeping out cats or any old woman who was suspected of having the ‘evil eye.’ In some places it was to cast salt under the child’s tongue to prevent its being bewitched. These prophylactic expediencys were deemed necessary till the time of baptism, as it was during this period that the demons directed their practice against the child, and tried to kill or change it, a babe of their own, in its place.

The immediate surroundings of the child were meanwhile taboo. On the other hand, every possible effort was made to secure good fortune for the newly-born. Special importance was ascribed to the umbilical cord, and to the bladder-like membrane or ‘caul’ with which some children are born, such children being regarded as the favourites of fortune. The caul was carefully preserved and sewn into the child’s clothing, thus ensuring all sorts of good fortune. From this, indeed, developed the Old Norse belief in an attendant spirit, the fylgi, which accompanied the person wherever he went. The dried umbilical cord was in course of time given to the child with a meal of eggs, in the expectation that this food would turn the child’s head and make it intelligent; or it was sewn into the clothing, as a means of making its possessor clever and capable.

Amongst the Teutons, as amongst many other races, great emphasis was laid upon the young trees which was planted on the day of the child’s birth, and was thenceforward regarded as its tree of life. The fortunes of the tree ran parallel with those of the child, and from this notion arose the belief in a person’s tutelary tree (Swed. värld-träd). When it clanced that an animal was born in the homestead on the same day as the child, it was believed that the former, during its whole life, stood in the closest relationship to the latter. The animal was named after the child, and became its constant associate.

Widely diffusely throughout the entire Teutonic area are the mythical stories regarding the goddesses of destiny, who appear at the birth of a child and determine his future. Their function is indicated by their names: thus, in Old Norse they are called urðr, ‘the past’, verðandi ‘the destiny’; in Gothic, orfris; Anglo-Saxon, motena, ‘those who measure out’; Middle High German, Gasekopfen, ‘the makers’. From early times the sisters were reckoned as three in number, but sometimes also as seven or thirteen, and frequently the part assigned to one of them is to deal out misfortune to the infant. Norse poetry speaks of them as norrs— a word of doubtful etymology. They are represented as spinning midnights, who at the child’s birth wind his thread of life—his fate; and accordingly, possessing great power to do a force of the destiny of men, they acquired at length a prophetic character.

The birth of a child was an occasion upon which a part of special importance was played by the myths regarding the origin of children. The thought underlying nearly all these myths was the belief that children come from ‘mother earth.’ One proof of this is supplied by the primitive heathen practice, already referred to, of laying the child upon the ground immediately after birth. In Germany and Swedeno the cows and calves were supposed to come forth from hollow trees, as these, according to popular notions, were connected with the interior of the earth. Similar ideas were also held about lakes, ponds, and wells. In South Germany various lakes and fish-ponds are known as Kindersen, ‘children’s lakes’; while, in the more southern parts of Central Germany, there are many Kinderbrunn, ‘children’s wells’, in which the goddess Frau Iolle was believed to keep in charge the souls of children before their birth. Other places of origin were marshes and fens. The prevailing belief in many districts was that children are born out of the water and carried to their mothers by water-fowl, especially the stork and the swan, while in other parts they were supposed to issue from caverns or mountains. In Pomerania, for example, we find ‘swan-stones’ and ‘stork-stones,’ and children obtained from these were called ‘swan-children’ (Jahn, Volkssagen aus Pommern, 390).

Heathen times came the belief that children are the men of a former day, re-born into the world. They had passed their intermediate period in an animal form, according to a popular superstition in South Germany, they had been flying about as butterflies. We thus see that these various notions regarding the origin of children are related in the closest way to the primitive Teutonic belief regarding the association of them with commemoration.

BIRTH-DAYS.—The custom of commemorating the day of birth is connected, in its form, with the reckoning of time, and, in its content, with certain primitive religious principles. It is the most complete example of a commemorative ritual. Its essence is the repetition of the event commemorated. As culture develops, this primary meaning is obscured by various accidents.

In the lower culture, what is reported of the Congo tribes, who generally consecrate a day is kept of birth or age.

* The Hupas of California take no account of the lapse of time, and consider it a ridiculous superfluity to keep a reckoning of age. They guess at man’s years by examination of the teeth. One will say, I have good teeth. The only epochs are those of babyhood, boyhood or girlhood, youth, manhood or womanhood, and the state of married man or woman, old man or old woman. The Omahas have a superstitious objection to counting, and therefore never note a person’s age.

The earliest lunar reckoning produced the seven-day week, the lunar month, and the lunar year, thus providing machinery for the expression of any ideas involving repetition of events. Parallel with these dates, and of earlier origin, are seasonal epochs, marked by changes in vegetation, and also the epochs of human growth, as noted above.

The day of birth itself is first considered. At an early stage of chronology the influence of ideas of luck is brought to bear upon dates. Every people has its own list of ominous objects and circumstances. In highly developed popular religions the result is a dualism affecting the whole life of man. Of the Cambodians we read that the idea of luck dominates their entire existence.
The religion of the Baganda is described as a religion of luck. Among the Tshi people of West Africa each person has his lucky and unlucky days. In the week of the Asasas of the Niger the days for marketing, for work, and for rest vary for each individual according to the particular ju-ju decided for him by the medicine-man. At the time of the event the name of the person, who possesses an elaborate doctrine of fatalism (vintana), mark a certain number of days in each month as lucky or unlucky. The vane, or first days, of some months are especially disastrous to children born in, or cases to the offspring of the people generally, in others to those of the royal family. A child born on an unlucky day, and dying young, is said to have "too strong a vintana." Formerly, children born on unlucky days were put to death by being buried alive. In Modern conditions this is rare. To regard the child as an evil omen, to ordain, offering, or "expiatory bath," the water being buried instead of the child. In one clan of the Sakalavas all children born on a Tuesday were put to death. In the Bara tribe a child was put to death on the day which was unlucky both to father and mother; if the day was unlucky for one parent only, the child's life was spared. In the Tswana tribe one particular month was peculiarly unlucky for birth.

With the rise of astrology comes the development of the horoscope and similar forms of augury. In origin such practices are species of sympathetic magic; the intention is to influence events, or to assist nature, and the method employed is the rehearsal or artificial previous reproduction of the desired result. The Central Americans possessed an elaborate code of "signs of the day," applying to each day of each cycle of twenty days, the compuhuhlili, of which the year was a multiple. Horoscopes were prepared from these signs for the day and hour of birth. Every Chinese born child, as a species of personage name, the sign of his birth-day. The Burmese predict a man's character and destiny according to the day of the week on which he is born and the constellation which rules it. The name of the child is given from the day or the letter belonging to the birth-day. The Asasas of the Baganda have a name after it the day of its birth. In China the hour and the day of birth are regarded as being very important. A child born between the hours of 9 and 11 will have a hard lot at first, but finally great riches. The Hindus possess an elaborate astrological system of nativities connected with lucky and unlucky days. In Madagascar nativities are drawn up from the position not of the stars, but of the moon. This method is unique, as far as I am aware, and is the star of nativity. The Tshi peoples name child after the day of the week. The Muhammadanized Swahili consider it lucky to be born on Friday, the Muhammadan festival. Children then born are named 'son' or 'daughter of Friday.' In German folklore Sunday is lucky as a birth-day, particularly if the Sunday day is connected with the growth. 'Sunday children' are supposed to be able to see spirits, or to see in the dark. The principle of repeating an event after its occurrence is an invasion of sympathetic magic.

Whereas in the modern form of magic the coming event is influenced and ensured by previous re-enactments, in this inverted form it is reproduced in order to repeat the original advantages and to effect its continuance. The idea is naturally suggested by the recurrence of the same external or clitorological conditions, the natal child was closely bound up with the original event, and are therefore supposed to influence it: they are further supposed to carry it with them, and therefore require its repetition. The intention varies as the event. In the case of the repetition of birth by the same parent, and the following renewal of the life by the original birth. Such ideas are illustrated by the general custom of celebrating the renewal of the year. The ritual is designed to renew not only the life of nature, but also the life of man, and at the same time to discard the malevolent influence. In a number of cases the uncouth, unclean bath, the water being buried instead of the child. In one clan of the Sakalavas all children born on a Tuesday were put to death. In the Bara tribe a child was put to death on the day which was unlucky both to father and mother; if the day was unlucky for one parent only, the child's life was spared. In the Tswana tribe one particular month was peculiarly unlucky for birth.

To illustrate the first of these points, we may instance the Hindu festival avatatar, which celebrates the beginning of the year. The chief features of the day are the reading of the new almanac and hearing the forecast of the events of the New Year. New clothes are also new when procured for the food are partaken of during the day is, as far as possible, composed of new materials, i.e. new grain, pulses and such like, for this is a feast of ingathering. One dish, which must be partaken of by all who wish for good luck during the year, is a conserve composed of sugar, tamarind, and the flowers of the maroon tree (Melia Americana), which is then in full flower. The bitter taste of this is not much relished as a rule; but it is necessary that at least a small portion of the dish should be eaten. This seems to be analogous to the English idea that it is necessary to eat mince-pie at Christmas or at the New Year.

In the next place, such festivals, surviving as they do into the highest stages of evolution, are in the early stages universal birth days. The Malagasy custom is significant. In the lunar year of Madagascar is particularly reckoned by the annual great feast fanzotro. Remarkable longevity is denoted by the phrase that a man has seen three fanzotro at the same season of the year. Thus he might see it in spring at the age of 75, again when 40, and again when 74. We are expressly informed that a man's age is reckoned not by his years, but by the fanzotro. The Japanese supply an instructive case of compromise between the social and the individual birth-day. The first of January, the commencement of the New Year, 'may be considered the universal birth-day, for they do not wait till the actual act of birth, but regard the year of birth as divisible into a person a year older, but that date the addition to his age from the New Year. The 1st birth-day is the only one about which much fuss is made. This is by no means because the Japanese, having living through one revolution of the seasonary cycle it begins a second round, which is regarded as an extraordinary event, for the Japanese as a youth to last from birth to the age of 32, middle age from 32 to 40, and old age from 40 to 60. A child is born in 1890, or January 1890, they take it of the child as being 2 years old, because it has lived through a part of two separate years.'

* W. Ellis, History of Madagascar, 1838, i. 447, 448.
The Chinese religion of piety we find a remarkably explicit illustration of the principle of the commemoration of the anniversary of birth. The 'birth-day celebration is a peculiar institution,' though not attended with much éclat till after the age of 15. Each person has an annual festival, and every tenth year after reaching 50 an extraordinary celebration. Especially honoured is the 61st birth-day. The Emperor on his birth-day is supposed to acquire 10,000 'longevity.'

The courts of justice are closed, and a general amnesty is proclaimed. The ordinary person on his birth-day receives 'longevity presents,' and his house is embellished with 'longevity' life. With the express purpose of prolonging life, a dish of vermicelli in remarkably long strips is eaten. Of particular importance is the 'longevity garnet.' This is a handsome robe, embroidered in gold characters with the word 'longevity.' It serves at death as the man's shroud. It is generally present from the children, and is given to the parent on his birth-day. He wears it then, and on all festive occasions, in order to acquire long life, 'it being generally acknowledged among the Chinese that it was a great and necessary duty of the birth-day to absorb a good amount of vital energy in order to remain hale and healthy during the ensuing year.'

The Cercans celebrate the 61st birth-day in the same fashion. On ordinary birth-days no clothes are worn, and a feast is prepared for friends of the family.

The Burmese offer on their birth-days, celebrated weekly, candles representing the animals connected with the day of the week. The offering is an act of worship at the pagoda.

The Central Americans celebrated birth-days with a feast given to the friends of the family. Presents were offered them on their departure.

Among the Tshi natives of West Africa, a man's birth-day is sacred to his kro, or 'indwelling spirit.' If a man is rich, he kills a sheep, if poor, a fowl, and prepares a feast. In the morning, when he washes, he provides himself with an egg, and some new fibre of the kind used as a sponge. He then stands before the calabash containing the water of his kro, and after protection and assistance during the coming year, as he is about to worship it, and keep that day sacred to it. He then breaks the egg into the calabash, and washes himself with the fluid; after this he partakes of his kro, and puts on white cloth. Members of the higher classes, kings and chiefs, keep sacred to the kro the day of the week on which they were born. Thus Kwofhi Kari Kari, having been born on a Friday, made it a law that no blood should be shed on that day.

The ancient Persians celebrated birth-days.

In ancient Egypt the birth-days of the kings were celebrated with great pomp. They were looked upon as holy; no business was done upon them, and all classes indulged in the festivities suitable to the occasion. Every Egyptian attached much importance to the day, and even to the hour, of his birth; and the commemoration of his birth was a matter of public notice. The king himself kept his birth-day with great rejoicings; welcoming his friends with all the amusements of society and a more than usual profusion of the table.

In modern Persia the birth-days of Muhammad and 'Ali, as in Islam generally, are duly honoured. For ordinary persons, however, the New Year's feast is the only real festival. In the Jewish calendar, the 13th birth-day of a boy is celebrated as a family feast, this date being his religious majority.

The preceding principles introduce some secondary principles. The idea, inseparable from festivals, of holiday or rest, combines with the wish to avoid consuming energy and vitality, and to assimilate the same by means of food and drink. A further principle is that of a propitious commemoration of an epoch as influencing the whole. At a late stage such ideas are obscured, and an ethical principle arises. This is, in Western culture, faintly suggested by the phrase, 'turning over a new leaf' at the New Year or on the birth-day. In Catholicism, this is more definitely expressed in connexion with the birth-day of the individual's patron saint. In early Christianity each anniversary was a step towards the new life commencing at death.

The idea of renewal, as we saw, is in the early stages emphasized by the weekly phases of the moon. Thus we get the principle of the octave. One of its earliest applications is the celebration of the seventh day after birth, on which, among various peoples, the name is given or some ritual operation is performed.

The principle of the octave is actually applied at times to produce a weekly birth-day. This has been instanced in West Africa and Burma. A good many recorded birth-days are probably not annual, but weekly or monthly. The ancient Syrians of the last century, who celebrated a month in the year, observed that:

'The consideration lead up to some peculiarities of reckoning or commemoration which have influenced the custom. The Apache father makes a note of each moon that follows the birth of a child. A large mark is made for the 16th month.'

The Mayans celebrated as the birthdays of their children the first step taken, the first word spoken, and the first thing made. The Ovahero reenact a man's age from the time of his circumcision, not counting the previous period. A man is called after the otjiwondo of his circumcision. Those circumcised at the same time are orokuku, persons of the same age.' Such methods of reckoning age are convenient for the savage, who has little use for any more accurate reckoning. Other such epochs, which at a certain stage are the only birth-days known, are the initiation and marriage. The Baganda reenact a man's age by the reigns of the chiefs. It was in the reign of so and so that I was born.'

In the lower cultures names are curiously parallel and related to the days of the week. The Maori had one name given at birth, a second at puberty, a third on his father's death, and others whenever he performed some achievement. An Alit will change his name perhaps ten times in ten years, and celebrate the event each time with a feast. In connexion with change of name there is the idea of renewal.

An early application of the principle of commemoration of the death. All the ideas connected with the spirits of the departed find expression here. In early religion these commemorations are as frequent and as important as any annual festival. In Ojosea great ceremonial attended the anniversary of the birth of great lords after their death. The belief was that the soul wandered about for many years before entering bliss, and visited its friends on earth once a year. The

...
The Hindus observe the new moon of the month, Bhadrapada (September-October), in honour of the dead. On this day the head of a family must perform prescribed ceremonies for the preceding thrones. It will have to pass in front of the image of the dead as may not have received the final rites of sepulture. The fact shows, by negation, that the commemoration is the repetition of the event. The annual śrāddhas are well known. Their object is to assist the departed spirit in the various experiences it will have to pass through. At the same time, the one who duly performs these rites and ceremonies thereby lays up merit for himself and his family, which merit will be duly carried to the credit of his account hereafter." One śrāddha is to provide the spirit with an 'intermediate body.' Another indicates the union of the dead with his immediate ancestors. The monthly śrāddhas commence on the 30th day after death. An annual ceremony is performed on the anniversary of the death.

A slight shifting of the point of view will show the parallelism between such practices as the Hindu and the early Christian principle that the birth-day of the martyr was the day on which he died. The death-day of the faithful was regarded as their birth into a new life. The 'mātāle per excellentem' of the day of the birth or nativity to a glorious crown in the kingdom of heaven. Tertullian observes that St. Paul was born again by a new nativity at Rome because he suffered martyrdom there. Such natālīa were contrasted with 'natural birth-days,' as spiritual in opposition to worldly. The 'birth-days' of martyrs, celebrated at the grave or monument, had a profound influence on the development of ecclesiastical institutions. The celebration was a service, at which the Communion was received. The various rituals involved was the imitation of the martyr, repetition in others of his life and death. The fasting of martyrs were gradually compiled, and churches were erected over their bones, the bones sometimes being replaced under the altar. The festivals of gods are frequently their birthdays. Thus the Hindu festival śrāvgaṇḍugānti celebrates the birth-day of Rāma, the seventh incarnation of Viṣṇu. The image of the god is adored and carried in procession. Pilgrimage is made to the temple. Kṛṣṇa-gānti is the birthday of Kṛṣṇa, and is celebrated on the most popular of the annual festivals. The Bhāgavata-purāṇa describing the life of the god is read on that day. Vīṇāyakabhūvānti is the birth-day festival of Ganesa. Every house sets up an image of the god, before which lights are placed. A mantra of consecration, pradātā, is pronounced, on which the spirit of the god enters the image.

In such acts we see a ritual re-creation of the divinity, a repetition of his birth.

At this feast, artisans worship their tools, and students their books, placing them before the image. Ganesa is the god who is invoked in all undertakings, and who helps man on his way.

In Christianity the birthday of Christ is only less important than the Passion and the Resurrection. Even here the social asset of religion is prominent, and, by a coincidence, the date finally decided upon is that celebrated in paganism as the annual birth-day of the Sun, just as the weekly day of the sun, the Christian Sunday, was the weekly day of the Solar Deity, and in Hebrew mythology the first day of the week. In paganism, and in its complete form as an introductory formula, designed to connect the beginnings of action with the devout remembrance of God, and it is probable that, while still resident at Mecca, he recommended his adherents to use it in a similar way. In the Qur'ān he represents Xos as summoning the faithful to enter the ark with the words, 'Bismillāh ("in the name of Allah") be ye voyage and its landing' (xi. 43); and, similarly, a letter purporting to have been written by King Solomon to the Queen of Sheba opens thus: 'Bismillāh-ir-rahmān-ir-rahīm' (xxiv. 30). Probably, too, he began his own ceremonial disconsolates, as collected in the Qur'ān, manuscript, Nolecke, Gesammelte Werke (Göttingen, 1800), p. 88 [published by F. Schwalbach. 1867].

BIRTH-DAYS (Greek and Roman) — BISMILLAH.

BISMILLAH. 1. Meaning and early usage. — Bismillāh (bn), an Arabic expression signifying 'in the name of Allah,' was borrowed by Muhammad from the religious phraseology of Jews and Christians, and was formulated by him in full as follows: 'Bismillāh-ir-rahmān-ir-rahīm,' in the name of Allah, the Compassionate, the Merciful.' Muhammad employed the phrase both in its short form and in its complete form as an introductory formula, designed to connect the beginnings of action with the devout remembrance of God, and it is probable that, while still resident at Mecca, he recommended his adherents to use it in a similar way. In the Qur'ān he represents Xos as summoning the faithful to enter the ark with the words, 'Bismillāh ("in the name of Allah") be ye voyage and its landing' (xi. 43); and, similarly, a letter purporting to have been written by King Solomon to the Queen of Sheba opens thus: 'Bismillāh-ir-rahmān-ir-rahīm' (xxiv. 30). Probably, too, he began his own ceremonial disconsolates, as collected in the Qur'ān, manuscript, Nolecke, Gesammelte Werke (Göttingen, 1800), p. 88 [published by F. Schwalbach. 1867].

667

with the phrase, and the redactors of the sacred
volume, in producing it (in plenary form) to the
various sects, evidently regarded it as a prefatory
formula having Muhammad's own sanction. We
cannot divine the reason of its omission from the
9th sura, although the Muslim exegetes show no
perplexity in the matter, and provide several ex-
planations, as may be found in commentaries to the
Qur'an. The earlier theologians of Islam were
at variance with each other regarding the question
whether the "bismillih-formula at the beginning of
the sura was to be considered an article of revela-
tion, as the other verses, or one prefigured from
the Prophet himself; but eventually the former
alternative carried the day, and it came to be held
that everywhere that the two covers (bismillah-
dafadain) of the book, including, of course, the
prefatory formula of the sura, was the word of God.

It is recorded that, before Muhammad arose, the hea
ten (qurash) made use of the sacred formula 'bism ukhama
('in thy name, O God') for a similar purpose—a statement
which is certainly creditable, though we have no evidence to test its
by. According to Arabic tradition, which delights to associate every
particular with a religious event, this formula was employed by the
person who introduced the use of this phrase into Mecca was
Umayya b. Abu-Sul, the reputed author of many apocryphal
works, which perhaps are based on this Arabic idea, while the
phrase was used by the Muslims before the time of Muhammad. Umayya
is said to have learned the formula, as a potent talisman against the evil
influence of the Jews, who opposed, from a Christian heresy, to have made
a personal trial of it. But as he was an enemy of the Muslims, Muhammad
himself did not use the latter's entrance upon his public career, the earlier
formula cannot, agreeably to the above tradition, have been in use long before
the Prophet's day. It is even said, indeed, that Muhammad
himself had employed it, but that the revelation of certain verses in the
Qur'an (xi. 36, xvii. 30) induced him to substitute for it, first the shorter, and then the longer, form of the
bismillih.1 Nevertheless he would appear, according to Muslim
authorities, to have sometimes used the earlier Meccan formula even at a later period; 2 thus in a treaty which
he made with the people of Mecca near Hijabulah in a.n. 6, he had to be heard in the following opposition:
'to mention the earlier formula introduced by him, and quite sanctioned the use of the Qurash 'bismikhukama
as a heading to the document.'3 'Alukama' is also approved as an invocation of God in Muslim petitions.

We may regard it as historically established that
trescripts drawn up by Muhammad's instruc-
tors, contracts concluded between him and tribes
which yielded him tribute and even records of a more private character,4 were usually
prefaced by the plenary form of the bismillih. 5

Thereafter its insertion in similar documents as a
prefatory formula became part of the religious
practice of the adherents of Islam. 6 Official records,
especially contracts, preserved the formula as
either as transcriptions in historical works, or,
more authentically still, as originals on papyrus
sheets, always begin with the bismillih. It
is also found on textile fabrics and other products
of industrial art. 7 In bilingual (Arabic-Greek)
documents, which were common, especially in the
Egyptian province, till far off in the Umayyad
period, the Greek portion contains a translation of
the formula, the shorter appearing as ev bapowu
ro pas, while the plenary form expands this with the

In accordance with the common Arabic practice of
giving an introductory formula for any device of omitting some of their constituent letters
(as, e.g., hikâla for 'al-kaun-dulalah, 'hay ala
for hayya 'ad-sa'ulât, etc.); the bismillih is
contracted to basmâla, which is also a verb meaning
'to utter the bismillih'; and the use of the formula is also referred to as tasmiya, the
invocation of the name (ism) of God.

2. Ceremonial use. The bismillih acquires a
special ceremonial significance as the formula of
benediction pronounced before slaughtering animals
for food—used during the day without doubt, was
then, it is suggested by the Jewish law enjoining the utterance of the bismillih before killing and eating. The relevant
injunction in the Qur'an is found in vi. 118, 121:
'Eat of that over which the name of Allah hath
been pronounced if ye believe in His signs' . . .

'Eat not therefore of that on which of Allah hath
not been named, for that were certainly
sin.' From this passage was argued the obligatory
use of the tasmiya before slaughter; and, simi-
larly, it was required that the benediction in
the name of Allah should precede the slaughtering
of the flesh of animals prescribed for that purpose. Even
in the chase (v. 6) it was imperative to utter
the name of Allah before releasing the falcon or the
hound, and only on this condition could the quarry be
afterwards used as food. 9 In pursuance of a
ceremonial practice copied from the pagan
exigents, certain theological schools attenuated the
character of this absolutely binding ordinance to
that of a mere wish, and in this way the omission of
the actual utterance of Allah's name before the
act of killing did not necessarily preclude the use
of the animal for food. If, for example, the
obsession of the regulation had been inadventently
neglected, the food might still be partaken of
without negligence—for, of course, the thought of
Allah is never absent from the devout heart. But
it is obvious that these interpretations and practical
accommodations are at variance with the actual
language of the injunction as given in the Qur'an
—a fact emphatically insisted upon in the teaching of
the more rigid and literalistic interpreters of the
book.

Another question of ceremonial relating to the use
of the bismillih arises in connexion with the
Muhammadan ritual of prayer (salat). The
latter, as is well known, begins with the recita-
tion of the opening sura of the Qur'an (al-
fitâlîhâ), whose phrases are sometimes preserved
in its complete form. It has been from early
times a subject of debate in the schools of the
law whether this introductory phrase should be
spoken aloud (qadha) or in an inaudible whisper
—a controversy connected in its origin with the
disputed question already referred to, viz.
whether the bismillih is to rank as Divine
revolution or not. Most of the orthodox schools
decided that the formula might be uttered in an
undertone, 10 but the Shi'ites, especially, and the
Shi'ite jurist demand that it be spoken in an
audible voice. 11

3. Everyday use. Having dealt with the use of
the bismillih in ceremonial functions and in im-

* But without al-rahmân ar-rahîm, as it was not thought right,
when taking away life, to name 'the Compassionate
Merciful' (Qur. xliii. 10, 11).

(1874), 199, 20.
BLACKMAIL

portant affairs of public and private life, we proceed to speak of a view which sprang up in Islam at a very early period, and soon established itself in everyday practice—the view, namely, which finds expression in a proverb commonly regarded as a saying (hadith) of the Prophet: *la-qa'ada,* i.e. 'every matter of importance which is begun without mention of God is maimed.' This maxim was taken by devout adherents of Islam as their warrant for the practice of inaugurating every act or occasion by reciting a bismillah. The Prophet did not, however, intend by this to have said that Satan sits behind every one who mounts an animal without first having uttered the formula. It is a saying as a blessing before meals is regarded as of special importance, and on social occasions the saying of the bismillah by the head of the household intimates to the guests that the repast is to begin. Nor must the tasmiya be omitted when a person enters or leaves a house, or puts on his clothes. The practice is felt to be in accordance with the thought of Qur'an xxxii.: 31: 'Remember the name of God with frequent mention.' This and other than frequently used to be a maxim highly approved in Islam. The idea that the utterance of God's holy name involves an impurity never found a foothold among the Muslims, who are wont to say, rather, that if we love a person we affectionate his name (man ahabba ashyan akhtara dhikrahu).

4. Superstitious ideas and use.—The deep significance and the sacred character with which Islam invested the bismillah led at length to its being pressed into the service of folk-lore, mysticism, and even magic. It was said that God had inscribed it upon the breast of Adam, the wing of the angel Gabriel, the seal of Solomon, and the tongue of Jesus. The Creator has written the sacred words upon His works. The imaginative eye can sometimes trace the formula in the veins of the leaf or the varied colouring of the butterfly's wing, where nature has imprinted it in mystic (Syriac) characters. The written and oral application of the bismillah possesses talismanic virtues. When the soul in its death-struggle is striving to escape, the angel of death is said to bring him from paradise an apple upon which is inscribed the formula, or the angel himself writes it upon the palm of the dying man, whose agony is alleviated by the sight of it, and whose soul then yields itself to the angel. The bismillah serves also as a means of effecting a temporary or permanent exclusion from evil eye, and other malignant influences of occult forces. It is a popular notion amongst Muhammadans that the jinn are easily offended, as, for instance, by human encroachment upon their haunts, by pouring out hot water, etc.; but if a man feels that he has provoked their resentment, he may drive them away by uttering the bismillah. Similarly, in order to render his goods proof against the jinn, he uses the phrase as a charm when he shuts the door, or stores articles of food in their appropriate compartments, or lays down his clothes at night. An article protected in this way is called *musammam* (commonly pronounced *musammimm*),

*i.e. 'something over which has been named (the name of Allah).'

The bismillah, by reason of its prophylactic virtues, is deemed specially serviceable as an inscription for amulets, and, in general, as an accessory of practical magic. Copious illustrations of these are to be found in the *Shajara al-ma'arif* of al-Bunî (†A.H. 622, A.D. 1225) and works of a similar nature. The Muslims also construct magic squares, and distribute the words of the *basmala* in magical combinations amongst the various compartments. Al-Bunî is also the author of a monograph specially with the use of the formula for magical purposes (*Fad'îl al-basmala*).

5. Calligraphic usage.—Mention ought finally to be made of a certain convention in the method of transcribing the bismillah. When the Muslim calligraphist writes the formula for a ceremonial purpose, he imparts a peculiar form to its first word by way of signalizing, as it were, the exceptional character of the phrase as a whole. The vertical stroke of the initial letter bâ (ן) is considerably prolonged in an upward direction, and slightly curved; then, the *alif* (of *ism* being omitted altogether, the *sin* (ם) is placed immediately after the bâ, while the final letter *mim* (מ) is connected with the *sin* by a line drawn far beyond the usual length (םמש). The Muhammadan scribes would appear at a very early date to have introduced yet another alteration in the written form of the bismillah—a peculiarity of common occurrence in MSS. Here the tips of the third letter *sin* (ם) disappear entirely, as well as the *alif*, and the initial bâ (ן) is joined to the final *mim* (מ) by a long horizontal line thus: —ןש. The antiquity of this usage is indicated by an incident recorded in Ibn Sa'd, viz. that 'the Khalif 'Omar b. 'Ald al-Aziz dismissed a certain scribe (kâthib) from his office because he wrote bism without inserting the *sin* distinctly (walam sayal al-sin).*

Literature.—The literature has been given in the footnotes.

I. GOLDSIHER.

BLACKMAIL.—The word 'mail' is derived from the Norman-French *maille,* which is used in the Act of 1335, 9 Edward III, c. 3 in the sense of 'half-penny.' We find three meanings assigned to this term.

1. Legally, blackmail refers to rents reserved in labour, cattle, or produce. In medieval times rent was uniformly paid in kind—a custom that persisted in France down to the days of the great French Revolution. The Black Death and the Peasants' Revolt gave a powerful impetus to the transformation of English agricultural life, and among the results was the substitution of payment in money for payment in kind. In Scotland and Ireland, and indeed in the rest of Europe, this substitution was not effected till a comparatively late date. For rent in kind were substituted 'white rents,' which were reserved in 'white money,' or silver. In the Middle Ages there was a great scarcity of the precious metals, and this doubtless assisted in prolonging the existence of the old method of payment. The discovery of silver in

* Lane, op. cit. i. 287; *Arabian Society in the Middle Ages* (London, 1883), 41.
* Doubert, op. cit. 333.
* This is a Massoreetic practice.
South America helped forward the movement from status to contract, with the result that white rent paid in current coin or white money (mailes blanches) began to replace the black rent. In Scots law the rents of an estate were called 'mailes' or 'maills,' while 'Blanch Holding' and 'Mail' for 1572 Archdeacon Hamilton (Cochran, 1884, 98), in reference to the forays of the border chieffains, mentions, 'Quhay takis aik sair mail, oor mekle ferme, or any blake mailis, fra their tennands;' while about 1561 R. Mailland, in the first act, directed against taking of black mail.' On both sides of the Border severe Acts were passed to put an end to these depredations. Under the Scots king, James vi., the measure of 1597 describes how 'divers subjects of the Inland, takis and sittis under their assurance, payand them black-mail, and permitand them to reif, herrie, and oppressse their Nibouris.' In 1601—a memorable year in economic legislation—an English Act of Parliament also notes that 'sundry of her Majestyes loving subjects within the said (i.e. the Border) counties' foundsome to pay a certayne rate of money, corn, cattle, or other consideration, commonly there called by the name of Blacke mail.' The 43 Eliz. c. 13, s. 1, made the levying or paying of this black-mail a felony without benefit of the clergy. The Terms de la Ley informs us that 'Blackmail is a word used in 43 Eliz. c. 13, and it signifies a certainty of money, corn, cattle, or other consideration, given by the poore people in the north parts of England, unto men of great name and alliance in those parts, to be protected from such as usually robbie and steal there.' Cowell in his famous Law Dictionary, The Interpreter, notes that 'these robbers are of late years called Moss-troopers.' The depredations of the Border chieffains, in spite of these repressive measures, did not cease till towards the end of the 17th century. In 1707 an 'Address from Cumberland' in the London Gazette points out that 'there is, now, no Delatable Land to contend for; no Black Mail to be paid to the Leaders of the Robbers, as a Ransom' (cf. Blackstone, Comm. iv. 260).

2. Historically, it is the tribute in corn, cattle, other kind, or money—here we are coming to the newer form—levied from the farmers and small owners in the border counties of England and Scotland, and along the Highland border, by free-footing chiefs in return for immunity from pillage. This border raids, 'raids of the Borrowers' of Northumberland, Cumberland, Westmoreland, and the bishopric of Durham. Sir Walter Scott in Waverley (i. 222) represents one of the better aspects of this custom when one of his characters remarks, 'The border is like a terrible enchantment. If a thief steals a hoof from any one that pays blackmail to Vich Ian Vohr.' It is somewhat remarkable to find how wide-spread is the use of the word 'mail' with the meaning of 'rent' or 'tribute.' In Irish mail signifies a rent or tax. In Armorican mail signifies such wealth as is acquired by the strong hand; while in Afghanistan the contributory levy on a village is called mailis. Blackmail sometimes denotes the money taken by the harbingers or servants, with their master's knowledge, for abstaining from enforcing exactions like coin and livery. They made up for the abstinence in these places by plundering in others. Curiously enough, we find that in Ireland in the 14th cent. black money or blackmail indicates certain coins of an inferior kind authorized to pass current.

In 1777 Archdeacon Hamilton (Cochran, 1884, 98), in reference to the forays of the border chieffains, mentions, 'Quhay takis aik sair mail, oor mekle ferme, or any blake mailis, fra their tennands;' while about 1561 R. Mailland, in the first act, directed against taking of black mail.' On both sides of the Border severe Acts were passed to put an end to these depredations. Under the Scots king, James vi., the measure of 1597 describes how 'divers subjects of the Inland, takis and sittis under their assurance, payand them black-mail, and permitand them to reif, herrie, and oppressse their Nibouris.' In 1601—a memorable year in economic legislation—an English Act of Parliament also notes that 'sundry of her Majestyes loving subjects within the said (i.e. the Border) counties' foundsome to pay a certayne rate of money, corn, cattle, or other consideration, commonly there called by the name of Blacke mail.' The 43 Eliz. c. 13, s. 1, made the levying or paying of this black-mail a felony without benefit of the clergy. The Terms de la Ley informs us that 'Blackmail is a word used in 43 Eliz. c. 13, and it signifies a certainty of money, corn, cattle, or other consideration, given by the poore people in the north parts of England, unto men of great name and alliance in those parts, to be protected from such as usually robbie and steal there.' Cowell in his famous Law Dictionary, The Interpreter, notes that 'these robbers are of late years called Moss-troopers.' The depredations of the Border chieffains, in spite of these repressive measures, did not cease till towards the end of the 17th century. In 1707 an 'Address from Cumberland' in the London Gazette points out that 'there is, now, no Delatable Land to contend for; no Black Mail to be paid to the Leaders of the Robbers, as a Ransom' (cf. Blackstone, Comm. iv. 260).

2. Historically, it is the tribute in corn, cattle, other kind, or money—here we are coming to the newer form—levied from the farmers and small owners in the border counties of England and Scotland, and along the Highland border, by free-footing chiefs in return for immunity from pillage. This border raids, 'raids of the Borrowers' of Northumberland, Cumberland, Westmoreland, and the bishopric of Durham. Sir Walter Scott in Waverley (i. 222) represents one of the better aspects of this custom when one of his characters remarks, 'The border is like a terrible enchantment. If a thief steals a hoof from any one that pays blackmail to Vich Ian Vohr.' It is somewhat remarkable to find how wide-spread is the use of the word 'mail' with the meaning of 'rent' or 'tribute.' In Irish mail signifies a rent or tax. In Armorican mail signifies such wealth as is acquired by the strong hand; while in Afghanistan the contributory levy on a village is called mailis. Blackmail sometimes denotes the money taken by the harbingers or servants, with their master's knowledge, for abstaining from enforcing exactions like coin and livery. They made up for the abstinence in these places by plundering in others. Curiously enough, we find that in Ireland in the 14th cent. black money or blackmail indicates certain coins of an inferior kind authorized to pass current.
that he had divulged the mysteries of Eleusis, the gravamen was not so much that the act was an offense against the gods as that it was dangerous to the community. The Roman criminal law appears to have given no provision against blasphemy, apparently because 'in spite of the intensity of Roman religious feeling, the religion of the State was always absolutely subject to the political authority' (Hunter, *Roman Law*, 1850, p. 10), and hence an offense against religion was one which was defined as a crime. Persons who introduced new kinds of worship, unknown to custom or reason, disturbing weaker minds, were to be punished—if persons of rank, with deportation; if not of rank, with death.

2. In the Old Testament.—It is to the Jewish and Christian Churches to which we must refer their statutes, to find, that we have to look for the creation of the offense of blasphemy. We omit the 'contempt' for God referred to in Mal 1, the dishonour done Him by withholding the offerings due to Him in Mal 3, or the speaking falsely by His name in Deut. 28, sin 'with a high hand' of Nu 15 (cf. 2 K 19), the reviling (or murmuring against) the Elohim of Ex 22, since, though all these are directed against God, they do not rise to the height of the special sin of blasphemy. A record, however, of this, as of the later cases, is found in the case of a man convicted of mixed breed 'blasphemes the Name.' In this case doubt seems to have been felt about the prescribed penalty, for the offender was put back until 'the mind of the Lord' could be ascertained. This was found to fix the penalty of death by stoning, and the law was then promulgated: 'He that blasphemeth the Name of the Lord, he shall surely be put to death, and all the congregation shall certainly stone him' (v. 19). This was the only kind of reproach against God which was punishable death with impunity on three kinds of offenses, the kinds (such as referred to above) being left to the judgment of God. For post-Biblical Jewish usages see next article.

3. In the New Testament.—The offense of blasphemy is referred to frequently in the NT; in the case of the sin against the Holy Ghost (Mk 3), in the case of the man whose sins were pronounced by Jesus forgiven (Mt 9, Lk 5), when the scribes accused Him of blasphemy; when the Jews declared the saying 'I and my Father are one' to be blasphemy (Jn 10); when James declared Himself at His judgment (Mk 14); St. Stephen was accused of speaking 'blasphemous words against Moses and God' (Ac 6); in Ac 13 and 18 and Ro 2 the Jews in their turn are accused of blasphemy; in Ac 26 St. Paul accuses himself of making the Christians blaspheme. The word occurs five times in the Pastoral Ep., (1 Ti 1v 6, 4 and Tit 2v 3), once in James (27), and nine times in the Apocalypse (2v 13, 5, 6, 7, 10, 11, 12). From these passages it appears that any expression was considered 'blasphemous' that was unprofitably, or contemptuously directed against God, His being, or goodness, which arrogated His attributes for a creature, which opposed a truth revealed by Him, or opposed an institution of which He was the author.

4. In Church History.—The feeling and the judgment expressed in these passages were taken over by Christianity, and enforced, after its union with the civil power, by temporal pains and penalties. (See *Apologia*; *Sedulius* of Justinian (lxxxv. 1) relate that some

used blasphematic expressions and swore by God, and so provoked Him to anger, and that it was enjoined on such men therefore to abstain from such blasphemies, and from swearing by the sun, moon, and earth, and sea, and other signs, seeing that blasphemies against men went not unpunished, far less would blasphemies against God. If, in spite of this admonition, any one committed the offense of blasphemy, he was to suffer the extreme penalty of the law' (*Corpus Juris Civilis*, ed. Schiller, 1566, vol. iii. p. 323).

In the Middle Ages the ecclesiastical court was the principal authority for the punishment of blasphemy, the temporal power being called in, when required, to pass the judgment of the court ecclesiastical. Thus in a decree of Gregory III. it is laid down that, if any one shall have presumed to loose in public a blasphemous tongue against God, or any one of His saints, or, in special, against the Blessed Virgin, he shall be condemned by the bishop to public penance at the church door for seven Sundays, being on the last Sunday deprived of his shoes and outer clothing, to fast and give alms. In default he might be excommunicated and deprived of Christian burial, and be subjected to a fine by the temporal power (*Decret. Greg. IX.*, lib. v. tit. 27, c. 2; *Corpus Juris Canon.*, ed. Richter-Friedberg, ii. 320).

Charlemagne had already incorporated in the law of the Empire the Christian law against blasphemy, and given his sanction to the principle that God Himself, or His Name, or even His images, might be reviled, and that He would visit the offense on all the people, thus ingeniously uniting in one the older pagan and the newer Christian sentiment. Louis le Débonnaire followed him with laws against blasphemy.

Philip Augustus fulminated against those who swore: 'Tête bleue!' 'Cord bleue!' 'Ventre bleue!' 'Sang bleu!' Offenders, if noble, were to be fined; if roturiers, they were to be put into a sack and drowned. St. Louis ordered that offenders should be branded on the forehead, and if they repeated the offense, should have their tongue and lips pierced. With this agrees the ordinance of Henry III., which enacted that, for the first four offenses, a blasphemer should be committed to confinement on bread and water; for the fifth offense, he should have the under lip slit; for the sixth, he should have it so slit that his teeth were to be seen; for the seventh, his tongue should be bored; and for the eighth, he was to be put to death. It was, indeed, about the end of the 15th cent. that blasphemy was most severely punished; but from that date onwards the feeling has gradually gained ground that God is not a Being who can be injured by man's insults, and that, when blasphemy is punishable, it is as an offense against society.

The Scholastic treatment of blasphemy calls for a short notice. Defining blasphemy, with Gury, as *locution Deo injuriosa*, or, with Suarez, as *verbum maladictionis, convicui seu contumeliae in Deum*, it divides it into 'immediate' when directed against God Himself, and 'mediate' when it attacks Him through His Word, His Church, His officers, sacraments, or saints. It is in its form threefold, 'heretical' when it involves a false doctrine, 'imprecative' when in the form of a curse, or merely 'abusive' (*predorosum*). Materially, it is threefold: (1) when it attributes to God what is not His; (2) when it deprives Him of what is His; and (3) when it assigns to the creature what belongs to the Creator—the first two of which St. Thomas declares to be but the affirmative and negative sides of the same truth, and the last to be a subdivision of the first. Blasphemy is a mortal sin, as being contradictory to charity; nay, it is the greatest of all sins, seeing that it adds to a denial of the faith a detestation of God to will, and the utterance of the outburst into words, as, on the other hand, faith is augmented by love and confession.

5. As a Crime.—It has been already stated that a milder judgment on blasphemy has during the last 150 or 200 years gradually ameliorated the feeling which finds expression in Lv 24:18. The change, however, has been of slow growth. So
late as A.D. 1656 we find, for instance, a poor mad Quaker, James Nayler, for allowing himself to be honoured as Jesus Christ, sentenced by the House of Commons to be put in the pillory, whipped from Wigan to Warrington, and again put in the pillory, to have his tongue bored, his forehead branded with 'B,' then taken to Bristol, there again whipped, and then sent to Bridewell to remain until Parliament should release him. Again, in 1812 an unhappy bookseller, Daniel Isaac Eaton, of Ave Maria Passage, London, was sentenced to eighteen months' imprisonment and to the pillory for publishing criticisms on the Bible story, after the manner of Thomas Paine. It is noticeable that Lord Ellenborough, in sentencing Eaton, did so on the express ground that 'the Christian religion is the only true religion, and the Bible is no more inspired than any other book.' In 1685, George Jacob Holyoake was sentenced to six months' imprisonment for oral blasphemy—for saying after a lecture in reply to a challenge: 'I do not believe there is such a thing as a God.' England is still sufficiently severe against blasphemy. 'It is indeed, still blasphemy,' according to Mr. Justice Erskine, 'punishable at common law, scoldingly or irreverently to ridicule or impugn the doctrines of the Christian faith.' On the other hand, 'if the deicides of controversy are observed, even the fundamentals of religion may be attacked without a person being guilty of blasphemous libel' (Lord Chief Justice Coleridge).

The net result of the slow process of change was that in the eighteenth century did men's minds on this, and all kinds of subjects, is that blasphemy has become the technical name for a particular offence against the State. It is a crime against the peace and good order of society; it is an outrage on men's religious feelings, tending to a breach of the peace. As an indictable offence it is described by Blackstone to be 'denying the being or providence of God, contumelious reproaches of our Saviour Christ, profane scoffing at the Holy Scripture, or exposing it to contempt or ridicule.' (1) Say it is a capital offence. But though the existing law of England still embodies the tradition which regards blasphemy as a sin, and upholds the Christian religion, in practice it treats it as an offence against the peace and good order of society. It is open to anybody to call in question any article of religion, provided that his method of expression is not obnoxious to the authorities. In France the same practical state of things prevails; for, though its Code does not prohibit blasphemy as such, it yet prohibits it as an offence against good order. In Germany public blasphemy is punishable with one to three days' imprisonment; but the blasphemy must be public, coarsely expressed, and offence must actually have been caused (Deutsches Reichsstrafgesetzbuch, § 166). The Austrian law is stricter, and the offender may suffer imprisonment for a term ranging from six months to ten years (ib. §§ 122, 123, 124). In the United States the law of blasphemy is essentially the same as in England, being based on English common law and early statutes.

The case of the Chilperic Antiphoners have brought the whole full circle round to where it was in Senea's day, when that distinguished pagan could write:

We are far from what we ought to be if we do not think of God, who maketh all our blessings, bestows the blessings, why do the gods bestow on us their bounty? It is their nature to do so. The man who denies that there is no harm because they are unwilling errors. They cannot. They can neither inflict injury nor receive it. For to harm and to be harmed go together' (Ep. 96, ed. Hase, 1873, iii. 307).

To this it is only necessary to add the remark that, while the general definition of blasphemy as an act of which no dictable and statutory offence is precise, the word itself has in literature and common parlance, as is natural, a wider and looser meaning. Thus, Jefferies (The Story of my Heart, 1891, p. 125) writes: 'I believe all manner of asceticism to be the vilest blasphemy, the most sacrilegious blasphemy of the human race.' Ruskin (Stones of Venice, i. 37) speaks of 'representations of Christian subjects which had become blasphemous under the influence of the visible blasphemy among the backwoods of the American frontier.'

BLASPHEMY (Jewish).—All subsequent Jewish notions of what the subject of blasphemy were derived, in their main principles, from those that were narrated in Lv 24:20-25. In the course of that passage the general rule is enunciated (v. 14): 'And he that blasphemeth the name of the Lord, he shall surely be put to death: all the congregation shall certainly stone him: as well the stranger as he which is born among us.' Rabbinic tradition (already represented in the Targum) interpreted these italicized words to mean that, to render blasphemy a capital offence, one must actually pronounce the name of God, accompanied with disrespect, the nature of which is not defined. The reverential reluctance to name God even in worship grew up early, and, as is well known, is already exemplified in Psalms, Chron., and the LXX. The blasphemer who used the prevalent substitutes for the name of God was subjected to flagellation (Sank. 56b). The writer of Pentateuchal scrolls was required to place his mind in a devotional attitude when writing the name of God, and in certain cases when writing the name, the mistake was irremediable, and the whole column on which the error occurred was withdrawn from use (Soferim, ch. iv.). The name itself could not be obliterated. The only individuals who lawfully uttered the name were the priests. The priestly benediction (Nu 6:24-26) is introduced by the words, 'Thus shall ye bless the children of Israel,' and closes with the phrase, 'And they shall put my name on the children of Israel.' These commands, it was held, compelled the priests to utter the name as written, and many sacrifices were offered for the error in the blessing (Yoma, 33b: Menahoth, 1096). The high priest, however, continued to pronounce the name on the Day of Atonement, amid the prostrations of the people (Mishin. Yoma iii. 8, etc. According to the midrash Yoma, 71a, the high priest uttered the name ten times on the fast). This reluctance to utter the name of God was paralleled by a similar objection to hearing the name uttered. In the blasphemy trial, as described in the Mishna (Sot. vii. 5), the witnesses were not allowed to repeat the actual blasphemy, on evidence against the accused; but when on a prima
In the Middle Ages the blasphemer, it was held, ought to be excommunicated (Responsa of Gemin, ed. Muller, 103). The current Jewish Code requires the auditor of a blasphemy to show his feeling of revulsion by rending his garment (Shulhan Arukh, Yoreh Deah, 340, 37). Naturally, however, as public opinion has tended to weaken the efficiency of excommunication, so it has become less and less usual to take any practical notice of the offence of blasphemy. Blasphemy in the older view had been an act of rebellion, parallel to Korah’s; it was a ‘stretching out of the hand to the root’ of religion. But such acts of rebellion are no longer punishable, and the Synagogue has shown itself as disinclined as any other organization to attempt the punishment. See Heresy. I. ABRAMHS.

BLASPHEMY (Muhammadan).—Blasphemy is regarded by Muslim jurists as one of the most convincing proofs of unbelief. If a Muslim has been guilty of this heinous sin, he is to be put to death as an apostate unless he is willing to repent (cf. art. Apostasy [Muhammadan]). All utterances expressive of contempt for Allah Himself, for His names, attributes, laws, commands, or prohibitions, are to be considered as blasphemy. Such is the case when an apostate states that it is impossible for Allah to see and to hear everything, or that Allah cannot endure to all eternity, or that He is not one ( wahid), but only ‘one of three,’ etc. All scoffing at Muhammad or any of the other prophets or apostles of Allah is also to be regarded in Islam as blasphemy.

Unbelievers who have obtained permission to reside within the domain of Islam (the so-called dhimmis) are in like manner forbidden to use, in the presence of Muslims, disrespectful expressions about Allah, His apostles, or about the dogmas and institutions of Islam. For instance, they may not testify publicly that Jesus was the Son of God. The unbeliever who is guilty of blasphemy in the eye of Muslim law is not, however, put to death, but exspiates his offence by ta’zir (a penalty determined by the judge, according to circumstances). Th. W. JENNY.

BLESSEDNESS.

Future life: Its original meaning is ‘a hem,’ ‘collar,’ ‘connecting thread’; hence a reason, ‘to follow up,’ ‘to climb up.’ After the advent of Buddhism in the first century of our era, the old term gisa, or ‘because else,’ was applied to the nishana, or ‘causes and effects,’ connecting past existences with present (Kitel, Handbook of Chinese Buddhism, 1888, p. 84); and so now in popular usage the Buddhist idea is usually connoted in the mind of the speaker or writer. But, none the less, the basic notion really takes its origin in the ancient ancestor-worship of the Chinese, one of the most elementary principles of which was that no happiness could exist in this life unless the spirits of the dead were conciliated by living representatives through sacrifice, prayer, and duty. In other words, blessedness can exist securely on earth only under the shadow or protection of the Spiritual Abode above. When a man enters into conversation with a stranger, and the interview develops some aesthetic interest on both sides, one will say to the other: ‘We two have a gisa—meaning, “it was already planned out before our birth that we should meet,” even if only to buy and

BLESSEDNESS (Chinese).—1. Perhaps the best way of arriving at some preliminary notion of the conceptions of blessedness cherished by the Chinese is to examine in the first instance their methods of ordinary speech, which can easily be traced back in spirit to the utterings of antiquity. When a Chinaman asks an acquaintance how he fares, the stereotyped reply is: ‘I depend upon your happiness,’ or ‘Thanks to you.’ In matters of greater gravity, the Emperor or any other of his subjects, official or otherwise, will say: ‘Thanks to the shade of my ancestors’ happiness, I am, etc. When two or more persons are thrown together in pursuit of a common interest, whether it be marriage, partnership, political sympathy, or what not, it is the practice to say and to assume that the individuals, or the families to which the individuals immediately concerned belong, ‘have a predetermination,’ i.e. have some spiritual affinity which is continued from the anterior existence into the present existence. The word gisa begins to assume predetermination was extended in later times to signify spiritual sympathy or connexion in the present life, and even in the

BLASPHEMY (Muhammadan)—BLESSEDNESS (Chinese)

fasic case the capital charge was proved, then before sentence of death was pronounced one of the witnesses was required to utter the actual blasphemy with which the accused was charged. The judges rose to their feet and rent their garments—the statement of the Mishna thus fully confirms the report in Mt 26:6. According to Josephus (Ant. Iv. viii. 10), a Jew was forbidden to blaspheme a heathen deity. Besides incurring the death penalty, the blasphemer was, in the Rabbinic view, regarded as excluded from Paradise (Abodah zarah, 18r; Mishn. Sanh. xi. 1. In the latter passage this deprivation is, according to Abba Saul, incurred by any one who utter the Tetragrammaton). The Talmud asserts that the offence of blasphemy greatly increased when the death penalty for blasphemy was abolished with the loss of Jewish jurisdiction (see vol. i. p. 130). It may be interesting to add that Eleazar ben Zadok, a contemporary of Josephus, relates that as a child he saw the uncaned daughter of a priest burning bunches of grape-vines (Mishn. Sanh. vii. 2; Talm. fol. 52 a-b). This the Talmud regards as having been the act of a Sadduccen, not of a Pharisice, court). Yet, despite this supposed increase in the prevalence of blasphemy, we find a strong abhorrence of every- thing which showed disrespect to the Deity. Rabbinic theology actually included blasphemy among the offences prohibited by natural law; this is the meaning of its inclusion in the seven Noachan prohibitions (with adultery, murder, idolatry, and so forth [Sanh. 56a]). Moreover, the stern moral denunciation of profaning the name (see s. b.) was the outcome of this range of ideas. To profane the name came to imply all forms of irreverence, of private insincerity, and of public disrespect for morality and religion. ‘For him who has com- mitted profanations about Allah of His apostles, or about the dogmas and institutions of Islam. For instance, they may not testify publicly that Jesus was the Son of God. The unbeliever who is guilty of blasphemy in the eye of Muslim law is not, however, put to death, but exspiates his offence by ta‘zir (a penalty determined by the judge, according to circumstances). Th. W. JENNY.
sell a horse, though the expression belongs rather to matrimonial arrangements. One friend will often write to or hail another as 'old generation elder brother,' the more ordinary term being 'old brother' simply. The addition of the word shi, meaning 'generation,' 'world' (for there are signs of three), delicately suggests for the past a subtle spiritual connexion running, it may be, through more than one world.

Like other nations, the Chinese have never been able to conceive conscious Deity otherwise than in the shape of man. Man has ever been conceived of himself as being above all animals, and thus he cannot but imagine the Deity in the highest conceivable shape. Hence it is scarcely to be wondered at that the Chinese have always conceived the Spiritual Abode to be a mere reproduction of the present earthly abode; its denizens being subject to the same feelings and passions, and divided into the same ranks and classes as here on earth.

One of the most ancient Chinese documents we possess, the Hung-fan (n.c. 1100), or 'Great Pledge' of the old king, Long Life, Wealth, Serenity, Love of Virtue, and Object achieved at Death. This idea of blessedness in the present world is still found, after running an unbroken course of 3000 years, in the popular speech. To wish one another a Happy New Year, the reply is: 'May you be promoted; may you have sons; may you live rich and distinguished days!' On almost every door-post or lintel in the empire, at least when the New Year comes in, if not at most other festive times, may be seen the two words 'happiness' and 'old age.' These two undoubtedly take premier rank among the Five Blessednesses in the Chinese mind: the love of virtue (which in China has nothing whatever to do with sobriety and continence) generally takes second rank; but still it is there, and most respectable Chinese, after the immediate necessities of life have been obtained, take a keen pleasure in doing what we should call 'kind acts.' The object achieved at death may reasonably be held to include a proper provision of sons and grandsons for the adequate continuation of the family chain, or 'dying at the zenith of success,' i.e. dying with ambition or desires fully achieved—a stock Imperial phrase in reference to deceased statesmen. The ideal picture of the China in eighteenth century shape by G. E. Simon (once French Consul at Foo-chow) in his pretty and sympathetic little work, La Cité chinoise, published in the year 1800: such pictures as he draws may be daily seen by any one who travels extensively over the more primitive districts of China, whether progress has not penetrated. The grandest ideal of all blessedness is 'five generations in one hall,' i.e. great-grandfather, grandfather, father, son, and grandson—if possible, each with his wife still living—all in the same house: same family, same household. These smoking their long metal pipes, giving advice, and sipping tea in the comfortable protected corners; the younger generations exposing themselves to the elements and doing the hard work; all the males associating in any hall (or long-hall-floor) according to season for common meals; all the females decorously confining themselves to the 'inner apartments' (often merely a curtained-off space) or secluded gardens; each generation tenderly caring for the seniors' wants; each venerable man mildiy but firmly asserting his rights. Now thus, and only thus, he individually is perfectly deferential to his own parent or parents.

In the field hard by is the ancestral cemetery; perhaps only the graves of an off-branch are there; possibly those of ten or twenty ancestors, ranged right and left of the 'first (migrating) ascendant.' In any case the book of genealogy for remote ancestors can be found, when needed, somewhere in China. There is little luxury in the ideal Chinese life: no boarded floors; no ceilings or papered walls; no glass or linen; no expensive wines or smart reception rooms. As a rule, the life, no matter how high the retired official may be, is what may be termed 'farm life.' Plain cotton clothes; plenty of rice; no work, and no comforts; good plain cookery; clothes for ceremonial occasions stowed away in chests; bed-clothes for the women; pigs, poultry, ploughing cattle (seldom carts or horses); manure in heaps (or even plastered to the walls); fish and hams, or penumian, drying and being smoked in the rafters; still chairs or benches; easy demeanour to servants and slaves; and, above all, perfect democracy and entire absence of snobbery: age is the only 'quality'; money counts not. Of late years newspapers have been added to the modern luxuries which are unpaid, and 'live the alms!' so has opium been added to the mild tobacco, rice spirit, and tea of antiquity. (Tobacco, by the way, only dates from about A.D. 1500, and tea from A.D. 600.) Comfortable, healthy grimmness may be said to represent well-to-do Chinese country life: baths and swimming, social arrangements, an entire absence, and no one seems one penny the worse.

Here clearly we have long life, wealth, peace, and death with honour. But where does love of virtue come in? Well, a good family is neighbourly, hospitable, and friendly; even foreigners are courteously received as equals, so long as they behave themselves prudently, and so long as evil rumours have not preceded them. Kindness to animals is another Chinese trait: perhaps negative rather than positive—not fussy solicitude, but negligent easy-going tolerance, subordinate, however, to practical human needs. A country squire of the above described type will usually have an informally-inhabited temple—he does not mind much whether it be a Buddhist, Taoist, or other temple. He has his own ancestral buildings for the settlement of family disputes; sometimes the whole village or town belongs to one single family-name, or two family-names; the village temple consequently suffers more for general interests. Mandarins are not by any means all bad; the local squire endeavours none the less to avoid official friction, and to keep his village free of tax-collectors' exactions and the police hardness: he is the pivot of the plan of China, the mandarin. He provides for the education of his children, and pays the taxes. Local self-government is universal; so long as the land-tax is paid, order and decency are maintained along the roads, and (latterly) so long as a reasonable tax, or, at all events, the customary tax, on commercial movement is paid. The virtuous paterfamilias promotes schools, maternity establishments, charities generally, and favours 'arbitration' in lieu of law. The elders may, as a rule, in council compound or hush up any crime but treason and Parricide, so long as they agree that they agree. The mandarin is the case officially brought before him. Religion in China is ignored rather than cultivated, and the priest (Buddhist and Taoist), though treated politely, especially if they are fairly educated men, are regarded as quite an inferior race, yet their services are conventionally sought even

BLESSEDNESS (Chinese)

by orthodox Confucianists when there is death in the house. If unprovoked religious observance is indulged in at all, it usually takes the form of a play at the village temple, when both sexes assemble for the combined purposes of consulting the oracles, praying for rain or children, and hearing historical dramas, and also for formal social intercourse generally. Admittance is free to all, and the local rich man pays the itinerant company.

2. Having now an idea of the life that is, the life in the after life, we come to a more general, if undefined, principles, one of which is that a happy existence on earth involves no spiritual comfort derived from supernatural considerations, but takes in account solely human desires, passions, dislikes, and fears, as they are born in us, and as they are and ought to be regulated by li. What this li usually translated as 'rites' or 'propriety' is, it is not so easy to define verbally as to realize mentally; but it may be called the Law of Nature and Right as seen by the collective wisdom of the highest human types, as understood by tradition, and as laid down by the Emperor (and his lieutenants) as Vicegerent of Heaven. The past life and the future life are the same life; the spirit bears the same life, i.e. it is the duty of one's self; the past, the present, and the future are thus merged in one; the idea of 'time' does not come in at all. The intense anxiety to possess a male heir (by adoption of agnates, or, if none, of cognates, failing a natural heir) is now made intelligible, as also is the extreme punishment of 'cutting off posterity,' which leaves 'uneasy ghosts' to wander about for ever without dutiful attention. What heaven is, of course, no one knows, ever did know, or (in our present spirit-worship) to think about. Nor, such as it is, is it in the Chinese mind a place where sentient individuals in the shape of human beings conduct affairs, whether as emperors, officials, freemen, or slaves; and, as we have already seen, nothing higher than a human being, or a sentient being with human feelings, has ever or could ever have been conceived of. It is often even uncertain whether heaven is viewed as a place or as a person; or say, rather, 'Heaven forbid' and 'who art in heaven' are Chinese as well as Christian The 'Spirit of Heaven' and the 'Emperor Above' are often convertible terms. There is but one life. The ancestor in the past is miserable unless he be tended; the mortal in the present is, or ought to be, miserable unless he tends, and unless he secures legitimate born or unborn links to tend himself when he is dead. Hence the ancestor must always be kept informed, with due fasting and purification, of the successes and failures of the representative individual, be he ruler or subject. The spirit child tendered to his special wooden name-tablet standing in the family temple; nor will he accept the sacrificial offerings, or evince his approval of what is done, unless things are conducted in accordance with li. Failure to render ghostly sacrifices, or the spirits is the mundane disorder in the shape of inundations or other irregularities of nature. But the spirits of any given family will accept sacrifice only from the legitimate representatives of that family; hence the enormity of cutting off for ever the only persons or links able to continue the family chain of life. Then only is it that Heaven steps in, and bears out of its former porté or nominee, and confers the vicegerency upon another ruling house: the same thing, mutatis mutandis, for private persons. This position is well illustrated in the year 516 B.C., when the ruler of Confucius' State took to flight in consequence of internal revolution (see Tso Ch'uan, ch. 42, p. 2). One of his ministers said: 'I do not know whether it be that Heaven has abandoned the country, or whether the country has committed some great offence against the ghosts and spirits.' It was necessary for him to give a name which grew into a family name, or, as we say, a surname. Hence we find sacrifices to the gods of the land, the harvests, the rivers, the mountains, and the frontiers, all concurrent with the personal sacrifice to ancestors. Dispossessed princes of previous dynasties were rarely cut off wholly, as if they were ever to be extinguished, but an estate, however insignificant, was conferred upon their lineal representatives by the ruling power favoured by Heaven's new choice, and these representatives were received as guests and peers by the Emperor when they presented themselves to do homage for their holdings. Except under circumstances of great provocation, it was considered impious to cause the extinction of a family, and thus to put a stop to the ancestral sacrifices. That sacrifice to ghosts and spirits can ever be viewed as a thing, as lived, and inferior to the sacrifices to the Emperor Above is instanced by a case in the year B.C. 482 (Tso Ch'uan, ch. 48, p. 20), when an official of Confucius' vassal-State was detained in captivity by the semi-barbarous State lying to its south. Though the State in question was ruled by the same family as the then Imperial family of China, and also the same family as that ruling over Confucius' State, the aboriginal population was still half savage, and even the Chinese rulers had become corrupted by popular influences. No vassal-State and inferior to the emperor of the temple will hurl imprecations against your king!' The device succeeded.

3. It was manifestly considered doubtful whether the dead really had any exact knowledge of what was transpiring on earth; for in B.C. 502 a royal maiden of North China, who found herself dying in the above-named semi-barbarous kingdom, said: 'If the dead really possess any knowledge, please bury me where I can at least see my own native land.' A year before that, and on a barbarous general, who was about to set fire to the enemy's camp, in which the bodies of many of his own slain also lay, asked, when reminded with: 'What does it matter if I burn their bones? If the dead really possess knowledge of what goes on here, it must be to that end; otherwise why do they thus give them satisfaction?' As is well known, Confucius himself, whilst adopting a respectful attitude towards the traditional 'nether' world (as we and they still popularly call it), declined to discuss spirits, as 'the spirits is the mundane disorder in the shape of inundations or other irregularities of nature. But the spirits of any given family will accept
was no word of any kind for 'religion'; none for a public 'church'; none for 'temple' or 'priest,' as distinct from ancestral halls and preceptors for Imperial worship; always except and in so far as there was an amalgamation of Confucianism and T'ien-ch'ing religious notions, and a 'sacrificial vessel' as supplantative. Consequently, in figuring out for themselves an ideal for blessedness in this life, no idea of collective worship; no notion of a single jealous God; no need for formalized confession and pardon of sin; no yearning for holiness as evinced by continence, abstinence, humility, joy in everlasting salvation or Divine grace, etc., ever even remotely entered the Chinese mind. Blessedness in the flesh was purely human, and spiritual blessedness in the past or future was—and this only doubtfully oragnostically—supposed to be the same thing.

4. It was reserved for the philosopher Lao-tse, an archivist at the Imperial Court, who lived during the 6th cent. B.C., a generation before Confucius, and who, according to the common view, ascended to heaven and was ushered in by civil strife and commercial activity, in contrast to Confucius' conservative and courtly definitions of li, to define for the first time in what ideal blessedness consisted. Like his rival, Confucius, he was an imperialist and a friend of the old texts. Both philosophers ignored spiritualist views, and attempted to restore social order in the Chinese federation by interpreting exactly the same ancient texts, each in his own 'advanced' way. Even the word 'teaching,' which since the arrival of Buddhism and Taoism determined our connotation of Confucianism in the West, in the time of its origin, has come to signify 'religion' or 'faith,' was not yet applied to these diverging interpretations, which were simply styled 'craft,' 'schema,' or 'plan,' i.e., the plan of life, the plan of government, the plan of ancestral continuity. The old Tao, or 'way,' which now for the first time began to substitute in men's minds individual blessedness for collective blessedness, or, to use Sir Henry Maine's words, to substitute contract for status, took quite a new form in Lao-tse's hands. The old Confucius had not seen the intellectual heights of China, according to the li theories as developed by the then reigning Imperial dynasty (B.C. 1122-8. B.C. 255), whose statutes combined in one indivisible idea law, religion, life, government, the whole in the form of Confucianism, himself. This was Tao. Just as Tchou took a narrower meaning when Lao-tse defined it, so Ju took a narrower meaning when Confucius specialized it. Lao-tse's summing up, literally translated, is as follows: 'My ideal is a series of small States with small populations. Let them possess an army machine of moderate size, but not too ready to use. Let them place a proper value on their lives, and refuse to engage in distant migrations, though they will be possessed of boats and carts, there will be no one to ride in them; though they will be possessed of arms and calumies, there will be no need for arming them. Let the people revert to the old guieu system of record, enjoy their food, take a pride in their clothes, dwell in peace, and rejoice in their local customs. Each State would be within easy sight of the other; the sound of each other's hens cackling and dogs barking would be heard. In the course of each generation, each man would live to a good old age, and would have no movement of intercourse with neighbouring States.'

Since the importation into China of Buddhism, Zoroastrianism, Manicheism, Muhammadanism, Nestorianism, Catholicism, and Protestantism, respectively, the doctrine of rewards and punishments was made a feature in future worlds, and then more into the Chinese imagination; and, of course, a certain extent the ideas of holiness and blessedness in this life have become correspondingly modified. But the intellectual classes are still largely swayed by the more materialistic philosophy of Lao-tse and Confucius, and it is very doubtful whether the religious enthusiasm which once revolutionized Europe has ever touched, or will ever touch, the trained Chinese intellect; a fortiori is it doubtful whether blessedness on earth will ever become less human, though it is another portion of a temporary preparation for supposed everlasting blessedness in eternity.

LITERATURE.—Conform's Chanta's, ou 'Springs and Autumns,' enlarged as known to Sen Chou; Shih King, or 'Book of History'; Shih King, or 'Book of Ballads'; Lao KI, or 'Book of Rites'; and Tao Teh King, the Taoist classic of Lao-tse—all translated in the SIE.

E. H. PARKER.

BLESSEDNESS (Christian).—As distinguished from happiness (q.v.), blessedness denotes a state of fruition that is purer and deeper, and hence free from the mixture of the vegetable, animal, and human, to which happiness is exposed. In modern literature the distinction is familiar; Carlyle recognizes it when he writes, 'There is in man a Higher than Love of Happiness: he can do without Happiness, and instead thereof find Blessedness' (Sartor Resartus, 132). But it is one that goes back to pre-Christian ages; one that, whether verbally expressed or not, has always been discerned more or less clearly from the time when men began to analyze the data of the ethical life or to reflect upon the realities of religious experience. What specially concerns us, seeing that the word 'blessedness' in Christian usage is an inheritance from the employment of the word 'blessed' in the NT, and that 'blessed' in the EV of the NT is a rendering of the Gr. ἁγιάζω, is to notice that in Greek poetry and philosophy a distinction was made between ἡγιάζω as 'happy' and μάκαρ or μακάριος as 'blessed.' The gods of Olympus were the μάκαρες θεοί as raised above the mortal inhabitants of the earth (Homer, Odyssey, vi. 49); the dead were the μάκαρες ἄνθρωποι as delivered now from its griefs and cares (Hesiod, Op. 14); the abodes of departed heroes were the μακάριοι νεκροί, the 'islands of the blest' (ib. 171). ἡγιάζω, on the other hand, was applied to those who experienced the twofold salvation of the soul—blessedness that is open to mortals in a world of change and chance; and sometimes it is exactly distinguished from the higher term μακάριος (Aristotle, Eth. i. x. 14).

For the Christian point of view it is significant that, while μακάριος is a word of frequent employment in the NT, ἡγιάζω is never found. This may be partly explained by the fact that to a Jewish mind μάκαριος had come to be blended with a sense of consecration, the accidents of time and circumstance was not the good and friendly 'genius' of the Greek imagination, but an evil spirit by whom men were tormented or urged on to their destruction. But the full explanation lies deeper, and must be sought in the fact that Jesus Christ introduced into the Evangelical new and larger conceptions of felicity for which 'blessedness' alone is the appropriate term.

To understand Christ's doctrine of blessedness genetically, we must compare it not with Greek ideas, but with those which we find in the OT and in contemporary Jewish thought. To a pious Israelite of the earlier history, length of days and earthly prosperity were the con-
stidents of blessedness, which was saved from degenerating into a mere equivalence with pagan notions of happiness, by the fact that these outward, shatterd those naive conceptions, and drove the best minds in Israel to look for blessedness elsewhere than in present prosperity. There were some pious hearts which, in the midst of trouble, were able to grasp by the sheer energy of faith the profounder essence of a blessedness which is inaccessible, committing one's way to Jahweh, in loving His Law, and humbly accepting His will (Ps 1^st 2^nd 40^th 84^st 112^nd, Hab 3^rd). But for the vast majority the powers of faith needed the reinforcement, which came gradually through the prophetic teaching, of the great Messianic hope of a coming King-
dom of righteousness and peace, in which the faithful should be abundantly rewarded and Israel attain to a blessedness of outward power and glory corresponding to that of inward trust and joy.

2. In its fundamental nature Christian blessedness appears as an inward spiritual experience. In setting forth His doctrine regarding it, Jesus vindicated the high idealism of those post-saints of the OT who had risen to the point of understanding the blessedness of the man who makes Jacob's ladder. He himself had previously deprecated the prevailing popular conceptions as to the blessings of the Messianic Kingdom. In Mt. the list of the Beatitudes begins and ends with a declaration of the blessedness that lies in possessions of the earth (Mt 5^st; Lk 6^st-22); but His teaching elsewhere serves to illu-
minate the principles there laid down, which are further illustrated by the Apostolic edification and enforcement of His words.

3. Christian blessedness is a present reality. To the seers and prophets of the OT the day of Messi-
anic gladness had been a far-off vision. To the men of Christ's own time it was a prospect near at hand. But Jesus clearly saw that the messianic blessings still lay in the future—a hope and a promise, but not an actual experience. Jesus declared that the Kingdom of God was come, that its blessedness was already present. 'There is the kingdom of heaven' was the announcement He made at the start of the chart of beatitude which He announced to His disciples (Mt 5^st-9). And the Kingdom being come, its blessedness is come, for the substance of that blessedness, as follows from its spiritual nature already referred to, does not need to be postponed till the arrival of a millennium on earth or the en-
trance into a Paradise of bliss in the future world. At the heart of it there lies the present and im-
mediate assurance of God's Fatherly love, blessing us with all spiritual blessings and daily loading us with earthly benefits as well (Mt 6^st). And if some much-desired blessings are withheld, as of
ten times they are, God's children know that it is He who withholds them, and that nothing can separate them from His love. The best gifts, at least those in which the very soul of blessedness lies, are not withheld from those who seek first the Kingdom of God. The Heavenly Father comforts all such in their sorrows (Mt 6^st), satisfies their hunger for righteousness (v. 6), crowns them with His mercy (v. 9), sanctifies us and love fellowship, with result from knowing God through Jesus Christ as our God and Father, that the essence of Christian blessedness lies.

2. But, while spirituality is the inmost quality of Christian blessedness, natural blessings are not excluded from its scope and content. There was nothing useless or out of the way about the blessedness which Jesus taught about this subject, though traces of a leaning in that direction appear in the writings of St. Paul, e.g., in some of his utterances regarding marriage (1 Co 7^st 8^st; but cf. Eph 5^st-22). Unquestionably Jesus put spiritual goods above everything else, and taught that to these all natural desires and affec-
tions and all concern for earthly benefits must be subordinated, even, when necessary, to the point of utter sacrifice (Mt 5^st 16^st, Lk 14^st). But He freely recognized the intrinsic worth of the things that are naturally desirable, and heaped them a place in any idea of blessedness. He did not frown upon those familiar enjoyments and activities that belong to the ordinary conception of happiness, but showed again and again His own appreciation and approval of them. He loved the beautiful in nature (Mt 6^st). He gave the sanction of His presence to the joys of social intercourse (Mt 11^st, Lk 5^st-21, Jn 2^nd 12^nd), He saw in the work of field and house and market fitting types of the things of the Kingdom of heaven (Mt 25^st-46, Mk 4^st, Lk 13^st); and He set forth as an object of the hope of a Messianic blessedness never ceased to burn. But by the time of Christ the pure radiance with which it glows in the writings of the great prophets had changed into a dusky flame, for men had come to think far less of spiritual benefits and obligations than of outward glory and material privilege. It was against this Jewish background that Christ appeared with His new doctrine of blessedness, which must be determinative for all Christian ideas upon the subject. The locus classicus here is His proclamation of the Beatitudes (Mt 5^st-12; Lk 6^st-22); but His teaching elsewhere serves to illu-
minate the principles there laid down, which are further illustrated by the Apostolic edification and enforcement of His words.
BLESSEDNESS (Muhammadan) 677

Blessedness is the joy of the fleeting moment.

But Christian blessedness has its eschatological aspect also, and looks to the future world for its perfect consummation. 'Great,' said Jesus in the last Beatitude, 'is your reward in heaven' (Mt 5:8, Lk 6:20); and probably the eschatological idea is the utmost, though not the only one, in the second of the series, where future comfort is promised to those who mourn (Mt 5:4). We have seen that Jesus did not ignore earthly goods, or treat them as if they were not to be desired, and that He found place for them accordingly in His doctrine of blessedness, which includes the blessing of the poor in spirit, or the lost, or those who suffer, or those who are persecuted. But these terms be used literally, they indicate a pantheistic position, but they can also be used carelessly as mere approximations to a description of the feeling of the moment, and, at most, as equivalent to teājil, 'suffering,' i.e. perception of and submission to the earthly condition.

The most general term for this eschatology or state of religious emotion and bliss is wujūd, which means literally a finding, perceiving, experiencing, either by the physical senses or by the intellect. Thus, when God gives the angels the right to see the Divine by the direct operation of the spiritual being. But wujūd and words cognate to it have also derived meanings which greatly complicate the terminology and lead to various plays on their different senses, and even to theological implications. For instance, the word wujūd, a common word in the Koran, has come the normal word in Arabic for the existent, whether absolute or contingent; and wujūd, which, in the first instance, meant simply 'finding,' has become the abstract 'existence.'

Such double and triple meaning sentences as the following: 'He is a Wujūd (finding or ecstasy or love) in the presence of the wujūd of the wujūd of the wujūd of His wujūd,' (i.e. 'He is a Wujūd in the presence of the wujūd of the wujūd of the wujūd of His wujūd') and 'There is no wujūd except in the presence of the wujūd of the wujūd of the wujūd of wujūd,' (i.e. 'There is no wujūd except in the presence of the wujūd of the wujūd of the wujūd of wujūd').

The reality and nature, for the Muslims, of this religious ecstasy, and the bliss therein experienced, will be made far more clear by the narrative that follows in Macdonald's 'Emotional Religion in Islam,' in J.R.A.S. for 1901, pp. 285-292, 765-748, and for 1902, pp. 1-28, and his The Religious Attitude and Life in Islam (Chicago, 1909), ch. vi. to end.

For the place and handling of those ideas in the system of Muslim theology the following brief abstract of the now complete work by Sir John McFarlane, The Islamic Al-Ghazali's Ithār will probably suffice. (The Division is that of 'Saving Matters,' and the Book 'The Book of Love and Longing and Friendliness and being Well Pleased,' in vol. i. p. 544 to end, ed. of the Ithār with the reaching and perceiving of the Divine by the direct operation of the spiritual being. But wujūd and words cognate to it have also derived meanings which greatly complicate the terminology and lead to various plays on their different senses, and even to theological implications. For instance, the word wujūd, a common word in the Koran, has come the normal word in Arabic for the existent, whether absolute or contingent; and wujūd, which, in the first instance, meant simply 'finding,' has become the abstract 'existence.'

Such double and triple meaning sentences as the following: 'He is a Wujūd (finding or ecstasy or love) in the presence of the wujūd of the wujūd of the wujūd of His wujūd,' (i.e. 'He is a Wujūd in the presence of the wujūd of the wujūd of the wujūd of His wujūd') and 'There is no wujūd except in the presence of the wujūd of the wujūd of the wujūd of wujūd,' (i.e. 'There is no wujūd except in the presence of the wujūd of the wujūd of the wujūd of wujūd').

The reality and nature, for the Muslims, of this religious ecstasy, and the bliss therein experienced, will be made far more clear by the narrative that follows in Macdonald's 'Emotional Religion in Islam,' in J.R.A.S. for 1901, pp. 285-292, 765-748, and for 1902, pp. 1-28, and his The Religious Attitude and Life in Islam (Chicago, 1909), ch. vi. to end.

BLESSEDNESS (Muhammadan)

as meaning obedience? Obedience rather follows love. Further, the Qur'an (ii. 60, v. 59) speaks of love of and by Allah, and in tradition the Prophet defines faith as loving Allah and His apostle more than any other. Many other traditions and sayings of the saints follow to the same effect. He who loves his Lord will love all His acts of devotion (i.e., the Last Day). At the Last Day, when the peoples are summoned, each in the name of his prophet, the lovers of Allah will be summoned thus: 'Hither unto Allah, O ye Saints of His! They will not be delayed for any judgment. Whereupon His Lord, who loves Him, and when He loves Him He turns to Him; he looks not on the world with the eye of lust, nor on the world to come with the eye of carelessness; that sweetness occupies him in this world, and soothes him in that to come.'

But what is the essence of love, and what are its causes and conditions? Especially, what is the meaning of the love of the creature for Allah? Love is a natural turning to an object which gives pleasure. It springs from perceptions and varies with them, being either from sense-perception, or, in certain cases, that spiritual perception wherein what seat is in the heart. The pleasure through it is the most complete and absolute. Some have held that it is unthinkable that any one should love another than himself for the sake of that other, and that all love is natural, the egoist being apart from the perception of the beloved. That, however, is an error; it is both thinkable and takes place. A man loves by nature, first, himself for the continuance and perfection of his self; then he loves another than himself, because that one serves the same purpose and benefits him. Thirdly, he loves a thing for its own sake, not for any happiness that it brings; but the thing itself is his happiness, like the love of beauty, simply for itself. So, if it stands fast that Allah is beautiful, He must certainly be loved by him to whom His beauty is revealed. Beauty is of different kinds, and is not sensuous only; beauty of mental and moral qualities can be loved. But, lastly, there is often a secret relationship of souls between the lover and the beloved, and it suffices. It follows, then, that the love of beauty, as in the absolute sense. At Allah only. If any one loves another than Allah, and does not do so because of a relationship of that beloved to Allah, his love can only imply defective knowledge of Allah on his part.

When the Prophet is said to love a man, it is to be understood that he loves his love of Allah, and shares in the knowledge and that spiritual perception wherein what seat is in the heart. Allah is the knowledge of the Prophet. The Prophet said: 'Souls are armies divided into bands: those whom know one another agree, and those which do not, disagree.' Such an inner kinship of ideas exists between the soul and Allah. Part of this relationship can be expressed in words and learned from books, and consists in travelling on the path, and making the self over in the Divine likeness as far as possible in the circumstances. But another part, peculiar to mankind, cannot be so taught, and is only hinted at in various phrases in the Qur'an and traditions. Thus in Qur'an xvii. 87, 'They will ask thee about the spirit (rūḥ), say, "The spirit is my Lord's affair."' Also (xxv. 38, xxxviii. 72), 'Then when I had formed him and blown into him of my spirit...'; therefore the angels worshipped Adam. Also (xxxviii. 53), 'We have made thee [David] a representative (ḥulūfa) in the end.' From the Prophet, 'Allah created Adam in his own form (gūra),' which certainly does not mean external form. So, too, in another tradition Allah says to Moses, 'I was sick, and thou didst not visit me'; to which Moses, 'O my Lord, how was that?' And Allah replies, 'My creature, so and so, was sick, and thou didst not visit him: hadst thou done so, thou wouldst have found me with him.' This kinship comes to the surface only through supererogatory acts of devotion (nawwāfīl). Allah has said in a tradition: 'When a creature does not cease drawing near to me through supererogatory acts of love of me, I will give him of the fruits of the tree of life. In the world, I become his hearing by which he hears, and his seeing by which he sees, and his tongue by which he speaks.' But here it is time to draw the rein of the pen. At this point men divide, and some see only an external metaphorical, spiritual, or mystical sense of 'identification' (ittihat) and 'fusing of loving' (ḥulūl)—both views being false. The kinship is real, not metaphorical, but can be known only by experience.

In the human heart there is a property of apprehension, named variously the Divine light, the inner insight, the light of faith. Its nature impels it to apprehend the essentials of all things; and in that is its delight, even as the other human apprehensive have their delight in exercising their functions. But, as the things apprehended rise in the scale,—the external sense, the inner apprehension, etc.—so does the delight in them. Of necessity, then, the knowledge of Allah is the greatest delight of all. How great it is can be known only by experience, although the human apprehension is to a great extent pre-occupied with it. Such are called by men mad and unbelieving, for their speech passes the limit of reason.

Two things strengthen this love of Allah. First, that the ties of the world be cut out of the heart, and the love of any other thing be taken out of it; and, secondly, that the knowledge of Allah and the spread of that knowledge in the heart, and its rule over the heart, be strengthened. Thus can men differ in the love of Allah and the consequent felicity.

But though Allah is the most conspicuous and manifest of beings, and though knowledge of Him might be expected before any other knowledge, yet we find that exactly the opposite is the case. There are many who with all their knowledge, even, and secondly, resist, and resist Him. But, too great conspicuousness: His is the case of the sun and its light; men are confused by it like bats. If the sun never set, and darkness never covered the earth, we should never know that light. So man is, as it were, confused by all creation crying out with Allah. In a homely parallel, he is like the dullard who was riding upon his ass and looking for it at the same time.

Again, that men have a longing (tahāba) for Allah is a proof that there is love of Allah. Love goes before longing. Longing is seeking for that which is loved, and which is thus perceived in one way but not in another. In the case of human beings, this may be because the beloved is remembered in absence, or, being present, is incompletely perceived. Both these reasons hold of Allah. Even by the most experienced saint the veil can never be entirely removed in this world, and even in the world to come Allah can never be entirely known. The story is of the long delayed and its joys and sorrows are very many. But what is meant by the love of Allah for His creatures? That He does love them is plain from divers passages in the Qur'an (e.g. ii. 193, 223, v. 21, 59, ix. 4) and many traditions. 'Love' is a word applied first to human relationships, and
secondly to Allah. But when words are so transformed, the meaning is always changed. They cannot be the same thing as when they mean Allah. In man, love is an inclination of the soul to something that suits it, that is lacking in it, and from the gaining of which it expects profit and pleasure. All that is impossible in Allah, the Possessor of all beauty and perfection, whose being contains nothing but Himself and His own acts, as there is nothing else in existence. Love, then, in Allah means: (1) the removal from the veil from the heart of the creature that he may see Allah; (2) the removal from the lover of the creature to draw near to Allah; and (3) Allah’s willing to make the soul and all eternity. For Allah’s love of a creature is from eternity, inasmuch as it is related to His eternal will, which requires that the creature in question should be given the power to follow the path that brings him near to Allah. But His love is, in time, in relation to the action which draws away the veil. So there is no change in Allah, or drawing near by Allah, or supplying of a lack in Allah. These terms apply only to the creature. And the signs of Allah’s love are some qualities which come up in the creatures. If any one loves Allah and is solely and entirely in love with Allah, that makes love for Allah, and is drawing him near through these trials.

And whether a creature, on the other hand, really loves Allah can be told by the fruits of love. And this shows itself in his heart, and in his tongue, and in his limbs. He should be in love with death, for the lover does not shrink from the journey to the beloved. He should joy to be killed in the path of Allah. Yet, sometimes, love of family brings a dread of death, although there is also in one’s heart some love of Allah. Or he may desire to remain longer in the world, in order to prepare himself to meet Allah. There is no weakness of love in that. Even with moral weaknesses there may be love of Allah in the heart. But sure signs of that love are delight in the thought (dhikr) of Allah, in prayer, and in the Qur’an. So the lover loves everything connected with the beloved, even to the dogs of her tribe. And a sign of weakness in such love is delight in companionship with others than Allah.

So friendship (in), fear (ba‘ad), and kinds (sheneb) among the effects of love; only, these effects differ in the lover according to his contemplation, and according to what is pre-determined. When gazing at the extreme beauty from behind the veil of the Unseen predominates, and the lover fears that he may fall short of reaching the Pinacle of beauty, then he may be in the condition of the one who is afraid and quieted and hastens. That state of disquietude is called “fear,” and is related to a long which is absent. But when those predominates in the lover in the nearness and witnessing of things present, through what has resulted from unrolling, and his contemplation is limited to examining the beauty thus present and unrolled, not turning to what he does not perceive, thereafter his heart rejoices in what it observes, and its rejoicing is called “friendliness.” But if his contemplation be of the Divine qualities of might and self-sufficiency and lack of solitude, and if the possibility of discontinuance and distance present itself, then his heart is pleased with this apprehension, and his pain is called “fear.” So these states follow these above states of love connected with different causes which necessitate them, and they cannot be prevented.

‘Friendliness,’ then, is this rejoicing of the heart in the contemplation of Divine beauty. It sometimes reaches the point of delight where there is no trace left of longing or of fear of change. The lover, then, is intimate with Allah, but strange with all others. He is alone when in company, and accompanied when alone. Yet some have denied all these things, and have said that they would involve that Allah is like to man (tasbih). This opinion is said that there could be no approval (rida) of Allah by His creatures. There could only be patience. All which is mere ignorance and a taking of the shell for the kernel.

When this friendly intercourse is unclouded by absence or fear, it sometimes produces a confidenti-

BLEST, ABODE OF THE (Primitive and Savage).—I. Introduction.—The idea of the future life entertained by many peoples is frequently a complex one; in other words, various conceptions are held simultaneously. Thus among one people it may be thought that the spirit lingers round or re-visited its old haunts, that it passes to another region, and there the animal is re-born. This, while due in part to the fluidity of primitive belief and the apparent lack of any perception of contradictory ideas, may also result from the fact that it is often thought that a man possesses several souls, to each of which a different role is assigned after death. Sometimes, however, these concurrent ideas are less contradictory. The soul leaves the other world to return for a time to the grave or the village, while transmigration occurs only after a sojourn, longer or shorter, in the spirit world. The development of the future state will be discussed in a separate article (see STATE OF THE DEAD); here we shall confine ourselves to the idea of it as a blissful region, or to the conception of a region of happiness open to a few favoured mortals. Such ideas have not been universal; while, again, when the belief in a future life is lacking or is vague, the Elysian idea naturally is also vague or lacking. The simplest idea of the life of the spirit in another region after death is that of a mere continuance of the earthly life without change. This conception prevails among several peoples. It is to such a continuance theory that we must trace the idea of life beyond the grave as fuller and ampler than life on earth or of an Elysian state. Such a fuller life is, of course, generally expressed among savages in terms of savage life—there will be better hunting and fishing, and plenty of food; the huts will be larger, and all bodily desires will be amply fulfilled. What caused this transition can only be suggested. Since, in the continuance theory, the chief was still the chief, the slave a slave, and all who possessed wealth or power or tribal lore still retained these, this naturally lead to the idea that for some at least—the chief, the medicine-man or priest, the wealthy—things would be better than on earth. Again, it may have been thought that the gods would be kinder to those who had observed their cult and ritual more carefully, or that those who had distinguished themselves on earth as warriors or by great bravery would be rewarded. Here we approach the dawn of more strictly retributive ideas. Such qualities as are approved among savages—bravery as opposed to cowardice, observance of tribal laws, and the like—have an ethical tinge; while even among the few who show a conception of morality may be lax from our point of view, certain moral ideas are inculcated, and they who observe them are said to be approved by the gods. This does not necessarily mean that the good men, from the savage point of view, is always rewarded after death, but in many cases this belief is entertained, while the bad are supposed to be punished. Hence, though in some cases the influence of a higher religion with a retributive system may have affected savage eschatology, there are others in which the development of such a system has proceeded spontaneously and apart from outside influence. When we add to all this the fact that greater powers are generally attributed to the spirit after death, it will easily be seen that men might readily come to believe that the spirit's opportunities of exercising them would be greater, and its surroundings, along with its capacity of enjoyment, would be more ample. While, then, the continuance state is often deemed a better one than earthly life, one in which different lots are assigned to different classes of men, there arises the idea of different states or places of existence, some perfectly happy, some no better than on earth or even more miserable.

Other ideas may quite well have produced the conception that life after death was blissful. Man's experience of the miseries of this world and his instinctive desire for happiness may have suggested a blissful other-world as an offset to this earth. The same experience led him to form myths of a Golden Age in the past, in which the gods and men lived together or had free intercourse with each other. These may have suggested the idea that such a state still existed, and that it would be restored to man after death. Here the belief is somewhat expressed, the men who were the gods after death, or will return to the region, subterranean
or heavenly, whence they originally came. There is also the belief (expressed in many myths of the origin of death, and that pain, unhappiness, hunger, and thirst are unnatural. Hence they will no longer exist beyond the grave (see AGES OF THE WORLD, FALL). But such a state of the blest, especially when it is the abode of gods or immortals, is often reserved only for a few, while these sometimes pass thither on without dying. It may also be believed in as a state apart from the ordinary abode of the dead, whether that is blissful or otherwise, though occasionally it is a mere region of the other world. This is because there is no abode always divided in these directions, and sometimes it is held that life after death is for all a tame copy of earthly life, a dim, poor, shadowy replica of the present, and that the dead may wander amongst them because the sun is supposed to pass through the place of the dead. Or it is on a mountain, probably because mountains are thought to support the sky, above which, in turn, the blissful abode is also located. Hence men are sometimes buried on mountains with the idea of creating a path for the spirit and marking the change to the conception of a heavenly world whither the spirit floated when set free by the fire. Or, again, the planets, sun, moon, and stars, are held to be the abode of the blest, while many primitive folk believe that stars are the dead transformed.

In many cases the blissful region, like the world of the dead generally, is reached only after a long and toilsome journey, over mountains and rivers, over the bridge of death, while many obstacles and dangers are met with, and various supernatural enemies are encountered. Occasionally these dangers and obstacles are intended to try the worth of the spirit, and if it fails to surmount them, it cannot reach the blissful abode. Possibly, however, these trials and dangers are reminiscences of similar experiences in the old migrations of a tribe, traditionally handed down and made part of the experience of the dead where they were supposed to return to some former dwelling-place of the abode of the blest.

Whatever ideas are held concerning the abode of the dead are strengthened and amplified by dreams, in which the soul is thought to have visited it; or when the medicine-man claims the power of going thither, and returns with a vivid description of its character; or by myths telling of visits of visits of the living to that land, their sojourn there, and their return (see § 7).

2. The lowest peoples.—We know nothing of the exact nature of the eschatology of pre-historic man. The fateful nature of the interment may be derived from the Stone Age, and from the elaborate customs of sepulture in its later periods, we may be certain that some continuity theory existed, whether of the body or of the spirit, in the grave or in another region. Whether it was blissful or not cannot now be known (see MacCulloch, Exp T xvii. (1906) 489). On the beliefs of the lowest peoples surviving now or within recent times, our information is more extensive, and, though it has been surmised that some of their eschatological ideas have been assimilated to the Christian, there is little reason to doubt that on the whole they are original. The belief of the Tasmanians was vague, yet they looked forward to a happier life in which they would untiredly and with constant success pursue

the chase, and for ever enjoy the pleasures which they coveted on earth. Contact with the white man suggested to them that there was an 'up among white men' on an island in the Straits (H. Ling Roth, Abor. of Tos. 1800, p. 69). The religious ideas of the Australian tribes have sometimes been exaggerated by uncritical observers, but there is no doubt that among many of them a belief in a happy other-world. In the Australian tribes of Australia little is known, while among the central and northern tribes a belief in perpetual re-incarnation existed universally (Spencer-Gillen's, 491); but among those scattered over the south-east coast the belief in an apocalyptic view of the future has been supposed to be suspected or imported from the west or in the sky is generally found (Howitt, 438).

This is a land like the earth, and is sometimes called 'the gun-tree country,' but is more fertile, was watered, and abounds with game, while everything is better than in this world; and the spirits live there as they did on earth. Considerable exaggeration is in the way the setting sun or by the Milky Way, sometimes itself the dwelling of the gods, and by the Milky Way, as in the Herbert Islander's water-course with fruit-groves and all desirable things: and there are many legends regarding its former accessibility by a tree or other means. (Howitt, 472, 473, 475.)

The tribes around the Gulf region believe in a happy life in Falurong, and a spirit above who looks after them there. Falurong is the Milky Way, a broad stream, a place, full of beautiful, shady trees, with plenty of water and abundance of game, and all things are as they were in life, so that the spirits, after returning to the stars, and the natives have no dread of going there (Palmer, JAI xiii. 291).

Something corresponding to the division caused elsewhere by rank, ritual observances, etc., is found among a few tribes. The Wakelurniture thought that right-handed men went to the sky, left-handed men to the ground, while the handfuls of certain tribes round Maryborough is reached only by the 'good,' and those who show excellence in hunting, fishing, etc. (Howitt, 472, 475). Among the Gulf tribes the custom of knocking out two front teeth is connected with their entry to the sky-world. Those who have been subjected to this custom will have bright, clear water to drink, others will have dirty or muddy water (JAI xii. 201). Such beliefs may explain the retributive ideas ascribed to some of the tribes, though the fact that the great being believed in by all these groups is supposed to be a kind of moral governor may have occasionally led to a retributive eschatology (see Anonymous, 4; to them, 491; JAI ii. 269–89). In the belief of a certain tribes lives in Bullaman, the land of rest, a eternal paradise of beauty and of plenty, where good, spirit, and can save from Elenbah-wundah, the abode of the wicked. (Park, More Aust. Legendary Tales, London, 1828, 90, and cf. Lang's Tales, etc., 2.)

The Andaman Islanders believe that beneath the earth is a jungle world (chaitan), where the spirits of the dead dwell and hunt the spirits of animals and birds. Between earth and sky is a cane bridge, only the souls of the wicked dead go to paradise, while the souls of those who have committed such sins as murder go to a coral region called jerepul-muqyu. But all souls will finally be united with their spirits, and will live permanently on a new earth in the prime of life. Sickness and death will be unknown (Man, JAI i. 161–2; but cf. Temple, Census of India, Calcutta, 1903, iii. 62).

Among the primitive pagan tribes of the Malay peninsula, Semang, Sakai, and Jakun, there is a belief in the abode of the blest. These are considered of the race which inhabited the Malay Peninsula 15,000 years ago, and often identified with those who fear to meet the terrible beings of the soul-bridge, are condemned to a wretched existence, though sometimes they are submitted to a process of purification and permitted to enter Paradise; Paradise is a place for all others. If situated in the abode of the blest, the death of a fisherman, "Island of Fruits," from which all that was noxious and distressing to man had been eliminated" (Scate and Blagden, Pagan Races of the Malay Peninsula, 1923). The Semang and Jakun divide the instruments into three tiers; the two upper tiers are the Paradise of the blest, filled with wild fruit, and certain regions of the blest. The abode of the blest, "Island of Fruits," which, in some songs, is preceded by a "Garden of Flowers." The choicest heaven is reserved for the old and wise.
BLEST, ABODE OF THE (Primitive and Savage)

Among the western Samoans the island of fruit-trees is reserved for bachelors (medicine-men); and while the girls are being wicked, go across the sea to a land of screw-pines and pitch-pine, where all the girls that have died are supposed to be purified in the infernal regions by 'Granny Langut,' after which they cross a great chopper over boiling water. The wicked fall below to proceed to the island of the dead (111, 239 ff.). Among the Jakun, the Blandas think that in the Island of Fruits souls of the old become young; there is no pain or suffering, but they eat and drink according to their location in the moon; it contains every kind of fruit-tree; there is perpetual feasting, and souls lie in indolence, their muscular movements are alone admitted to it. According to the Mantra, souls pass to Fruit Island in the west and live in harmony and enjoyment, feasting in fruit for ever in marrying and having children. Pain, disease, and death are unknown. Souls of men who have died a bloody death go to Rangoon, as they maintain that souls are swallowed by the snake thence to a cheerful abode in the heavens, where, dowered with immortality and decked with flowers, they dance and enjoyed themselves, looking down from the parapet of Avalki. This Elysium of the brave consisted of 10 successive heavens, and was the home of Tangaroa, the god of day. But in Raratonga warriors lived with Tiki underworld, in a beautiful region with shrubs and flowers of unifying fragrance, eating, drinking, and sleeping, and within direct participation in the admission here depended on their having brought a suitable offering (Gill, 18, 152 ff., 170). In the Society Islands, while the people descended to Po, members of the Aorei society, chiefs, and those whose families could afford surfeited as a gleam went to the aerial paradise of perfumed Rohutu, where, amid beautiful scenes, every sensuous enjoyment was open to them. Neglect of certain rites and offerings might, however, debar them from this (Ellis, Polynesian Researches, 1852, i. 245, 252, 297, 408; Smith, 1856, i. 306); and when souls that went to Po, the place of night, where they were eaten, though some became immortal spirits by this process. A few went to the under- ground paradise of Miru and Ake, while chiefs without were led by the gods to the otherworld. The under- ground paradise was level and beautiful, and everything grew of itself. In Miru's part, souls amused themselves with noisy games; in Ake's there reigned a solemn peace (Katzed, Hist. of Mankind, 1897, i. 315; Ellis, i. 306). For the spirits of the dead in Savage Island there was an underground region called Mani, but their favourite place was the land of Sina in the skies (Turner, 306). Another account says that the virtuous passed to Ahone, Everlasting Light, the virtues being chastity, Theft from another tribe, and slaughter of enemies (Thomson, JAI xxxi. [1901] 139). In Bowditch Island the common people went to a distant region of delights full of fruits and flowers, where they enjoyed feasting and dancing. Kings, priests, and their families went to the moon and enjoyed all sorts of pleasures, the moon itself being their food (JAI xxi. [1891-2] 51; Turner, 273). Bolotu was the Elysium of the Tonga Islanders, an island of gods and spirits of chiefs and men of rank. Fruits and fruits were unlooked at and freely regarded; and dogs, when killed, came to life again. This exquisite region was not open to the people, whose souls died with their bodies. The Maori subterranean Hades, Po or the Reinga, is variously described. Sometimes it is regarded as a state with disgusting food, again as an excellent state like earth, visited by the sun, with rivers, good food, and many villages and people. It was also thought to be divided into several compartments, the lowest being the wear and all of lesser order. There was only one named as a goddess, and in it was the living fountain in which the sun and moon bathed and were renewed. Great chiefs and heroes went to one of the heavens after death, or became stars. There was, however, much uncertainty as to whether the spirit went up or down, or remained near the body. Karakia, or prayers, aided its ascent. Reiga is described by one writer, probably confusing it with the sky-abode of chiefs, as a beautiful heaven where all things were abundant, with eternal sunshine and gladness (Nicholls, JAI xv. [1855], 290; see also Shortland, Traditions of N.Z., 1854, ch. 7, Maori Rel. and Myth., 1882, pp. 43, 52; JAI xix. [1890] 115-9; Taylor, Te Ika a Maui, 1855, pp. 103, 186, and passim).

Group Avaki was a hollow underground region whither all who died a natural death went to be eaten and annihilated by Mani. Fathers being swallowed by Rongo, climbed a mountain and thence went to a cheerful abode in the heavens, where, dowered with immortality and decked with flowers, they danced and enjoyed themselves, looking down from the parapet of Avaki. This Elysium of the brave consisted of 10 successive heavens, and was the home of Tangaroa, the god of day. But in Raratonga warriors lived with Tiki, in a beautiful region with shrubs and flowers of unifying fragrance, eating, drinking, and sleeping, and within direct participation in the admission here depended on their having brought a suitable offering (Gill, 18, 152 ff., 170). In the Society Islands, while the people descended to Po, members of the Aorei society, chiefs, and those whose families could afford surfeited as a gleam went to the aerial paradise of perfumed Rohutu, where, amid beautiful scenes, every sensuous enjoyment was open to them. Neglect of certain rites and offerings might, however, debar them from this (Ellis, Polynesian Researches, 1852, i. 245, 252, 297, 408; Smith, 1856, i. 306); and when souls that went to Po, the place of night, where they were eaten, though some became immortal spirits by this process. A few went to the underground paradise of Miru and Ake, while chiefs without were led by the gods to the otherworld. The underground paradise was level and beautiful, and everything grew of itself. In Miru's part, souls amused themselves with noisy games; in Ake's there reigned a solemn peace (Katzed, Hist. of Mankind, 1897, i. 315; Ellis, i. 306). For the spirits of the dead in Savage Island there was an underground region called Mani, but their favourite place was the land of Sina in the skies (Turner, 306). Another account says that the virtuous passed to Ahone, Everlasting Light, the virtues being chastity, theft from another tribe, and slaughter of enemies (Thomson, JAI xxxi. [1901] 139). In Bowditch Island the common people went to a distant region of delights full of fruits and flowers, where they enjoyed feasting and dancing. Kings, priests, and their families went to the moon and enjoyed all sorts of pleasures, the moon itself being their food (JAI xxi. [1891-2] 51; Turner, 273). Bolotu was the Elysium of the Tonga Islanders, an island of gods and spirits of chiefs and men of rank. Fruits and fruits were unlooked at and freely regarded; and dogs, when killed, came to life again. This exquisite region was not open to the people, whose souls died with their bodies. The Maori subterranean Hades, Po or the Reinga, is variously described. Sometimes it is regarded as a state with disgusting food, again as an excellent state like earth, visited by the sun, with rivers, good food, and many villages and people. It was also thought to be divided into several compartments, the lowest being the wear and all of lesser order. There was only one named as a goddess, and in it was the living fountain in which the sun and moon bathed and were renewed. Great chiefs and heroes went to one of the heavens after death, or became stars. There was, however, much uncertainty as to whether the spirit went up or down, or remained near the body. Karakia, or prayers, aided its ascent. Reiga is described by one writer, probably confusing it with the sky-abode of chiefs, as a beautiful heaven where all things were abundant, with eternal sunshine and gladness (Nicholls, JAI xv. [1855], 290; see also Shortland, Traditions of N.Z., 1854, ch. 7, Maori Rel. and Myth., 1882, pp. 43, 52; JAI xix. [1890] 115-9; Taylor, Te Ika a Maui, 1855, pp. 103, 186, and passim).
Retribution was not strictly ethical, but ritual and ceremonial, as some of the above cases have shown. When the friend of a dead man in Nanumea gave a great funeral feast, the deceased was admitted to a heavenly land of light and clear waters; if not, he was sent to darkness and manslaughters (Turner, 292). Entrance to Mara, the western paradise of Tamana, with its clear streams and abundant food, depended on an even number resulting when pebbles were thrown by the dead man to a red rock; odd numbers could not call the spirit to be unmutilated (ib. 294). In Pukapuka and the Hervey Group, Vacaata ate spirits which had committed ceremonial offenses; all others went westwards to the house of Reva, where they passed a blissful existence. In Aitutaki, spirits which were provided without, could not escape by a ruse from being eaten by Mira, and went to the pleasant abode of Iva, where they feasted on the richest food and the finest sugar-cane (Gill, 171, 175). In Netherland Island, however, "souls of the honest, kind, and good" are admitted to the light in Heaven. The thief, the cruel, and the ill-tolerated went to prison of darkness under the earth" (Turner, 301).

4. Dayaks, Papuans, and Melanesians.—The Dayaks exhibit a great diversity of beliefs, and the general disposition towards a retributive view, as amongst all savage nations, is strong. A belief in a second or future state may owe something to Hindu or Muhammadan influences. More purely native beliefs are seen in the occasional idea that the other-world is a copy of this, or is open to all, or that a better fate awaits the mind, who die a violent death or women dying in childbirth.

The Sea Dayaks of Sarawak believe in simple continuance. The dead build houses and make paddy fields; they are subject to the same natural laws as the living. They can bestow the living amulets and medicines of magical power (Ling Roth, Native of Sarawak and Ternate, 1860, i. 210). Others, like the Sibuyan state, have a communication through the dead. Thus, the whole tribe of —thieves and great criminals—being punished in the first. Eventually the final heavenly state—beautiful, peaceful, and happy—is reached. The streets are clean and regular, the houses perfectly formed. There are lakes and rivers, gardens with fruit-trees and flowers, and the people are happy and rich. This place is enclosed by a great wall, while at a distance the souls of Malays have a Kampung (Brooke, Ten Years in Sarawak, 1859, i. 55). The Dyaks of the Island, and others tribe place paradise at or near the top of a mountain which all souls ascend, and which is guarded by a fiery dog or some other monster of a terrifying form (ib. ib.). The Dyaks of New Guinea and the Sandwich Islands have a paradise at or near a mountain peak. It has rivers rich in fish; in its midst is a sea surrounding an island on which there is fruit, grass, and fine cloth for clothes. It also furnishes the Water of Life, which the souls drink to become youthful (this is also effected by eating the flesh of the bird). While the souls are traveling through this world, all are tree farm, every desire is supplied by abundant fulness, and there are all kinds of enjoyments, and rich fruits and gold. Souls, however, eventully die, returning to the earth and entering a fruit or leaf, etc. Thieves, unjust chieftains, and those who turned a good into a bad cause are excluded from these enjoyments (Grabowski, Inter. AE, ii. 181 ff.; Ling Roth, citing Schweiner, ii. pp. 612 ff., c6). The Melanesians made the other world resemble this, with seas, rivers, and sage plantations; but those who had died a violent death had a separate paradise from those who had died a natural death, and divided into regions for virtuous, worms, etc. (Cresipgy, JAI v. 36). Various places were allotted to the souls of the dead, according to their class, and this was transmitted to the memory of their children. Those who died a violent death and women dying in childbirth state in Long Julian, where they had all their wants supplied, and all their wishes were gratified. Those who were drowned went to Long Yang, a land of plenty below the rivers, where all property lost in the waters became theirs. A place called Ochredes was reserved for widows (Ibe, in Ling Roth, i. 229).

Among the Papuans of New Guinea and the adjacent islands there is a general belief in a future state by the elaborate ceremonial ceremonies and by explicit beliefs. But these beliefs vary in different regions, and the other-world is located now on an island, now in the sky, now underground. Sometimes it is open to all, sometimes to those only who comply with various ritual observances; or, again, there are various places according to the manner of death. It is conceived as a region of light and happiness; friends are reunited; hunger is unknown, and the souls enjoy an existence of hunting, fishing, and feasting.

In the Solomon Islands all souls whose bones have been taken go to the island of Watuma by way of a serpentine bridge; to the full all the pleasures of life, the women cultivating and working, the men fighting for their idle fards (Haddon, P. F., 184; Haddon, F., 194, p. 339). In the western islands of Torres Straits the abode of the dead was in a mythical island called Fongia, where souls sat together on tree-tops; but those of the best men, greatest warriors and skull-hunters, were better off (Haddon, JAI xix. (1860) 318). In the eastern islands the spirits pass underground to the other side of the dead, and eventually to the island of Bugai, being conducted thither by Terer, the first man from whom all the people on the islands descends. He was so happy and bright, had plenty of food, and did no work. The death ceremonies comforted the mourners, and gave them assurance of the future state of contentment (Hunt, JAI xiv. 1883). The Eleina tribes of the Papuan Gulf, New Guinea, thought that those who did not fight to the sky-cloud of the god of war, and could not roam about and annoy theirivotmlC. Various localities were assigned to those passing a natural death, while those who were murdered or killed by crocodiles or snakes became wandering spirits (Holmes, JAI xxii. (1907) 428). Other tribes entertain different ideas. Some think that all spirits live in Taurus, a glorious place where the souls welcome the newcomer, and where hunger is unknown. A similar paradise called Laka, there believed in by the Motu-motu people; but here only those whose noses are pierced enter it (Challener, Pioneering in N.Y., 1888, p. 160). The Morokot tribes of the Solomon Islands, however, restricts the soul, or else it perishes, and must cross a great water by a ladder. Here it meets a powerful spirit who first questions it, and if it answers not, these the ladder is tripped up, and the soul falls into the water, whereas there is no return. Otherwise it is met by two women, who lead it to the subterranean home of western ghosts dwell. They can revisit their former home and bring good or ill luck (Inter. AE, xiii. 47).

Throughout the Melanesia, where future life is a reflection of life on earth, there is a general disposition to ascribe greater happiness to the chiefs and warriors, and a greater amount of power to the disembodied spirits. But here also attention to ritual obtains a special card, and there is an approximation to retribution. The place of the dead is an island, or sometimes (Solomon and Loyalty Islands) or underground (New Britain, Santa Cruz, New Hebrides, Fiji). Sometimes there are different places for different classes, or according to the manner of life or death, and in general all these regions of the dead are reached with difficulty.

The people in the north of New Britain believe that souls which lived a bad life have no money to offer the god can enter a desiriable paradise called Tengeria-torawen. Paradise, however, is not sent to a black region. The Salukas of the south coast believe that if a chief's nose is not pierced he can prove their life to have been satisfactory (Fulman-Burry, Trans. 3rd Cong. Hist. Rel. i. 84).

In the New Hebrides the Lavinia tribe is easily reached by ghosts which have their noses pierced (Florida), or have their hands marked with a conventional design, lacking which they are prevented from entering. But this distinction is not observed in these island abodes; the ghost bathe, and their laughter is heard. In some cases the common ghosts turn their white ants' nests and are eaten more vicious ghosts, who also at last undergo the same transformation (Codrington, Melanesians, Oxford, 1901, 256 c.). Similar beliefs are held in other islands of the group.

An underground world is believed in from the Torres Group to Fiji; and its abode is generally the island opposite. The New Hebrides is Panioi. The Banks Islanders think there are four divisions, season for different classes, e.g., youths dying in the flower of their age inhabits a more pleasant region with flowers and scented plants in abundance; or, according to the season of their death, to the manor of their parents or their death. Those who died a violent death and women dying in childbirth state in Long Julian, where they had all their wants supplied, and all their wishes were gratified. Those who were drowned went to Long Yang, a land of plenty below the rivers, where all property lost in the waters became theirs. A place called Ochredes was reserved for widows (Ibe, in Ling Roth, i. 229).

In Fiji the way to the place of souls, Mubatu, was long and dangerous, and ritual ceremony and observances are the lot of the deceased. The ghosts of bachelors were annihilated, all other ghosts had to be approved by Ndengei, great warriors especially gaining his favour. In Mubatu punishments were
awarded to those who displeased the gods, those who had not
their ears bored or were not tatted, or had not slain an enemy.
Those who had always been eaten by the gods. Hence there were divisions in Mibua, and of
these Mibora was the most Elysonian. These sacred groves and
the sacred snakes, which were not sacred if food was not
his affection for them, were most desired by the gods and
any joy. A native song says, 'Death is easy: death is
est.' (Williams, Fiji, 1855, l. 243 B.) It is also noticed, in a
ancestors, especially the native spirits of the W. African Negro tribes, though
the evidence must be received with caution. Souls of
good men ascend to heaven, sometimes by the Milky Way, the
path of the ghosts of the deceased. The souls of the
Ochichi, the evil being punished (Waitz, i. 191). But Bosman's
account of the beliefs of the Ogoni, North-Western Nigeria, shows
what 'goodness' means here. There is a judgment of
souls after death: the good, viz., those who have strictly observed
ceremonial and religious laws, and have not offended the
gods, are sent to a happy and pleasant Paradise; offending souls
are slain or drowned (Finkenberg, Paganies, xvi. 491). Among
the Arni also, souls of the good begin a new life analogous to
this after death (L'Anthropologie, Paris, iv. [1893] 434) and this
is said to be true of some of the tribes on the Upper Congo, who
think that Longa, the other world, is tenanted by souls of the
good (Weeks, Eth. xii. [1901] 184). It is not improbable that a
belief in a future judgment is taught in the Secret Societies of
W. Africa.

5. Africa.—An Elysonian conception is but slightly
developed among the peoples of Africa, partly be-
cause some tribes have a vague idea of a future life,
and partly because among these tribes the spirits of
55) partly because with many others the belief in
transmigration and re-inarnation is very strong.
The cult of ancestors is, however, general, and
shows that some kind of future existence is com-
monly believed in, though it is not definitely out-
lined, and many profess ignorance of its nature.
But as the spirits of the dead are so often the gods
of the living, and are adored as great spirits, this
must argue that their lot, or that of the more
important of them, is better than that of the human
race. Though this is a very general idea, it is likely
that in some cases the division be-
 tween good and bad shows a Christian colouring, and
the national belief may simply have been that
certain souls alone could enter the happy state,
others being debarred, i.e. those who died a violent
deer; those who were not trouble to thank or bow to
dangers of the soul-journey, cowards, or those for
whom sufficient offerings had not been made at their
tomb. But in other cases those who were
debarded or are sent to a gloomy region are wicled,
they have committed offences against tribal law,
and are a plague to society, as among the Dela-
wares, Blackfeet, and Ojibwes.

Where a state common to all was believed in, it
was thought to continue all the pursuits of earthly
life under absolutely unintermed conditions. 
Hunting and war were sacred, holy, and always with
success. There would be neither want nor sorrow. 
The woods, lakes, streams, and plains would not only be more beautiful, but
would swarm with every desirable creature. The
'happy hunting grounds' were the natural paradise of
hunting tribes, and there they dwelt with the
chief divinity or 'great spirit' in supreme felicity.
Many poetical and sensuous descriptions of this
land are to be found in the myths of various
tribes, but all things in it were as incorporeal as
the spirit itself, 'the hunter and the deer a shade',
Generally it was supposed to be in heaven, the
Milky Way forming the way thither, as with
the Chalams, some N. Californian tribes, the Iroquois,
and the Wimicowes (N. vi. ii. 522; Meade, Yan-
kee Mission Island, 1885, p. 448; Morgan, League of
the Iroquois, 1851, xvii. 176; Schoolcraft, Ind. Tribes,
Phila., 1853-6, iv. 240). Or it was in the region of
the rising sun, or on a mountain (the Mojavies, N. vi. iii. 526). The Navahos thought it was below
the earth, whence men had once come forth. They
have all things growing in it, and the spirits enjoyed
peace and plenty (N. vii. i. 528).

Among many tribes bravery in war as well as rank earned for men the abode of bliss, while the
medicine-men taught that it was a recompense for
successes in life. (Ritchie, Uzima, 1847, p. 32.)
Cowards and common people were debarred or
might enter Elyson only after a long period of
suffering. With the Abts, chiefs and warriors went to the beautiful heaven of Quawteash, untroubled by storms and frost, revelling in sunshine and abundance of game. All others went to the subterranean kingdom of Chayher (Sproat, 200). The Taman, the Ojibwas and the southern of the Chiloooks were open only to brave hunters and warriors. The Ojibwas thought of it as a great village in a fine country, with continual amusements and dances, and plenty of food. War was unknown; the hunter obtained his prey without the fatigues of the chase. The Taman and others were anathemised (Pinkerton, Voyages, xiii. 14, 457). The Nativeez, the Tensas, and the Apalacheas held that chiefs and warriors went to reside in the glorious land of the sun (Müller, Amer. Urreligionen, Basel, 1855, p. 66 ff.). Far more elaborate in such divisions was the eschatology of the ancient Mexicans, who assigned to the dead the deities of the emperor, nobles, and fallen warriors were borne eastwards to the paradise of Huitzilopochtli, where honeyed flowers and luscious fruits abounded in shady groves, and rich hunting parks awaited the hunters. The gods went round the sacred sun daily in triumph to the zenith, and then returned to their blissful Elysium. Finally, they were transformed into birds with golden plumage. Women dying in childbirth were also admitted to this paradise, and, dressed as warriors, escorted the sun from the zenith. An earthly paradise free from sorrow, and abounding in every kind of fruit and vegetable, was open to those dying of certain diseases, to the drowned, and to sacrificial victims. This was the perpetual summer land of Tlalocian. Mictlan, a buttery and honeyed ground or nether world, was assigned to all who died from any other cause (Reville, Rel. of Mexico and Peru, 1884; Sahagun, Hist. Gen., passim).

In some of these instances bravery and cowardice determined the fate of the soul. This approach to an ethical distinction according to the native moral standard, and doubtless underlies many of the instances usually cited of more strictly retributive justice. Thus, with the Nez Perces and some Haidah tribes, the wicked and those who had not died for the Lord, were sent to a desolate region of mean desolation after death. Being there, they were alone, and the path became ever more beautiful as he went on. He reached a ledge, where he was told to leave his body behind and enter the shadow-world and cross the lake where the spirits of the wicked met their fate. Now he reached the happy island of souls where there never was cold or hunger, or any mortal labour, for the air itself nourished the souls, and where, amid eternal sunshine, they wandered through the blissful fields (Schoolcraft, i. 521). See also America.

7. SOUTH AMERICAN INDIANS—Of the numerous tribes of S. America, taken as a whole, it is difficult to generalize concerning their ideas of a happy other-world. The earlier beliefs of some of the Chichimecas, Spanish translaters Huitzilopochtli, the Virginian emperor, and the abode of the gods. Thus, the Chichimecas, according to the ancient Mexicans, who assigned to the dead the deities of the emperor, nobles, and fallen warriors were borne eastwards to the paradise of Huitzilopochtli, where honeyed flowers and luscious fruits abounded in shady groves, and rich hunting parks awaited the hunters. The gods went round the sacred sun daily in triumph to the zenith, and then returned to their blissful Elysium. Finally, they were transformed into birds with golden plumage. Women dying in childbirth were also admitted to this paradise, and, dressed as warriors, escorted the sun from the zenith. An earthly paradise free from sorrow, and abounding in every kind of fruit and vegetable, was open to those dying of certain diseases, to the drowned, and to sacrificial victims. This was the perpetual summer land of Tlalocian. 7. South American Indians—Of the numerous tribes of S. America, taken as a whole, it is difficult to generalize concerning their ideas of a happy other-world. The earlier beliefs of some of the Chichimecas, Spanish translators, the Virginian emperor, and the abode of the gods. Certain tribes simply believed in the soul hovering round the grave, others in transmigration; others, like the Ahipones, were ignorant of the soul's status after death (Dobrizhoffer, Abipones, 1825, ii. 75; Dunn, 1861, p. 104). Chiefs and medicine-men among the Virginian tribes went to a western paradise of perpetual happiness, where they smoked, danced, and sang with their forefathers; all others were anathemised (Pinkerton, Voyages, xiii. 14, 457). The Natchez, the Tensas, and the Apalacheas held that chiefs and warriors went to reside in the glorious land of the sun (Müller, Amer. Urreligionen, Basel, 1855, p. 66 ff.). Far more elaborate in such divisions was the eschatology of the ancient Mexicans, who assigned to the dead the deities of the emperor, nobles, and fallen warriors were borne eastwards to the paradise of Huitzilopochtli, where honeyed flowers and luscious fruits abounded in shady groves, and rich hunting parks awaited the hunters. BLEST, ABODE OF THE (Primitve and Savage)

In this place of all sensuous delights enjoyed to the full, they would take pleasure in everything which they had desired or possessed on earth. It was endowed with glorious hunting grounds and fishing streams, and anything for food. Or they fed on rich fruits, which required no toil or labor. Such was the bliss of life. Life was restful and peaceful, without suffering or grief, and with the added delights of drinking, feasting, and dancing. There they met all their dead relatives, and their wives existed in beauty and youthfulness. Such were the beliefs of the Guaranys, Guarani, Chiriguana, Araucanians, Yuncasiris, Ottomakeni, Apacra, Warrwa, Bahalri, Guajiro, Pampas tribes, and others (D’Orbigony, 109-110, 164, 337, 342, 347; Molins, Chili, Leipzig, 1791, p. 72; Castellau, Expedition to the Guayanas, aux polaristes centrales de la Améri., Paris, 1850, ill. 314; Schomberg, Reisen, Leipzig, 1847, ii. 446; Ausland, 1865, p. 338). The Saliva Indians placed their paradise in the moon; and thought of it as a place without mosquitoes (Tylor, i. 70).

A distinction according to rank is met with among the Guayanures, who thought that chiefs and medicine-men hovered round the moon and went to regions of pleasure and enjoyment (Martius, Zur Ethnog. Amer., Leipzig, 1867, i. 283). More usually bravery, as opposed to cowardice, merited the abode of the dead, in this world, after which the brave men and good fathers went to an earthly paradise full of delight and feasting, with abundance of women and chicha, where they devoted themselves to singing and dancing (Koch, op. cit. 119). The Caribs of the Antilles believed that the spirits of brave warriors dwelt in pleasant islands like those of their own land, abounding in delicious fruits. There all their wishes were fulfilled; they feasted and danced, and had their enemies as their slaves. Cowards, on the other hand, would become slaves to the Arawaks. It was also believed that the spirits of the best men became stars. In Thurn says that the present Caribs of the mainland think of the spirits as remaining near their present dwellings, while some hope to become white men or go to Sky-land, a copy of this world, whence their ancestors came (Indians of Guiana, 1883, p. 339 ff.; Rochefort, Îles Antilles, Rotterdam, 1681, p. 430). Some of the Pampas tribes believed that in the heavenly abode of Pillan warriors enjoyed eternal drunkenness, broken only by great hunts, in which they slew so many ocelots or jaguars that they fell down, and fell among the clouds (Reclus, Prim. Folk, n.d., 105). Goodness and virtue are sometimes expressly mentioned as meriting paradise, but on examination this proves to mean savage bravery. Thus the Tupinambas thought that after death those who had lived virtuously, i.e. who had avenged themselves on and eaten many enemies, would go behind high mountains, where they would dance in beautiful gardens with their ancestors (Lery, Voyages fait en la Terre du Brésil, La Rochelle, 1678, p. 292). So, too, among the Chiriguana, good men were those who fell in war, and they, with women dying in childbirth, enjoyed a blissful future (Koch, 128). In the same way may be interpreted the respective beliefs of the Yaer, that those who ‘lived well’ went to heaven; of the Yanaros, that the good went to a place where they enjoyed divine food; and of the Wazanos, that, while the souls of common people went to heaven, the good attained to a superior region, where they found beautiful women, rich hunting grounds, and continuous feasts, and did work only for the enjoyment of the gods (Koch, 127). Among the ancient Peruvians there was no distinction between good and evil beyond the grave. While the bulk of the people went to a dreary underground region, a heavenly paradise was the lot of the higher classes and the children of the Sun, their father; nobles and great warriors were received in the heavenly world of Haman Paka, where their happiness consisted in perfect freedom from evil, in repose and peace, and they were waited on by the wives and slaves who had been put to death with them (Müller, 402-3; Prescott, Peru, 1856, p. 413).

8. Sky-land.—Among most of the peoples whose conceptions of an abode of the blest have been discussed, there is also frequently found a belief in a happy world of other beings, often divine, above the sky. Many visited the heavenly region, of which the sky seemed to be the floor, with the greatest of his imagination. Especially was this the case when his world of the dead was situated elsewhere. Thus the Zulus, believing in an under world of spirits, thought that above the blue sky, conceived as a rock, was a heavenly country, the abode of a remote powerful being and of a nation of heavenly men (Callaway, op. cit. 63, 137 ff., 393 ff., Nursery Tales, i. 152, 316). Again, as the sky seemed to rest on earth at the horizon, or on lofty mountains, or even on high trees, according to a myth, all these forms are by which Sky-land can be reached. Or it rests on pillars, or may be reached by a bridge, a ladder, a rope, etc. There is little doubt that these ideas survive in tales of the Jack and the Beanstalk cycle (see OP 432; Blest, Aboof THE (Savage, 259). Legends of others often claim to visit that land, either by some of these means or by a bodily or spirit flight, just as they also claim the power of visiting the world of the dead. This is a very common belief in Australia (Spenor-Gillen, 689; Howitt, 383, 381). In one case, when the flowers withered because Baimai left the earth, the wirecunus ascended a mountain and were carried to the sky, where they were allowed to carry off the fadeless flowers of the heaven-land (Parkes, More Austr. Legend. Tales, 84).

Legends of other peoples ascended to their Sky-land, and returning thence with the elements of civilization or performing other feats, are of frequent occurrence in the lower culture.

In a Melandian instance, the hero reaches the upper world and teaches the Sun’s children to make fire and cook (Coddington, 306). An earthly son of Tui Lang, king of the sky, went thither by a magisterial, according to a Fijian legend, and learnt there how to sky the local gods (FLJS v. 256). In a Polynesian story, Lesti ascends to the sky and compels its people to give him shoots of taro, queen of the cocoa-tree, and the monstrous conch shell, which he placed on the earth (Turner, 105). Si Jura, in a Dayak myth, climbs to the Peleades by a magic tree, and learns the secrets of astronomy (Ling Koh, op. cit. 396). In other cases of which there are many variants, the hero ascends above the sky and captures the sun, compelling it to descend slowly (TURNER, 306). There are also many American Indian tales of visits paid to the land of the Sun above the solid rocky vault of heaven (OP 436, 440, 456).

Other heroes visit Sky-land to obtain a wife, or to regain her, or to dwell with her there. In Simoco, La ascended to Tapobore’s beautiful place of rest in the sky, and was given his daughter as wife (Turner, 13). In many tales, when a mortal has captured a daughter of the sky who has descended to earth, she sometimes returns thither; but she follows her and regains her, sometimes remaining there. Of this there are Nacari and other Polynesia, Melanesia, and Malay versions (Grey, Fijian Myth. Legend., 194; Tylor, Early Hist. of Mankind, 1857, 340), while the idea recurs in European and other variants of the Swan maiden cycle. There are also several versions of the story of a hero who ascends to the sky to dwell with his immortal wife, or with some other relative, usually then becoming immortal (Grey, op. cit. 68; FORSS, Primitive Mankind and Customs, 1859, p. 256 [AIAGONPA]; Cole, 14, 1875 [Santall]; Bunt, Legends...of British Guiana, n.d., 20).

These stories may be compared with another large group in which visits to the world of the dead are paid to obtain a boon, to regain a lost wife, etc., or to a vague under world or fairy region (OP 45, 438).

Other myths tell of an earlier Golden Age when gods and men dwelt together on earth or in heaven, or how the ascent of the sky was accomplished by some of the means already mentioned. But this at last came to an end, and the means of intercourse was broken off (see FALL, ii. 3 and 18).

Thus the Eskimos and others heard that the gods had created the peopling of the earth by a pair from heaven (Nansen, op. cit.)
Blest, Abode of the (Buddhist)

259 ff.; Long 7, i. 181). Many myths of the Aesopine tribes tell of a woman cast out of heaven, from whom men are descended (Brontin, American Hero-Myths, Philol. 1882, p. 64). In other cases, men are the offsprings of their immortality (Tongay [Mariner, ii. 115] Cuvencce [Forbes-Leslie, Early Jues, Edin. 1871, ii. 171]; Upsall, Florence [Scott, Women Voyages of Guinea, 1744, l. 176]); or can return thither from whatever cause of accident (Nepent [Hatzet, ii. 351]; Cudworth, Eng. Philos. , 1703; these are akin to another group, namely S. African and American Indian, in which men ascend to earth from an under world (Casalis, 261, 261; M. Dorman, Origin of Primitive Superstitions, Philadelphia, 1881). Cf. also a Kizilas legend of former intercourse with the people of a mountain, where fruit trees bear all the year round, flowers never withered, women were as beautiful as young, death, cold, and darkness are unknown, and all are happy, whereas men on earth are now miserable (Sven Hedlin, Through Asia, 1888, i. 231). A funeral chant among the Basutos suggests the existence of a bright and happy sky-land, whither men cannot go (Casalis, 260).

b. Reviewing these primitive notions of a state of the blest, we see that, even where they suggest a reward for goodness, the delights of Paradise are mainly sensual, or at least sensuous. A suggestion of more spiritual conceptions may be seen, perhaps, in thought that the hereafter is now dwelt in by gods or goddess, or in the poetical descriptions of the beauty of the land. But any true spiritual outlook is generally wanting, and the ethical conception of this Elysium as a reward for righteousness is not very different from religions of Mexico and Peru, where the belief in sin as an offence against the gods was comparatively well developed.

J. A. Macculloch.

BLEST, ABOE OF THE (Hindu).—From an orthodox Buddhist point of view 1 it must be said that the only ‘blest’ are the saints who have entered absolute nirvana. Owing to their approximation to this goal, the epithet may be applied, by anticipation or metaphor, (1) to the saints who are to enter nirvana at the end of this present life (who possess nirvana-on-earth [see art. Aihat and Jivanmukta]—this is Little Vehicle; (2) to those who have taken the ‘vow’ of becoming Buddhas and meantime enjoy the joy of ‘giving and of saving creatures’ more joyously than in the present life (see art. Bodhattaya)—that is Great Vehicle. Nevertheless, there is place in both Vehicles for categories or abodes of the Blessed.

1. Little Vehicle.—The ‘heavens’ of the Little Vehicle have been, for the greater part, adopted and adapted from Brahmanic or Hindu belief. To understand the exact position of the Buddhist thinkers, the following is of importance.

The fundamental characteristic of the True Law, its historical and dogmatic foundation, is the conviction (intuition or belief) that no ‘existence whatever can be absolutely happy. Such, it appears to the present writer, is the real significance of the Buddhist pessimism—a topic open from every side to serious mistakes (see art. Pessimism). Like the Brahmanic Buddhists (i.e. Buddhist monks, bhikkhus, not laymen, upasakas) aim at perfect and eternal happiness; they feel or profess to feel, desirous for any sort of transitory happiness, and without consideration for sensual joy. They live in the world (marga, pratipad) that leads to nirvana, to eternal refreshment. But there is certainly some sort of 

* The reader is aware that this expression always involves subjective appreciation.

** Arahats are styled Simonhedhara, ‘purity-gods’; contrasted with kings, samudita, ‘opinion-gods,’ and gods, upapattideva, ‘born gods’ (Vibhaadal, p. 452).

happiness in the world of becoming, in the wheel of transmigrations (bhavavachakra). The brute creation itself is not devoid of agreeable sensations; men are sometimes at ease; gods are by definition the possessors of bliss.

No adherent of the Buddhist teaching ventures to doubt that the gods and the power of the gods. Monks (bhikkhus) think that they have to strive for something far better than paradies (avarga); nevertheless, as is clear from Atoka’s lapidary sermons, as well as from many passages of the Yali canon of Scriptures, Buddha and Buddhists (monks and laymen) lay their hands on the royal road to a further life. The Master commended the doing of good actions (in order to be re-born as a happy man or as a god), avoiding bad actions (in order to avoid unhappy human existences, animal births, or hell); and, for the wise, the avoiding of both bad and good actions; abstaining from desire and action from the latter (for producing and securing the former) being necessary to holiness, to nirvana. Birth in heaven often appears as a progress towards human emancipation, and, as with men, man, alone, not gods, can enter the path of release.

It must be borne in mind that (1) human happiness is always mixed with suffering (as human birth is produced by mixed actions, ‘black’ and ‘white’; (2) sensual pleasures always turn to suffering; (3) true pleasure is only a means to supreme beatitude, as it enforces clinging to existence. Therefore no one who has seen the truths (i.e. who has entered the stream of release, sotadpunana) can strive after transitory and ambiguous union.

1. Amongst men, two categories are worth noticing: (a) the inhabitants of the Northern continent (Uttarakuruvipa, Auttakaurava [see art. Hyperboleans]); (b) the ‘wheel-kings,’ t or universal monarchs (Chakrawartha), who embody the Indian ideal of earthly sovereignty. Men indeed,—as it is forcibly said by the scholastics,—but possessing supernatural faculties and powers, although they live on earth, they feel themselves at home in the atmospheric or heavenly regions. Their body is characterized by the ‘marks’ (lakshana) of the ‘great beings’ (mahatpara, ‘great man,’ ‘great male’—a name of Vishnu; they conquer one, two, three, or the four continents, have successful wars with gobins of all kinds and even with gods; they possess the ‘seven treasures’ (elephant-treasure, wife-treasure, etc.); they reign with justice, but not without kingly pride. Nevertheless, like ordinary men, they are susceptible of becoming disgusted with transitory life (although they live for centuries!) and of

The analogy between the Hyperboleans and the men of the Northern continent has been pointed out by Sp. Hardy (Manual of Buddhism, p. 11), who gives a brief description of this continent. We may observe that, amongst many characteristics (especially the absence of premature death, of unholy phallicism, of the unembryonic life, living from the Desire-Tree, re-birth as god or man, etc.), the Auttakaurava are ‘moral by nature’ (pratigra, ‘true to a purpose’); they love all things good (public rights); they do not commit bad actions (akalavakapata, ‘abandoned to unhappiness.’); they do not please themselves in anything that is not agreeable objects (karanvachari [gentle]; there is no ‘restraint’ (austhara), because there is no ‘rule’ (plamas). Therefore there is no entrance on the Path of release; and Bodhisattvas will not be born there (Abhidharmakosayukkha, Atatuotpavanta suttha [Gimboll, p. 355]; Mahabodhi, i. 103; Waskeil, Buddhissan, p. 245).

1 On the Chakrawartha see Mahakusumandaravarta, tr. by Rhye Darshi, Satsodhata, S. Asian Art. 1889, p. 199. Bakhshad, ‘Sahih Al-Dawiana, p. 210; 224-221; the standard text (Chinese sources) is named by Takakusu, J refugee, 1905, p. 17. The Chakrawartha have a place in Pali (Sanghad) and in the Chinese (bhiknavacharo) states that they ‘save the beings’ (p. 125, 159). W. Hopkins, like Ed. Hardy and others, observes that they are the ‘true successors of the post-Aeolian (Great Epic of India, New York, 1901, p. 306, n. 2).

2 But, like Buddhas, two Chakrawartha cannot coexist. Like Bodhisattvas, they enter their mother’s womb with full consciousness.
entering the path of salvation.* Such is not the case with the Hyperboreans and the gods.

2. The various schools differ, however, on this last point,—conflicts of scholastic views are the crux of Buddhist dogma,—but the common opinion is that heaven and paradise *are* the abodes of the *saints* (in the sense of holiness) amongst gods.† Heavenly beings do not forget that they owe their actual 'promotion to godship' to former good deeds, and their *morality* is therefore strongly established against sinful delusions.‡ But, being re-born for joy, they cannot (because they have already gone through the truth of suffering—which is the root of the Buddhist holiness. Gods, we say, are possessors of bliss, but (it is not an easy task to reconcile these contradictions) they know that their happiness will come to an end when the treasure of merits shall be exhausted; and they are therefore troubled by anxiety (parināmanadukhāta)—the more so that, owing to the mysterious law of retribution, a god may be re-born as a beast or as an inhabitant of hell (see art. KARMA).

3. The different kinds. Without attempting a general survey of the matter, we must distinguish:

1. Sensual heavens (kāmadhātu), where sexual pleasure exists. But sexual union, in the celestial spheres, is not what Buddhists call grāmundhātru (the pāramukto, or 'released' God). For pleasure and beget by simple contact, touching the hands, looking or smiling at one another, etc. On the cosmical disposition of these blissful realms, see art. COSMOLOGY (Buddhist).

2. Material heavens (rūpadhātu), where bodhisattvas inhabitation from生世的 several worlds, come to inhabit the region of nirvāṇa. They are said to be the abodes of those who have not yet realized the 'vow' or the 'question', and are said to be the abodes of the 'saints' (in the sense of holiness) amongst gods.

3. Non-material heavens (arūpya-dhātu), with four stages of perfection; it is difficult to say if they ought to be understood as 'abodes (since there is no *man* or *earthly states*) (since they are said to be the dwelling places of spiritual beings). Their common characteristic seems to be the gradual loss of consciousness. Like the 'material heavens,' they are truly Buddhist combinations or fancies, being inhabited by saints who have not realized in the inferior stages the absolute freedom from thought and desire necessary to release, and who must wait for some centuries in the happy and transitory unconsciousness of the 'non-material' worlds, before merging into the happier and definite form of the nirvāṇa. They are all mere stages of the same region—which have only been 'Buddhized' a little—are no more than prolonged trances analogous, but for their limits, to the trances of the holy life (see art. DHYANA).

II. Great Vehicle. —The piety of the so-called 'new' Buddhism has evolved paradises very like the Christian or the Vaisvāvite abodes of the Blessed. The happiness is now of a purely spiritual nature (in contrast with the sva-ragata, inhabited by sensual gods and nymphs), and essentially devotional in character (with the self-control and unconscious blissfulness which are the chief elements of the 'orthodox' and Buddhist meditations). Such a paradise is the Tusita-heaven (the abode of the gods Tusi-tas, the 'satisfied ones'), the regular abode of the future Buddhas of our world during their last existence but one. There reigned Šakyamuni, then named Svetaketu, before his last re-birth; there they meditated on the question of the nature of the future savior.* But, as a rule, 'paradises' are not a part of our world (lokadhātu), as is the Tusita, but special realms, ruled by excellent Buddhas who have at last realized their 'vow' of creating worlds. Their number is, of course, infinite (see art. COSMOLOGY (Buddhist)), but in the 'compound of cosmos' which we inhabit (sahālokadhātu) the most celebrated are: (1) the paradise of the East, under the rule of the Buddha Bhaisajyaguru (the 'Master of remedies,' also Healing Buddha); (2) the Happy [universe], Sukhavatī (lokadhātu), of the West, where, from every quarter of the world, blissful creatures are born from lotuses before the Buddha Amitābha and the Bodhisattvas Mahāsthamapāṇi and Avalokiteśvara. To be accurate, the Happy universe is not an everlasting paradise. The Blessed who there enjoy the privilege of seeing the radiant body of the Buddha, and of hearing his preaching, are candidates for Buddhahood; Amitābha's heaven is a blissful paratory and a school, not only a place of retribution. But, from a practical and historical point of view, the Sukhavati, as said before, is the exact counterpart of the Vaisvāvite paradise.§

We have few Indian documents dealing with the devotional practices arising from such a conception of everlasting life in Amitābha's presence. But Chinese and Japanese sources, ancient and modern, Bodhisattvas of Amitābha's paradise. In all these peaceful abodes the Blessed enjoy the vision and the actual presence of their god, and the successive degrees or savours (sasa) of devotion, friendship, filial affection, ecstatic susceptibility (Barth, cit. p. 225) re-unite to produce the happy spiritual experience (see Barth, p. 226, and art. Avalokiteśvara and Mahāsthama).

* Mention of Maitreyas as the next Buddha, the Buddha to come, who will build an everlasting paradise and bestow only a small retribution, occurs in the Pāli Canon of Scriptures (see Oldenberg's Buddhism, 7th Germ. ed. p. 139). It is ignored. It is also ignored to take Maitreyas, i.e. 'orthodox' Buddha, as the Buddha to come, although this view is held by the Law (2000 Anna Buddha). Both forms of Maitreyas' worship are frequent in Chinese sources (Piligrim; the latter is canonic in ecclesiastical preaching); to bear the preaching under the Dragon-Flower-Tree, (Chavannes, JA, 1905, 566), and, together with iconographic evidences (images of Maitreyas; see Grünwedel-Burgess, Buddhist Art), show that special regard was paid to the Tusita heaven. See Julien, L'Art et voyages de Hiron-thonang, p. 344 (writing in Beul's Records, but see his Buddhist in China, London, S.P.C.K. 1844); I-Tsing, Religieux éminents, tr. Chavannes, p. 72, Paris, 1894; Forcher, Art prise-boutique, p. 59 (huiyakai varahavatya = the best abode), Paris, 1905.

* Every future Buddha aims at possessing (i.e. creating by his own effort a Happy universe free from the obstacles met with by saints, gods, and men; see Arhat-khātā, p. 382 (apokramavuttika).

* The earliest documents are the Sukhāvatiyūga, the Sūtra of Amitābha (SBE, vol. xli.), and the Netherlands Buddhayoga, (see art. Avalokiteśvara, p. 258 note 1; note 2; also Beal, Catenia, p. 313). Ngakjuna (Nanjio, 1150, and Watters, On Pāli Ceylon, p. 245) mention the Sukhāvatiyūga (the Sūtra of Faith, Chicago, 1900, p. 146) teach re-birth in Sukhavātī. There is no record of the Sukhāvatiyūga in the Sanskrit sources. The vehicle: the mention in Mahābhārata, iii. 463, 10, is from the colophon; see Rhys Davids, J.R.A.S, 1886, p. 422. A Japanese picture is found in Ukiyo-e, Shūgaku-shojo, p. 105, and Grünwedel, Mythologie der Buddhämumus (Leipzig, 1901, p. 115). Sukhāvatī (also Sukhākara [Lotus, SBE, vol. xx. ch. xiv. 300] has been mentioned in the Buddhist literature (Sukhā, Nimlocani), by Max Müller (SBE, vol. xlv. p. 321), and as identified with the χρυσίδον and the Gardens of the Hesperides, by Kern (Lotus, cit. loc.)
BLEST, ABODE OF THE (Celtic)—The Celtic doctrine of the future life is discussed elsewhere (see CELTS, § xvi.). This article deals with the Celtic belief in a happy Other-world, or Elysium, which, as will be seen, was not necessarily the abode of the dead.

1. Names of the Celtic Elysium. These names are mentioned in the medieval literature, sometimes they particularize the situation of this happy land. Of the former are Mag Mor, ‘the Great Plain’; Mag Moll, ‘the Pleasant Plain’; Tir n’Aill, ‘the Other World’; Tir na Nog, ‘the Land of Youth’; Tir Sorcha, ‘the Shining Land’; Tir na Nueo, ‘the Land of the Living’; Tir Tairngiri, ‘the Land of Promise’ (perhaps a Christian derivative). Of the latter are Tir ra Ton, ‘Land under Waters’; I–Bresail, ‘the Land of Bresail’, and ‘the Isle of the Men of Falga,’ which denote Elysium as an island afar off. The Falga is the ‘Island of Man’ (Rennes Dindsenchas, RCCL xv. 449), which was connected with the god Manannan, who appears as lord of the over-sea Elysium. If the Goddes occupied Britain before passing to Ireland, then the former, which was the Western isle, the ‘island of the Lord of the Other-world’ (Meyer and Nutt, Voyage of Bran, London, 1895, i. 212). To this period may belong the tales of Cuchulainn’s raid upon Falga (considered as the Other-world), which were afterwards carried to Ireland (see § 6).

2. Various aspects of the Irish Celtic Elysium. Some of these titles show that Elysium was regarded from different points of view; it was beyond the seas, or it was under the waves. But an examination of the tales which refer to it shows that there were at least two other aspects: it might have been either the land or the hollow hills, or it might be a mysterious land revealing itself suddenly on the earth’s surface and entered through a mist. Reserving a consideration of these different localities till later, we shall here summarize the more important tales in which the Other-world appears. These tales mainly describe the visit of mortals to that land. Some of them belong to the Mythological, some to the Cuchulainn, some to the Ossianic cycle. The MSS in which they are found are frequently among the earliest known to Irish paleography, but there is no doubt that many of the tales are of a greater antiquity, and that all of them, if not actually composed in pagan times, are based upon pagan ideas, upon story-currents current before the rise of Christianity.

(a) The Island Elysium conception is found in several tales, and is also current in existing folklore. The story of the ‘Voyage of Bran’ (found fragmentarily in the 11th cent. Book of the Dun Cow [c. L], and complete in 14th–16th cent. MSS [Meyer and Nutt, Voy. of Bran]) tells how Bran hears mysterious music and falls asleep. On waking he finds a silver branch with white blossoms. Next day, as he is sitting with his men, a mysterious woman appears singing the story of the land under seas, its beauty, its freedom from pain and death, its music, its wonderful tree. It is one of thrice fifty islands to the west of Erin, and there she dwells with thousands of ‘motty white trees.’ The branches of the leaning beams into her hand. The poem then describes Bran’s sailing with his comrades, his meeting with Manannan mac Lir, crossing the sea in a chariot, his arrival at the Island of Joy where one of his men remained. According to the story, the welcome they received, the dreamlike hours of time, the food and drink which had for each the taste he desired. Finally, it recounts their homesickness, the warning from the queen not to set foot on Erin, otherwise they shall remain ashore there and become a heap of ashes, how Bran from his boat told of his wanderings, and then disappeared over (the tale of ‘Oisin in Tir na Nog’ [see KEHN CYCLE, § 5] has several points of resemblance to ‘Blírnan,’ especially in the fate which overtook Oisin). In the Cuchulainn cycle the story of ‘Cuchulainn’s Sickness’ (found in L) relates the temporary union of the hero with the goddess Fand, deserted by her consort Manannan. She will become his mistress if he will help his sister’s husband Labraid against his enemies in Mag Moll. Cuchulainn’s charioteer Laeg visits the place, and it is from his report that we learn the nature of the Other-world, where Labraid lives in an island frequented by troops of women, its different trees with marvellously beautiful leaves and fruits, and a vial of mead. It is reached with magic speed in a boat of bronze. Thither goes Cuchulainn, vanquishes Labraid’s enemies, and remains a month with Fand. Then he returns without hurt to Ireland, where he has arranged a meeting with Fand. At that meeting his wife Emer is present, and mortal and goddess strive to retain his love. The difficulty is solved by the sudden appearance of Manannan, for whom Fand’s love returns (L 437; Winisch, Trièche Texte, Leipzig, 1880, i. 205 ff.; Leisy, Heroic Romances, London, 1905, i.; D’Arbois, Cours de Litt. Celt., Paris, 1892, 170 f.). Here Labraid, Lian, and Fand, though dwellers in an island Elysium, are called sid-folk, i.e. they are of the sid, or Otherworld. The two regions are partially confused, but not wholly, since Manannan is described as coming from his own land (i.e. the true island Elysium) to woo Fand. Apparently Labraid (who, though called chief of the sid, is described in terms which leave little doubt that he is a war god) is at enmity with Manannan’s hosts, who suffer defeat at Cuchulainn’s hands.

In the Ossianic cycle, besides the story of Oisin (see above), there is a description of the Land of Promise over the far Dindsenchas, which is related by Manannan himself, in the story of the ‘Gilla Dacker’ (see Joyce, Old Celt. Romances, London, 1894, 222).

Of greater importance is the tale called ‘Echtra Conda’ (L 120; Winisch, Irische Gram., Leipzig, 1879, 120; D’Arbois, v. 384). Connla, son of Conn, king of Ireland (A.D. 122–157), is visited by a goddess from the immortal land of Mag Mell. Her people dwell in a sid, or mound, and are called Aes sidhe, ‘men of the mound.’ Thither she leads him to a choice spot, feeding him an apple which supports him for a month without growing less. In a month she returns and tells Connla, who has been filled with desire of her, that the Immortals invite him to join them. She bids him step into her crystal boat and come with her to the Land of Joy where dwell only women. He does so, and in a moment disappears for ever from the sight of his father and his druid who has vainly tried to exercise his spells against the woman. Here again, we note a distinction between the Underground and the Over-sea Elysium.

(b) Tir ra Ton, ‘Land under Waters,’ occurs with greatest distinctness in the tale of Laegaí mac Crinnin (Book of Lismore, 15th cent., O’Grady, Silva Gaelica, 290). Fionnach of the
men of the sid appears among the men of Con-
nacht assembled at Loch Naneane, and implores
their help against his enemies, whose chief Goll
has abducted his wife. Laegaire and 50 men dive
into the Loch with him, and reach a wonderful
land, where marble music, and wine, is the rule.
Is this the sid-folk attack the fort of Mag Mell, and defeat Goll. As reward they each
take a woman of the side, and remain in the
land for a year. Then they yearn to return, but
are warned not to descend from horseback on Erin.
Annwn, among their own people, copies the title
wonders of Tir fa Tonn, and in spite of being
implored to return, they return thither, and are
seen no more. Here, too, the Underworld and Tir
fa Tonn are scarcely distinguished, and its divine
hosts, as in the tale of Cuchulainn, are at war (see
for another account of Tir fa Tonn, entered from a
well on an island over-sea, the 'Gilla Daeker'
in Joyce, (253).

(c) The sid world: pure and simple is described in
the Story of Mider and Etain, found in the 11th
century MS, but became when his daughter
consort Etain in her re-birth as a mortal, married
to king Eochaid, appears to her and tries to
regain her by describing Mag Mór, the great plain,
the immortal land, its music, its beauty, its heady
delicacy, its delicious food. Ultimately Etain, who has no recollection of this land,
flies away with Mider, both in the form of birds.
Eochaid's druid finally discovers Mider's under-
ground sid. Eochaid captures it, and takes away
his wife (Lu 129; Ir. Texte, i. 118 ff). This tale
amply illustrates the belief that the gods, the
Tuatha Dé Danann, were living in underground sid,
in which they finally became the fairies of popular
lore, to whose mounds, exactly like Mider's sid,
mortals often paid visits. These sid were simply
Elysiums in Irish myth, and the secret soil.

(d) 'The Adventures of Cormac mac Airt' (found
in 14th and 15th c. MSS, but probably con-
ected with a tale of the same title mentioned in the
old epic list) well describes the fourth conception
of the Other-world. A divine visitant, with a branch
bearing nine apples of gold which, when shaken,
made sweetest music, appeared to Cormac. He at
once asked for this branch whose music dispelled
all sorrow, but for it he had to give up wife, son,
and daughter. In a year he desired to see them, and
in the shadow of a mist he found himself enveloped in a mist, through which
he came to a house where a strange pair offered
him hospitality. These proved to be Manannan
and his consort. The god then brought in a pig, a
each of which was cooked in the telling of a
true tale. While the third quarter was cooking,
Cormac told of the loss of his wife and children;
whereupon Manannan, after sending Cormac to
sleep, opened a door and they appeared. Finally
he produced a cup which broke in pieces when a
his MS told, but became when his daughter

that the Tuatha Dé Danann first appeared in
Ireland.

3. Various aspects of the Brythonic Elysium.-
A certain correspondence to these Goldie beliefs is
found in Brythonic story, but here the Elysium
conception has been considerably influenced by
later Christian faiths. The word 'annwn' is
Annwn, which means 'an abyss,' 'the state of
the dead,' 'hell,' etc. (Silvan Evans, Welsh Diet.
s.). But in the texts relating to Elysium, Annwn
does not bear any likeness to these meanings of
the word, save in so far as it has been confused by
readers of the tales with the Christian hell, Avern.
In these tales it appears as a region on the
earth's surface or an over- or under-sea world,
in which several of the characteristics of the Irish
Elysium are found: a cauldron, a well of drink
sweeter than wine, animals greatly desired by
mortals, which they steal (see § 7), while it is
of great beauty, and its people are not subject to
death or disease. Hence the name Annwn
has probably taken the place of some earlier pagan name of Elysium.

(a) Annwn in the tale of Pwyll, which forms
the earliest reference to it in Welsh literature
(Loth, Mabinog, Paris, 1889, i. 27), is ruled by
a king, Arawn, who is at war with his rival Hafgan,
and obtains the cauldron of the chief of
Hafgan, by exchanging kingdoms with him for a
year. It is a delightful land, where merriment
and feasting on the choicest food and drink go on
continually, and it has no subterranean character,
but appears to be conceived of as a province adjoining
Pwyll's kingdom.

(b) Annwn is also the name of a Land under
Waves or Over Sea, called also Cædr Sidi ('the
revolving castle,' cf. the Ille Tournoi of the
Grail romances, and the revolving house in Celtic
Edda saga) and Pwyll's island. A'ennwain,它的
'streams,' and which is reached by a long voyage.
It is 'known to Manawydan (Manannan) and
Prydveri,' just as the Irish Elysium was ruled by
Manannan (Skene, Four Ancient Books of Wales,
Edin. 1885, i. 270). Another 'Caer of Defence' is
beneath 'the ocean's wave' (Skene, i. 256).
Hence the two ideas were probably interchangeable.
The people of this land are free from death and sick-
ness, and in it is 'an abundant well, sweeter
than white wine the drink in it' (Skene, i. 270).
There also is a cauldron of a most marvellous kind,
the cauldron of Annwn,' that is, of the lord of Elysium, like that of
the Dagda, which is stolen away by Arthur and
his men. A similar cauldron is the property of the
people of a water-world in the Mabinogion
(see § 5).

(c) Finally, the description of the mysterious
island of Avalon, even though this was later
identified with Glastonbury, whither Arthur was
carried to be healed of his wounds, completes
the identification with the Goldie Elysium. No tem-
"ple, no exchange of heat or cold, no anxious
organisms troubles it; it is blessed with eternal spring,
and with fruit and flowers which require no husband-
man's labour; it is the land of eternal youth
unvisited by death or disease. The island of
Annwn, more beautiful than her beautiful maiden
attendants; she cured Arthur of his wounds, hence
she may be identified with the Morgien of other
tales, while she and her maidens resemble the
divine women of the Irish isle of women (Chréitén,
Erc, 1903-1909; Glaudrey, Vita Merlini, 41; San
Marte, Geoffrey, 425).

The Identification of Avalon with Glastonbury is probably
post-pagan (Loth, ii. 215, 264, 360), while the names applied to
Glastonbury—Avalon, Inisla Pomumana, Iona, Sienna—may
be primitive names of the island Elen (Brewer, A Guide to
Malmes-
by'r (Ant. Glaston, Eccl.) says that Ionula Pomunana is a
translation of the native name, Ionula Avalon, which he
connects with the Brythonic anna, 'apples,' because Glastenig

360 BLEST, ABODE OF THE (Celtic)
found an apple tree there. The name might therefore have been connected with marvellous apple trees, similar to those of the Irish Elysium. But he also suggests that it may have been derived from a Latin word meaning "invited", probably with a reference to the goddesses who were said to have visited and healed by the regia virgo (San Marto, 425). He may therefore have been a mythical land of the other-world, and his daughters were the Elyrians (see Rhy. As Ael. Leg. 335). He also derives Glastonbury from an eponymous founder Glastenig, or from his native name Ynysutiron ("Glass-island", Trottis, ii. 10). The glass fortress appears to have been the cited foundation of the fort on the Celtic Crétien, in the form, "l'Ile de voire." Giraldis (Spec. Eccles. ii. 9) explains the name from the glassy waters which surround the monastery. We must see in it an early name of Elysium (cf. Merlin's glass house, Triads, ii. 10; the glass fortress, ibid) as the Milerian Nennius, § 33; the glass bower of Elain (Celt., § 5); and the glass mountains of Teutoncynology and folk-tale.

4. Origin of the Celtic Elysium conception.— Most mythologies tell of a Golden Age in the remote past, when men were happy and when the gods lived with them (see Ages of the World, Fall). Man's imaginative faculties as well as his acute sense of the misery of his earthly existence may have led him to believe that this happy state still existed in the distance, and that a Golden Age in distant time. Wherever it was, it held endless joys; it was in a special sense the land of the gods or of some gods; thither some favoured mortals might penetrate. This was the germ conception of Elysium, but it is extremely doubtful whether it is so in Celtic mythology. Perhaps the Celtic myth of man's early intercourse with the gods may have taken a twofold development. In the one instance the idea which he hoped to go after death was that lost land, conceived as a subterranean region, and in the other there was no means to recover; men would not go there after death, but favoured mortals might be invited thither during life. It was thus clearly distinguished from the land of the dead, however joyful that might be. But this question requires separate consideration (see § 5). In Ireland it was held that after the conquest of the Tuatha Dé Danann, the gods, by the Milesians, they had retired within the hills or mounds (sid). But it agrees with the more primitive aspect of Celtic religion, as an agricultural race, to suppose that some of the deities, the fruitful Earth-divinities, had their abode beneath the earth, which, as the home of the gods, would be conceived in the loftiest terms. Thence man had perhaps originally come, and thither he would return after death. To this extent, therefore, the Underworld of the Earth-divinities was also the place of the dead. The later association of the gods with hollow hills and mounds was but a continuation of the belief in this divine Underworld, only, it seems obvious from the tales that these hollow hills, or sid, had become simply an Elysium state, not a state of the dead. These were, on the whole, still conceived as going to some region under the earth. There are no data to support the conception of a distant Elysium arose among the Celts. It may have been first suggested to them, while still on the Continent, by the setting sun: far off there was also a divine land where the sun-god sank to a blissful rest. On reaching the coast it was inevitable that a similar idea should be over seas, in some happy island such as they saw on the horizon. That island might be still connected with the sun-god, but it was more naturally connected with the god of the sea. Hence the sea-god, as usual, was the source of Elysium tales. The under-world Elysium and the over-sea Elysium were conceived in identical terms, and the same set of names applied indifferently to either. Perhaps the locating of Elysium in the sid may simply be due to the tendency to give a local habitation and a name to every mysterious region as time goes on. To this identity also may be assigned the mingling of the sid-folk with the over-sea Elysium. Both were in the same class of beings.

The idea of a world beneath the waters is common to many mythologies, and, generally speaking, it owes its origin to the animistic belief that every part of nature has its indwelling spirits. Hence the spirits of the Elysian place are conceived as dwelling far below the surface under a divine king or chief. Tales of supernatural beings appearing out of the waters, the custom of throwing sacrifices therein, the belief that human beings were extinguished into the water, or could live with the beings beneath the waves, all are connected with this primitive animistic view. Among the Celts, however, that water-world assumed the aspects of Elysium; it was a divine land like the over-sea Elysium. Hence in later story it became a fairy world, and as the modern Celt has and had precisely the same sensuous joys as in the island paradise; it also has names in common with it. Tir fa Tonn is also Mag Mell. Hence in many popular tales it is hardly differentiated from the island Elysium in which the fairies have become practically synonymous. Hence, too, the belief that such water-worlds as the Irish I Bresail, or the Welsh fairy-lands, or sunken cities off the Breton coast, rise periodically to the surface and would remain there permanently, like an island Elysium, if some mortal could fulfill certain conditions (Giral. Camb. ii. 12; Hardiman, Irish Min., London, 1831, i. 367; Rhy. Celt. Folklore, Oxford, 1901, i. 170; Sébillot, Folklore de France, Paris, 1904, ii. 56 ff.)

The Celtic belief in Tir fa Tonn is closely connected with the current belief in submerged towns or countries, which is perhaps found with greatest detail on the Breton coast. Here there are legends of several such towns, but most prominent are those which tell of the city of Is, which was submerged with all its people and still exists beneath the sea, where (or occasionally on the surface of the waves) it may still be seen. It was submerged as a punishment, because of the wickedness of its people. Other versions of the same belief suggest that Is must seek the love of mortals (Sébillot, ii. 41 ff.). Elsewhere in Celtic regions precisely similar legends are found, and the submergence is the result of a curse, or of the breaking of a tabu, or of neglect to cover a sacred well. The best example is that of the town covered by the waters of Lough Neagh (see Girald. Camb. Top. Hitz. ii. 9; Rhy. Celt. Folklore; Kennelly, Legend, Fictions, London, 1866, 282). There is little doubt that one important fact lies behind these various legends, viz, the tradition of actual cataclysms or inundations of the sea, such as the Celts encountered on the coast of Holland. Once formed, it was inevitable that these legends should intermingle with those of the divine water-world.

The idea that the Other-world is on the same plane as this world, or temporally locates itself there, and is hidden in a mist, is probably due to the belief in the magic power of the gods. One of the commonest pieces of druidic magic was the causing of a mist to effect concealment, and it was natural to believe that the gods could do the same. Behind that mist, for some definite purpose, the divine Elysium was temporarily located, with all its marvellous properties, as in the story of Cormac (and also in folk-tales where fairyland is thus imagined) (see O'Flaherty, Celt., 108, 170), or from such a mist supernatural beings frequently emerged to meet mortals. In such
cases the mist may simply have concealed the sid of the gods, from which the messenger emerged, or to which the mortal, misled by the mist, was introduced. Such appearances from a mist often occur in the legend of Tethra and elsewhere. (Cf. mumpl., West Highland Tales, Edin. 1890, Nos. 38, 52; Scott. Celt. Rev., Paisley, 1885, i. 70.) On the other hand, there may have been an existing belief that the divine world was invisibly co-extensive with this world, since in recent Welsh and Irish belief fairyland is on the same plane as this earth, and interpenetrates it; men may interfere unwittingly with it, or have it suddenly revealed to them, or be carried into it and made invisible (Rhys, i. 230; Curtin, Tales of the Fairies, 158). 5. Was the Celtic Elysium the land of the dead? A land of the dead is a land where there is neither grief nor death, a land of immortal youth and peace, filled with every kind of sensuous delight. In a few tales, however (the Malinoig of Ffeyll, Siek.-led of Cheadllain, Lægæirnæc Crimhith, Æol D—rmaid, Dairmaid in Tīr fa Tonn), while the sensuous delights are still the same, the inhabitants are at war with each other, invite the help of mortals, and are sometimes slain in battle. But in both these groups Elysium is the land of the dead, although the beings, a land to which a few favored mortals are admitted while still in life. It is never described as the world of the dead, nor do its people ever appear to be the dead. These two conceptions of Elysium, (1) a land of peace and deathlessness, (2) a land where war and death occur, may be both equally primitive. The second may simply have been formed by transferring to the divine world the actions of the world of mortals, as a direct result of anthropomorphism. It would also be on a par with the concept of the divine world itself, which was likewise a replica of the life of mortals in this world. But men may early have felt that the gods were not as themselves, that their land was a state of peace and immortality. Hence the creation of the legend of the peaceful Elysium. The two conceptions may have existed side by side, but apparently the more peaceful one found most favour with the people. Mr. Nutt (Brm, i. 159) thinks that the other conception may be due to Scandinavian influence acting on existing tales of the supernatural. But, as has already been said, the wars of divine beings occupy a prominent part in the mythological and Ossianic cycles of the Irish Celts, this is doubtful. Or again, the peaceful Elysium may have been the product of the Celts as an agricultural people, since it is ‘a familiar, cultivated land’, where the fruits of the earth are produced without men’s labour, where there are no violent storms or excess of heat or cold—precisely the fancies which would appeal to a toiling, agricultural people, while the more warlike Elysium may have been produced among the Celts as a warlike people, appealing to their warrior instincts. What is certain is that the inhabitants of Elysium are supernatural beings; chief among them are the well-known figures of Celtic mythology, but the others have every trace of divinity. D’Arbois, Rhys, and others, however, maintain that the Celtic Elysium is the world of the dead. Elsewhere will be found reasons for the belief that the orbis alias (Lucan, Plurr. i. 457), whither the dead went, is a national Phœnician Suburbanian region. Or, if it was an island, it was not the island Elysium (see CELTS, § xvi.). D’Arbois’ theory of Elysium as the state of the dead rests mainly upon different passages in 8krr3x (p. 339), which is interpreted by him in a way which seems somewhat wide of its true meaning. The sense of the passage seems to be: ‘The Ever Lastening’ (Cf. Rhys, p. 339), which pleases these people. They see thee every day in the assemblies of thy fatherland, among thy familiar loved ones.’ D’Arbois assumes that Tethra, the Fenian king, is ruler of Elysium, and that after his defeat by the Tuatha Dé, he, like Corgen, took refuge in Elysium, where he now reigns as god of the dead; while by introducing 8krr3x in the place of the words ‘on thy erra,’ he maintains that Conna, by going to Elysium, will be seen among the gatherings of his dead friends (D’Arbois, Dictionnaire de la langue Celtique, 1891, iii, 166, 233; Rott. xvi. 175). But it is impossible to take ‘Thou everlast’ as a champion of mankind’s and the soul of the god of the dead. It appears to mean simply that Conna is a mighty warrior, one of those whom Tethra, a Fenorian war-god (Stokes, Corrn., iii. 85; Curtin, Tales of Fairies, 158), ‘Tethra’s mighty men’ or ‘Tethra’s mighty’ men used elsewhere (Dialogue of the Sages, Rott. xvi. 27.), seems to be a conventional phrase for warriors. The note of this land is that it has its fleet or barque of immortals from afar, or Tethra’s mighty men, see Conna in the assemblies of his fatherland in Erin, among his familiar friends. The breadth of death awaits us all and the gods have left us. Would not the mortals desire Conna to escape that by coming to Elysium? Her words do not imply that she will not meet them; otherwise, moreover, if the dead went to Elysium, there would be little reason for inviting a mortal there while still alive. Thus this tale, like all other Elysian tales, was given for the occasion of the contention that Elysium is the place of the dead. Moreover, the rulers of Elysium are the Tuatha Dé or the sid-folk, never a Fenorian like Tethra. ‘Tethra’ is glossed as ‘waterwell,’ ‘sea,’ by O Cleary (Stokes, C. a. Tethra’), and Ó Céilecháin speaks of the sea as ‘the plain of Tethra’ (Arch. Rev. i. 125.), but we cannot infer from these that he was ruler of an over-sea Elysium, and the passages are probably derived from the association of the Fenomani with hostile sea-powers (see under Caisa, § x.). D’Arbois’ assumption that ‘Spain’ in ‘Nemnus’ account of the invasion of Ireland (Celt. Brit. § 123) is the land of the dead generally, means the land of the dead, and that it was introduced in place of some such title as Mag Mór or Mag Mheth by the enehanerial compiler of the Spanish Elysium. The fact that (1) Rott. xvi. 231) is equally grounded. In other documents which have been subject to Romano-Celtic influence these terms are generally the same; but there is no proof that a document, now lost according to D’Arbois, that the invader came from or returned to Mag Mheth. Once, indeed, but not so called (Alcuin, Ep. 192, vi. 197, ed. Murs.); the name of Spain (Book of Leinster = UL. S. 2.) but here a person is intended. It is much more probable that there was a connexion between Ireland and Spain from early times, both religious and commercial (Reinach, Rott. xix. 18. Streit, Les Premieres Ages du Metal dans le Sud-Est de l’Espagne, 1893); perhaps some of the Goddelic invaders reached Ireland from Spain or Gaul. This connexion, traditionally remembered, would be the chief basis for the name of Spain. It was further supported by the fact that early maps and geographers made Ireland and Spain contiguous (Uroschus, c. 2.); hence the traditional tale Ireland was invaded by Spain in Spain (UL. 11. 2). The word ‘Spain’ was used vaguely, but it does not appear to have meant Elysium or the land of the dead. 6. Characteristics of the Celtic Elysium.—(a) Nothing can exceed the romantic beauty of this land as described in the tales, and in nearly every one this is insisted on by the messengers who come from it to mortals. The beauty of its landscapes, its hills, cliffs, peaks, valleys, is seen from the air, or from the trees, rivers,—of its trees, of its inhabitants, of its birds, is obviously the product of the imagination of a people keenly alive to natural beauty. And borrowed from the delight which the Celt took in music is the recurring reference to the marvellous music which every bare swells in Elysium. It sounds from birds on every tree, from the branches of the trees which lull to forgetfulness the favoured mortals invited thither, from marvellous stones, from the harps of divine musicians. In Elysium, as the visitant says to Bran, ‘there is nothing rough or harsh, but sweet music striking on the ear.’ Probably no other race than the Celtic has, in describing the joys of the other world, so spiritualized the sensuous joys of sight and hearing, or imagined anything so exquisitely beautiful. (b) Certain of the tales which deal with an island Elysium make it evident that it was composed not of one but of several islands, ‘three fifty’ in number, according to the Voyage of Bran, though this may be a later conception. It is frequently described as the ‘Island of women’ or ‘of ever-living women,’ though in some instances there appear to be other inhabitants also. These women give their favours to Bran and his men, or to Machlúin and his company (Voyage of Machlúin, Rott. xvi. 653); indeed, it is said that these women exactly equals that of the mortal visitors. Similar ‘islands of women’ occur in Marchen still.
current among Celtic peoples, and actual islands were or are still called by that name—Eigg in the W. Highlands (Martin, *West Isles*, London, 1716, 277), Grongez off the Breton coast (Schéilhot, ii. 76). Similar islands of women are known to Chinese, Japanese, and Ainu folklore (Burton, *Thousand Nights and One Night*, ii. 285; Scalabrin, *Aino Folk Tales*, London, 1888, 38), to Greek mythology (Circe’s and Calypso’s islands, cf. the land of the Ama
dons), and to ancient Egyptian conceptions of the future life (Maspero, *Histoire des peuples de l’Orient*, Paris, 1886, i. 158). They were also known elsewhere, and it is therefore not unreasonable to assume that in making such an island a part of their Elysium, the Celts were simply making use of something common to universal folk-belief. It may, however, owe something to the memory of a time when women performed their rites in seclu-
sion, a seclusion which is perhaps hinted at in the references to the mysterious nature of the island, its inaccessibility, and its disappearance once the mortals leave it; to these rites men may have been initiated by the inner circle of the Celtic women who performed such rites on islands (Strabo, iv. iv. 6; cf. Ploss, *Das Weib*, Leipzig, 1885, ii. 70, artt. Birth (Celtic), and Celts, xii. 1). This may have originated the idea of an island of divine women as part of the Elysium belief, with its reference to the female aspects of that Elysium. Love-making, in effect, had a considerable place in the Elysium tales. Its divine inhabitants sought the love of mortals, goddesses of men, goddesses of women (cf. the tales of Bran, Connla, Osian, etc., of Manannan seeking the love of Tuag [*Kel. xvi, 152*]; Mider, that of Etain). The mortal desired to visit Elysium because of the enticements of the divine visitor, regarded by later Christian redactors of the tales as a demon (see ‘Cuchulainn’s Sick-bed,’ D’Arbois, v. 216). On the other hand, the love-making which goes on among the people of Elysium, even in documents edited by Christian scribes, is said to be ‘without sin, without crime’ (*Bran*, § 41).

(c) Besides their beauty, the characteristic of the inhabitants of Elysium which is emphasized in most of the tales is that they are immortal, or ever-living. Elysium is *Tir na nBélo, the land of the living*; its people ‘look for neither decay nor death;’ they are eternally youthful. The general belief among primitive peoples was that death was brought by the man who were naturally immortal; hence freedom from that accident naturally characterizes the people of the divine world. But, as in many mythologies that immortality is more or less de-
pendent on the eating or drinking of some food or drink of immortality; so it is in certain Celtic tales. Manannan, in the tale of Cormac, had immortal wine, which, killed one day, came to life the next; and with the flesh of these he is said to have con-
ferred immortality on the Thuntha Dé Danann. This was also conferred by the isle of Golland, with water of Gol-
land, which either by itself or with the flesh of swine formed his immortal feast (O’Grady, *Silva Gadel*. ii. 385; O’Curry, *Atlantis*, iii. 859). Besides con-
ferred immortality, the food of the Other-world was inexhaustible, and whoever ate it found its effect to have precisely that taste which he preferred. The fruit of certain trees of Elysium was also believed to confer immortality and other qualities. Cúchul-
ainn’s servant, Laeg, tells of 150 trees which he saw growing in Mag Mell; their nuts fed 300 people (L. 30). The apples given by the goddess to Connla was inexhaustible, and he was still eating it when he found another favored mortal visited Elysium—Teigne, son of Cian. ‘When once they had partaken of it, nor age nor nimbleness could affect them’ (D’Arbois, v. 384; O’Grady, ii. 385). Apples, crimson nuts, and rowan berries are specifically said to be the food of the gods in the ‘Pursuit of Diarmaid and Grainne’ (*Joyce*, 314). Through carelessness one of the berries was dropped on earth, and from it grew a tree, three of whose berries eaten by a man of a hundred years made him a young man. To keep one of them, Fionn, the leader of the Fianna, was great to guard it. With this may be compared the dragon-guarded rowan tree in the tale of Fioscos (Leahy, *Heroic Romances*, i. 30, with many variants elsewhere); its berries had the virtue of nine meals, added a year to a man’s life, and healed the incurable. It was supposed to grow hazel trees with crimson nuts, which fell into the water and were eaten by salmon. If these salmon were caught and eaten, the eater would obtain knowledge and wisdom (O’Curry, *Manann and Customs*, ii. 143). But the stories in which these hazels are mentioned show that they grew in Elysium, and their berries were the food of the gods, which a mortal might not eat without incurring danger (*Kel. xv. 451*; Burton,* Heroic Romances*, vi. 389). Windisch in the *Immergut* says that the trees of Elysium are much more marvell-
ous; they have silver branches (Bran); they have golden apples (Cormac); they produce won-
derful music, which sometimes causes sleep and oblivion.

(d) As these various nuts and fruits were prized in Ireland as food, and in some cases, perhaps, were used to produce an intoxicant, it is obvious that they were, primarily, a magnified form of earthly trees. But all such trees were doubtless objects of a cult before their produce was generally eaten; they may have been totem trees, and their fruit eaten only occasionally and sacramentally. If so, this would explain why they grew in the Other-world, and why their fruit was the food of the gods. Whatever man eats or drinks is generally supposed to have been first used by the gods, like the Hindu soma. Miss Hall points out that, in some tales, the branch of a divine tree becomes a talisman leading the mortal to Elysium; in this resembling the golden bough plucked by *Eneas* before descending to the under world (*FL* xii. 321). But this is not the primary function of the tree. On the other hand, Mr. A. B. Cook is of opinion that the branch is derived from the branch borne by early Celtic kings of the wood or representa-
tives of trees, and argues that it was not beneficial to be near such a tree, or to enter the living for-
tive form of the trees which incarnated a vegetation spirit (*FL* xvii. 158). But, again, it is the fruit of the trees as the food of the gods on which the greatest stress is laid in all the tales. When mortals eat it, it has the effect of conferring immortality upon them; in other words, it makes them of like nature with the gods, and this is doubtless derived from the primitive idea that the eating of food given by a stranger produces kinship with him. Hence to eat the food of gods, or the food eaten by the dead and the mortal to them, was he cannot leave their land. When Connla ate the apple, he desired to go to the Other-world, and could not leave it once he was there: he had become akin to its people. In the stories of Bran and Osian, they are not said to have eaten the divine food, but the primitive form of the tales may have contained this incident, and it would explain why they could not set foot on earth unsheathed.

(e) The inhabitants of Elysium are also invisible at will—Teigne’s, and the druid of their divinity. They make themselves visible to one person only out of many present with him. Thus Connla alone sees the goddess, his father and the druid with him do not see her; and, when Manannan comes to recall Fand, he is invisible to Cuchulain and she visible with him. This agrees with what Mider says to Etain:
BLEST, ABODE OF THE (Celtic)

‘We behold, and are not beheld’ (Windisch, i. 133).

(7) In most of the tales of Elysium, and in other stories about the gods, a magical cauldron has a prominent place, as it also has in tales of semi-mythical and legendary origin. It was the inexhaustible cauldron of the god Dagda, which came from Murias, probably some over-sea world (Ecol xii. 57), or the vat of inexhaustible mead described in ‘Céchulainn’s Sick-bed.’ Whatever was put into such vessels satisfied every one, no matter how numerous the company might be (O’Donovan, Battle of Mag Rath, Dublin, 1892, 50). Such a cauldron was stolen by Céchulainn from Midir, lord of the isle of Fúlga (the over-sea Elysium), along with several cows (Li. 169b); and in what is perhaps another version of this tale he obtains an inexhaustible cauldron from the daughter of the king of Scath (Hull, Cuch. Sages, 234). Similarly, in the Welsh poem called ‘The Spoils of Annwfn,’ Arthur steals a cauldron from Annwfn; its rim was encrusted with pearls, voices issued from it, it was kept boiling by the breath of nine maidens, it would not boil a coward’s food (Skene, Four Ancient Books of Wales, i. 265). In the Welsh story of Taliesin we learn how Tegid Vogel, a pagan bard, kept an inexhaustible cauldron of lake Tegid (i.e. ‘the Land under Waves’). Their son was so ugly that Ceridwen resolved to boil a cauldron of science and inspiration for him. For a year and a day it must boil till ‘three drops of the grace of inspiration’ were yielded by it. Gwion was set to stir it, and by accident obtained the inspiration himself (Guest’s Mabinogion, London, 1838, iii. 321 f.). Finally, in the story of Branwen, daughter of Llyr, her brother Bran gave the king of Ireland a cauldron into which any slain man might be restored, but be restored to life the next day. The cauldron had been given to Bran by two beings, a man and woman, who came out of a lake (‘Land under Waves’) (Loth’s Mabin. i. 65). The three properties of the cauldron— inexhaustibility, inspiration, regeneration—may be summed up in one word, fertility; and it is significant that the god with whom such a cauldron is expressly associated, Dagda, should be a god of fertility (see further, CELTS, § v.). But we have just seen it associated, directly or indirectly, with goddesses—Ceridwen, Branwen’s mother, was a personification of the lake—and perhaps this may point to the earlier cult of fertility associated with goddesses, and later transferred to a god. The cauldron as a regenerator would be significantly connected with a goddess, since woman as the fruitful mother early suggested to man the idea of the fruitful Earth-mother, who was also frequently a goddess of love. Elton had already concluded that Branwen was a goddess of love (Origins of English History, London, 1882, p. 291). The cult of fertility was usually associated with orgiastic and indiscriminate love-making, and it is not impossible that the cauldron may have symbolized fertility, like the Hindu yoni. Again, the slaughter and cooking of animals were usually regarded as sacred acts in primitive life. The animals were symbolic, enormous cauldrons, which were found as an invariable part of the furniture of every large Celtic house (Athen. iv. 34; Diod. Sic. v. 28; Joyce, Soc. Hist., London, 1903, ii. 124). The quantities of meat which they contained may have suggested magical properties to people, and the cauldron was a symbol of fertility. Thus the symbolic cauldron of a fertility cult was merged with the cauldron used in the religious slaughter and cooking of animal food. The cauldron was used by the Druids of the Gauls, according to Strabo, vii. 2. 1, referring to the Cimmeri, but this may also have been a Celtic usage; Brehon Laws, i. 195; Jullian, Recherches sur la rel. gaul., Bordeaux, 1803, 44). Like the food of men which became the food of the gods, the cauldron of this world became the marvellous cauldron of the other world; and, as it then became necessary to explain the cauldron of the dead, it was told how the cauldron arose, telling of how they had been stolen from the divine land by mortals. In other cases, however, its place is taken by an equally magic vessel or cup stolen from supernatural beings by the heroes of the Feinn saga or the heroes of Míracían. Here, too, it may be noted that the Graal of Arthurian romance has affinities with the Celtic cauldron. In the ‘Conte du Graal’ of pseudo-Chrétien, a cup comes in of itself and serves all present with food. This is a simple conception of the Graal; in other poems its sacrosanct character is heightened, until at last it became the chalice in which Christ instituted the Holy Sacrament. But in certain of its qualities it presents an unmistakable likeness to the Celtic cauldron—it supplies the food which the eater prefers, it gives perpetual youth. There is little doubt that the Graal is simply a fusion of the pagan Celtic cauldron and the chalice of our Lord’s blood (see Villemarqué, Contes populaires des anciens Bretons, Paris, 1842; Nutt, Legend of the Holy Grail, London, 1843).

(g) Sensuousness as are many of these characteristics, they yet have a spiritual aspect which must not be overlooked. Thus the emphasis placed on the beauty of the land, its music, its rest, its peace, its oblivion, is more spiritual than sensual, while the dwelling of favoured mortals there with divine beings is suggestive of that union with the divine which is of the essence of all religion. Though some who are lured there seek to leave it, others do not return, while Céchulainn’s charioteer Laeg says that he would prefer to stay with the kingship of Ireland (Winston, i. 219), and in Ireland elsewhere re-echoed by Laegaire mac Críththimn. On the whole, then, it may be said that, of whatever elements it was composed, the conception of the Celtic Elysium was the imaginative shaping of man’s instinctive longing for peace and rest. He hardly expected to obtain these beyond the grave, for there life went on as here, although that future state was one which had no terrors for him. A few great personages might reach Elysium after death, according to Plutarch, deorum deorum (Oraç 18) may hint (see under CELTS, § xvi. 5), but it was shut to all save a few favoured mortals who might be carried there in life. And possibly the hope that he might be so favoured of the gods buoyed up the Celt as he dreamed over this distant Elysium.

7. The Celtic Elysium and the gifts of civilization.—In the opinion of the Celts, as of many other peoples, wisdom and culture belonged first of all to the gods, by whom they were given to, or from whom they were stolen by, man. Examples of this have already been found in the tales in which a mysterious cauldron is stolen from the Other-world (§ 6). It is also hinted at in the tales of divine trees guarded from mortals, and in the belief in the hazards of wisdom which endowed mortals with supernatural wisdom and knowledge. But when men came to domesticate animals, it was believed in course of time that the knowledge of domestication or, more usually, the animals themselves were given to them from the Other-world; in this case, the animals were of a magical, supernatural character. Such a belief underlies the stories, already referred to, in which cows are stolen from their divine owners by Céchulainn. In the tale of ‘Ner’s Adventures in the Land of Promise’ (Celtic Man. 236), Ner’s wife and several kine from the sid of Crussan; and similarly Tulehin, who took a wife from the Land of Promise, obtained
9. Elysium and Paradise. — While the tales already dealt with are mainly re-mouldings of earlier pagan originals, while a few have been handed down orally, or are based upon the materials of pagan belief, they have in many ways been influenced by Christian ideas, although their main incidents are purely pagan. But in another case, in which the original pagan tales were written, the Elysian conception recurred, and finally ends in becoming the Christian paradise or Heaven. These are the *Immrama*, or *Voyages*, of which that of Maelduin, found partly in the 11th century MS St. Columba, and in complete form in 14th to 16th century MSS, stands at the head. 

The voyage is undertaken for the purpose of revenge; but the travellers reach a number of strange islands unpeopled, or peopled by men and women, by animals, or by monsters. One island closely resembles the Isle of Women in the pagan Elysium. Besides the Isle of Laughter, found also in *Bran*, there is an Isle of Weeping, and in this we approach the idea of a place of penitence. Another island, guarded by a fiery rampart, is the domain of feasting and singing—an approach to the Christian paradise. The Isles of Weeping and Laughter are also found in the *Immram hua Corra*, where also is the island of the Miller of Hell, mentioned simply as a miller in *Maelduin*. Thus, even in *Maelduin* the use of the pagan materials is indicated, and the Elysian conceptions have become vague. Elsewhere, as in the *Voyage of Snefnus and Mac Riongla*, the journey is undertaken as a pilgrimage, and the Christian atmosphere is more pronounced. One island, however, has a kind of intermediate state, and in it dwell Elijah and Enoch and a multitude of others without sin, without wickedness, waiting for the day of judgment. Another island is nothing less than the Christian Heaven viewed from an ecclesiastical standpoint. Finally, in the *Voyage of Brandes* the pagan elements have practically disappeared: there is an island of Hell and an island which is the Christian paradise or Heaven. In these *Immrama*, the number of islands visited may be compared to the thrice fifty islands of *Bran*, whether it be the fifty tales of the pagan paradise or not; the old idea of a mortal lured thither by a goddess has disappeared, and the voyage is undertaken for a specific purpose—revenge or a pilgrimage. Another series of tales, in which the Christian elements appear in vision (Adamnan's Vision, *The Tidings of Doomsday*, etc.), are purely Christian products, but it is remarkable that the joys of heaven are described in terms of the pagan Elysium. There is an imaginative beauty, music, absence of sickness, of pain, of death; there is no age, decay, or labour. The whole description of heaven has a sensuous, material aspect which reflects that of the old pagan stories. In the latter text there are two hells; besides heaven there is a place for the boni non cullo which corresponds to the island where dwell Enoch and Elijah in the *Voyage of Snefnus*. The conception of this island, which is not heaven, may be borrowed directly from the pagan paradise. The connexion of the pagan Elysium with the Christian paradise is also seen in the title of *Tir Tairngiri*, 'the Land of Promise,' which is applied to the heavenly kingdom or to the land flowing with milk and honey, as in glosses (7th or 8th cent.) on He 6, where *regnun coomorun* is explained by *tir tairgiri*, 'the land of promise,' on Co 10, where the heavenly land is called *tir tairgiri inna mho*; 'the land of promise of the living ones'; thus apparently equating it with the *nab mho* of...
BLEST, ABODE OF THE (Greek and Roman)

'Conna's Voyage.' If tir taurnigiri was not already a title of the pagan Elysium, it was now applied to that heavenly abode by a development from the influence of this identification.

10. Elysium in later folklore.—Most of the stories of the pagan Elysium reappear in folk belief almost unchanged. The under or sid world is everywhere in fairy-gounds, forth from its fairy-dwellings into which mortals are sometimes inveigled, and where all the characteristics of the earlier divine world are found—magic lapse of time, marvellous beauty, magical properties. Similarly a marvellous over-sea land is still a commonplace of Celtic Maine and Celtic belief. Tir na Nog is still a living reality to the Celt. Within that fabled land are the mystic and magic things of folk-tale—the fountain of youth, healing balsams, life-giving fruits. It is peopled by marvellous men, and by gods, and by incomparable fairy folk. Sometimes it is visible only to favoured persons, or it is sunk beneath the waves, and comes to the surface only at intervals. But in whatever form it is found, it is obviously linked on to the abode of Elysian gods in the pagan Celtic world.

In the 11th cent. Irish documents, from which our knowledge of Elysium is mainly drawn, and which, of course, imply a recognition of the abode of the immortals, the world of the sid is still the world of divine beings, though these are beginning to assume the traits of fairy folk. But probably among the people themselves the change had already been made, and the sid world was simply fairyland. In Wales the same change had early taken place, as is witnessed by the story of Eildrons enticed by strange people into a shadowy world of fairies. Similar traditions are told by Geraldus Cambrensis (H. anc. i. 5). For the over-sea land see J. F. Campbell, Popular Tales of the West Highlands, London, 1860—62; MacDougall, Folk and Hero Tales, London, 1891; Howells, Cambrodian Superstitions, Tipton, 1853; Scholz, Fabeln aus der Alt- und Mittelhochdeutschland, Legendäre Fictions, London, 1866; or any collection of Celtic Maeren.

BLEST; ABODE OF THE (Greek and Roman).—f Greek.—In the Homeric poems the gods are the favourite deities; the old strata of the poems is immortality an attribute of man. Complete life for him exists only on earth and in the light of the sun, and only with the complete union of soul and body. When separated from the body, the soul passes out of this world into a shadowy, powerless existence, which is nowhere expressly stated to be eternal. The idea of an earthly paradise, i.e. an abode of bliss upon earth, where life is continued in full vigour without the suffering experience between soul and body which death renders possible, is a poetic conception of the problem of an after-life. A solution so naive does not long remain an article of belief in Greece except among the ignorant vulgar. In the history of religion the idea is absorbed by the belief in immortality, which was soon fostered in Greece under the influence of imported mystical tenets and of philosophic systems founded upon them. The earthly bliss, which at best could be attained only by the favoured few, is transferred into the other world, which is the happy abode after death to all who have lived uprightly. In the history of literature the idea survives as a beautiful fancy which is cherished by poets and often serves in later times as a basis for the romantic re-constructions of human society in which the Greeks found a melancholy consolation for some of the darkest periods of their history.

1. Homer, Hesiod, and the Epic Cycle.—In Homer, as the gods alone are immortal, so they alone can confer immortality. Their favourite heroes, always of divine descent, have such immortality conferred upon them by the drinking of nectar or the eating of ambrosia, and are therefore translated either to heaven or to an earthly paradise such as the Elysian plain. The most striking instance of such an earthly translation is to be seen in Od. iv. 561, where Protons prophesies to Menelias:

But it is not thy destiny, O Menelaus of Zeus, to die and meet thy fate in horse-pasturing Argos. The immortal gods will send thee to the Elysian plain and the verge of the world where fair-haired Rhadamantys dwells, where life is easiest for man. No snow falls there, nor any violent storm, nor rain at any time; but Ocean ever sends forth the clear, shal low waste of the West wind to refresh mankind; because thou hast Helen to wife and they count thee to be son-in-law to Zeus.' (Cf. Eur. Heli. 167 ff.)

Here it should be noted that Elysium is on earth and not in Hades. It is the counterpart of Olympus, the mountain-home of the gods, described in almost the same words in Od. vi. 43—45. Further, Mene lads is not it, but Thetis, as a representative of heroes. Like Rhadamantys, he is of kin to Zeus. The blissful existence in Elysium which is conferred by the gods upon their kin is an exceptional privilege, exactly parallel to the eternity of bliss which they inflict upon their enemies in Erebo (Od. xi. 576 ff.). This is the actual ancestor conception. But in a later period of Hellenism, the conception has become rather than religious. The heroes who have passed thither exert no influence upon the world of men that they have left behind. The gods transfer to them none of their own prerogatives save immortal life. The conception is an extension of the other ideals of blissful, though mortal, existence that are found in Homer—chiefly in the Odyssey, which is permeated by a peaceful spirit characteristic of men who have enjoyed undisturbed quiet long enough to value it, and foreign to the martial temper of the Iliad. Of such ideals the most noteworthy are the idyllic lands of Phaeacii (Od. vii. 81), of the island of Syriee, the home of Eumenes (Od. xv. 409), and idyllic peoples such as the Abii (H. xii. 8) and Ethiopians (H. i. 423).

This enchanting fancy of an earthly paradise became an ideal of the mind of Greek thought once it had been incorporated in the Homeric poems. The common people of Greece were accustomed to the idea of 'translation' in the worship of such heroes as Amphiaraos and Trophonios, who had passed into death and were believed to have been translated to heaven. The 'translation' of heroes, so rare in Homer, is of common occurrence in the post-Homeric Epic. In the Cyprus, Iphigeneia is rescued by Artemis, carried to the land of the Tauri and rendered immortal (Proclus in Euporcan Graec. Fragi., ed. Kinkel, p. 19). In the Aethiopis, Mennon is translated by his mother Eos to her home in the East and made immortal by Zeus at her request (ib. p. 33). In the same poem, Achilles is saved from death by Thetis and conveyed by Proteus to the abode of Zeus (ib. p. 34). In the Telethegenia, the latest of such Epics, Teleconus, the son of Odysseus and Circe, brings the bodies of Penelope, Odysseus, and Telemachus to his mother, who confers immortality upon them in her home in Aeaea (ib. p. 58).

Thus far the idea of an earthly paradise is developed at the will of each particular poet. The fortunate heroes have no common home, but are transferred to magic lands which are alike in nothing else save that the gods have found them. The various strands of fancy are woven together into a consistent whole by Hesiod, in whose poems we meet with the expression 'The Isles of the Blest' for the first time. In Op. et Di. 170 B., after
the description of the three races of Gold, of Silver, and of Bronze, follows a fourth race better than the race of Bronze—the heroes or demi-gods who fought at Thebes and at Troy. Of these, some died gloriously, but others fled away. The number of them is not specified in the works of Homer, Sallust, and Theopompus. Some others were placed in the centre of Libya (Herod. iii. 29) or in the Antipodes (cf. Serv. Aen. vi. 532). The home of Diomedes was found in the Treni islands in the Adriatic (Strabo, vi. 283, 284). Lenke, the Velo of Achilles, was placed in the Enkine (Ael. Fast. iv. 489; Pind. Andr. 1232 f.), Iph. T. 420), at the mouth of the Danube (Paus. iii. 19. 11), and was counted as one of the Isles of the Blessed (cf. Plin. HN iv. 93, "Insula Achilis, eadem Luce Euan Mazaron diatii"). Similar legendary lands are placed near the Indian Ocean (cf. Aristophanes, A. 144; Aesch. frag. 192, Nauck). For further attempts see Hesychius s.v. 'Lesbos,' and Snudia s.v. 'Rhodos.' A parody of the belief will be found in Lucian's Vera Historia, ii. 6 ff. The inscriptions containing references to the Elysian plain and the Isles of the Blessed may be consulted most conveniently in G. Kaibel's Epigra"numa Graecae, exlapidibus collecta, Berlin, 1878. But here it is no question of earthly bliss. The Blessed Isles (Ep. 640. 2), the Elysian plain (Ep. 814. 8), and the Islands of the Blessed (cf. Plin. HN vii. 141), are not of this world, but only testify to a life beyond the grave to which the righteous can aspire. The Epigram on Regilla, the wife of Herodes Atticus (1046. 8), μη δοξάσαντες τοὺς μάρτυρας τοῦ θαύματος τῆς κόσμου θανάτου, is merely a literary adaptation of the older belief.

2. The Romance writers.—The best account of these will be found in Rohde's Griechische Romantik, pp. 178-260). The political downfall of Greece, which began in the 4th cent. B.C., and the widespread disasters which accompanied it, led men to seek relief from the hopelessness of present affairs in the freedom of fanciful speculations. Social reformers, whether politicians or philosophers, embodied their ideas in sentimental romances—a branch of literature which developed naturally out of the old sagas (e.g. the tale of the Argonauts) and the stories of fabulous adventures and ethnographical curiosities which had long been popular in Greece. As early as Solon we find a comic description of a race of cannibals (Sol. Frag. 36; Hip. 260. 27), and Homer's Mys and Phlegyas (Hom. Iliad 6. 27) and the passage in Hesiod (II. 454) are similar tales. In the eighth book of his Philippics he introduced a description of an ideal country called 'Meroips' with its cities Machimos and Eunës—first a town of warriors, the second the abode of peace and justice. A more philosophic work was 'The Hyperborean' of Hecataeus of Abdera, a philosopher at the court of Ptolemy I., and a pupil of the sceptic Pyrrho. Pyrrho's philosophy was less a theory of doubt than a conviction that the whole world of things was unverifiable, and that a calm indifference was the only feasible rule of conduct. His pupil's romance on the Hyperboreans, who live in the island of Heiuxia, in the Northern Ocean, seems to have been prompted by similar views. Anometus, a contemporary of the first and second Ptolemies, travelled outside the range of native mythology, and based his romance of the Attaeci (Tit. HN vi. 17, 55) upon the Indian legend of the happy land of Uttarakuru, north of the Himalayas (cf. Lassen, WZKM ii. 63, 64). Enriemus of Antissa, after having been shipwrecked, finds his Utopia in the island of Panchaia in the Indian Ocean. Iambulus (of uncertain date, but earlier than the age of Augustus) finds an Island...
BLEST, ABODE OF THE (Hindi)—The Hindus believe that there was, and is still, a place of bliss on earth, a kind of earthly paradise, inaccessible to men, and far far away from our part of the earth. But the idea, frequent among many savage tribes and some civilized peoples, that the brave and the virtuous go to such a place on their decease, seems not to have been current in ancient India. For already in the Rigveda the abode of the dead, who in life have done pious deeds is said to be in heaven above, and, according to the Atharvaveda, the wicked receive their punishment in the hell below.* And in later Sanskrit literature heavens were multiplied to such an extent that the souls of the deceased were amply provided for, and required no dwelling place on earth such as the Islands of the Blessed of the ancients. The Indian belief in a place of bliss cannot therefore have developed from an earlier one in a heaven on earth; but we shall postpone our inquiry into the probable origin of this belief till we have described it in all its details. We must, however, define this place of bliss more accurately as one believed to be still in the earth, in order to distinguish it from the state of bliss which obtained in the Golden Age, when the whole earth, newly come into existence, was, as it were, all one abode of the Blessed.† In the Sanskrit epics, the Purânas, and the classical literature the Uttarâkurus are regarded as the Blessed, and their land as an earthly paradise which is localized in the far North.

1. Site of Uttarâkuru.—It will be convenient first to set forth the Paurânic opinion on the site of Uttarâkuru, since it is the most explicit one. According to the Purânas, the earth, of which India forms part, is a circular island, or rather insular continent, of enormous dimensions, called Jambudvîpa. There are six more such islands, Sîkâdvîpca, etc., which, however, are not connected with our present subject. In the centre of Jambudvîpa rises Mount Meru, 8,400 yojanas above the surface of the earth. The whole continent is divided by six parallel mountain ranges, running due east and west, three south of Meru and three north of it. The southernmost range is the Himalâya, and the fabulous mountains Nîskûta and Sêtavâparâsa, and having vanquished many mythical people, Arjuna reaches the north of the country Harîvâra. There he is warned not to proceed further, because the region beyond Harîvâra is inhabited by certain beings which are not to be mentioned. The Purânas also mention those four countries, substituting, however, Bhârata for Jambudvîpa, and likening them to the petals of a lotus whose pericarp is Mount Meru. Sometimes they seem to be located as continents outside the middle varsa, sometimes as islands lying off the coast of Jambudvîpa in the great ocean. The efforts of the Purânas to explain this result in worse confusion.

* A. M. Butler, *Vedic Mythology* (in Grundriss der Indischen Philol. und Altertumskunde), Strassburg, 1897, p. 29 ff.
† See art. Aces of the World (Indian) in vol. i. p. 200 ff.

The counterpart of Bharatavâra, i.e. the segment to the north of the northernmost range, Śrîgîn, is Uttarâkuru. It may be mentioned that the other varsas, or strips of land between the several mountain ranges, as inhabited are not, in the model of them all seems to have been the Uttarâkurus. From the position of the country of the latter it is clear that they were regarded as the antipodes of men, if it be allowed to apply this term to an earth figured as a disc.

In the Bhishma Parvan, adhy. v. and vi., in a part of the Mahâbhârata of a decidedly Paurânic character, we meet with a somewhat different description of the earth, called here Sudarśana instead of Jambudvîpa, with the number, arrangement, and names of the mountain ranges in the same as in the Purânas, but the names of some of the varsas are different, and those of the two most northern ones are omitted. In vii. 10, however, all the northern segment is called Āravâta, not Uttarâkuru, which, by the way, is also the case with the Jains; yet the excellence of the country and the happiness of the inhabitants of Āravâta are exactly like those of the Uttarâkurus as described in a preceding chapter. In this account (vi. 13) the land of the Uttarâkurus is described as being near the eastern side of Meru, or near the centre of the disc of the earth. Round Meru, we are told, are grouped four dvîpas, lit. 'islands,' but, according to the commentary, countries surrounding by a broad river; these islands are Uttarâkuru N., Bhadrâsa E., Jambudvîpa S., Ketumâla W. Here we must distinguish, it seems, two accounts: the Paurânic account, which is the basis of the description of the earth; and combined with it an older one, which places Meru in the ocean, and the four insular continents round it.* Here, too, Jambudvîpa is the abode of men, and Uttarâkuru that of the Siddhas.

What the present writer considers the earlier of these two accounts is actually the idea underlying the Buddhist system of geography. There Meru rises from the ocean, round it are seven concentric mountain ranges separated from each other by ring-shaped seas, and beyond them, in the vast ocean known to men, are four insular continents—Jambudvîpa S., Pûrvavâdeha E., Uttarâkuru N., and Apraśâtra W. Jambudvîpa, then, is of a triangular shape, and Uttarâkuru, the abode of the Blessed who live 1000 years, forms a square.†

The Jains, whose geography has been developed on the same lines as that of the Paurânas, also place the Uttarâkurus in the centre of the world, the Jambudvîpa, between Gandhâmâdana and Mûlayat, two spurs of Mount Meru running N. and N.E.‡

In such parts of the epics as do not yet exhibit the fully established system of Paurânic geography, the Uttarâkurus are placed in the extreme North in the borderland of the inhabited or known earth. In the Divyâypaçarvan of the Sabhôparvan of the Mahâbhârata (ii. 28), Arjuna's conquest of the northern countries is related. After having crossed the Himalâya and the fabulous mountains Nîskûta and Sêtavâparâsa, and having vanquished many mythical people, Arjuna reaches the north of the country Harîvâra. There he is warned not to proceed further, because the region beyond Harîvâra is inhabited by certain beings which are not to be mentioned. The Purânas also mention those four countries, substituting, however, Bhârata for Jambudvîpa, and likening them to the petals of a lotus whose pericarp is Mount Meru. Sometimes they seem to be located as continents outside the middle varsa, sometimes as islands lying off the coast of Jambudvîpa in the great ocean. The efforts of the Purânas to explain this result in worse confusion.

† TatÔtrââdhyâyana Sûtra, ed. Umâvât, ch. iii., tr. in ZDMG, vol. xiv.
‡ TatÔtrââdhyâyana Sûtra, ed. Bibliotheca Indica, Calcutta, 1903, Appendix, p. 28 f.
is that of the Uttarakurus: 'he that entereth if, human, is sure to perish.' In the Rāmāyana (iv. 43) we meet with a description of the North where the monkeys are despatched in search of Sītā. The mountainous regions of the Himalayas, which do not form part of the Pauranic system of geography, are mentioned. In the North sun and moon cease to shed light, and even farther north live the Uttarakurus.* Their country is bounded by the Northern Ocean, in which rises Mount Sumeru, the land of the Nambuyas, which are said to be the home of the demigods, and which itself is so placed as to surround the earth. Notwithstanding the prevalence of Pauranic geography during the classical period and some centuries before it, some faint knowledge of an actual tribe of Uttarakurras, somewhere on the slopes of the Himalayas, seems to have continued even then. Lassen has drawn attention to some notices in the Epics and classical writers where the Uttarakurus are not regarded as a fabulous people. Important in this regard seems to be a passage in the Viśvaveda Brahmana (vii. 151), where the Uttarakuru aurochs are mentioned, upon which a rest against the Mountains, has the following note which sums up the whole question under discussion:

They seem to have been stock from which the Kuru's and the Vriksharvas and the Dhyāra Kangas were originally derived. In both of these branches of the Kuru's engaged in happy rivalry (Xli-P. cix. 1966-40); but the wild recollections of their ancient home idealized it afterwards into a blissful land, where fancy gave itself free scope (Râmây., Ksh. xiv. 69-135). They seem to have occupied the uppermost valley of the Indus near its sources, with Kailâs lying beyond (Yâna-P. cix. 1025-35); and servile imitation also placed them close to Mount Meru on its north side (Bhishma-P. vi. 207-8, and vii. 509), or in the region Harîvaras, and declared men could not enter their sacred land (Sânt-P. cxi. 151-54). Men, living in primitive happiness, and women had the utmost freedom there (742, 4792-93, and Râmây., loc. cit.).

* The first mention of the Uttarakurus is contained in the Aitareya Brâhmaṇa. In viii. 14 we read: 'hence all people living in northern countries, such as the Uttarakurus, Uttarakurānadas, are inaugurated for living without a king (vairâyana), and called Vîrâ, i.e. "without king."' Here the Uttarakuru aurochs seem to be a real people, that in which the Indians, at the time of the Aitareya Brâhmaṇa, were actually acquainted, or, at least, of which they had some kind of positive knowledge; for the very name Northern Kuru's, and the two tribes mentioned, the Vriksharvas with the Northern Madras, proves that these peoples of the North were regarded as related by kinship to the well-known Indian tribes of the Kuru's and Madras. But the Uttarakurus were already looked upon as superior beings, for in the same Brâhmaṇa (viii. 20) it is declared that Uttarakuru is 'the land of the gods, no mortal can conquer it.'

It must be added that Plotinus (vi. 10) mentions a mountain, people, and town of the name of Uttorokurâ, which obviously stands for Uttarakuru aurochs, and Plutarch in his Historia Plurari and Tacitus. On the other hand, many fables seem to have been told of them. For Pliny says: 'de ipsis privato conditio

* Even in later Pauranic myths we meet with the belief that the gods and the demon lived among the Uttarakurus; e.g. Sâkhâ, the wife of the Sun, escaped in the shape of a mare in order that her husband might not discover her (Harihârâs, 661, P. 12, c. 117, 3), cf. G. F. Kunckel, ch. 77.

* Ib. p. 357.

1. Description of Uttarakuru.—The classical passages about the land and the inhabitants of Uttarakuru are Rāmâyana iv. 43 and Mahâbhârata vi. 7, of which we subjoin a translation:

In Rāmâyana iv. 43 it is said that in the farthest North sun and moon cease to shine, and even farther live the Uttarakurus. There they are said to come to the river Sâkhâ, whose water, according to the Bengal redaction of the text, turns into stone the man who touches it. On either side of this river grow red fruits, which carry the India (Sâkha.) to the opposite bank and back. There is Uttarakuru, the abode of the kuru aurochs, watered by lakes with golden lotuses. There are rivers and water-lilies, leaves of the colour of sapphire and lapis lazuli, and the lakes, other than the one of the sun, are there filled with golden beds of red lotus. The country all round is covered with costly jewels and precious stones, with gay beds of blue lotuses of golden petals. Instead of sand, corn forests, costly woods, and gold form the banks of the rivers, which are covered with trees of gold shining like fire. The trees always bear flowers and fruits, they are of a heavenly smell and touch, and yield all delights; other trees yield milk and milk-yielding trees. They are divided into the seven principal branches. There one always hears the sound of song and music mixed with gay laughter, pleasant to all creatures. There is none who does not rejoice at the sound of the seven desirable sounds, which are out of place there, but on the whole it is in the same strain. Besides the items given above, there are gold and silver, and there is no lack of milk-yielding trees and milk-yielding cows, and of milk-yielding forms of the milk yielding trees. The people there live in dwellings of boiled rice, and trees on which grow beautiful maidens hanging down from their branches.

The description in Mahâbhârata vi. 7 runs thus in Protop Chandra Ray's translation: 'On the south of the Nila mountain there is the northern side of the Himalaya (the Northern Kuru's, which are the residence of the Siddhas. The trees there bear sweet fruits, and are always covered with milk and milk-yielding trees, and yield milk of excellent taste. Some of the trees, again, yield fruits according to the will of (the plucker). There are, again, some other trees, which yield alms given by the alms giver, and milk and six different kinds of food of the taste of Amrita itself. Those trees also yield clothes, and in their fruits are ornaments (for the use of man). The entire land abounds with fine golden sands. A portion of the region there, extremely delightful, is so free as to possess the radiance of the ruby, or of the lapis lazuli, or other jewels and gems. All the seasons there are agreeable, and nowhere does the land become miry. The trees are always covered with the fruits and flowers, and the gold and silver trees, and the trees from which there are dropped from the world of the celestial. All are of more birth, and all are handsome in appearance. There twins (of opposite sexes) grow there, and the children of gold and silver are raised without injury, and in beauty. They drink the milk, sweet as amrita, of those milk-yielding trees, and in the form of milk, without delay, and they are always happy. Some of the opposite sexes grow up equally. Both possessed of equal beauty, both endowed with similar virtues, and both equally blessed, both created in love and grace. The people of that country are free from illness, and are always cheerful. Ten thousand and ten hundred years they live, and never abandon one another. A class of birds called Madrâpura, furnished with sharp beaks, and possessed of great strength, take them up when dead and throw them into mountain caves. One more item must be added. In the following chapter it is narrated that on the south of the Mount Meru three trees grow the jagatind, the jambuh, and the jambudvâra, from which the name Jambudvâri is derived. It touches the very skies, and bears fruits of 1115 cubits circumference. In falling upon the earth these fruits make a loud noise, and then pour out a water which is scattered on the ground. That juice of the Jambu, becoming a river, and passing through the shop and the region of the Northern Kuru's. If the juice of that fruit is quaffed, it conduces to peace of mind. No thirst is ever felt after;' decreases desire and weakness there.'

Most Purânas give no detailed descriptions of the Uttarakurus, for the number of fabulous peoples inhabiting the other vayesa beyond the Himalâya is very great in the Purânas, and all these peoples live in a state of happiness denied to the human race. The Utarikuru is one of the smallest equals of the Uttarakurus who, though still regarded as the blessed race, lost something of the interest originally attached to them. There is, however, a description of Uttarakuru in the Markandeya Purâna vii. 2, which is apparently based

* Schwaner, Megasthenes' Indica, Bonn, 1846, p. 117.

* See Markandeya Purâna, tr. p. 252. (Tr. p. 389.)
BLAST, ABODE OF THE (Japanese).—1. The ancient native religion of Japan, Shinto, had little to say regarding a future life, and the old records or scriptures are silent on the subject. The closest reference to the state of the dead occurs in the Nihongi (Trans. Jap. Soc. Supp. I. i. 296, London, 1896), where the dead Tamichi appears from his tomb as a serpent and kills his enemies. ‘Therefore the men of that time said, “Although dead, Tamichi at last had his revenge. How can it be said that the dead have no knowledge?”’ Shinto, in its later developments, has been influenced by Buddhism regarding the future state of the dead. The earlier texts frequently assert that the dead were confined within Yomi (‘darkness’), the Root-country (Ne no kuni), or Bottom-land (Soko no kuni). This neutral-tinted Hades is called ‘a hideous and polluted land’ (Nihongi, i. 24), and one prayer invokes protection against ‘the unfriendly and savage beings of the Root-country’ (Aston, Shinto, London, 1903, p. 187). But, though it is not stated to be the region of the dead, the word yomi appears to have been used metaphorically for the grave or the state of the dead. There are gods in Yomi, and sometimes they and some of the gods there are said to have been born like Izanami, whom her husband, Izanagi, tried to rescue, according to a myth resembling that of Orpheus and Eurydice (Chamberlain, Ko-ji-ki, Yokohama, 1883, p. 36; Nihongi, i. 24; for other tales of descents to Yomi, see Aston, 106, 181; Joly, Legend in Japanese Art, London, 1908, pp. 5, 11). This myth may simply be a reflexion of the belief that mortals, when they died, went to Yomi. Native writers on Shinto have identified Yomi with the state or place of the dead (Dazai Jun [1860-1847], Trans. Third Inter. Cong. Hist. Rel. Oxford, 1908, i. 163; Motoori [1730-1801]; Aston, 55), but the question is obscure. Generally the gods of Yomi are deities of death, disease, pestilence, and poverty, and in a Norto, or Ritual, offences are described as sent to Yomi by the god Ikuni-do-mushi (Aston, 302). In later times, Yomi is regarded as a place of punishment, and is identified with the Buddhist Jigoku, or hell (Joly, 117; Aston, 54, 357).

2. Heaven.—As in most primitive forms of eschatology, the Japanese belief is a compromise between the future state of men of rank, power, and wealth, and that of the masses of the people, so it was probably in Japan. Izanagi, who was not immortal, after his futile attempt to regain Izanami, died, and went, according to one account, to an Island; but, in another, went to dwell in the palace of the Sun. The ‘plain of high heaven’ is also the place where great men, heroes, mikados, and the like are said to go, there to dwell with the gods. This is in accordance with the later designation of men, whether living or dead (mikados, wise, virtuous, and heroic men), who would then be associated with the heavenly deities, as a class of lesser gods. Later Shintoism, adopting Chinese views of the soul, maintains that, at death, the kon, the positive spirit or yotoku, goes to heaven (Aston, 52). Ame, or heaven, where the gods dwell, is minutely described in the early records. It lay just over the earth, and was connected with it by the floating bridge of heaven (perhaps the rainbow), and supported by a pillar, though the sacred tree also described as the pillar of heaven. The tranquil river of heaven is the milky way, where the gods assemble. It has mountains, caves, valleys, streams, groves, fields, trees, and flowers, and all kinds of gods and goddesses. When one goddess on a rock or hill of the sacred tree on one occasion retired, is particularly referred to, as well as the rare jewels, the marvellous mirror, and the splendid robes hung on the sacred sakaki.
tree to tempt her forth. The scenery of the 'plains of high heaven' is that of earth on a more beautiful and extensive scale. (For these details, see Ko-ji-ki and Nihongi.) Tales of mortals ascending to the sky and remaining there, either through miraculous visitors or by divine favour, are common (Joly, 163, 295).

3. The Eternal Land.—Toko-yo no kuni, the Eternal Land, is sometimes spoken of as the place whither certain persons go after death, e.g. the god Sukunahime and her sister, the fire-god Mikado (Aston, 54, 117). This Eternal Land is sometimes identified with Korea or China. From it Tajima Mori brought a fragrant fruit, the orange. The land lay across the sea and took ten years to reach, and on his return he said, 'This Eternal Land is no other than the mysterious realm of gods and goddesses, to which mortals cannot attain' (Nihongi, i, 186-7). In a well-known popular tale the Eternal Land is identified with the palace beneath the waves of the Dragon King of the Sea.

Urasinha, having rescued the king's daughter, went thither with her and remained for three years. At the end of that time long years had passed, and there appeared a box which he gave his wife to open. Having reached his home, he found that over 300 years had elapsed and he was thought to be dead. His daughter told him of the box, where light puff of smoke came from it. This was his soul, and he fell dead (Joly, 384; Aston, 322).

Aston notes that this region is also identified with Hōrai, an island paradise of Japanese legend and art have much to tell. Hōrai is the land of everlasting life, where stands Fusus, the mountain of immortality. On it grows a wonderful tree with roots of gold, a trunk of gold, and fruits of rare jewels. The finest flowers and fruits, all unfading, grow there; eternal spring reigns; the air is always sweet, the sky always blue. The place is rarely found by mortals, though many have sought it, for it is visible only for a moment after afar off.

One favourite story tells how Wasabrose reached it after long voyaging and was met there by Joloku, another mortal visitor, who had fled from a tyrannical emperor under pretence of seeking the herb of immortality, and had found life so pleasant in Hōrai that he had no wish to return. Wasabrose also remained there for two hundred years, which lapsed away as in a dream. All things remained as in a perpetual present, there was neither birth, nor death, nor change of any kind. The island was peopled by wise men and beautiful women, the elect of the gods, and with them he passed the years with happiness. But he was of this unvarying beauty and sweetness and calm, and longed for death or escape. Finding no means of dying, for death was impossible there, he trained a glove to be his death. He put a fish in it and put it on his back. After many other wanderings he returned to Japan to tell of his adventures (Kern, SBE xi. 476; Tōnken, 1855, 146; Rinder, Old-World Japan, London, 1895, 79; Joly, 126, 253, 386).

4. Western Paradise of Japanese Buddhists.—Several influential sects of Buddhism in Japan, though their teaching is rejected by many other Japanese Buddhists, owe their popularity to their doctrine of the Western Paradise of Amitā. This doctrine of Northern Buddhism was first introduced into Japan in definite form by the Jōdo Shin, or ' Sect of the Pure Land,' and it is plainly expressed in one of the books of the Northern Buddhist canon, honoured and widely read by these sects, the Hok-ki-ki, the Japanese name for the Lords of the South, the land of the extremely rhetorical and imaginative work. The founder of the Jō-dō sect in Japan was the Buddhist saint, Hōnen (1133-1211), the fundamental tenet of his teaching being belief in the power of the saintly Amitābha, the Lord of the South, to save the soul of the believer to the Western Paradise. This teaching was based on that of the Chinese founder of the sect, Zenō. Entrance to the pure land of Amitābha after death was made to depend upon belief in, and repetition of, prayer to Amitā; and this simple doctrine, easily understood, at once became popular. According to Hōnen,

'Perfect bliss Amitābha would not have till he knew that all who would invoke him might be saved. This is his primal vow. Every sentient being, the chance of being born in the western paradise is in existence amongst the peoples. Whoever calls earnestly upon his name, all the beings of the Western Paradise, at the time of his birth, will enter the Western Paradise. Amitābha, as in his own body, will be born among his people, and will come to him, welcome him with all his attainments; or shall obstacles nor demons keep him back' (Aneeski, 'Honen, the Priest Saint, Trans. Third Interpreters of Rel., Oxford, 1893, 166).

Even more emphatically is faith in Amitā alone taught by the Shin-shin, or True Sect, which also holds out the reward of the Western Paradise, in painting it in more attractive colours, while it teases that not one of these rewards of Amitā allow the believer under his protection to conduct the dead to paradise, but even now, immediately upon his profession of belief. The Nichiren Sect, on the other hand, teaches that a man must work out his own salvation. Amitā dwells in this blissful Western Paradise or Pure Land, called Sukhāvati, as ruler of the blessed dead. In it, said Hōnen,

'There shall be no distinction, no regard to male or female, age or race; no life, no death; all shall have full life, after having called, with complete desire, on Amitā. Just as a great stone, if on a ship, may complete a voyage and be carried by the great waves of the ocean, so we, though our sins be heavy as giant boulders, are borne as if by the falling leaves to the other shore, and are not sinking in the sea of birth and death' (Aneeski, i, 125).

The Pure Land is open to all who wish to be reborn there, and this blissful existence is thus made easy for all to whom the necessary discipline for the final attainment of Nirvāna is too great, or too difficult, or too difficult, or because of sickness, or because of the difficulties, while it has taken the place of Nirvāna in practical thought. The Pure Land is thus described in the Saddharma Pundarika:

'There no women are to be found; there sexual intercourse is absolutely unknown; gold and silver are the coins of the land; the poor turn into existence by appositional birth, are sitting in the unending laps of eternity; all of the Chief Amitsūbha blushed and sat on a throne in the pure and nice cup of a lotus, and shines as the Sāla-king' (Kern, SBE xxii. 417).

The same work also states that any female, after reaching the age of twenty-five, immediately returns to its twenty-second chapter ('Ancient Devotion')

'will, after disappearing from earth, be reborn in the world Sukhāvati, where the Lord Amītābha, the Tathagata dwells, exists, lives, surrounded by a host of Bodhisatvas. There will be he (who formerly was a female) appear seated on a throne consisting of the interior of a lotus; no affection, no hatred, no infatuation, no pride, no envy, no wrath, no malignity will vex him.' He becomes a Bodhisattva, his equal is not to be found in the universe, nor does he prefer this existence.

Again, those who wish and keep this Sutra shall, when they die, arise and stand in the company of the gods of the paradise, and at that birth shall eighty-four thousand heavenly nymphs immediately come to look after them, and they shall as angels dwell amongst those nymphs' (ib. 485).

Vivid descriptions of the Western Paradise abound in the larger and smaller Sukhāvatīvyāha, works which are of authority to the Pure Land and Shin-shin sects (SBE xlii. pt. ii., Oxford, 1894). In the smaller work, birth in the Land of Bliss occurs if the name of Buddha Amiṭābha is merely repeated for a few nights before death; and it asserts that birth there is not a reward and result of good works in earthly life (op. cit. 98 f.); but in the larger work the doctrine of merit is not thus neglected. According to both works, the Happy or Blissful Land is a state where there is neither mental nor bodily pain, for pleasure is universal there, and there is no fear of suffering, and the length of life there is immeasurable. It is adorned with terraces, and enclosed on every side with the four gems, gold, silver, beryl, and crystal. It contains lotus lakes adorned with gems, on their banks gold and silver flowers of various colours. There are great rivers of different kinds, with waters of different sweet odours, bearing up flowers of different perfumes and adorned with different gems. The dwellers there bathe in the waters, wearing whatever vesture and of whatever colour they desire, and are exactly of the temperature they prefer. Exquisite music is
BLEST, ABODE OF THE (Persian)

caused by the flowing of the rivers, by the trees and bells, by innumerable birds singing in concert. Every one born in that land is endowed with spirit, and is not lacking in any of the elements of virtue, and obtains dress, ornaments, gardens, produce, and every enjoyment of touch, taste, smell, and sound. Whatever food they desire they enjoy without even tasting it. Or if they desire musical instruments, or ornaments, or a palace, these appear before them and are produced as they dwell and enjoy themselves, surrounded by myriads of Apsarases. Language and metaphor are exhausted in these two works to set forth the bliss of this glorious, fertile, and beautiful Paradise. Probably the idea of the land of bliss, a region of the Earth, is preserved in the Land of Bliss was the Brahmanic teaching regarding the city of Varuna in the west, sometimes called Sukhā, or 'the Happy' (Max Müller, introd. SBE xix. pt. ii. p. xxii). Many Japanese works have been composed on the Western Paradise of Amābitā.

See, further, Buddhist section of this article, p. 687.

J. A. MACULLOCH.

BLEST, ABODE OF THE (Persian).—The Persian tradition concerning an abode of the blest of Paradise has come to us through three main sources, each with its wide-spread interpretation as a Flood legend, an additional element of complication being the divergent theories regarding the original character of its hero, the Indo-Iranian Yima-Yima. In view of this confusion it seems best to give first, without comment, the data of the Avesta and Pahlavi literatures, then the spread of the belief to other religious systems and its possible parallel in Norse mythology, and finally to discuss the meaning of the legend.

Data of the Avesta, etc.—The earliest source for the Iranian legend of the abode of the blest on earth is the second part of Vendidad ii., which falls into two parts, 1–20 treating of Yima and his Golden Age, and 21–43 devoted to Yima's suffering, which, here, can be considered as constituting the abode of the blest on earth.

This chapter may be summarized as follows (cf. also the analysis on the basis of textual criticism and the tr. by Goldner in Kuhn's Zeitschr., xxv. 179–192). Yima was the first of mortals, excepting Zoroaster, to whom Ahura Mazda taught his religion (1–2); but on his confession that he was 'neither formed nor learned to remember and to sustain the faith,' Ahura Mazda urged him 'to further creatures, to increase creatures, and he be the protector, guardian, and overseer of creatures,' to all of which Yima agreed, declaring that 'in my kingdom there shall be neither cold wind nor hot, neither dimension of day nor night, nor no limit of four seasons. For even the earth was full of cattle small and great, of men, and dogs, and birds, and fires red and blazing,' so that he was compelled to come south and enlarge the earth by 600,000 yojanas. In 600 years he was forced to enlarge the earth by two-thirds, and in 300 years by three-thirds, still proceeding southward (12–20). Here ends the first section of the chapter. In the second part, which here concerns us more immediately, Ahura Mazda, the 'king of spiritual angels' meet Yima and the 'best men' in the holy region of Aryanam Vaejō, which may perhaps be identified with Azerbaijan (Jackson, Zoroaster, New York, 1905, vol. i. p. 119); but it is more important as representing the coming of terrible winters (on the translation of this difficult passage see Bartholomae, Zum altiran. Worterb., Strasbourg, 1896, p. 60). Yima is accordingly commanded to

Aryanam Vaejō is also identified by Darmesteter (Le Zend. Avest. de Tuit., p. 171) with Arrin, the name of the 'city of Ormuz,' in Trans-Caucasia, and by Marquart (Erdkunde, Berlin, 1901, p. 115) with Chorumena; but, as Bartholomae very pertinently remarks (ibid., 1896, p. 151), 'es ist nicht zu bestimmen, wohin man es verlegt hat.'

BLEST, ABODE OF THE (Persian)

make a vara a baraotu (according to the tradition, 2 miles) square, which should serve as an abode for men and cattle, and which should be surrounded with water in such a way (according to the tradition, 1 mile) long, with birds along its banks. To this service moreover, should be taken the germs of cattle, human beings, men, women, girls, boys, dogs, cats, all kinds of foods, and these germs should be in pairs (uṣṇaḥstra) and concealing 'all kind of good things which should be found (citra susravat) (caraśtra, possibly, however, only a plurale majusculum); whatever there be no sort of deformity, disease, or infirmitv should here be found (varad-e sita-sitah, 119–25). In the midst of the sea of the abode of the blest of Paradise, in the middle six, and in the lower three, the first being 1000 germs of human beings, the second 600, and the lower 300; and there was also to be found 'having its own light on the inner side' (dastāt) as well as 'houses, men, and a cellar, an altar, a fire, and a bastian, and a circumanivation' (25). This vara, which was to be inhabited by 'stamped apart, with the heels and dog asunder with the hands' (yantra), was accordingly identified with the abode of the blest of Paradise. The original of the vara was from 'lights self-determined and world-determined (i.e. eternal and transitory). Only once (each year) does one idol the setting and the rising of the sun, and on this old they think that what is a year is but a day. When 40 years have elapsed, from two human beings are born two human beings, twins, both male and female; so (also) of them that are of animal kind. And these human beings, who are in the vara that Yima made, live with most happy life (40–4). The religion of Ahura Mazda was brought to the vara by the bird Karshapi (the spiritual lord of all birds and acquainted with speech; cf. Bundāhīš, xvii. 10, 16, xxxiv. 185, 186), and the Zoroaster religious are Urvātapa-nas (one of the three earthly gods of Zarathustra and the head of the agricultural class; cf. Bundāhīš, xix. 5, xxxiv. 187, 198, 199, 263).

The remaining Avesta material of relevance in the present connexion adds little to the main source just summarized. Aryanam Vaejō is described as the garden created by Ahura Mazda (Vendidad i. 2), and in it, as a sort of eminently holy, sacrifice was offered by Zoroaster (Vāt y. 104–106, ix. 25–27, xvii. 45–47; see also Jackson, loc. cit.), and even by Ahura Mazda (Vāt y. 17–19, xv. 38), and there are a number of admissions to the Golden Age, but where the most of the blest of Paradise is concerned. Although, though the first section of Vendidad ii. shows that this Golden Age is a tradition separate originally from that of the vara, to which it forms a quasi-prelude (see Yasna ix. 4–5; Vāt y. ix. 8–11, xv. 15–16, xvi. 28–31, xxv. 32–33; Aogemadādāt, 94–95; cf. also the Pahlavi Jamaspī-Namaḵ, ed. and tr. Modi, Bombay, 1903, p. 113 f.).

The Pahlavi literature adds considerable information to our knowledge of the Persian abode of the blest on earth. The account given in Vendidad ii. Bundāhīšī is repeated somewhat in Bundāhīšī vii. 20–24, Bundāhīšī xxix. 14, that 'the enclosure' formed by Yim is in the middle of Pārs, in Srvāk; thus, they say, that what Yim formed is below Mount Yimaikān (see West, SBE v. 190, note b.); but it is more correctly stated (see West, 1868, p. 143); but Dinā-Ī Mānān-Ī Khurāxi lxvi. 15–19, says that 'the enclosure formed by Yim is constructed in Airāvējō, below the earth' (so also Bundāhīšī xxxii. 5, and the Persian RaBERT, ed. and tr. Sachau, JRAS, 1885, p. 226 ff., esp. p. 253), adding that there men lived 300 years. The same treatise describes the blissfulness of Aryanam Vaejō (xxiv. 17–35), where, despite the evils of many serpents and ten months of winter, men live 300 long years, with one child every winter. In the first 300 years, keeping the primitive faith and virtues of the earth. The real 'crux in the interpretation of the vara is constituted by the passages Dūstāstān-Ī Dēnak xxvii. 94–96; Dīnī-Ī Mānān-Ī Khurāxi xxvii. 27–31; Bahman (and other texts, see West, SBE v. 190, note b.); Aogemadadāt, xix. 1–4, and Jamaspī-Namaḵ, tr. Modi, p. 118.

The most complete of these passages, with which all the rest are closely connected, is Dūstāstān-Ī Dēnak xxvii. 94–96, 100 f. (101 f.): 'One (of the proofs of the ultimate triumph of Ahura Mazda over Ahriman) is this, that is, even that prodigious devastation of which it is declared that he caused the snow to fall of Mokhsh, when, through snow, innumerable cold, and the unproductiveness of the world, most mortals die; and even

* West (SBE xxv. 109, note 8) takes this to imply 'that its position could no longer be discovered on earth.' The passage Vendidad ii. 31–32 should, however, be considered in this connexion.
the things attainable by mortals are attended with threatening of scarcity. Afterwards—as among the all-wise, preconcertedly and solemnly popularized, spiritism was established that there is one of the species of hands that is called 'the enclosure formed by Yim,' through which, by orders issued in the month of Tishri, the son of Yima and Vivanga, the world is again filled—men of the best races, nullifying the unbelief of those most sacred foods, in that manner came back miraculously for the restoration of the world; which new men are substituted for the former mortals, who were an uprooted dead.

The tales of Zoroastrian chronology drawn up by West SIR viii. 33-41) show that the accession of Yima took place in the year 3500 B.C.; but he was slain by manu ante reloginion 2500-5500 B.C., and that the winter of Maliksh (Avesta, Marhidia) was to take place in the century named, A.D. 770-780, so that the son of Yima would have lasted over 3500 years.

2. In other religious systems.—The legend of Yima's wana was borrowed by Mehozism, which, and has also been claimed to exist in Judaico-Christian apocryphal literature. In the former system, according to oral traditions collected by Petermann and Stoiuli (Brandt, Mandische Religion, Leipzig, 1899, p. 154), the earth, after the depleating catastrophes of the end of the world, will be re-peopled from wana wana, a mysterious and invisible, but transitory, locality upon the earth, where dwell perfectly righteous, religious, and happy men who die without pain. Other sources locate wana wana either beyond the northern boreal mountain range, or, as in the scanty and late allusions in the Genzes (r. 29, 18; 302, 18; 333 ult. —339, 5), regard it as floating in the clouds (Brandt, op. cit. pp. 371 f., 53, 601). In this Mandean wana wana (ib. p. 154) was probably rightly, a reminiscence of Yima's wana. As regards the Judaico-Christian borrowing, it will be sufficient to refer to Bökle, Verwandschaft der jud.-christl. mit der pars. Eschatologie, Göttingen, 1902, pp. 130-144, who mentions Commodian's Instructions, II, 7, and compares Genes. apol. 341 f., with Narratio Zosimi, ch. 10, as well as the Ethico-Conflicts of the Holy Apostles, even though it seems to the present writer that the resemblances here noted by Bökle are too general in character, and too near akin to what would naturally occur to one describing a place of ideal bliss, to be positively claimed as borrowed from Iranian belief. An analogue to the legend of Yima's wana has been sought, as common property of the Indo-Germanic peoples, by Rohde (Mythology, London, 1890, p. 306-390, esp. pp. 379-388) in Norse mythology. With the wana he compares the Norse Jord lifanda manna ('earth of living men'), or Odainsark ('acre of the not-dead'), a land either subterranean or on the surface of the earth, where the dead, then, juxtaposed, enable living men to reach. In this realm, which was ruled by Gudrun (Minim) and enclosed by bulwarks that no disease, death, or age could surmount, and where none could die, men lived many generations (cf. also Meyer, De germ. Mythol., Berlin, 1891, pp. 126 f., 134 f.). Furthermore, the final cataclysm will be preceded by the futoelvetr, a three years' winter with no summer, during which Lif and Lifthrasir ('Life' and 'Immortality') conceal themselves in Hoddmimer's groove, whence, after all the rest of mankind have been destroyed, they will emerge and re-peopie the earth (Sőderblom, La vie future d'après le mazdeisme, Paris, 1901, pp. 204-221; de la Saussaye, Religion de l'Inde, 1902, p. 351 f.; see also below, p. 386, n. 17). The latest, and almost certainly, a Norse account (de la Saussaye, loc. cit.; Meyer, op. cit. p. 163), and though it would be, in the present writer's opinion, a scarcely warranted assumption to suppose that the Norse and Iranian traditions form a connection, it may be, nevertheless, that the two legends of an earthly abode of the blest serve to illustrate each other. Arising independently and under different conditions, they might yet be parallel in their psychological development.

The most important question of parallelism, however, is that raised by the fact that Yima is an Indo-Iranian figure, facing his counterpart in the Indian Yama (cf. Spiegel, Arcische Perioide, Leipzig, 1887, pp. 243-256). The original nature of Yama has been the subject of much speculation (cf. the data and references in Macdonell, Vedic Mythology, London, 1897, p. 190). If, in the writer's opinion, it may be regarded as admitting of little doubt that, whatever theosophical and even astro-mythological attributes were given him, he was, primarily, as the Atharvasvaedca Yima, the Indo-Iranian equivalent of the Hebrew Elohim, the first to die (ye namara prathama martarpman). He is thus the king of the dead (Yigedca, xvi. 771, 771), for whom 'may Yama there mete out abodes' (yrd yamah sadatas min motus, x. xvii. 13), 'there obviously being his realm in this man in Yama at the same time observing it rising above the eastern horizon.' Yama is the antipodal point to Rûm (ib. pp. 372, 383), and, in accordance with tāqub and al-Fazān, the country of the 'limbo' of the fallen spirits. The name Dērāb (Yara) for Tārām, i.e., ṣur, or 3, is within a sexa...

As koš means "castle" and Yama is the angel of death, the word reminds me of Kangdž, which, according to the Persians, had been brought by Zoroaštra or Jam (rather than Jamshid, the king of the east, behind the sea, for dīz means in Persian "castle," as koš in the Indian language") (ib. p. 350). Kangdž (the name of Yima's abode) is thus the invisible castle, or castle, separate from Airāvātē, so closely associated with the sacred (Bûndahish xxiv, 57, 55; Dîyâ̄ Mānîqû Xaṛāh xxiv. 12-15; Sad Dar x. 7), and as 'in the direction of the east, at many leagues from the bed of the widespread ocean towards that side' (Bûndahish xxvi. 10). Hyde (Hist. religionis veterum Persarum, Oxford, 1760, p. 173) records, from a manuscript of the Aitongast, a mythical city of Jagandā ('City of Yama-Yima') on the equator to the extreme east, and Abul Fida describes Jamkūt, or, as the Persians called it, Jagandā, as on the equator, to the extreme east, and antipodal to the easternmost (east and South) islands of Zoroastrianism (ib. p. 350). Yama is the present writer to be specifically an Indo-Iranian development. If all events, the data do not appear to him to warrant any real connexion or kinship between Yama and Yima's wana—the location is too different, the chronology, too distinct, the development of events is too great, and the development of Yama and Yima in India and Iran is too divergent from the Indo-Iranian period onward to render possible a theory of a connexion of two absolutely mythical places, which, after all, can no more be localized than the 'west'. The present writer has therefore...

3. Meaning of the legend.—The view is widely current that the story of Yima and his wana is a legend of the Deluge—a theory defended with much learning by Kohut (ZDMG xxx. 61-68), Usener (Die Sintflutagen, Bonn, 1899, pp. 208-212), and Geibner (Geschichte in Mittheilungen der antropol. Gesellschaft in...
BLEST, ABOBE OF THE (Semitic)

Wien, xxxi. 328 f., Darmester (op. cit. ii. 191, lii. pp. Iviii-ix), and Linder ('Die iran. Flut-
sage,' in Forschungen R. v. Roth, Stuttgart, 1885, pp. 213-216). This hypothesis has been-
as has been shown by Bishop Casertalli (Philoso-
phy of the Mazdayasnam Religion under the Sassanids, Eng. tr., Bombay, 1889, p. 198 f.), and
especially by Söderblom (op. cit. pp. 167-222, where will be found a rich collection of parallels
and full citation of authorities on both sides).

Not only is the vara of Yima eschatological
in purpose, and existing for centuries, but certain
other chosen heroes, as Windischmann observes
(Zoroastr. Studien, Berlin, 1895, pp. 244-249), are
also the subjects of motifs more than eschatological significance, for it would seem to be a
blending of two motifs, the Golden Age and the Aboe of the Blest, plus a migration
tradition of distinct value. The first two motifs
have in common a time-phrased identity, but a
brief note may be appended on the story as a
migration legend. Ayiryan Vâqô, the scene of
the Golden Age of Yima (see above, p. 702*) was,
besides its sanctity and beauty, a land where, as
the Vendidâd states (i. 9), ' there are ten winter months,
two summer months. There is the centre of
winter, there the heart of winter.' From this
region, according to Vendidâd ii., Yima, after
900 years, was forced by increase of population to
go southward, and to repeat the story after 900
years. This can be explained only as the southward
migration of the Iranians (very probably, indeed,
of the Indo-Iranians), and it would seem as though
the tradition which locates the vara in ' the middle
of Pârs' marks this place as the centre of the
Iranian peoples when they ceased their wandering.
At this time, there were found in the mind of the
people a tradition of memory as the realm of the
Golden Age, and in it, by a transfer of thought which
would not be unnatural, was localized the vara, the
abode of the blest. The migration thus suggested
would seem to have been identified away so generally held,
of the wandering of the Indo-Iranian stock from
the early home of the Indo-Germanic races in
Europe through Armenia into north-western
Persia, and so south through the mountain passes
leading to the Panjâb. This wandering, too,
accounts for the fame of Yima as a builder of
cities, among them Sârâ or Hâmadân, Ctesiphon,
and the ruin still known as the Taht-i Jamsîd,
or 'Throne of Jamsîd,' at Persepolis (Justi,
Iran. Namenbuch, Marburg, 1889, p. 144; Win-
dischmann, op. cit. p. 30; Mirkhoud, Hist. of the
104 f.; Jackson, Persia Past and Present, New
York, 1906, p. 310).

LITERATURE.—This has been given in detail in the article.

* See Barton, Semitic Origins, 29-96.

† See Barton, Semitic Genesis, xxvi.-vii.

‡ As to the identity of Gihon and Pison, views diverge.

Delitzsch (Wo bly das Paradies) identified these with
Ghâzanān, one of the rivers near the Babylonian
Kassite city of Chaldis, which was the
Kassite country to the east of the Persian Gulf.

Haupt (Die Versammlung der Länder von Mesopotamia
1889-1892) had found the Gihon with the Red Sea
and the Pison with the Nile, regarding Cush as
Nubia. Hommel (Abenteuer und Abhandlungen, 395-396)
identifies all these with the Euphrates, except the
Suphan, which becomes the Euphrates in Arabia.

Gunkel holds all the rivers to be heavenly rivers sus-
gested by the Milky Way (Genesis, p. 59).
for the primitive oasis is changed into a garden, the name of which is Babylonian.

It seems that a form of this story was naturalized at Tyre—a form in which Tyre, or the temple there, was regarded as Paradise. Our witness to this is the 4th century b.c. If Ezekiel's Eden was preserved in Tyre, or at least as Ezekiel conceived it, Paradise was a garden, but it was situated on a mountain. Its tree was no longer a palm, but a cedar. In this garden were many precious stones, and, if we read back Ezekiel's description of any mountain in ch. 47, a river flowed out of it. Ezekiel's picture modifies the primitive conception of the oasis still more than does the account in Genesis. It corresponds strikingly to the description of the sacred abode of Hammab, the god of Eden, in the fifth tablet of the Gilgamesh epic. In connexion with that was a grove of sacred cedars. Out of the mountain on which it was situated a sacred river ran, and here divine voices were heard (cf. KB iv. 457, 441, 573). Cuneiform inscriptions recovered at Susa in recent years show that the sign for cedar tree was there a part of their deity's name. Probably this portion of the epic, or the story which lies behind it, had influenced the Tyrian conception of Paradise. This primitive paradise was thought by both Babylonians and Israelites to be formed by the dawn of civilization. In Genesis a serpent tempted woman to eat the fruit of the sacred tree, and she effectually tempted man. The motive is that they may become like gods, knowing good and evil. Knowing good and evil*, is equivalent to having reached the age of puberty. The result of the sinfull act of Adam and Eve is that they perceive that they are naked, i.e. become conscious of sex. Clothing is invented, and child-bearing begins.* It is clear, therefore, that this story belonged to the period of the Golden Age with the dawning of the consciousness of sex. The Midrash Rabba, Genesis, § 20, holds that the serpent was an emblem of the sexual passion. Their sacred tree, the palm, was also bi-sexual, and its fertilization was a sacred act.† Whether the serpent and the tree were or were not conscious used because of symbolic significance, one element in the Biblical story—and it is the most important element—was the idea that primitive paradise was lost by the union of man and woman.‡ This is the view propounded by the Jewish Talmud and thence, the Gilgamesh was permitted to make a journey, from which he returned. The road to this island was a long journey, in the course of which one came to a great pass in the mountains of Mashu. This was guarded by scorpion-men. After this pass came a long road of midnight darkness. At last one came out to a 'park of precious stones,' after which a bitter river had to be crossed. Next came the 'waters of death,' beyond which the divine island lay (KB vi. 211–220). It was formerly thought that the Mashu mountains were to be looked for in Arabia, as was the 'park of precious stones,' that the 'bitter river' was the Persian Gulf, that the 'sea' above the south of the Dead Sea, and that the happy isle lay to the south of Babylonia (cf. KB iv. 467, 460, 473). Jensen, however, has proposed a different view. He now holds that the mountains of Mashu were the Lebanit and Anti-Lebanit ranges; that the 'park of precious stones' was by the Dead Sea coast; the Mediterranean was the 'bitter river'; the 'waters of death' lay to the westward of the Straits of Gibraltar; and the abode of the gods was in the Atlantic Ocean (cf. KB iv. 573 ff. and Gilgamesch-Epos in der Weltliteratur, I, 24, 34, 47, Map ii.). This view has been accepted by Zimmer (KAT.573 ff.). One strong reason in Jensen's mind for this view is his belief that the Gilgamesh epic is based on a sun myth, and the sun travels from east to west. Gilgamesh was told, it is true, when he was desirous of crossing the dreadful waters, that only Shamash (the sun) crossed them. In favour of Jensen's view, too, is the fact that Ezekiel speaks of a garden in which are precious stones at Tyre. This would correspond to Jensen's conception of a sacred grove of cedars, the dawn of civilization and that which is described below. The story of primitive Paradise held that man once had a blissful abode, with the gods on earth, but had lost it. The Par-napishpit and Gilgamesh stories hold that it is still possible that one or two ancient heroes may have attained the happy isle, and found a blissful abode with the gods.

The third view is that of the abode of the bliss on earth developed among the Jews in the two centuries before Christ, in connexion with the Messianic hope. It was believed that the Messianic kingdom would be established, and the living Israelites to enjoy it were but few in comparison with the great host that had died. The author of Is 26, therefore, writing about B.C. 334, declared that departed Israelites should be raised from Sheol (Is 261) to share in this kingdom. This reversed the time-honoured conception with reference to the deceased, for it was accepted, as Ps 8810 and 119 show. It was, however, accepted by the author of Enoch 1–36, who wrote B.C. 200–170, and who thought that dead Israelites would be raised to enjoy a Messianic abode of bliss. In Ch. 22, before whom the earth would in itself be an abode of the bliss. Its capital was to be at Jerusalem (25). Those who attained it would enjoy lives like the patriarchs (25), or everlasting lives (5), though 'ever lasting' is elsewhere defined as five hundred years (108). (For later conceptions of the Messianic kingdom as an abode of the bliss on earth, see MESEIIAH and KINGDOM OF GOD.) When the Messianic kingdom would come, however, was uncertain, and this writer accordingly conceived of another earthly abode for the bliss until the resurrection should occur. In ch. 22 he gives an extended description of the under world. This he pictures as divided into four parts. One of these is for the very wicked, another for the less wicked, another for good, and the last for the righteous or good. There are thus thought to be two subterranean abodes of the bliss in Sheol. All these dead, except the very wicked, are to be raised. Sheol is but a temporary abode for all except the most distant, and they do not win any degree upon their delights, and the wicked are tormented. Although this elaborate
BLEST, ABODE OF THE (Slavonic).—The ideas of the pagan Slavs concerning the state of the dead are known to us only from indirect testimony and, even then, only by means of folk-belief. While some mediavial chroniclers deny that the Slavs had any conception of a future life (which is unlikely), others freely assert it, and there is no reason to doubt the existence of definite beliefs on the subject (see Schafarik, Slav. Alterthümer, Leipzig, 1844, i. 583; AncesTor-Worship [Slavonic]). Three existing words denote the abode of the dead—Nya, Raj, and Peklo. The two last now denote heaven and hell respectively, but Raj evidently denoted originally a pagan paradise, as is shown by the reading of one chronicler, who says that 'Krok went into the Nya,' while the god of the dead, or Pluto, is called Nya by the Polish chronicler Długosz, who says that the people ask him to carry them after death. But in modern folk-belief it is generally supposed that the dead are sent to one of these places, which are often compared to the paradise of the ancient Egyptians, New York, 1905, pp. 115-137; Jensen, Das Gilgamesch-Epos in der Weltliteratur, i, Strassburg, 1896 Breasted, History of Egypt, 1899, pp. 3-5.

GEORGE A. BARTON.

BLEST, ABODE OF THE (Slavonic).—The ideas of the pagan Slavs concerning the state of the dead are known to us only from indirect testimony and, even then, only by means of folk-belief. While some mediavial chroniclers deny that the Slavs had any conception of a future life (which is unlikely), others freely assert it, and there is no reason to doubt the existence of definite beliefs on the subject (see Schafarik, Slav. Alterthümer, Leipzig, 1844, i. 583; Ancestor-Worship [Slavonic]). Three existing words denote the abode of the dead—Nya, Raj, and Peklo. The two last now denote heaven and hell respectively, but Raj evidently denoted originally a pagan paradise, as is shown by the reading of one chronicler, who says that 'Krok went into the Nya,' while the god of the dead, or Pluto, is called Nya by the Polish chronicler Długosz, who says that the people ask him to carry them after death. But in modern folk-belief it is generally supposed that the dead are sent to one of these places, which are often compared to the paradise of the ancient Egyptians, New York, 1905, pp. 115-137; Jensen, Das Gilgamesch-Epos in der Weltliteratur, i, Strassburg, 1896 Breasted, History of Egypt, 1899, pp. 3-5.

GEORGE A. BARTON.
BLEST, ABODE OF THE (Teutonic)—

1. Introduction.—The hints supplied by myth, folk-belief, and occasional passages of existing texts, suggest that, in earlier times and probably for a long time, the idea of the state of the dead was not definitely formulated in Teutonic belief. The funeral mobilier as well as statements in the texts regarding burial shows that life after death continued the life on earth. The dead may have been supposed to ascend to the sky either in a body to ascend in the air or to frequent the grave, while souls of warriors continued to fight in the air. Conceptions of a more permanent sort may, however, have arisen quite early and ultimately gained ground. When the dead were committed to the waves, this suggests that, their abode was over sea, and the passage in Procopius (de Bello Goth. iv. 20) about fishermen, subject to the Franks, rowing souls over by night to Brititia, may be a reminiscence of such a belief. But we find also a more general belief in the dead living in their barrows or burial-mounds, or in hills—they 'die into the hills.' There they feast in happiness, and occupy themselves with the good of their surviving kindred, and their presence in these huts, or hills, is a source of joy either to the neighborhood (Rehb. and Powell, Corp. Poet. Babulœ [=CPP], Oxford, 1883, i. 415 ff.). Nor is it unlikely that some of the gods, e.g. Odin, had also their abode at first, several mountains being sacred to Odin (Grimm, i. 132). Odin was especially the god of dead warriors, and their abode may at first have been with him in hills, since later tradition represents great heroes as slumbering in hills, sometimes, as in the case of King Charles, in the Odenberg, with Odin (Grimm, iii. 953 f.). These heroes may represent the dead warrior, the pagan belief, or the gods themselves considered as mountain-dwellers. Again, the souls of dead warriors are seen issuing from and returning to a mountain (ib. 954). Thus the warrior host in the mountain may be an earlier form of the warrior host in the heavenly Valhalla (Simrock, Handb. 189).

In the Elder and Younger Eddas the conceptions of Hel, the under world of the dead, and Valhalla, the warriors' heavenly abode, are met with. Both may have been developed from the belief that the dead lived in a subterranean cave below the earth, or in hills. Hel, 'the hollow place,' would be an extension of the hollow hill or barrier, and a similar development of the under world from the grave is met with in Celtic belief (see Celts), while the idea of the fierce, fierce warriors of Hel as warriors to a sky-Valhalla would easily be made, the sky being frequently supposed to rest on hills. Vigfusson and Powell consider that the idea of Hel as the abode of the dead cannot be clearly reconciled with the early belief in the dead living in their barrows (CFF 1. 420). Byberg (Teut. Mythol., London, 1889, p. 505) recognizes the two views by showing that, in Teutonic belief, man did not consist simply of body and soul, but of 'a combination of factors, in which death could be separated,' so that the dead could at the same time descend to Hel and inhabit the grave-mound. This is in accordance with primitive and even Egyptian ideas of man's personality as consisting of regions or slices of his being after death. At the same time, the ideas of the barrier and of Hel seem rather to represent different strata of belief.

The subterranean region of Hel may at first have been considered as the abode of all the dead, not excluding warriors, even Balder going there when he was slain, and, as late as Wulfgang of Corybel, the idea of Hel as a place for all the dead was current. Indeed, Hel was supposed to be a 'Hel so great as to contain such a multitude of the slain!' (Grimm, ii. 801). But side by side with this we find the idea, whether of later Viking origin or not, that warriors have a separate abode. They are, therefore, supposed to have not been conceived as dwelling with Odin in the hill, or, as in the Edda, in the heavenly Valhalla.

2. Was Hel an abode of the blest?—Hel is usually

sacred city hidden beneath deep waters, reached by 'Pity's road,' and inhabited by the Holy Elders (the dead), is spoken of.

But there must also have existed ideas of a magnificent abode for the dead, or a heavenly paradise reached by a mountain of glass or iron, difficult to climb. The nail-clippings of the dead man, or bear's claws, were buried with him to enable him to climb it. Among the Poles exists the belief that lost souls must climb it as a punishment; when they have reached the summit, they slip down again (Grimm, ii. 836). According to some forms of this myth, the glass mountain crownéd with a golden palace stands in the midst of a great orchard in the paradise of souls, and they ascend it by means of the bear's claws (Mainland and Gerl. Mythen, Berlin, 1858, p. 380). The moun

tain recurs in Slavonic and other European folk-tales, in which the hero rescues a princess, or gains the hand of a fair being from its summit (CF, P. 412).

Certain folk-tales, peculiar to the Slavs, speak of a mysterious land above the sky, wherein dwell beings or animals of supernatural character and magic power, while in this land are great wealth, many magical objects, and abundance of food. This country is described as a mountain which gives out pie, cake, and a pot of stewed grain; another, a hut with walls of panelakes, benches of white bread, and a stove of buttered cards. In another the stove is garnished with sucking pigs, geese, and pies, and everything which the soul can desire. This sky-land is visited by mortals who climb up a magical bean-or pea-stalk, or a great oak, as in our Jack and the Bean-stalk tales, and generally the visit is presented (Rust. Russ. Folk Tales, London, 1873, p. 291 f.; CF, p. 435). This upper world of riches and plenty is not said to be an abode of the dead, but the tales may have been derived from pagan conceptions of an Elysium in the sky, where the gods and the blessed dwell. This is also suggested by the belief, still current, that the soul must make a journey after death, across the sea, on foot, or by the rainbow or the Milky Way, to the region of the dead. The two last are obvious survivals from pagan beliefs regarding a journey to the sky.

Rites in honour of the dead, still in use, include chants of a purely pagan character, in which the souls, having eaten and drunk, are begged to return to heaven. In pagan times the burial rites were all-important, as, until they were completed, the soul could not start on its long journey. Existing funeral songs and tales show that the beliefs regarding the state of the dead were of different character, or were perhaps held simultaneously. The dead continue to dwell in the grave (an idea which passes over into the vampire belief [see VAMPIRE]), or wander round their old home, or exist in a separate region. But, whatever beliefs were held, the state of the dead was apparently of a sensible character. Married people continued to dwell together, and to a dead bachelor a maiden was allotted to be his wife in the other world. In such a case she was formerly put to death (cf. Schrader, Totenhochzeit, Jena, 1904, and see above, p. 22 f.).

The belief in a happy eastern region of perpetual warmth and light, to which the sun, the light of the day, went on his journey, was widely current among the Slavs. Such a belief is still found; and this region is sometimes thought to be tenanted by the Rakhmane, who abstained from flesh, and led a holy life. The Rakhmane are obviously the Brahmins, and the traditions may be derived from the religious writings.

regarded as a dismal and gloomy abode; but it is only in the Younger Edda that this is definitely stated, and it is not improbable that the influence of Christian beliefs may have been traced here. The references in this Edda are three in number, and they vary each from the other. All Father has given to man a soul which will live and never perish, nor will it die, but rather ascend to Valhalla (Gylf.); wicked men fare to Hel, and thence into Niflhel which is beneath in the ninth world (Gylfaginning, § 3). Gylf: is later described as the fair hall of goddesses, and it may be synonymous with Valhalla. The third is that the abode of wickedness is an ethical one, and Niflhel rather than Hel is the abode of the wicked. This corresponds, on the whole, with the description of the fate of men after the final catastrophe:

‘Many abodes are there then good, and many bad: best is it to be in Ginnung in heaven with Surtr; and great store of good drink is there for them who drink with joy in the hall called Brjot; it stands also in heaven. That also is a good hall which stands on Nifl-fells wrought of red gold; it is called Sindr; in this hall shall abide good men and well-minded.’ The wicked—wicked mountain-dwellers—wars and perjurers—suffer fearful torments in Niflheim (Gylf. § 53).

This description is borrowed from the Völuspa, where it is not clear whether it refers to a state of existence after death, or to some metaphysical vision which is a form of the mysterious beings alone survive. The sibyl sings:

‘I see a hall, brighter than the sun, shinging with gold, standing on Ginnung. Their hall shall dwell in heaven and their hall shall dwell on earth toward on Nifl-fells of gold for Sindr’s people. On Ocean stands another called Brjot, the golden hall of Brjot. The wise and learned man, who has shaved his head, is here also the abode of the wicked (CPB § 201; cf. ii. 267).

The third reference describes the goddess Hel as cast into Niflheim, with power over the nine worlds, and sharing those abodes of gloom and hunger with those who die of sickness or old age. For them, on the one hand, go to the blissful Valhalla (Gylf. § 34, 36 ff.). Here there is no ethical distinction.

The eschatological system set forth in Völuspa depends for its value as a source on the pre-Christian belief that the world is the product of the struggle between the forces of light and darkness, each represented by a god, the good being represented by Odin, who by his wisdom, the bad by Loki, who brings the destruction. The question is decided by a battle at Ragnarok, in which the good will triumph. The result of this is the destruction of the world, and the re-creation of it. The world is then divided into two parts, one good and one evil. These two parts are divided again into two, and so on, until the world is divided into an infinite number of parts, each represented by a god. The world is then divided into two parts, one good and one evil. These two parts are divided again into two, and so on, until the world is divided into an infinite number of parts, each represented by a god.
peaceful arts of life, women and children, all who had pleased the gods, all who had been true to the creed, all who had kept themselves free from those gross sins—must have been awarded the bliss of the underworld. All such could, 'with a good will and without fear, await death,' knowing that their course of life would 'do them good with their reward' (Sonnleitner, CPB i. 260; cf. i. 42, 279, ii. 628; Gjøf, [Lokke] § 52). To them were allotted the blissful regions of the underworld—the 'green realms of the gods' (Hakonamal, CPB i. 264; cf. Rydberg, 319), with their hidden grove, their holy fountains, their 'paths of bliss.' Peace and quiet reigned. Though they might make them forget sorrows and gave them strength, composed of the liquids of those fountains, and drunk from the horn whence Minir qualified the mead of his well (Gjøf i. 197; cf. the mead which awaits Balder, and the 'costly draught' which the dead Helgi drinks, i. 143). The mysteriously engraved horn from which Grimbild makes Gudrun drink and forget her wrongs, may be a late reminiscence of this draught of oblivion. The draught was composed from Urí's strength, ice-cold sea water from the spring, and oil from the Sun. The horns are engraved unreaped corn ears from 'the land of Hadding,' the underworld (CPB i. 34). See, for this section, Rydberg, 218 ff.

3. Valhalla. Though Valhalla may be 'simply a metaphorical expression for the highest achievements of men,' and opposed to the strong family affection of the Northern heathen (CPB i. Intro. ci. 421), yet it is also noted in old Teutonic belief, in the conception of dead warriors dwelling in Odin's mountain. Valhalla was one of the dwellings of Asgard, the heaven of the gods, situated in Grimbheim where 'the gold-bright Valhalla towers' (Grimnís, CPB i. 70). To it all brave warriors hoped to go, though later tradition suggests that warriors who had committed 'nothing actions or lived wickedly were excluded (Rydberg, 340). They were conducted thither by the Valkyries, who also waited upon them there. Valhalla was entirely a warrior's paradise; its boating was not that of peace, but of war. There the dead warriors dwelt with Odin, who welcomed them, offering the benefits that were to be gained already, the goblets of mead and the wine brought by the Valkyries (Eyríks-mal, CPB i. 260). Descriptions of Valhalla are found in Grimnís-mal and in the Younger Edda. It is furnished with spears, it is decked with shields, its benches with 'golden' loaves. A white gull flies before the western door, an eagle hovers over it. The goats Heifrir bites at the branches of the tree Leardr (perhaps Yggdrasil), and from her tests runs meat which fills a vat every day, enough to satisfy all the warriors. The hart Eikþornsbit bites at the branches, and from her horns full drops which form the rivers on earth. So great was Valhalla that it possessed five hundred and forty doors. Every day the warriors, fully armed, issued from the gates to arm themselves in combat with each other, to prove their strength and courage. The black heavy mead from the cups presented to them by the Valkyries. They ate the flesh of the boar Sleipnir, which was sodden every day and became whole again at even. Beside Valhalla stood Vin-gafi, the Hall of Friends, the abode of the goddesses. Grimn (ii. 520) points out that Vin-gafi is, in one poem, used synonymously with Valhalla, while it is also the name given in the Younger Edda (Gjøf § 3) to the place where the good and right-minded shall dwell after death. With Odin is associated Freya, whose dwelling is called Folkvangar, which who chooses one half of the slain, Odin the other. Elsewhere, however, it is dead women who expect to join Freyja (Egils saga, ch. 78). With the god Gejof, who resembles Freyja, dwelt all who died virgins (Gjøf, § 33; for Valhalla, cf. § 36, 38 ff.; Grimnís-mal, Eyríks-mal, and Hakuorn-mal, CPB i. 364 ff.).

4. Elysium in folk-belief and saga.—The Glæserg, or glass mountain, of Mírchen and poetry, which in Slavonic belief represents an earlier conception of a mountain paradise, may be derived from Slavonic sources, or may be a misunderstanding of earlier beliefs. Later, however, it is true Teutonic belief, since the Norse gleðishúmn, 'glass heaven,' is a paradise to which heroes ride (Grimn, ii. 820), and the mountain abode of the dead has already been met with. Beautiful subterranean meadows, which are bright with flowers, is the place where Freya Holde dwells, also occur in Mírchen, and may be associated mainly with elves and kindred beings. Popular belief describes souls of the dying fluttering as butterflies or birds in these meadows (Grimn, ii. 820). These are doubtless reminiscences of the hereafter, as with them may be compared the Rosengarten of mediaval poetry, now churchyards, now a kind of paradise. A series of more elaborate tales, analyzed by Rydberg, are certainly reminiscent of earlier sagas. The latter, in which the heroes die in the garden of the under world already met with. In these travelers set out to seek Óðinsaksur or Jord Irfanda manna, the Land of Living Men, situated in one tale in the east, but more usually in the north, and certain more transparently Christian.

These tales in their present form belong to the period between the 12th and 14th cent., and are mainly found in Saxo and in the sagas. Gudmund is ruler of the Glittering Plains, situated in the north or Jótunheim; he and his men are heathen, and of a land dwelt in Glittering Plains but shiped by his people as a god. Óðinsaksur is situated in his land, and is 'so healthy that sickness and age depart, and no one ever dies there' (Hereærar saga, Rydberg, 219–21).

(a) In the Fágrim's look (14th cent.) Helge Thorsen is described as journeying to the north, where, lost in a forest, he met twelve maidens, one of them being Gudmund's daughter, Ingeborg. With them he waited three days, and one evening was given gifts of gold and silver. Next Yule night he was carried from his home by two men, re-appearing a year later with them. The strangers gave king Olaf two golden horns as a gift from Gudmund. They were filled with wine and given to the strangers to drink, the wine having been prepared, and the wine messengers cast the horns away, and disappeared with Helge amidst great confusion. One year later Helge reappeared with eyes swollen with weeping. He had spoken with Gudmund's daughter in Gudmund's realm, but king Olaf's prayers had made it impossible for Gudmund and Ingeborg to keep him. The latter pinched his eyes out, and he was put on the ship with the maidens (Saxo Grammaticus, Danish History, London, 1894, Intro. xliii; Rydberg, 340 ff.).

(b) Saxo relates that king Gorm set out to seek a mysterious treasure land in the north ruled by king Geirrod in the under world. After passing through many dangers, they were met by Geirrod's brother Gudmund, who led them along a river till they reached a golden bridge. This he warned them not to cross, as the region beyond was not exempt from mortals. Continuing up the river, they reached Gudmund's hall, where, warned by their pilot Thorbjorn, they refused to touch food or drink lest their memory should be lost, and they should have to remain with Gudmund's people for ever. Gorm also refused Gudmund's daughter in marriage. But fear of his men fell victims to the charms of the women of this land, and became imbeciles. Gorm also refused the delicious fruits of Gudmund's garden. The party were received across the river and reached Geirrod's realm, a foul and evil place, full of miserable folk, some of them punished to Thor. Finally, they reached a place where they saw fountains of water, a vast decorated horn, and other treasures. Some of the party seized these treasures, which changed to records and tools, and the rest exchanged them for other treasures, including a rich mantle, were seen. Thorkill himself seized the mantle, when the place rang with shrieks, and the party was driven out. The party was entertained at the court of their host, returned to the river and to Gudmund, who vainly tempted them to remain with him. They finally returned home in safety (Saxo, 344 ff.; Rydberg, 340 ff.).

(c) Saxo has also preserved the story of king Hadding. One winter's day he set out with his people to get their herbs in her lap. Hadding desired to know where such plants could grow in winter. Wrapping him in mantle, she drew him underneath across a region of fog and darkness, till they reached a river where spears and weapons were tossed about. On one side of it they met some noble beings clad in rich robes. 

BLEST, ABODE OF THE (Teutonic) 769
Passing them, they reached a sunny region (the Glittering Plains), where the woman had obtained the flowers. On the other side of the river, which was covered with a beautiful flowery plain, the men saw, by the light of the sun, a great fire burning in a mysterious place, surrounded by an impassable wall. This was the home of the dead, where deaths are being prepared for battle. Finally, they came to a mysterious place, surrounded by an impassable wall. This was the place where the dead were being prepared for battle. They threw it over the wall, when it was at once restored to life (Gazo, 37; Rydberg, 316).

(a) A saga in Flatey-book tells of king Erík, who with a large company set out to seek Oddinksar in the far east. They finally reached a valley, with a bridge guarded by a dragon. Erík and one of his men ran toward the dragon, and were seized by it. But they found themselves in a beautiful flowery plain, with rivers of honey, and full of sunlight. They travelled through, finding no inhabitants, and reached a tower suspended in the air, with a ladder leading up to it. They entered the tower, and found it in a room full of jewels, a mazz of gold, and gold and silver dishes, and two beds. Convinced that they had reached Oddinksar, they ate and drank and slept. During his dream this guardian angel appeared to him, and told him he was Oddinksar, or Jörólf Íñanda. This region lay near the Christian paradise which was so glorious that, compared with it, Oddinsakr seemed a desert. Here they were permitted to remain six days, and then they returned home.

Late as these stories are, they are yet so near to the pagan age of the north that, in spite of possible classical literary and Christian influences, they preserve a unique color. Oddinsakr is clearly differentiated from the Christian paradise, while Gudmund and his people are pagan. The river with its golden bridge has already been met with in the pagan descriptions of the under world, and in these tales its further side seems to be connected with the soul of the dead, while in the Haddo story the dead warriors fighting suggest a reminiscence of Valhalla. The evil region in the story of Gorm may reflect the terrors of Nifhelf, where the place with its cisterns of meal, the richly decorated horn, and the treasures, are reminiscent of the Edda descriptions of the blissful under world. Rydberg (228 ff.) also identifies Gudmund with Mimir, and shows reasons for believing that Oddi- naskr, within the Glittering Plains, the mysterious walled place in the Haddö story, and the tower in the Erík saga with its two beds, are the equivalents of Mimir’s grove, where Lif and Lifthasir, progenitors of the new race of men, are preserved. To them would appropriately belong the title ‘living men,’ and to their hidden grove that of Jörólf Íñanda mann, ‘In Gudmund’s domain there is a splendid grove, an enclosed place, from which weaknesses, age, and death are banished—a Paradise of the peculiar kind that is not intended for the souls of the dead, but for certain Íñanda menn, yet not for all of them. In one of the variants of the Myth concerning Mimir we also find such a grove’ (Rydberg, 231). Thus, while this Elysian land of Gudmund’s, with its deathless Oddinsakr, is one of beauty and joy, to which daring mortals may penetrate and receive a welcome, it is closely connected with the realms of the dead—Hel, Valhalla, and Nifhelf,—unlike the Celtic Elysium. Unlike the latter, too, it is not a land of the gods, but of a giant race, and is associated with Jótunheim; it is not an island Elysium, but a northern and sub-terranean world, as Elycian in the sense of the word of the Elycian and Elycian language, 1883, ch. 35-37; Simrock, Handbuch der deutschen Mythologie, Bonn, 1887; K. Müllenhoff, Deutsche Altertumsstudien, Berlin, vol. v. (1883, 1884), ch. xvi. A. R. Anderson, London, 1889; de la Saussaye, Religion of the Ancient Teutons, Boston, 1903. J. A. MacCuUoch.

BLINDNESS. — 1. Definitions. — ‘Blindness’ signifies inability to see, or absence of the sense of sight; hence, figuratively, want of discernment, or defective intellectual, moral, or spiritual sight. ‘Word-blindness’ is an acquired condition, in which a person loses the power of reading written or printed words, although he can see objects; thus the letters on a printed page can be seen but are not recognized. ‘Mind-blindness’ is an acquired condition in which objects can be seen, but fail to be recognized by the sense of sight. ‘Half-blindness’ is a condition in which there is loss of one-half of the field of vision of one eye, or more commonly of both eyes.

2. Causes of blindness. Blindness may be due to lesions of the optic nerve, of the retina, or of the brain, or to the retina, or of the brain itself.

(1) The eyes. — Blindness may result from a loss of transparency of the cornea (nebula, leukoma), of the lens (catactarum), of the vitreous humour; from effusion of blood or pus into the anterior or posterior chamber; from inflammatory (acute and chronic) processes, from various affections of the choroid and retina; from changes following increased intra-ocular tension (glaucoma). Destructive inflammation of one eye, such as often follows injury, is apt to be followed by a similar inflammation of the other eye (sympathetic inflammation). Ophthalmia neonatorum, an infectious inflammation contracted during birth, is the chief cause of blindness in early childhood.

(2) The conducting paths. — Inflammation of the optic nerve (optic neuritis) is an important cause of blindness. It commonly ends in atrophy (white atrophy) of the optic disc or beginning of the nerve within the eye. ‘Grey atrophy of the disc, also a cause of blindness, is a primary degenerative condition, not resulting from inflammation.

The optic nerves pass back from the eyes and meet at the optic chiasma, at the base of the brain, where a re-arrangement of their fibres takes place, such as a very large part of the outer half of each retina pass into the optic tract of the same side, while the fibres from the inner half of each retina pass into the optic tract of the opposite side. In this way, that while a lesion destroying the continuity of one optic nerve causes total blindness of the corresponding eye, a lesion of one optic tract results in destruction of the outer half of each retina. Thus destruction of the right optic tract causes blindness of the outer (right) half of the right retina, and of the inner (right) half of the left retina. Blindness of the right half of each retina results in blindness of the left half of the field of vision, and this condition is called left-sided half-blindness or hemianopia.

(3) The brain. — The fibres of the optic tract pass into the occipital lobe of the brain, and destruction of the visual centre in either occipital lobe produces hemianopia just as in the case of the optic tract. Destruction of both visual centres would cause double hemianopia, that is, say, complete blindness. Lesions of the left occipital lobe, but not of the right, may also be attended, according to their extent, by ‘word-blindness,’ or ‘mind-blindness’—conditions which have already been defined. This difference between the effect of lesions of the left and of the right side of the brain is simply an example of the general fact that all the speech functions (speaking, reading, writing) are in their special centres on the left side of the brain only. Apart from affections of the special centres for vision, gross lesions in any part of the brain may cause blindness by setting up optic neuritis.

3. Statistics of blindness. — The proportion of blind among the general population is much greater in tropical than in temperate regions. In temper-
BLINDNESS

711

ate regions generally the proportion is about 1 in 1960. In civilized countries the proportion of blind shown by the statistics is very small. Thomas Jefferson, the United Kingdom in 1851, 1 person was blind in every 979. The proportion has now fallen to 1 in 1255. Owing to occupation there are more males than females afflicted with blindness.

The following statistics are taken from the census tables of 1901, and refer to England and Wales:

4. Psychology of the blind.—In comparing the blind with normal individuals, it must be remembered that the great majority of the blind lost their sight in adult life. In such persons we are not likely to find any special mental peculiarities, beyond their personal reactions to their misfortune. It is quite different when sight is lost in early childhood. The natural development must be profoundly modified in cases where the acquisition of knowledge, the training of the intellect, and the formation of tastes and habits must proceed without the faculty of vision playing any part in the process. One of the earliest peculiarities to be noticed in blind children is a tendency to bodily inaction. The blind child is often content to sit quite still for considerable periods of time, at an age when a normal child would not be still for an instant. The games of blind children are often lacking in animation. Of course there are many individual exceptions to this statement, but a tendency to inaction is general, and seems to be most marked in those whose blindness is total, so that the sense even of light is lacking. This sluggishness of body is usually ascribed to the absence of the stimulating effect of light. There is no doubt that light is a very powerful stimulus to the nervous system, and children who spend much time in imperfectly-lighted rooms are usually languid and feeble. Another factor in the case, however, may be the natural tendency of the guardians of a blind child to restrict its movements and anticipate its wants in case of meeting with some injury if left to itself.

The mental condition of a blind person reacts upon the mental state. As an anonymous writer on this subject expresses it, the blind, as a class, are "seldom characterized by that rapidity and intensity of mental action, that keenness of penetration, which pieces at once to the very heart of a matter,—that priva vis animi which is the characteristic of the highest genius. Their intellects are in general cautions, calm, deliberative, slow, distinguished rather by soundness than by brilliancy..." The fact that their attachments are not based on a calm and equable kind, for, being more on judgment and "right reason" rather than upon those inexplicable attractions which so often bind others together; the infrequency with which they seem to give way to strong impulses of affection, and a certain want of gaiety and expansiveness which has often been noted in them,—may also, no doubt, in fact be attributed to the same cause." (National Review, 1860, p. 92).

The blind depend upon the sense of touch to a large extent for their knowledge of the outer world, that tactile sensibility being developed by constant practice to a very high degree of acuteness, and many astonishing things are related of the discriminative ability of some blind folks. Blind people have been able to play cards by means of small marks upon the cards which they were able to distinguish, but which escaped the notice of the persons who were playing with them. The sense of touch is greatly improved by practice, and blind people often take special care to keep the epidermis of the finger tips soft in order that their delicate susceptibility may be preserved. The lips and tip of the tongue, naturally more sensitive than the other parts of the body, are often made sensitive in persons in cases where the fingers are unable to perceive sufficiently clearly. The skin of the face often becomes very sensitive to the proximity of solid bodies, and the tympanic membranes are credited with the power of rendering perceptible vibrations of the atmosphere too slight to be recognized as sound.

Mr. W. Hanks Levy, a blind writer, gives an interesting account of his own power of recognizing neighbouring objects. "Whether within a house or in the open air, he says, "whether walking or standing still, I can tell, although quite blind, whether I am opposite an object, and can perceive whether it be tall or short, slender or bulky. I can also detect whether it be a solitary object or a continuous fence; whether it be a close fence or composed of open rails; and often whether it be a wooden fence, a brick or stone wall, or a quick-set hedge. I cannot name a single object if much lower than my shoulder, but sometimes very low objects can be picked out of the air; and part of my body possessing this power is my face; this I have often tested in my unaided experiments, by introducing my own nose into the narrow circle which I can see, or by closing my nose with a thick veil destroys it altogether" (Blindness and the Blind, London, 1875).

Some writers on the blind make the curious assertion that they have no sense of space, that they live only in time, that their little world is circumscribed by the narrow circle which they can span with their own arms. This assertion, however, seems to be altogether preposterous, and is sufficiently refuted by the facts quoted above from Mr. Levy. The delightful blind people often take in travelling, especially with a companion who can describe the scenery passed by, is also opposed to the idea. Blind men may even enjoy mountaineering, and a blind man who had been to the top of Mont Blanc wrote to the "Blind" that no one could have enjoyed the view more than he had done. There is no doubt, of course, that a blind man's conception of space must differ greatly from our own, but a conception of space derived from touch, from movement, and from sound, he certainly cannot lack in the case.

Sounds, also, cannot fail to play an important part in giving to the blind a sense of the beyond; and where we think of an object getting smaller as it recedes in the distance, a blind man would think of the sound proportionate to the sound. When a blind man is out walking, the variations and mutations of familiar sounds constitute a source of interest and pleasure. The distance of objects can often be gauged with wonderful accuracy, and a case is quoted of a blind gentleman who could practise archery with considerable expertness, his aim being directed by a bell placed behind the target.

Conversation is naturally a source of great pleasure to the blind, and, indeed, it means even more to them than to normal people. For, having developed their auditory impressions to furnish that commentary upon the speaker's words which we find in the play of expression, it is a curious trait in the blind that they seem to take a special pleasure in descriptions of the visual appearance of things. In their conversations they make much use of visual imagery, and always speak of going to see places and things. No doubt the impressions from which they are necessarily for ever shut out have for that very reason, a special value in the eyes of the blind. As is well known to many of the blind tells the writer that there is no subject in which his pupils manifest greater interest than the study of optics.

The general characteristic of the mind of the blind is rather curiously described as syntactical
The blind man's construction of real space differs from that of the seeing man most obviously in the larger part which systems play in the relative absolute of spatial relations. The seeing baby's eyes take in the whole room at once, and distinct arise in him at once of the various objects which are visually discerned. The blind child, on the contrary, must assimilate his mental image of the room by the addition, piece by piece, of what falls within his knowledge of what it is quite certain to know somewhere in the universe.

On the other hand, M. Dufau tells of the mind of the blind as characterized analytically. If we compare the manner in which systems arise to the blind that he acquires by analyzing a piece of solid object, for example, a plant, we find that the former 'casts a glance upon it, envelops it with a look, and his task is done; he has considered it, so much is clear which he gathers himself, because it is sufficient to enable him to recognize and to name the object. On the contrary, the blind man, on the contrary, can only examine, to touch with the utmost care, the stalks, the branches, the leaves; to acquire, in short, a complete and definite conception which will enable him to distinguish it from others. Thus it is necessary that makes analysis a habit to him, which retains his acquisition of knowledge, but at the same time renders it more positive and more certain' (Dufau, Des Aveugles, 1850, p. 42).

Although these two descriptions at first appear somewhat opposed to each other, it is obvious enough on consideration that both are true so far as they go. Taking up his concepts of the world about him, the blind man must analyze, and, having analyzed, he must put together. The two processes are carried out by him much more carefully and systematically than by the seeing, and the results are carefully compared and contrasted. If we recognize this natural tendency to analysis and re-construction that the blind owe their wonderful power of observation, and to the same tendency we may trace the fact that science seems to attract the education of much more strongly than imaginative literature ever did.

Cases of blind persons recovering their sight in adult life are not numerous, and such as are known have naturally attracted a good deal of interest. This interest has to a great extent centred around what is known as Molyneux' problem. This was as follows:

'Suppose a man born blind, and now adult, and taught by his touch to distinguish between a cube and a sphere, ... so as to tell, when he felt one and the other, which is the cube, which the sphere. Suppose then the cube and sphere placed on a table, and the blind man be made to see; query, whether by his sight, he might agree with his touch in distinguishing between the cube and the globe which is the globe, which the cube?' (see Locke, Essay, II. x. 9).

To this query Molyneux himself answered in the negative, and Locke in the affirmative. Contrary opinions were expressed by Dr. Franz and Sir W. Hamilton, and the former had an opportunity of testing the soundness of his views. His patient when operated on was seventeen years of age, and he was familiar with geometrical figures. When some of the early lessons before the operation had been given, he showed a vertical and a horizontal line, and those he was able to name correctly; but on being asked to point out which was the horizontal line, he indicated the wrong one, afterwards correcting himself. This error evidently means that no association had yet been found between the senses of sight and touch. He was next shown an outline of a square, 6 inches in diameter, within which was a circle, and within this a triangle. He was asked to describe these figures, and after careful examination, he succeeded in doing so correctly.

A recent case of the same kind has been described by Dr. A. Maitland Ramsay of Glasgow. This was a young man of thirty, totally blind from birth, but able to distinguish day from night by the sense of touch. After the operation performed, the patient appeared quite dazed, and could not realize that he was seeing. The size of everything in the ward seemed very much increased, and on that account he had great difficulty in interpreting what he saw. When asked to distinguish between a ball and a brick, he looked at them attentively, and could not answer correctly. His mind worked naturally, as if he were trying to translate what he saw, by comparing it with an imaginary tactile impression, and then he named both correctly. He explained that he was so much in the habit of handling objects that he had come to have a feeling of form which he was not conscious of, although his whole education for the blind was founded, the Hospice des Quinze Vingts, wherein St. Louis IX., provided for the needs of three hundred knights who had lost their sight in the Crusades.

The first idea of educating the blind by means of the sense of touch appears to have originated with Franz Valentin Haidy, a native of Picardy, about the year 1753. Haidy's first pupil was a blind beggar, whom he paid to receive instruction. The practicability of teaching the blind to read from raised characters having been proved, public interest was aroused, and a young man was able in 1758 to found the first 'School for the Young Blind.' Haidy afterwards visited St. Petersburg, at the invitation of the Government, to superintend the establishment in that city of a similar institution. The Liverpool School for the Blind was founded in 1791, and was followed two years later by the Edinburgh Blind Asylum, which became one of the most successful schools of the kind in the world. The success of these schools has led to the multiplication of such institutions all over the civilized world. The introduction of special education for the blind, the pupils being taught to read from raised characters, and receiving lessons in the usual school subjects, while their future is kept in view, and instruction is provided in different trades, whereby they may maintain themselves in after life, has given rise to a more special kind, such as the Normal College and Academy for Music.

The method of teaching the blind to read has had an interesting evolution. Haidy originally made use of the script form of the Roman letter. Subsequently quite a number of forms of embossed type were introduced. The first of these was brought forward by James Gall, of Edinburgh, in 1827. He made use of the Roman letter, but for ease of recognition, all the curves were changed to angles. In this type there was published in 1834 the Gospel of St. John. The first Gospel was printed in raised type for the blind. Other modifications of the Roman letter were introduced by Howe, Alston, and Fry. Various stereographic and phonetic systems were also brought forward, but were discarded on the ground that they did not teach correct spelling.

To get over the difficulty sometimes experienced in passing from one line to the next, Frere introduced his ingenious return line. The finger travels from right to left, and is returned by an embossed curve to the line below, which is read from right to left. On this lower line the characters are printed in the reverse way, in order that the finger, moving in the reverse direction, may meet them in the same order as when reading from left to right.

Moon's type, which became very popular, is a modification of the Roman character, but arbitrary signs are also made use of. Frere's return line is not adopted, but the characters are not reversed in the return lines. Moon's type is still made use of to some extent, and the Gospel which blind men may be seen reading in the streets is commonly printed in it. It has, however, two great drawbacks. Books printed in this type are very expensive. A single volume, for example, fills a large volume.

This multiplicity of types was naturally attended by many inconveniences. A blind man who learned to read one type could not read books printed in another, and books printed in one type the embossed types could obtain a circulation only among the blind who were acquainted with that type. Accordingly, a number of gentlemen founded the British and Foreign Blind Association, and set themselves the task of finding and adopting some one type best adapted to the needs of the blind. This
they found in none of the varieties to which we have referred. Their researches resulted in the introduction into England in 1868 of a type which has been invented by a blind Frenchman forty years before. This type, which is now in general use, is called the Braille, after Louis Braille, its inventor. The advantages claimed for it are: that the letters are easily recognized; that they can be written by the blind themselves in such a way as to be legible to themselves or other people who know the characters; that books can be printed in much smaller bulk and at a much smaller cost than in the case of other types for the blind.

The principle of the Braille system is very simple. The letters are formed of raised dots of which the maximum number is six, arranged in three pairs placed one above another—•. Any of these dots may be omitted, the letters of the alphabet, punctuation marks, and a number of other signs being formed by one, two, three, or more of the dots variously arranged, as may be seen in the alphabet printed below. It will be noticed that neither of

The Braille Alphabet and some Contractions.
(The large dots represent the raised points of the Braille letters).

The two dots constituting the lowest pair is present in any of the characters of the upper line; each of the characters of the second line resembles the character immediately above it, plus one of the lowest dots; while the characters of the third line differ from those above only in the presence of both dots of the lowest pair. This arrangement obviously greatly reduces the difficulty of learning the symbols. The Braille characters have also been adopted for the printing of music, so that a blind musician can learn a new piece of music by following the score with one hand while he plays the keys with the other.

A large number of standard works have now been published in the Braille type, and are sold at a moderate price. At the Edinburgh School for the Blind, a monthly magazine, *Hera Jacunda*, has been published since 1893. It was started and edited by Mr. W. H. Illingworth, a former head-master of the school. Each number contains sixty large pages of interesting and amusing matter, and a piece of music; and the price is one shilling. The British and Foreign Blind Association also publishes magazines in Braille.

Mr. J. W. McLaren, of Edinburgh, recently invented a method whereby the printing of books in Braille type is greatly simplified, and the cost vastly reduced. The Braille Printing and Publishing Co., St. Giles Street, Edinburgh, was founded to print books by this new method, and for some time a magazine for the blind, the *Braille Weekly*, was published every Saturday at the price of one penny. Dr. John Brown's famous story, *Ruby and His Friends*, printed by the new method, was issued at the price of sixpence. The story occupies fifty-two quarterly pages. As books of this class naturally depend upon a very limited public for circulation, it would be a good thing if some central publishing company could not only stock all the books printed by this method, but control the class of books to be published, and prevent overlapping and the same book being printed by different people.

Writing in Braille characters is carried out by means of a writing frame. The paper is covered with a piece of brass containing a double row of oblong perforations. By means of a stylus, each letter is impressed upon the paper through one of the perforations. To read the writing the paper must be reversed, when the depressions produced by the stylus will be felt by the finger as raised dots.

When the blind wish to write so as to be read by the seeing, they may use a pencil and a guiding frame. Some blind persons who lost their sight in adult life have become very expert at this kind of writing, but for those who have been blind from childhood there is no doubt that the best plan is to use a typewriter. Here the expense may be an objection, but this has been got over by Mr. Illingworth, who recommends for the purpose a cheap form of typewriter which costs only a few shillings. In this instrument the rubber type projects from the under surface of a revolving disc, and, by pressing on the upper surface above each letter the corresponding character in Braille, the blind pupil can easily find the letter he needs, bring it into place, and print it on the paper. It will be noticed that, by using a typewriter, the blind scribe actually writes in a character with which he may not be acquainted, and is thus saved the trouble of learning two totally distinct alphabets. It is curious to recall the fact that the Braille type was violently opposed on the ground that the letters were entirely arbitrary symbols, as if the characters of the Roman or Greek alphabets were anything else. Obviously, it is no more confusing for the blind to call a couple of dots the letter *b* than it is for the French to call a cabbage a *chou*.

Arithmetic is taught to the blind by means of a
tablet containing rows of octagonal holes. A peg can be placed in any of those holes, in eight possible positions representing the numbers 1 to 8; to obtain 9 and 0, the peg is inverted and placed in positions 1 and 2. The two ends of the peg, of course, differ so as to be readily recognizable by touch.

The device is made use of for teaching algebra. Raised maps are used for geography, and models and natural objects are freely used for class purposes.

6. The care of young blind children.—When sight is lost in early childhood, a good deal can be done for the child before it is sent to a school. When the child is old enough to go to school, teachers of the blind complain that, when children come to them, they do not know how to use their tools; that they are lacking in confidence, and can do nothing for themselves; that their muscles are soft and weak; and that, in short, a great deal of time has to be given to exercises and gymnastics intended to train the muscles and the sense of touch before education, in the school sense, can be started. These faults depend very largely on the fact that the child’s relatives, teachers, and nurses have done everything for him. They have dressed him, washed him, and fed him. They have led him from place to place. They have perhaps never thought of giving him tools to play with. They have helped him from going about by himself, for fear of accidents. In some cases they have even kept the child in bed for years, or taken him about only in a perambulator, in case he might hurt himself. Such treatment, although kindly meant, is really cruel to the child. The proper course of procedure is quite the opposite. The proper method of dealing with a young child who is blind may be expressed in a sentence: Treat him exactly as if he could see. The child should have tools to play with as soon as he can grasp. When he can creep about, he should be allowed to do so. He should be expected and encouraged to walk as soon as other infants. As soon as he can move about, he should be allowed to explore the room for himself, and discover the properties of the furniture it contains. While care should, of course, be taken to prevent any serious accidents (dangerous places such as stairs or fires being guarded), obstacles should not be taken out of the child’s way, nor should he be warned if he is going to walk against something. No doubt, it is very difficult for a user of the perambulator to see a blind child in the act of walking in the street, although it is not difficult for him to quickly stopping him or snatching the chair out of his way; but if the child is ever to gain confidence, and to be able to walk about freely without fear of running into walls and lamp-posts, he must learn by hard experience in his nursery days. So also, as the child gets older, he should be encouraged to feed himself; to undress, and later to dress himself; to fold his clothes, and put them away; to put his toys away when he has finished playing with them, and not to leave the room until they wants him. He should be taught to use his hands in every possible way. Many of the kindergarten occupations are useful for this purpose, and the sorting and threading of beads is valuable as affording a training in sensibility to the finger tips. The handling of small beads is a useful preparation for the later study of Braille.

7. Advice to those likely to lose their sight.—When blindness occurs from disease in later years, the loss of sight is usually gradual, and, after it is known that blindness is impending, months or even years, may elapse during which some sight remains. Persons so affected should be advised to set about training their other senses, and especially the sense of touch, without delay. The Braille alphabet can soon be learned, and, in practicing reading, the sight which remains will be of great assistance. Braile writing should also be systematically practised. Various everyday tasks, such as dressing and undressing, should be practised with the eyes closed. When any real difficulty presents itself, of course, the eyes may be opened for a moment, but, as far as possible, the sufferer should try to perform himself by degrees the work he will have to perform for a long time, so that, when the day of total darkness does come, it will not find him wholly unprepared.

W. B. DRUMMOND.

BLISS.—See Blessedness and Blest (Abode).

BLOOD.—1. Physiological and Psychological.—Blood consists of a fluid portion, known as plasma, and corpuscles (‘the red corpuscles’, the ‘white corpuscles’, and ‘the platelets’), the latter forming its nutritive element. ‘Average blood may be regarded as consisting of 9% plasma and 9% corpuscles’ (Huxley, Physiology, p. 105). The inner function of the blood has been compared by Harvey to that of a ‘vat in the outer function of the air and food supply. ‘It is absolutely essential to the life of every part of the body that it should be in such relation with a current of blood that matters can pass freely from the blood to it, and from it to the blood, by transudation through the walls of the vessel in which the blood is contained’ (ib. p. 116). Thus, the blood is literally the vehicle of life throughout the organism, and this function is discharged by means of its constant circulation from the left lower cavity of the heart through the arteries, and backwards through the veins to its right upper cavity. The nourishment of the blood itself is derived by absorption from the food which enters the intestines; the venous blood is changed into arterial blood by absorption of oxygen through the lungs, the oxygen then being maintained from the right lower cavity of the heart to its left upper cavity. It is evident that the true function of the blood could not be understood until its circulation was demonstrated, as was done by Harvey in his Exercitatio, published in 1628 (Foster, History of Physiology, 1901, p. 42). Of this circulation the ancient world was ignorant, and consequently of the precise ministry of the blood to life. Aristotle (B.C. 384-322) ‘knew only of its direct passage from the heart to the extremities, and back again. ‘The next man then to demonstrate that the liver converts food into crude blood, giving it the ‘natural spirits.’ In the heart, some of this blood is mixed with air drawn from the lungs, and by the innate heat of the heart is laden with ‘vital spirit’ (Foster, op. cit. p. 122 f.). This was the accepted doctrine for thirteen centuries, until the dawn of modern physiology. The pulmonary circulation was described by Servetus in 1546, and, probably in dependence on him, by Readius Columbus in 1559 (ib. p. 313); whilst Celsesalpinus, a little later, ‘recognized that the
flow of blood to the tissues took place by the arteries and by the arteries alone, and that the return of the blood from the tissues took place by the veins and not by the arteries (ib. p. 35). Fabricius described the valves of the veins in 1574 (ib. p. 163). Harvey, with Professor C. S. Symons, was 'the first to demonstrate the circulation of the blood. . . . The essential feature of Harvey's new view was that the blood through the body was the same blood, coursing again and again through the body, passing from arteries to veins in the tissues, and from veins to arteries through the lungs, heart, suffering changes in the substance and pores of the tissues, changes in the substance and pores of the lungs' (ib. p. 47). Thus, the long-established doctrine of 'spirits' was discarded, and the study of physiology separated from that of pseudo-psychology.

But primitive man did not need to wait for Harvey in order to be taught the significance of blood in relation to life. However ignorant he might be of the precise relation, common observation showed the dependence of life on the blood within the body of man or animal. Loss of blood meant loss of strength, and a man's life seemed to drain away with the blood from a mortal wound. Thus Homer can speak either of the soul (psykh, II., 7. 692, 'and the soul, which in that passage was caused to drain away through the inflicted wound (cf. Robinsonson, Psychol. of the Naturewolker, p. 18; Gruppe, Griech. Mythol. und Religionsgesch. p. 728)?) the identity is affirmed explicitly, e.g., amongst the Hebrews, in the phrase 'the blood is the life' ('Dt 12.2, where 'life' is literally 'soul'); and even a thinker like Empedocles could regard blood as the seat of thought or perception (Holde, Psykh, 1802, ii. 176; Burnet, Early Bkock Philosophy, 1908, p. 288). For us, however, to repeat 'the blood is the life' means something so far removed from any meaningful and the difference is of fundamental importance for the subject before us. By such a phrase we should imply that blood is essential to the living activity of the organism, and that life is not possible without blood. But primitive thought meant to assert that the life is the blood, and vice versa: when the blood left the body, it carried the life with it. Thus, in the Qur'an, xvii. 2, God is said to have created man from a clotted blood; in Burns this is kept and eaten as a special occasion (Hughes, History of Ideas of Blood, p. 122). Numerous, too, is the explanation of the numerous customs that illustrate the perils and powers of blood for the ancient mind. This is the key to many important institutions. To the modern mind, blood which has left its organism is no more than any other fluid, except for a certain amount of sentiment, which may be itself an inheritance from the past; but for the ancient mind, blood, even when shed, was still perilous and potent, full of latent life, and capable of working on persons or things in contact with it. The illustration of these ideas belongs to the following sections; here it remains to show, by instances selected from a very large material, the nature of the idea of a blood-soul. The Arabs used the word for 'soul,' nefis, cognate with the Heb. nephesh, in the sense of blood. 'When a man dies a natural death, his life departs through the nostrils . . . but when he is slain in battle his life flows on the spear point' (Robertson Smith, Rel. Semit., p. 40 n.). Belief in the blood-soul is encountered in connection with the heroine, and of burying the Muslim 'martyrs' in their blood, according to Muhammad's commands at Uhud (Wellhausen, Reste ar.v. Heidentumus. p. 178, n. 3). Robinsonson quotes a remarkable story of an Arab newly-married man attacked, whose blood was raised by the husband. He thereupon killed her, smeared himself with her blood, and fought till he fell, by this means uniting her soul with his own (op. cit. p. 25). Similarly, we may read of the Australian initiation custom, after circumcision: 'The boy was lifted up, and standing above the two Thangallum men, allowed one of them to touch his body, and thus establishing a special friendly relationship between himself and them' (Spencer - Gillen, p. 572; further examples collected by Frazer, GB. 1. 356). Or we find that the Caribs 'sprinkle a male infant with a finger of blood to give him his father's courage' (II. Spencer, Soc. Stud., i. 343). We even find that amongst the West African natives the skeletons of Ashanti kings are washed with the blood of human victims (Ellis, The Teli-speaking Peoples, p. 108)—doubtless to impart soul-life to the dead. Another group of examples shows us the use of blood as a substitute for life (Tylor, ii. 403), and the wide-spread avoidance of blood as food is by some peoples explicitly traced to the identity of the soul and the blood (examples collected in Frazer, op. cit. 1. 355). So natural, indeed, is it among primitive people for death to come by blood-shedding that 'it is always held uncanny in Africa if a person dies without shedding blood' (Kingsley, Travels in West Africa, p. 324); in other words, the blood is the normal and visible sign of life as life passes away, and the splitting of this blood-soul to other ideas of soul, such as its identification with breath or shadow, is probably left quite indeterminate in most cases. Skoet cites a curious Malay belief which connects the blood-soul with the shadow-soul through a small snail. 'Among the grass in the shadow of a grazing animal these creatures are to be discovered, and if one of them is crushed, it will be found to be full of blood, which has been drawn in a mysterious way from the veins of the animal through its shadow.'

2. The perils of blood are a natural result of that idea of the blood-soul which has just been indicated—the almost universal belief that blood is a fluid in which inheres mysterious potency, no loss dangerous when misused than efficacious when properly employed' (Moore, Edi, art. 'Sacrifice.' § 43). It is with the former aspect that we are first concerned, and its most obvious example is that tabu on blood as food with which the OT tabu makes us familiar. (I. 18, p. 112.) However, it is the explanation of the numerous customs that illustrate the perils and powers of blood for the ancient mind: this is the key to many important institutions. To the modern mind, blood which has left its organism is no more than any other fluid, except for a certain amount of sentiment, which may be itself an inheritance from the past; but for the ancient mind, blood, even when shed, was still perilous and potent, full of latent life, and capable of working on persons or things in contact with it. The illustration of these ideas belongs to the following sections; here it remains to show, by instances selected from a very large material, the nature of the idea of a blood-soul. The Arabs used the word for 'soul,' nefis, cognate with the Heb. nephesh, in the sense of blood. 'When a man dies a natural death, his life departs through the nostrils . . . but when he is slain in battle his life flows on the spear point' (Robertson Smith, Rel. Semit., p. 40 n.). Belief in the blood-soul is encountered in connection with the heroine, and of burying the Muslim 'martyrs' in their blood, according to Muhammad's commands at Uhud (Wellhausen, Reste arav. Heidentumus. p. 178, n. 3). Robinsonson quotes a remarkable story of an Arab newly-married man attacked, whose blood was raised by the husband. He thereupon killed her, smeared himself with her
with the result that cattle are stoned to death or suffocated. Where blood is actually shed, various means are used to drain the charge of the shell, so to speak. This was explained in the precepts indicated above in the practice of putting the blood on a sacred stone or altar, and reference will be made to it again when the place of blood in sacrifice is considered (p. 719). Another plan is to cover the blood with earth or dust; Doughty met with an example of this, interesting because the blood was the man's own: 'Thärhî, cupped in the head, neck, and back, felt lightened; he covered the blood with a little heap of dust, and one who came in asking, 'What is this heap?' he answered, 'It is blood!' 'Why? to fall on that of the Devil' (Dee's Journal, i. 492). Or the blood may be sucked, or else deposited in some special place; both are illustrated by one of the Australian rites of sub-incision, in which the boy is made to suck the blood on the knife, whilst the blood from the wound falls on a piece of paper bark. 'The blood was taken in the paper bark to the boy's mother, who buried it in the bank of a water pool so as never more to ensure the growth of the fìles' (Spencer-Gillen5, p. 365). In other circumstances, the blood that has been shed may require expiation (cf. De Selincourt, p. 195). The blood is cleansed away, or at least purified, by the use of other blood (Lang, Myth, Ritual, and Religion, i. 275). Finally, the perils of blood, already seen in the prohibition of blood as food, and in avoidance of or precautions in blood-shedding, find a third group of illustrations in the elaborate rules affecting the blood of menstruation and childbirth. The fear of women's blood in these cases, no doubt because regarded as specially mysterious and potent, is wide-spread amongst primitive peoples (see also the evidence from a native of the Vanikoro Islands). Women are the main depositaries of this sacred blood, with two exceptions. The blood of the first menstruation (Spencer-Gillen5, p. 490). Crawley (The Mystic Rose, p. 212), whilst admitting that the obvious vehicle of contagion in such cases is blood, questions the truth of making this central in the tabu of women; and it is frequently true that various ideas operate and concentrate in one primitive custom. But none can doubt that the perils of blood are illustrated by the wide-spread tabus that attach to women in many societies.

3. The powers of blood have been implied already in its perils. But the same ideas which make men ordinarily shrink from contact with blood may evidently cause them to resort to it on extraordinary occasions, as a specially potent medicine or magical vehicle. In general, the risk of the blood is the risk for the sake of the end in view. Only a few representative cases can be given here: further illustrations may be found in the chief works on anthropology, or in Strack's Das Blut, which gives many examples and copious references. One of the most obvious ways in which the psychical energy of blood can be assimilated is by drinking it. 'Blood may be given by young men to old men of any degree of relationship and at any time with a view to strengthening the latter' (Spencer-Gillen3, p. 461). Amongst the same Australian peoples, blood may be given also to the members of an avenging expedition; to secure unity of purpose and to exclude treachery, it may even be forcibly administered to an outsider (p. 402); special meetings of blood-ritual may be called for the object of blood-drinking (ib.). Many primitive peoples drink the blood of enemies in order to secure their strength (Crawley, The Mystic Rose, p. 102; Robertson Smith, Kinship, p. 284 [ed. S. A. Cook, p. 290]; Trumbull, The Blood Covenant, pp. 139-142). Sometimes the special power of blood-drinking is religious inspiration (Trumbull, op. cit. pp. 139-142), especially in connexion with a sacrifice, when the fresh blood of the victim is drunk (Frazer, op. cit. i. 133 f.). The result is frequently seen in the usual phenomena of possession. The religious idea underlying this practice will be discussed when blood-covenants are dealt with (§ 4) in connexion with the tabus enumerated: here it is sufficient to name this wide-spread practice in illustration of the powers of blood. Another way of imparting these powers is by external application of the blood. It is a very common thing for a young man to open a vein in his arm and allow the blood to sprinkle over the body of an older man, the idea being to strengthen the latter' (Spencer-Gillen6, p. 598). Among some primitive peoples, the blood of relatives is allowed to fall on or be applied to the body, to preserve or reviving it or imparting life to it (cf. Howitt, p. 451). From such use of blood to promote physical or psychical strength, it is an easy transition to the use of blood as medicine. For example, amongst the people just named, 'it is a very common practice to give both men and women blood to drink when they are ill' (Spencer-Gillen3, p. 599). From the time of the Romans down to our own time, there has been a wide-spread belief that epilepsy could be cured by drinking the blood (Robinson, Primitive Religion, p. 379). There can be no question of cure for leprosy, from ancient Egypt down into the Middle Ages, was the blood-lath (Trumbull, The Blood Covenant, p. 116 f.). Many curious examples are collected by Strack (pp. 27 f. and 38-40) of these and similar customs. The patient may even be given his own blood to drink (op. cit. pp. 40-43). We find also cases approximating to the use of charms, like the Chinese custom, in times of pestilence, of writing sentences in human blood to be fastened on the door-posts for protection against disease (Trumbull, The Threshold Covenant, p. 71). Not only human but also animal blood occurs frequently in the primitive pharmacopeia (Strack, pp. 55-57). It is, of course, difficult to separate ancient medicine from ancient magic. In regard to the magical uses of blood, some belong to it in common with hair, nail-parings, etc., as having been in close connexion with the body: thus 'ancient Peruvian sorcerers destroyed their victims by acting on blood taken from them' (H. Spencer, Sociology, i. 264). The use of blood is equally curious in various societies. Australia is midway between the magical and religious uses. But special mention must be made of the use made of the blood of menstruation for both medicinal and magical purposes (Strack, pp. 28-32)—a use we might expect in view of the power of the powers of blood are illustrated throughout this article, in regard both to human and to superhuman relationships, and underlie innumerable blood-rites and blood-sacrifices. One of the most striking of these is the blood-baptism of Mithras (q.v.). Here it remains only to point out the extension of the powers of blood to many blood-like things. The tabu on blood extends to many blood-coloured objects (Devons, p. 67: 'The savage believes that the same taboos, consequences—whatever they may be—which ensue on contact with blood, do actually and really follow on contact with things which by their colour . . . remind him thereof'). So, amongst West African natives, 'every spot where the earth is of a red colour is believed to be, or to underlie, the abode of a Saska Martinu; and the red colour is supposed to be caused by the blood of the victims destroyed by him' (Ellis, op. cit. p. 35; cf. Taylor, i. 406). We may trace the same range of thought in the idea of attaching to the red object the red breast, and in the practice of smearing the body with red earth (Spencer-Gillen3, p. 464). This last is probably a substitute for blood. For other
customs, especially the natural and frequent use of wine as the blood of the grape, cf. Trumbull, *The Blood Covenant*, p. 191 f.; Frazer, i. 359.

4. Blood-covenants.—The previous sections illustrate that primitive conception of blood on which is essentially the union of one life with another by actual exchange of blood, the exchange being made either by drinking or by transfusion. Many instances of this practice are collected by Trumbull in his elaborate monograph, *The Blood Covenant*; he draws examples from Africa, Asia, America, Europe, and Oceania, and claims that it is fundamental in all primitive life (p. 96). Certainly the practice is a natural development of the idea that blood is life. On its physical side, the practice is still retained in civilized communities in the medical operation of transfusion: 'men or dogs, bleed to apparent death, may be at once and effectually revived by filling their veins with blood taken from another man or dog' (Huxley, *Physiol.* p. 117). The difference is that the transfusion does not lead to a new individual, even for physical only, but also for psychological ends, which he does not separate from the former. 'The inter-commingling of the blood of two organisms is, therefore, according to this view, equivalent to the inter-commingling of the lives, of the personalities, of the natures, thus brought together' (Trumbull, *op. cit.* p. 33). Both the primitive practice and the primitive idea may be modified in various directions. On the one hand, some substitute for blood, such as wine, may be introduced; on the other, it appears that they appear in the weaker form of union in a particular oath or pledge (cf. Doughty, *Arabia Deserta*, ii. 41: 'Sheikhly persons at Aneza have told me that "el-Kahtân in el-Yemen do confirm their solemn swearing together by drinking human gore"'). For a collection of such blood-oaths, cf. Strack, *Das Blut*, pp. 21-25. See, further, BROTHERHOOD (artificial).

5. Kinship.—It has seemed to many that the idea of union by blood through the blood-covenant is the fundamental idea of kinship by blood as underlying kinship in general, the only difference being the substitution of artificial means for natural. Jevons, referring to the fact that Muslim women do not veil themselves in the presence of their brother, but of the idea of 'kinship' any more than before other blood-relations, remarks: 'it faithfully preserves the primitive view that the blood-brotherhood thus established is not a relationship personal to the two parties alone, but extends to the whole of each clan: my brother, or becomes, the brother of all my brethren; the blood which flows in the Veins of either party to the blood-covenant flows in the veins of all his kin' (*op. cit.* p. 99; cf., however, p. 170). Benzerger, also referring to Semitic races, which so richly illustrate the ideas of blood, remarks: 'Relationship is participation in the common blood which flows with equal fulness in the veins of every member of that circle; on this idea rest all the rights and obligations between the individual and his clansmen' (*EBI*, ed. 2572). Such an identity of kinship is not to myself identical; it is the terms are convertible, for the life of the father and the life of the mother are combined in the child born from their physical union. But it is by no means so certain as is frequently assumed that the fundamental idea of blood-brotherhood is to itself identical which makes the whole range of birth ideas amongst primitive peoples often differs widely from our own. By various Australian tribes we find the idea firmly held that the child is not the direct result of intercourse, that it may come without this, which merely, as it were, prepares the mother for the perception of the spirit. Thus among one tribe a spirit child inhabits one of the local totem centres' (Spencer-Gillen*, p. 265). In another part of the same country, a different view is held: 'The child comes from the man, and the woman only takes care of it' (Howitt, p. 258). Amongst the Assiniboin, Western East Indian tribe, say that the lower jaw is the only part of the body which a child derives from its mother, all the rest being derived from the ancestral **lawn** (the Tahí base). The father furnishes nothing' (Ellis, *The Yoruba-speaking Peoples*, p. 131 n.). Westernmarck (*Hum. Mar.* p. 106) cites from Camer the case of a North American tribe who ascribed the soul to the father and the body to the mother. These ideas, in their many varieties, at least remind us that the idea of blood-relationship has far less physiological support in the primitive mind than in our own. Further, we may ask whether the analysis of the idea of kinship into one of identity of blood is itself natural to the primitive mind, and does not belong to a later development, rather for physical only, but also for psychological ends, which he does not separate from the former. 'The inter-commingling of the blood of two organisms is, therefore, according to this view, equivalent to the inter-commingling of the lives, of the personalities, of the natures, thus brought together' (Trumbull, *op. cit.* p. 33). Both the primitive practice and the primitive idea may be modified in various directions. On the one hand, some substitute for blood, such as wine, may be introduced; on the other, it appears that they appear in the weaker form of union in a particular oath or pledge (cf. Doughty, *Arabia Deserta*, ii. 41: 'Sheikhly persons at Aneza have told me that "el-Kahtân in el-Yemen do confirm their solemn swearing together by drinking human gore"'). For a collection of such blood-oaths, cf. Strack, *Das Blut*, pp. 21-25. See, further, BROTHERHOOD (artificial).

6. Blood-revenge.—At first sight it may seem difficult to explain the universal practice of blood-revenge, except from the standpoint of a primitive sense of the blood-tie underlying kinship. When the blood of a kinsman has been shed, it seems most natural to assume that the tie of blood impels his nearest relative to slay the slayer. But, in the light of what has been said, we may regard the motive which animates the avenger of blood as complex. There is, first, the fact that presents itself from the powers and perils of blood. Blood has been shed, perilous power has been liberated, and something has to be done if those in the vicinity are to escape the consequences. 'The principle that blood must be avenged for by blood has inspired the idea of the advent of the avenger of blood, and the avenger of blood becomes the avenger of a murdered kinsman' (Bastian, *Der Mensch in der Geschichte*, iii. 1; he collects many examples in pp. 2-36). There are, further, the natural obligations and feelings of those whose lives have been closely linked, and which make them desire to take revenge. The avenger of these two
BLOOD

motives, the psychical and the personal, as they may be called, issues in the familiar features of blood-responsibility, as presented in early forms of blood-feud. For example, among the West African tribes, 'revenge, especially for bloodshed, is everywhere practised. It is a duty belonging first to the "jâwe" (blood-relative), next to the "ikaka" (family), next to the "etomba" (tribe). . . . Formerly it was indifferent who was killed in revenge, provided it was some member of the murderer's tribe. Naturally that tribe sought to retaliate, and the feud was carried back and forth, and would be finally settled only when an equal number had been killed on each side. . . . At first to promote bloodshed, whoever was formerly no money would have been accepted as a sufficient penalty' (Nassau, Fetishism in West Africa, pp. 19, 20). This example may be taken as the normal type. In course of time various modifications arose, tending to take vengeance out of the hands of the individual, and to put it in charge of the whole community, whilst various plans were adopted, such as the well-known 'cities of refuge' among the Hebrews, to differentiate the cases of wilful and accidental manslaughter (cf. Dt 19).

The theory of distinction between the two is significant of the attitude of the primitive mind to the whole matter; it is the actual shedding of blood that is in question, not the modern idea of abstract justice. The blood they suck from the palms signifies the significance in the ideas held about blood-shedding in the case of animals. 'The primitive hunter who slays an animal believes himself exposed to the vengeance either of its disembodied spirit, or of all the other animals of the same species, whom he considers as knit together, like men, by the ties of kin and the obligations of the blood feud' (Frazer, ii. 389, where examples are given). Finally, we may see the whole principle which underlies blood-revenge well illustrated in some modern survivals. The following account is given by Curtiss from native information (Primitive Semitic Religion To-day, p. 191): 'In the neighbourhood of Nablius it is customary, when a reconciliation has been made between the murderer and the avenger of blood, for the murderer to kill a goat or a sheep in the open place, and deliver it to the avenger of blood, with a red handkerchief tied about his neck. Some of the blood of the animal slain is put on the palms of his hands. The avenger draws his sword and intimates that he could take his life from the murderer, if he gives it back to him.'

See also BLOOD-FEUD.

7. Blood and the spirit-world.—In tracing the developments of the ideas of the powers and perils attaching to blood, as they are seen in blood-covenants, blood-relation, and blood-revenge, we have considered those ideas as affecting the relation between man and man only. But it is evident, from the fact that the spirit-world is generally conceived on anthropomorphic lines, that this important group of ideas would be applied to the unseen world, and that blood would come to occupy an important place in religious as well as in social life. The remainder of this article is therefore concerned with the place of blood in religion. The natural starting-point is afforded by the thirst of departed souls for blood, of which the visit of Odysseus to Hades supplies the classical example (Od. xi. 34 f.):

'But when I had besought the tribes of the dead with vows and prayers, I took the sheep and cut their throats over the trench, and the dark blood flowed forth; and they were not satisfied with the blood. In the end the departed gathered them from out of Erebus. . . . I drew the sharp sword from my thigh and sat there, suffering not the strengthless heads of the dead to draw nigh the blood, ere I had word of Teiresias' (Butcher-Lang's tr., p. 173). This eagerness of the dead to revive their strength by drinking that blood which is life is the best explanation of the frequent practice of drinking blood or tomb or by means of a tube or funnel (examples in Jeffons, p. 51 f.), or of the various forms of blood-offering to the dead (p. 52 f.), which may take the form of more or less serious mutilations on the part of the mourner (p. 191). But other spirits than those of departed men are represented on similar grounds. So we meet with belief in the vampire. 'Inasmuch as certain patients are seen becoming day by day, without apparent cause, thin, weak, and bloodless, savage animism is called (without satisfactory elucidation) by the name of vampire. This does so in the doctrine that there exist certain demons which eat out the souls or hearts or suck the blood of their victims' (Tylor, i. 191; he cites various examples, pp. 191-194; for some modern cases, cf. Strack, Das Blut, p. 65). A particular example may be mentioned the Malay vampire known as the Penanggulan, 'which is believed to resemble a trunkless human head with the sac of the stomach attached to it, and which flies about seeking for an opportunity of sucking the blood of the dead man' (Tylor, ii. 196) (cf. p. 328). But other temporarily or permanently disembodied spirits have the same tastes and powers. So the West African natives believe that witches live almost entirely upon the blood which they draw from their victims' (Tylor, ii. 196) (cf. p. 490). It need hardly be said that the difficulty we feel in connecting an immortal spirit with material blood does not exist for the primitive mind, which knows no such antithesis; indeed, spirits are sometimes thought to yield blood (Robinsohn, esp. p. 116).

From such general beliefs we may pass to the various practices by which the spirit-world is approached through blood. Perhaps the best and simplest example of contact with the spirit-world made by blood is afforded by its use in Australian totemistic ceremonies. In connexion with the Unjiamo-flower-totem, the blood of one of the young men is sprinkled freely on a stone, which is supposed to represent a mass of Unjiamo flowers, after chants have been sung, 'the burden of which is a reiterated invocation for the power of the Unjiamo tree to flower much, and to the blossoms to be full of honey' (Spencer-Gillen, p. 184). In connexion with the Okira or kangaroo-totem, a similar ceremony is performed to increase the number of kangaroos, and the blood which is thrown out is used to hunt them (ib. p. 201). In this case, the stone 'represents the spot where a celebrated kangaroo of the AlcherInga (q.v.) went down into the earth, its spirit part remaining in the stone which arose to mark the place' (ib., p. 409). These blood ceremonies are specially instructive, because they show the potency of blood in making a vital connexion with the 'supernatural' world, quite apart from any of the theories of sacrifice developed at a later stage of religious thought. It is of importance to emphasize this, lest we misread primitive forms of 'sacrifice' such as that offered to the Yoruba god, Ogun, when a human victim is slain; 'the entrails are exposed before the image, and the body suspended from a tree. The victim is slain by having his head struck off upon the stool of Ogun, upon which the blood is made to gush' (Ellis, Yoruba-speaking Peoples, p. 68). The relation of the blood to the god may be regarded as an extension of its relation to the departed spirit. A man; it is supplied up in the address to one of the gods in the Egyptian pantheon: 'Hail, thou who dost consume blood' (Book of the Dead, cxxv. 13). In other cases, however, we meet with a less direct presentation of the blood to the deity. Thus Ellis
writes: 'In 1811 a slight earthquake shock threw down a portion of the wall of the king's residence in Coomassie. The king, Mensah, consulted the priests as to whether the evil had been done by the land. The latter declared that the damage was the act of Sasa-bosum, and that the ruined portion must be rebuilt of mud (swish) moistened with the blood of virgins. Fifty young girls were accordingly slaughtered, and blood poured over their bodies, with assurances that blood would be the chief form of sacrifice was the slaughtered animal (Wellhausen, op. cit. p. 114); and the genuine Arab ritual consists in pouring out the blood, or else smearing it on the sacred stone (p. 116). This special appropriation of the blood to the deity can be paralleled in the many peoples of the Nile. The natives of Africa eat the meat of the sacrifice, that having nothing to do with the sacrifice to the spirits, which is the blood, for the blood is the life' (Kinglsey, Travels, p. 451). 'In an expected great evil the gateway is sometimes sprinkled with the blood of a sacrificed goat or sheep. The flesh is not wasted; it is eaten by the villagers' (Nassan, op. cit. p. 93). The reason for this appropriation has been suggested in the previous sections of this article; it springs from the powers and perils of blood. On the one hand, we have already seen that blood is used as a vital link between man and the spirit-world—a usage with which various views of its precise potency might be connected; on the other hand, the very perils of blood, which so often cause its rejection and spurning, suggest that the cub, sacred to the deity, that is to say, the sacred stone will serve as a lightning-conductor does, by drawing off the latent peril. This view is practically that held by Moore in the article referred to: 'The common root of these offerings and sacrifices is most evident in the universal belief that blood is a fluid in which inheres mysterious potency, no less dangerous when misused than efficacious when properly employed. In the outpouring of the blood at the sacrificial stone we may perhaps recognize the feeling that this is the safest disposition of it, as well as the belief of a somewhat more developed theology, that it belongs to the deity of right' (EBs, col. 4218). Such disposal of the blood, starting from a genuine and deep-rooted primitive motive, would form a nucleus round which the later usages and ideas would easily cluster. Ancient psychology draws no hard and fast line between the blood-soul of the animal and that of the man; totemistic ideas confirmed the identity of the man with the animal he offered, and the communion with the deity obtained by the blood which was the life would be a very real thing to the primitive worshippers. The later ideas of substitution depend on a deepening ethical experience; and they, too, equally with the idea of homage, can find a basis in the primitive usages. Without new developments, interpreting the primitive rite anew to the needs of each age; nor do the perils and powers of blood become imperative on human thought till men learn that the only perfect communion with God belongs to the perfectly obedient will, and that they who would worship the Father must worship in spirit and in truth. See, further, art. ANTI-SEMITISM, BLOOD-FEUD, BROTHERHOOD (artificial), EXPIATION AND ATONEMENT, SACRIFICE, SACRIFICE, SACRIFICE.

BLOOD-BROTHERHOOD.—See BROTHERHOOD (artificial).

BLOOD-COVENANT.—See BLOOD, p. 717.
BLOOD-FEUD (Primitive).—One of the most wide-spread phenomena of primitive, and even of comparatively advanced, jurisprudence is the blood-feud, which, while subject to the most manifold gradations, may be defined, in its typical aspect, as that principle of ethnological jurisprudence whereby an entire family (more rarely clans or tribes) is made liable to retaliation and reprisals in kind by another family (or clan or tribe) against which a member of the former family (or clan or tribe) has committed a deadly offence (generally murder, less commonly rape or abduction). It is, in other words, the lex talionis exercised between families (more rarely clans or tribes), often including those connected with them by any form of blood-covenant; it is communal vengeance, as distinguished from individual revenge. Its ultimate foundation is, indeed, personal retaliation; but, in proportion as the family develops, the principle of the blood-feud grows in importance, until it reaches its full development in such a clan or tribe that an entire government is bound to require punishment for injury done to one of its citizens by another nation or by a member or members thereof. On the other hand, just as in the latter case concessions or pecuniary compensation normally take the place of demanding life for life, so in relatively primitive jurisprudence, murder, rape, and other grave offences may frequently be commuted in various ways; the blood-feud is replaced by the werigel (see below).

The essentially communal nature of the blood-feud carries with it the corollary that, among many peoples, one unprotected by ties of family, clan, or tribe may be injured in person or possessions without risk of blood-vengeance, unless he has received artificial kinship by some form of blood-covenant or enjoys the status of guest, which in itself constitutes in great measure a temporary quasi-adoption into the family (very rarely into the clan or tribe) of his host. This explains the fact that many peoples rob or kill strangers with impunity and without any sense of wrong-doing, although they would have the highest regard for the possessions and lives of their fellows, as among the Polynesians, where the property of strangers was held to belong to the gods of the land, so that it could be seized and the owners killed with impunity by those among whom the strangers in question had come (Mariner, Tonga Islands, London, 1818, i. 308; Mathias G., Lettres sur les îles Marquises, Paris, 1843, p. 106).

The blood-feud is, among many peoples, a sacred obligation, to which the kinsmen of the murdered man are in duty bound, as among the African Bakawiri (Leuschner, in Steinmetz, Rechtshervt h i s e von eingeborenen Vöndern in Afrika und Ozeanien, Berlin, 1903, p. 23). To such a degree is this concept carried that it is believed that the soul of the murdered man finds no rest until blood-vengeance has been exacted, as among the Australians and Papuans (Kohler, in ZfWvii. 365, 376), and the African Bakana, Bapuka, Diakite Sarrakolese, and Washamhals (Steinmetz, op. cit., ii. 55; in Steinmetz, op. cit. p. 132; Lang, 16, p. 257). He who does not perform blood-vengeance when he should is despoiled, not as a coward, but as a recreant to the demands of religion and duty, as among the Negro Akka (Monrad, Gemälde von der Küste von Guinea, Weimar, 1824, p. 90.) and Pelups (Park, Reise in das Innere von Afrika, Hamburg, 1779, p. 29), the South American Arakwás (Schomburgk, Reise in Britisch Guiana, Leipzig, 1847, i. 137), in Australia and New Guinea (Kohler, in ZfWvii. 384, 376; Grey, Journal of Two Expeditions in North-West and West Australia, London, 1841, ii. 240), and in the Indonesian Islands of Leti, Mos, and Laker (Riesel, Die slauk- en broedkampen tussen Selebes en Papua, The Hague, 1886, p. 370). In at least some cases the object of the blood-feud appears to have been sacrifice of the murderer or his kin to the names of the victim, thus explaining the rule that all kinmen of the offender that killed relatives of the murdered man should strangle the slayer on the very spot of his crime (Featherman, Social History of the Races of Mankind, London, 1887-90, iii. pt. 2, p. 340). This usage finds its antithetical parallel in the North American Indian adoption of the murderer in his victim's stead (see below, p. 722). The women are often described as especially assiduous in demanding the inauguration of the blood-feud, as among the Iroquois, Florida Indians, Caribs, and Brazilians (Lalita, Moeurs des sauvages américains, 10mo ed., Paris, 1724, iii. 149-151).

The degree of kinship involved in the duty of satisfying blood-vengeance varies widely. In its greatest extent any member of the family, clan, or tribe to which the murdered man belonged may kill any member of the family, clan, or tribe of the murderer, as in New Guinea, where the murderer himself is not killed (von Hasselt, in ZE viii. 193; cf. the Australian Dieri custom of killing the eldest brother of the offender rather than the offender himself [Howitt, p. 227]), and among the African Somali and Bakawiri (Haggenmaeder, in Petermann's Mittheilungen, Erg. x. No. 47, p. 31; Leuschner, in Steinmetz, op. cit. p. 23). Elsewhere the feud may be restricted to totem-families, as among some Aboriginals and the South American Mosquitoes (Kohler, in ZfWvii. 364, 382). In its extremest form the blood-feud prevailed generally in Polynesia, especially in New Zealand (Angas, Savage Life in Australia and New Zealand, London, 1847, ii. 171; Thompson, The Story of New Zealand, London, 1850, i. 98). In Polynesia, if the offender escaped, his whole family paid the penalty in his stead (Wakefield, Adventure in New Zealand, London, 1845, ii. 108); in Tonga and Samoa, where werigel was accepted only rarely, all kinsmen of the offender killed if they could be found (Shortland, Traditions and Superstitions of the New Zealanders, London, 1854, p. 224); and in New Zealand the kinsmen of a murdered man often killed in revenge the first man on whom they chanced, whether friend or foe (Diefenbach, Travels in New Zealand, London, 1843, ii. 127).

The blood-feud may, however, be restricted to certain members of the households of the murderer and the murderer—a system widely prevalent in Africa. Where the matriarchate is in force, only those related on the mother's side are involved, and where the patriarchal system has been developed, only those on the father's side. Accordingly, among the African Barea and Kunama the son...
The avenger of a death of a mother or uterine sister, the nephew his maternal uncle or aunt, and the maternal uncle or aunt his nephew, does not avenge his father, or the father his son. Among the Lepus, on the other hand, as in Akkra, on the Gold Coast, the eldest son is the avenger of his father (Post, *African Jurisprudence*, Oldenburg, 1858, p. 275), and among the Bambara, on the same principle.*

If, however, the natriarchal and patriarchal systems are confused, these differentiations no longer hold, as among certain Brazilian tribes (Post, *Anthropologie und Ethnologie*, p. 182). An interesting sidelight on the primitive legal status of the wife is afforded by some of the laws of the blood-feud, which show whether she is regarded as having become the property of her husband or is held still to belong to her original family (cf. the twofold theory of the status of the individual in more highly developed polity, p. 723). From the latter point of view she is avenged, by the Bakawiri and Washamlamba, by her own blood-kin only, not by her husband's (Schmidt, *op. cit.*, p. 237), this being the reversal of Banaka, Bapuku, and pagan Bambara practice (ib. pp. 49, 89); while among the Dinkate Sarrakolese of the French Sudan the husband may avenge his wife when duly authorized by the family. However, this privilege is enjoyed by the woman's family, not by her husband's (ib. p. 132). In West Africa the blood-feud is a duty belonging, first, to the "jäve" (blood-relative), next to the "ikaka" (family), next to the "etomba" (tribe). The murdered man's own family takes the lead—in case of a wife, her husband and his family, and the wife's family; sometimes the whole "ikaka"; finally, the "etomba" (Nassau, *Fetichism in West Africa*, New York, 1904, p. 19). In the African Sansanding States the right of blood-revenge belongs to the agnates of the murdered man in the order of their inheritance (Fama Mademba, in Steinmetz, *op. cit.*, p. 89). Among the African Washamlamba, the blood-feud, which they exact only for murder, is directed against the offender and his wife, while his children are enslaved and his property is plundered (ib. pp. 256 f.); and among the American Shawnee, in case when was refused and the murderer could not be seized, his nearest kinsman was slain in his stead by the kinsmen of the murderer (cf. *ibid.*, cit. iii. pt. i. p. 183), this being a quasi-analogue to the Dieri practice of substitution, to which attention has already been drawn (for the very different principle of substituting the murderer for the victim, see ibid., p. 729).

An interesting example of what may be called a ceremonial blood-feud is afforded by the Australian *pimpua* (the attaining of the Central Australians), a sort of *pose commumart*, which may hunt down the murderer or (as already noted) his eldest brother. In lieu of actually killing a victim, however, the *pimpua* may subject the murderer to a milder penalty. Thus, among the African Sardinia blood-feud, an appointing spot near at hand where the expiatory encounter should take place was authorized, until at length the offender was brought by a spear the combat should cease. Then the offenders stood out, armed with shields, and received the spears thrown at them by the dead man's kin's kindred, until at length one of them was wounded. The Headman of the Garchukus then threw a lighted piece of bark, which he held into the air, and the *keldi*, which it had been contrived that would cause a general fight between the two tribes (Howitt, p. 335). This practice is widespread in Australia (Howitt, p. 335 f.).

Artificial kinship, as noted above (p. 720), is also frequently found in blood-feud (ib. p. 245; eb. *op. cit.*, p. 406; this is also noted in the blood-feud. Thus, among the Polynesians, brothers artificially created by blood-covenant were bound to require blood-revenge if one was killed, even though he fell in battle, which normally abrogates the necessity of such vengeance (Ellis, *Polynesian Researches*, 2, London, 1832, i. 290); and similar principles were observed among the Araucanian Indians of Chile (Kohler, *Zur Lehre des Rechts*, Oldenburg, 1834, p. 69). The relation between host and guest often carries similar obligations with it, as among the African Barea and Kunama (Munzinger, *Ostafri. Studien*, Schaff., 1903, p. 383), among the Tchop, and client, as among the Baroa and Bogo (Munzinger, *op. cit.*, p. 234, and *Studien und das* Recht der Dogon, Winterthur, 1859, p. 43); so that among the African Takue is readily accepted for a murdered kinman, but blood-revenge is exacted for the killing of a guest or client (Munzinger, *Ostafri. Stud.,* p. 298).

Certain limits are, however, normally observed in the blood-feud. Men in full vigour are usually alone concerned. Women are, for the most part, exempt, as are children and aged men, among the Indians of Brazil (*Post, Anfang*, p. 175), although some peoples, as the Sudanese, spare children only until they are old enough to bear arms (Marno, *Reisen im Gebiete des blauen und weissen Nil*, 1912, p. 183); the practice prevailing among the New Islanders of the Bismarck Archipelago (Sorge, *in Steinmetz, op. cit.*, p. 418) and the Marshall Islanders (Senft, *ibid.*, p. 449). Other tribes, as the Nufores of New Guinea and the African Banaka and Bapuku, render even women and children (ibid.). In a Japanese *sasa no* (cf. *ibid.*), the Garchukus (ibid.), and among the Zurbed (cf. *ibid.*, vii. 376; Steinmetz, *op. cit.*, p. 49). In like fashion the Caribs mercilessly slaughtered children (Labad, *Voyage aux isles d'Amérique*, The Hague, 1724, ii. 109), and the South American Tupinambas even extended the blood-feud to the child begotten by a prisoner of war, who, before being killed, was made to consort for this very purpose with a woman of his captors' tribe, the offspring being brought up expressly for slaughter (Schmidt, in *ZVRW* xiii. 297, 317). Some peoples, as the Makassars, forbid blood-feud between those of different rank, the inferior being entitled only to blood-money (Wilken, *Hct strafrecht bij de volken van het maleishe ras*, The Hague, 1883, p. 7); while in the Sansanding States one superior in rank is not liable to blood-feud for the murder of his inferior, unless robbery was the motive for the offence (Fama Mademba, in Steinmetz, *op. cit.*, p. 88 f.).

Within the family the blood-feud has no existence, punishment being meted out by the authority of the father and the man's nearest kinsman (cf. *ibid.*, p. 183), this being also observed in the clan and tribe; although, as the sense of blood-kinship descends in the two last divisions, it naturally becomes increasingly difficult for an interclanal or intertribal blood-feud to arise.

The blood-feud is most generally begun, as has been noted, by murder, which may be entirely unintentional, as among the Australians, the Marshall Islanders, and in the Egyptian Sudan (Kohler, in *ZVRW* vii. 303, xiv. 445 f.; Marno, *op. cit.*, p. 200), or committed in self-defence, as among the Redus in Belawon (Kohler, in *ZVRW* viii. 254), or committed even by a person irresponsible for his acts, as among the African Ondonga and the Nigerian Islanders of the Bismarck Archipelago (Rautanen, in Steinmetz, *op. cit.*, p. 941; Sorge, *ibid.*, p. 416). The widespread belief in magic as the cause of death frequently leads to inquiry of the sorcerer as to the identity of the murderer and the consequent object of the blood-feud, as in Africa (*Post, Afr. Jur.*, i. 146 ff.), among the Nigerian Islanders (Sorge, in Steinmetz, *op. cit.*, p. 416), in New Guinea (Howitt, p. 336), and in Central Australia generally (Spencer-Gillen* p. 499). The Bagobo of South Mindanao even made the medicine-man liable to the blood-feud on the ground that he had failed to avail death from the murdered man.
BLOOD-FEUD (Primitive)

(Schadenberg, in ZE xvi. 12). But, as the feeling of blood-kinship diminishes, a distinction is drawn between murder and manslaughter, the former still requiring revenge, but the latter makes the slightest punishment to be made for the latter by a lesser penalty, or the offence may be commuted by wergeld, as in the Sanssung States and among the Dikiate Sarrakolese of the French Sudan, the Washambala (Fama Mademba, in Steinmetz, op. cit. p. 89; Nicol, ib. p. 187; Lang, ib. 257), the Kunurivert of South-East Australia (Howitt, p. 341), and the Papuans (Kohler, in ZVRW xvi. 380 f.). In case of offences other than murder, primitive jurisprudence varies extremely. Among the African Barea and Kurnama, for instance, the murderer is permitted to ransom himself, and the offender liable to the blood-feud (Munzing, Ostafri. Stud. p. 502; Monrad, op. cit. p. 98), as it does, for instance, in Montenegro (Wesnitsch, in ZVRW ix. 54; Miklosich, Edelschatz bei den Slaven, Vienna, 1887, p. 21), while the African Bogo regard such injury as shedding half the blood of the injured part, so that half the price of blood-revenge is required (Munzing, Bogos, p. 81). Sexual offences, as infringing property rights (see art. ADULTERY), are sometimes subject to the blood-feud. The Bantu (Walter, in Steinmetz, op. cit. 391), among the Bagobo (Schadenberg, in ZE xvi. 28), the Manyumea and Balegga (Post, Afr. Jnr. i. 84; cf. Anfangse, p. 175f., Geschlechtsgenossenschaft der Urzeit, Oldenburg, 1875, pp. 199 ff.), and the Malagasy islands of Nossi-Be and Mayotte (Walter, in Steinmetz, op. cit. 391). A war of fourteen years' duration was waged between the North American Indian Passamaquoddiës and Micmacs because, while the two tribes were visiting each other, the son of the Passamaquoddië chief became engaged with the daughter of the Micmac chief, and refused to come to blows, but the war broke out in consequence, the Micmacs being among the Bagobo (Schadenberg, in ZE xvi. 28), the Manyumea and Balegga (Post, Afr. Jnr. i. 84; cf. Anfangse, p. 175f., Geschlechtsgenossenschaft der Urzeit, Oldenburg, 1875, pp. 199 ff.), and the Malagasy islands of Nossi-Be and Mayotte (Walter, in Steinmetz, op. cit. 391). Sometimes, however, as among the Australians, a blood-feud may be continued although the murderer be merely wounded (cf. above, p. 721; Howitt, pp. 336, 342; Kohler, in ZVRW vii. 365).

For a typical example of the termination of the blood-feud the ceremonies of the African Barea and Kurnama may be cited (Post, Afr. Jnr. i. 67, his account being based on Munzing, Ostafri. Stud. p. 801 ff.). When a day has been fixed for the settlement of the feud, the murderer chooses a protector in the hostile village, to whom he sends durra to make be. On the day appointed, all the villagers, except the family of the murdered man, go out to meet the murderer, whose safety is safeguarded in various ways. As soon as he appears, the victim enters the house and slaughters a deer which he has brought for the occasion, and the women of the family of the murderer join in the sacrifice, the number being equal to the number of those who refused every offer of reconciliation, even the life of the boy murderer (Leland and Prince, Kulskop the Master, New York, 1902, p. 231 f.). Sometimes, however, as among the Australians, a blood-feud may be continued although the murderer be merely wounded (cf. above, p. 721; Howitt, pp. 336, 342; Kohler, in ZVRW vii. 365).

Typically, the blood-feud in its primitive form excludes all possibility of commutation by money or its equivalent. This extreme form is, however, comparatively rare, even the African Ondonga, who kill man for man, woman for woman, and child for child, having a fully developed system of wergeld (L. and Baultan, in Steinmetz, op. cit. 257). But the Toda of South India, where the decline of the sense of blood-kinship and the concomitant decay of early family law, commutation of blood-revenge becomes increasingly easy. Many peoples, like the Ondonga just mentioned, decree that murder, or of a person's alliance, by feud or by wergeld, at the option of the injured party, as among the Haidah of the Pacific coast (NA i. 168), the Papuans and Marshall Islanders (Kohler, in ZVRW vii. 376, xiv. 446), the Malays (Tijdschrift voor Nederlandsch-Indië, 1851, ii. 15), hold the, or 'long house'' exercised jurisdiction over their own members, so that, if one killed another belonging to the same 'long house,' the village assumed that the deed had been done for good and sufficient reasons, and the avenger was to leave off further pursuing his business. If, on the other hand, the murder was committed by a man who had been exalted to the rank of a chief, or into whose clan as a result of marriage, or who had been connected with the slain man united to 're-make the spirit' (refaire l'esprit (Long leur expressions) for the deceased,); while at the same time every effort was exerted to save the murderer's life and to protect his kin against the vengeance of the kin of the murdered man. One of the chief duties of the avenger was the fixing of the custom recorded in 1686 by Lejeune (Jesuit Relation and Allied Documents, Cincinnati, 1858, cit. 892-849), 'the feast of which,' according to Lejeune, 'must be of the value of a new beaver robe.') The first nine of these, which were for the immediate kin of the deceased, were the most costly, each often being 1000 beads of wampum; and the remainder, which were displayed on a pole, represented all the feud goods which had been bought by the murderer and murdered proffer wergeld was executed before this wergeld had been proffered, it was theavengers who were bound to offer these presents, while the kin- man of the murderer were released from all liability. At an earlier time the Huron had not only exacted the giving of presents, but had also required the murderer to come to witresses the putting away of his corpse (which was elevated on poles) as long as the kinsmen of the murdered man desired. If the presents were not forthcoming, the body was exhumed, and the murderer was given such additional to the wergeld, to the kinsmen of his victim, whose place he was to take. Although he was occasionally rejected, he usually came to be regarded as the master of the children of the slain man. Lalou additionally, though without vouching for the statement, that further sacrifices were made and that the avenger adopted the children of the slain man, thus clearly showing the substitution-motive in lieu of the sacrifice-motive (cf. p. 7259) in the blood-revenge-motive of the Micmacs (compare Steinmetz, op. cit. iii. p. 1, p. 96). Sometimes a murderer was even adopted as a son by the mother of his victim (Tanner, Mémoirs, Paris, 1853, ii. 267). Where the parties concerned have their own option as to whether the blood-feud shall be terminated by wergeld or some other means, outside authorities may not interfere, as among the
Araucanians and Greenland Eskimos (Post, An- 
fringe, p. 174); and the African Negroes, Baren- 
his, and the Mende (Munzinger, Bogos, p. 79, 
Osteof, Stud. pp. 499, 242), and Malasala (Desoignies, in 
seinmetz, op. cit. p. 280); but, if reconciliation 
proves impossible, the blood-feud remains in force.

The offender often flees, a certain amount of start 
flight being imposed upon him, this being 21 days 
among the Dedawin (Post, Studien, p. 125; Kohler, 
in ZWRV viii. 233). It must then remain in 
exile, either until reconciliation has been effected, 
as among the Baren, Kuniana, and Tesla (Mun- 
zinger, Osteof, Stud. p. 550). Naghara Nahara 
Sahana, Berlin, 1879-89, i. 448), or until his offence 
has been outlawed by the lapse of a definite period 
of time, this being 5 years among the Felpus 
(Berenger-Peiaud, Les Peuples de la Stoegمجم, 
Paris, 1879, p. 255) and 1 year among the Cali-
ifornian Nishinam (Kohler, in ZWRV xii. 400).

Here the blood-feud comes into immediate con-
nection with the jurisprudence governing the right 
of asylum (p.v.), but among some peoples, as many 
American Indian tribes, murder was the one and 
only offense for which a man was outlawed; (Lothar 
Grusch, der Mission der evangel. Bruder unter den 
Indianern in Nord-Amerika, Barby, 1759, p. 20; 
Morse, Report to the Secretary of War on Indian 
Affairs, New Haven, 1822, appendix, p. 99;
Featherman, op. cit, ii. pt. 1, p. 440), so that the 
Chief Justice always pronounced the method and 
outlawing of all offences except murder (Kohler, 
in ZWRV xii. 400).

By degrees the acceptance of proferred wergeld 
becomes compulsory, but if the offending party be 
unable to pay this, the blood-feud may, as primitive 
kinship-feeling decays, still be commenced in a 
variety of ways. Thus the offender may become 
the slave of the family, clan, or tribe that he has 
injured, as in Makassar, Sarangdao, and Gorong 
(Wilken, op. cit. p. 24); Riedel, op. cit. p. 156, 
and among the African Digirra (Hequard, Reise 
an der Kiiste und in das Innere von Westafrika, 
Leipzig, 1854, p. 104); or he may become the slave 
of the chief of the tribe in question, as among the 
Malays of Menangkaba (Wilken, op. cit. p. 22); 
or of him who paid the blood-money, as in West 
Timor (Riedel, in Deutsche geograph. Blätter, 
x. 234). This form of punishment is also the 
penalty for many other offences (see SLAVRY).

In Akkra, on the other hand, he who could not pay 
the woolly blood-money was subjected to a long 
series of the consequences of the blood-feud (Bosom, Vingag in 
Guinea, Venice, 1752, ii. 91; Müller, Die off. auf 
der Goldküste gelegene Landschaft Futa, Hamburg, 
1760, p. 116).

As soon as no mode of reconciliation or com-
munication becomes permissible between a murderer 
and the family, clan, or tribe of his victim, the 
decay of the blood-feud begins. It has already 
been seen that the commonest method of such 
reconciliation is by the payment of certain sums 
to the kinsfolk of the murdered man. Pointing 
this, it was the custom in some places to 
soever as diminishing the scope and fre-
quence of the blood-feud, other factors are still 
more powerful. With increasing civilization 
the predominance of the family and clan becomes 
less and less, while that of the tribe (and ultimately 
of the nation and State) becomes greater and greater.

The blood-feud, which is at first absolutely essential 
if family is to be prevented from encroaching on 
family, is seen to be detrimental to the larger 
development of the embryo State, and measures 
of encouragement are therefore adopted to 
check the suppression of the blood-feud, until at last it wholly 
disappears as a recognized institution. The struggle 
is, however, long and stubborn. The primitive 
State may hand the offender over to the kinship 
of his victim, that they may either execute blood-
revenge or obtain recompense in any way they 
choose, as among the Iroquois, Batak, Malays 
of Menangkaba, Chagga, Laps (Post, Studien, 
Bornu, Wadai, and Unyoro (Post, Studien, p. 128, 
Anfringe, p. 184); or the nearest kin of the murder-
ner may be appointed the official executioner 
of the murderer, as among the Galia (Cecchi, op. 
cit. p. 79). In Madagascar (Post, op. cit. p. 89) 
the place of the primitive avenger of blood is al-
or taken by a regular State executioner, as among 
the Malays of Nias (Wilken, op. cit. p. 22). Even 
in ancient Greece the State took cognizance of 
murder only when duly qualified kinsmen of the 
murdered man had lodged a formal complaint 
against the murderer.

Often there is a double system of punishment 
for murder and other grave offences—execution 
by officers of the State or blood-feud, as among the 
Arabs of the Red Sea coast (Klenm, Kultur-
geschichte, Leipzig, 1843-52, iv. 149); while, in 
Makassar, if a murderer succeeded in reaching 
the judge, he was safe from blood-feud, and had 
only to pay the wergild (Wilken, op. cit. p. 6). Else-
where, as in Johor, the avenger of blood must 
not only make formal recompense of the 
judge (Post, Baustetxe, i. 150). An especially 
potent restriction on the blood-feud is found, as 
already noted, in the system of asylum; and finally, 
with the more perfect development of the State, 
aided by a higher concept of religion (though, as 
matter of fact, Christianity alone has contributed 
to this end), the blood-feud itself becomes murder 
and a crime, instead of a sacred and praiseworthy 
duty, and is suppressed and disappears, surviving 
only in such stagnant phases of civilization as are 
still revealed from time to time by Siarnan red 
dettas or the feuds of the 'mountain whites' of 
Kentucky and Tennessee.

LITERATURE.—Fragenstäd, Blutrede und Tötungsges. 
Leipizg, 1891; Wernicke, Zur Lehre von den Blutraehe, Wurzburg, 
1893; Steinmetz, Ethnol, Studien zu der Entwicklung der 
Srafe, Leyden, 1894, i. 361-466; and Recktenwalde von 
ingeborenen Völkern in Afrika und Oceanien, Berlin, 1893; 
Post, Geschlechtsrechmssenschaft der Grecen, Oldenburg, 1875, 
157 ff.; Wernicke, Untersuchungen zur Geschlechtsredeniusschaft 
Anfange des Staats-und Rechtslebens, Oldenburg, 1875, 
727 ff.; Baustetxe für eine allgemeine Rechtsrechmsschaft auf 
Grund ihrer historischen und naturwiss. Einzelforschungen, Oldenburg, 
1897; Jurisprudenz, Oldenburg, 1887, i. 57 f., Studien zur Entwick-
le78erforsschung, des Familienrechts, Oldenburg, 1898, pp. 233 ff., und 
Rechtsverhältnisse von einigen Völkern in Afrika und Oceanien, Berlin, 
1901, p. 246 ff. On the last-named work the present article is largely based.

A large amount of material is taken from the 
"Blutraehe," and such, as Kohler's sum- 
mmary of the North American Indian blood-feud, 
"B. 405-411, and Schmidt's summary for 
South America, xiii. 310-315. Much
BLOOD-FEUD (Aryan).—Introduction.—The institution of the blood-feud may still be traced among all Aryan peoples: first, as it exists up to the present day among the Greeks and the Albanians, in Corsica and Sardinia, and among the Southern Slavs; secondly, at least in the older traditions, clearly preserved among the Greeks, Teutons, Celts, and the Western and Eastern Slavs; thirdly, with only scanty traces, among the Indians of the Veda, the Iranians of the Avesta, and the Romans. Its primitive Aryan significance is evident from the synonymous conception of Av. kava-, 'punishment,' 'revenge;' (New Pers. khat, 'enmity,' 'hate,' 'anger') = Gr. σκοτει, 'blood-revenge' and 'wergeld.' Probably it may also be connected with Ir. cáin (from 'co-m'-) = 'emenda,' i.e. 'damni reparatio,' 'satisfactio de iure lesos vel de iniuria illata.' The verb which may be taken to be a substantivia is Skr. chrī, chayate, 'punish,' 'avenge;' Av. čt; Gr. ῥίπος, ῥίπων, 'obtain compensation,' 'punish,' 'give compensation.' Compare also rīsu, 'estimate a value,' 'honor.' The following characteristic features of the primitive Aryan period may be established from the identity of customs among individual tribes.

1. The obligation of blood-revenge is always attached to definite circles of relationship, which may be designated family or clan. Within this circle the blood-feud descends first of all from father to son.

In Homer the sons and grandsons, father, brothers, and brothers' sons (애코ς and the έιας) are mentioned as avengers and blood-renders; last-named is an impersonal failing which probably belongs to the pronoun stem έιας, έιαν, and so means much the same as the Latin viāri. Once we find in place of έιαν the word δικαιοποιεσθαι, in II. 198, 402 'δικαιοποιεσθαι' (= as διάκρισι, 'bedelllow') which is perhaps connected with στε-στον, but is also capable of another derivation (cf. Walde, Lat. Vocabullarv, p. 539).

2. As a result of this obligation to blood-revenge, we find a state of feeling between two families or clans which among West Teutons is technically called in Old High German fēhida, Anglo-Sax. fehida, Mid. Lat. fætida (O.H.G. fēch, Anglo-Sax. fēð), Old Norw. fæthi (O.Norw. fæth, 'love'); in the Slavonic languages, Old Slav. vřážida (Old Slav. vřáži, 'enemy,' Old Pruss. vέrgis, 'bad'). The opposite conception to this in the Germanic languages is O.H.G. frīdu, Anglo-Sax. frīdu, Old Norw. vrj, 'pryj, 'love'; in the Slavonic, Russ. mirū, 'peace' (Skr. mi-trā, 'friend,' Lith. mū-liamas, 'beloved,' Russ. mi-liyj, 'dear'). Fundamentally, therefore, peace and friendship (i.e. on the old vēþ) are the relations that prevailed in the Indian and German words or borrowed from the latter (cf. L. von Schröder, 'Indogerman, Wergeld,' Festg. der AsO., p. 49). The most probable supposition is that the Skr. vērī, Anglo-Sax. wergeld, Old Fris. frīdu, were originally compounded of various stages of change of the radical vowel of the original Aryan term for 'wergeld.' Moreover, the above cited equation, Av. ξινά = Gr. σκοτει, no doubt indicates that in the primitive period, as more often stated, the root existed of buying off blood-revenge by payment of wergeld. Similarly, we find in Slavonic languages the above-mentioned vřážida, 'hostility,' 'revenge,' used also to mean the compensation by which homicide was expiated. Cf. also Cynr. gałamas.
originally 'hostility' (paxh, 'foes'), and then 'wergeld;' and the Mid. Gr. φόρος, properly 'murder,' Lat. paena, 'compensation,' and then 'punishment,' probably exhibits a borrowing from the Gr. νομός.

At an early date prices or rates of wergeld, more or less fixed, had been evolved. So in Old Indian sources (cf. Schrader, Reeltex. p. 102) we find a hundred caws mentioned as the rate of compensation for a man (vātram); and Tacitus also, in the passage already cited, says: 'Huitur hominidium certo armentorum ac pecorum numero.' From the rates stated, the general underlying principle emerges that the wergeld of bondsman, freeman, and noble were in the following proportion of 1:1:2: that is, 75—150—300 shillings or oxen (Millenhofer, Deutsche Alltsuertskandale, iv. 327). For the rates among the Slavs see below, p. 734. What was demanded for the murdered, wounded, or insulted man by the clan, or by himself, constituted his 'value' or 'price,' and the recovery of this price by his friends and the recognition of the same by his foes constituted his 'honour.' This evolution of custom is clearly stamped upon the languages that concern us. The Gr. νομός, derived from νομα mentioned above, signifies primarily 'revenge' (ποινή, 'punishment, Homer. Od. iv. 107, 117); the Lat. nocem, the Goth. nahtur, the Corn. nahe, all like νομαθα, denotes a person who may be slain without need for compensation; then 'honour.' Precisely similar is the development in the meaning of éthe, a word common to the Slavonic languages. The word corresponds exactly to the Gr. νομίμος ('govern'), and thus signifies in the first instance 'revenge' and 'wergeld.' Then it takes over the meaning of 'price' and 'honour' (Old Slav. чешит exactly answers to the Gr. νομαθα; so Schrader's Reeltex. p. 885 f., and now Berneker, Slav. Etym. Tafeln, p. 128). In his connexion we find also the explanation of the hitherto unintelligible Gothic word gwætír, 'peace,' mentioned above. The word has nothing to do with watirpan (Germ. werden), but is connected with wætír, 'value,' 'worth.' Consequently its proper meaning is 'general agreement about the worth or value of a person,' the union and the resulting state of peace between two clans. It is noteworthy also that the first instance of the word paestæs, which underlies the Lat. paxe, 'peace,' occurs in the 11th century (viii. 391), which is the clearest survival in Roman tradition of the system of blood-revenge which once prevailed in that quarter as well: 'Si membrum rupit, ni cum ex pacat (agree about the value), talior esto.'

Thus we see that two of the most important conceptions of civilization—peace and honour—are at least in part rooted in the ideas that centre in blood-revenge and its buying off by the wergeld.

5. Among most Aryan peoples we find it customary for his bloody deed, to flee from the country for a longer or shorter period, presumably in order that in the interval the anger of the hostile clan might abate and the terms of reconciliation become easier. It still remains uncertain whether this custom is to be assumed as existing even in primitive times, when renunciation of tribal connexion was almost a matter of life and death (cf. Schrader's Reeltex. p. 885).

6. The fighting out or the avengeable settlement of a blood-feud, at any rate, began the beginning exclusively the affair of the two hostile clans. Notwithstanding, perhaps the realization of the danger incurred by the whole clan owing to feuds of long duration (cf. above, Tacitus, Germ. cap. 21: 'periculoseos sunt inimiciitae iuxta libertatem') may have at an early period encouraged efforts upon the part of the race, in their assemblies under the direction of the king (Skr. rāj = Lat. rex, Ir. rí), towards the amicable settlement of clan feuds. A settlement of this description would naturally, even in primitive times, be accompanied by a long succession of solemn ceremonials. But we have ample information on this point as regards the ceremonial of the Slavonians as well (see below, p. 734 f.). Everywhere in Europe two factors tended towards the restriction and ultimate eradication of the blood-feud: first, the State, that is, the absorption of the old clan and race-constitutions into the political compositions of the State based on the principle of territory and no longer of consanguinity; and, secondly, the Christian Church, which offered sanctuary even to murderers. See art. ASYLUM.

LITERATURE.—The literature has been given in the article.

O. SCHRADER.

BLOOD-FEUD (Celtic).—I. Terminology.—The usual word in Old Irish is fisch ('feud,' 'fight'), foinmh ('I fight'), cognate with Lat. vincere, etc. In the Acclilion na Senórach (Windsch, Ir. Texte, Leipzig, 1880—1905, iv. p. i. p. 47, 75) we find, at the feast of Tara, which lasted six weeks, nech fidh ná frithfóla do thabhairt ('neither feud nor cross-feud to be given'). The Irish fóla is for fóla, gen. of fóil ('blood'), perhaps connected with High German füllen, Low German fillen, Danish fiill, etc. 'The Irish variation of the custom is probably for *ér-icca (for *ér-icca) (full payment, full performance)' (d'Arbois de Jubainville, Études sur le droit celtique = Cours de litt. coll. vii., Paris, 1895, p. 88). Finally, the Irish dír ('duty', in corp-dír, is the same as the Welsh dirw, diuir ('mulcta'), dir ('necessary'), Irish dir ('just,' 'due,' etc.) (Stokes, Urbelt. Sprache, 1893, E. 630). For 'vengeance,' 'revenge,' we have the Irish digal, Welsh dial ('vindicta,' 'ultio'), Cornish dial. The Irish ér (composition) is probably for *er-icca (for *ér-icca) (full payment, full performance)

II. History of the blood-feud among the Celts.—That the institution of the blood-feud was in existence among the early Celts is obvious from the numerous references to it in ancient Irish literature. One of the best known instances is found in the Fotha Catha Cucna ('Cause of the Battle of Cucna').

Cunnali, the royal warrior of Ireland, carried off Murci, daughter of Ailill, because he was refused permission to marry her. Tadg complains to Cond, supreme king of Ireland, who, according to the Annales of Ireland by the Four Masters (P. 729, 1221), reigned from 122 to 157 a.D. Cond, furious at the insulting words of Tadg, sends soldiers to take possession of the girl. Cunnali refuses to give her back to Murci, and in attempting to avenge Cunnali, Luchet succeeds only in wounding Goll in the eye. Goll kills Luchet and gives as his quotation for the Irish, is deinn robh fisc asa as i mna maca Morna ona fionn, 'It is from that, then, that there was an hereditary feud between the sons of Morna (descendants of Goll) and Find (the son of Cunnali).'

Furthermore, after the death of Cunnali, Tadg not only refuses to receive his daughter Murci, but orders her to be burned because she is pregnant. Accordingly she invokes the protection of Cond, and gives birth to a son, Find. When this son arrives at a suitable age, he offers to his grandfather, Tadg, the following condition: that 'a battle or a duel or full eric for the murder of the father' should be given to him at the last, and is obliged to give the castle and grounds in Aluin to Find (Kell. li. 86, etc.).

Again, in the Lament μac u-μragna, Conchobar, the great king of the first epic cycle—i.e., about the beginning of the Christian era (Hyde, Lyt. Hist. of Ireland, London, 1896, p. 245)—has the three sons of Cuchulain, who was beheaded on a tree, grasped a weapon and invoked the protection of Conchobar. The three heroes, Fergus, Dubthach, and Cormac, met him to give him a weapon and threatened to avenge his murder. First they murdered four of the immediate relatives of Conchobar, and, later, when attacked by him, killed three hundred men. If from this time the royal palace at Emuin. With 3000 men they sought refuge at the court of Ailill and Medb, king and queen of Connaught, and continued their feud against Conchobar for sixteen years (Windsch, op. cit. I. 57—72). Cleath na Aratcan, who died in 975 ("Annales of Oxford") had, 'Kells (p. 145), a complete account of this story, which stated that Conchobar, in retaliation for the murder of his relatives, killed Gergen, the son of Illad (Windsch, op. cit. B. 3, p. 119). Numerous other
examples could be cited, such as Addled Conron, in which the murder of Conron is avenged by his sons (d’Arbois, Époque Celtique in Ireland=Conours de litt. celt. v., Paris, 1892, p. 321); the Aughrin Massacre (1869), in which a landlord avenged (O’Corry, Lectures on the Manuscript Materials of Ancient Irish History, Dublin, 1878, p. 631 f.); The Voyage of Gilpin, in which a hero is taunted not avenging his father’s death (Stokes, RCel. ix. 459, etc., etc.).

In the Ancient Laws of Ireland, some of which, such as the Senchus Mor, date as early as the 7th century (Hyde, op. cit. p. 589), we find murder classed under two heads—necessary murder (morbad déthdíre), and unnecessary murder (morbad in déthdíre). Necessary murder is unexampled by, or, if premeditated, is accomplished through duty of vengeance. Unnecessary murder is for motives of gain (Anc. Laws, iii. 68, ll. 12–14; iv. 248, ll. 25–26). In the case of the first, no composition, or éric, was required if the murderer was in the result of vengeance. According to the Ancient Laws (iv. 232–4), ‘when the murderer of a member of the derbheine (i.e. of any relative of the goifhine or derbheine) is to be avenged by the death of the murderer, the family of the murdered has a right to the corpiacht (i.e. the death of the murderer) and the éric (or honour-price’); if, however, it has received this éric before exercising vengeance, it must, after taking vengeance, make full restitution of this price. The duty of vengeance was imposed upon the nearest relative of the murderer. The axe, goifhine and derbheine (d’Arbois, Droit Celtique, p. 180). To understand these terms, we must remember that the Irish family was divided into four groups, consisting of seventeen persons in all: goifhine, derbheine, iarfarne, and indanne (Anc. Laws, i. 262, ii. 23, 27; p. 272, l. 23). To the goifhine belonged the father, son, grandson, and brother of the murdered; while to the derbheine, besides the above five, were added the grandfather, paternal uncle, nephew (son of the brother), and consin-german (i.e. a brother’s fourth degree of consanguinity). In addition to the above eight persons, three others could take vengeance on the murderer. These three were the foster-father, whose dálta, or pupil, was murdered; the adoptive father, whose mac faosna, or adopted son, was killed; and the (maternal) uncle, when the son of his sister (nicenna) was the victim of the murderer (Anc. Laws, iv. 214, ll. 20–22). So, in ancient Ireland, the blood-feud was fostered by the duty of vengeance. We have indications of its existence as late as the 16th century in the Deirdre of the Sorrows. The chief, Manus O’Donell and his son, between the Earl of Thomond and his uncle, etc. (Moore, Hist. of Ire- land, London, 1855–60, ii. 367). As in Scotland, the most usual causes and consequences of the later feuds were the destruction of crops and the driving-away or hounding of cattle belonging to persons occupying lands to which others alleged a claim. One of the most celebrated cattle-raids in Irish literature is the Táin Bo Cúailnge, or the Cattle-Raid of Cooley (ed. Windisch, Leipzig, 1903). Sir Walter Scott has in his usual ingenuity given us a similar expedition undertaken by twelve Highlanders.

In Wales, where, as the testimony of Giralduus of Cambray and Walter Map show (see above, p. 724), the blood-feud once flourished, the Roman conquest brought about the suppression of both the duty of vengeance and the payment of éric for murder. The Lex Cornelia de ecirorâ of Sulla (n.c. 81) and the laws of Caesar and Augustus (Lex Julia de vi publica and de vi private) imposed severe penalties upon those who incurred the wrong by bearing arms with the intention to kill (Richter, Deutach und Römer, Leipzig, 1844, pp. 409–14, 752, etc.). On this account, no doubt, the Welsh diriu or dirny changed its meaning from éric (‘composition’) to maluda (‘fine paid to the State’). After the departure of the Romans, while the éric was re-established, the duty of vengeance failed to assume its former force. This was in part due to the fact that the cenedd, or clan, was already to some extent disintegrated as early as the 10th century. (Rhyys and Brymner-Jones, The Welsh People, London, 1900, p. 196). The feuds between the clans were largely superseded by the warfare between the petty kings. But the duty of vengeance was not looked upon unfavourably is manifest from several statements in the Dimetian Code, which was probably redacted under Howel in the 10th century. (Rhyys, op. cit. p. 181).

According to Raftell there is in a cenedd an ecclesiastical or an idiot, he is neither to pay nor to receive any part of the galanas (‘body-price’); and ‘no vengeance is to be exercised against any one if he has killed a person for galanas, that is to avenge a relation that is killed.’ Furthermore, if a cenedd commences paying the galanas of a person killed, and the whole be not paid, and if on that account one of such kindred (stock) be murdered, the galanas for that individual is not to be paid; neither is anything to be restored of what had been paid on account of the first. Finally, if ‘an innocent person is accused of murder and neglects to seek justice, and if he be killed then running, not including those in the Highlands and Islands. Even ministers of the gospel were sometimes so swayed by their passions that they took part in these ferocities. One of the most noted of these was the murder of the Colquhouns and the Macgregors, which culminated in the battle of Glenfinn in 1692. According to Birrell’s diary (2nd Oct., 1692), a party of Colquhoun women and girls were hanged in front of the castle of Lochinver. From the time of this battle, the clans of the Macgregors were driven out of the Lowlands, and many of them went to the Highlands. They sapped the crop, hanged the cattle, and drag the women about by their hair, killing all who might resist (Lang, loc. cit.). Such cases were most frequent. In fact, the volume of the Privy Council Register for 1613 contains no fewer than 42 feuds then running, not including those in the Highlands and Islands. Even ministers of the gospel were sometimes so swayed by their passions that they took part in these ferocities. One of the most noted of these was the murder of the Colquhouns and the Macgregors, which culminated in the battle of Glenfinn in 1692. In fact, the volume of the Privy Council Register for 1613 contains no fewer than 42 feuds then running, not including those in the Highlands and Islands. Even ministers of the gospel were sometimes so swayed by their passions that they took part in these ferocities. One of the most noted of these was the murder of the Colquhouns and the Macgregors, which culminated in the battle of Glenfinn in 1692. According to Birrell’s diary (2nd Oct., 1692), a party of Colquhoun women and girls were hanged in front of the castle of Lochinver. From the time of this battle, the clans of the Macgregors were driven out of the Lowlands, and many of them went to the Highlands. They sapped the crop, hanged the cattle, and drag the women about by their hair, killing all who might resist (Lang, loc. cit.). Such cases were most frequent. In fact, the volume of the Privy Council Register for 1613 contains no fewer than 42 feuds then running, not including those in the Highlands and Islands. Even ministers of the
cent. decided that, in default of the family, the king himself might be held responsible for the payment of the eric (Wasserschleben, Jr., *Kanonen
erwerbsverwaltung*), Leipzig, 1855, p. 170).

In Ireland, it was divided into two classes: the *coirp-dire*, or *body-price*, and the *enche-lann*, or *honour-price* (or *log-enench*, lit. *face-price*, Breton, *eneu-uir*; cf. Ernault, *Gloss. moyen-bret.*, Paris, 1893, p. 794). The *coirp-dire* was exacted in the case of unnecessary murder, or in necessary murder when not promptly by way of vengeance. The *enche-lann* was exacted in the case of bodily injury, insult, etc., and would, therefore, be necessarily included in the *coirp-dire*. In regard to the latter, the family had the choice of surrendering the criminal as *restitution* (cf. *foraill* to the family of the murdered, or of giving land for his crime (*Anc.
Laws of Ireland*, iv. 246, ii. 25-26). But, continue the *Ancient Laws*, *each one dies for his premeditated crimes when he has not found the eric* (iv. 256, ii. 16-17). Thus, in the case of unnecessary murder the criminal was the sole debtor. But in necessary murder the criminal and his *geisfive* were held responsible for the payment of the *eric*. In default of the *geisfive*, the other three groups of the family found themselves in

**4. Duel.**—The duel was often the means of obtaining release from the *coirp-dire*, and along the lines of the collection referred to above attributes to St. Patrick two decisions prohibiting the debtor from resorting to arms to prevent a creditor from levying a distress (d’Arbois, *Droit celtique*, p. 451.). But true individuals did engage in a duel only with the knowledge and consent of his family. If he fought without their consent and was killed, the victor would be obliged to pay full eric to his family, unless he could prove that the murdered man himself provoked him to fight (*Anc. Laws*, iii. 302, i. 1-8; p. 296, i. 19-21). So, on the Border of Scotland, trial by combat served often as a proof of guilt or innocence; and Sir Walter Scott notes a feud between Thomas Musgrave and Lancelor Carleton which was settled in this manner in 1603 (*Lay of Last Minstrel*, Note x.)

**LITERATURE.**—The literature has been given fully in the course of the article. JOHN LAWRENCE GIERG.

**BLOOD-FEUD (Greek).**—Blood-feud, or blood-revenge, is a widely diffused custom of primitive society, of which some instances still survive, as in the Corsican vendetta, and of which numerous traces are to be found in history and literature. It arises, as a rule, through a violation of rights practised by a member of one family against a member of another (A. II. *Post, Familienrecht*, p. 134). The breach of rights may take widely different forms, but its normal instance is that of murder, or at any rate homicide, and to this attention is confined in the present article. The parties professedly responsible for such a feud are, on the one hand, the nearest kinsman of the slain man, and, on the other, the slayer; but the responsibility extends beyond these to the circle sometimes of their families, in a wider or narrower sense, sometimes of their entire respective clans (cf. e.g. *Ebi, s.v.*, ‘Goel,’ col. 1745). In many cases revenge can be satisfied only with the death of the slayer, or of one of his kin, but in others reconciliation is effected on the basis of compensation in monetary kind. In either case it was felt as a sacred duty. Its aim is largely, no doubt, to maintain the honour and integrity of the family or clan, and so far it has an ethical rather than a religious significance. But it is probable that blood-revenge has in every case, at least in its earliest original form, been naturalised towards the spirit of the slain, and, as the tendance of the dead implies the recognition of spiritual beings and readily passes into worship, the blood-feud has to this extent a religious basis. By the Greeks certainly, in historic no less than in pre-historic times, vengeance on the murderer was regarded as a duty to the slain, and one of a religious kind. And probably the chief interest of the subject before us is the clear light which it sheds upon a whole world of thought and feeling which is in marked contrast with generally current conceptions about Greek religion.

**1. Homer.**—In Homer there are abundant traces of the custom. We read of Orestes avenging his father (Od. iii. 306), though this is less usual case of blood-feud within the family, and of understood right and duty of any man to avenge a brother or a son (II. ix. 632; Od. xxiv. 434). In one instance (Od. xv. 273) the responsibility for vengeance falls also on the slain man’s own, who are usually understood to be the descendants by the facts that *tae* are distinguished from cousins (c*airsol*) in II. ix. 464, and that in Attic law the duty of prosecuting a 44 cows and 213 pence; while the earle or wilte was valued at 16 cows (Robertson, *Hist. of Scotland*, 3 vols., London, 1831, App. ii.; Lang, *op. cit.* i. 81; Skene, *op. cit.* iii. 218, etc.).
muderer passed in case of need to any member of the murdered man's plutry (Rohde, Psychoe, p. 260-261 n.). When an act of homicide has been committed, under whatever circumstances,—for these do not seem to have affected the issue in the society which Homer depicts,—its author is something represented as fleeing into a house, where he seeks the protection of a man of influence. So Patroclus finds refuge in the house of Peleus, and Lycophron in that of Ajax (II. xxiii. 85, xv. 431). In other cases the feud is ended by murder as a recompense, or ποιήσα, murder, is brought on by the two parties. That this often happened is shown by the passage (II. ix. 632 ff.) where Ajax, after trying in vain to disarm the resentment of Achilles against Agamemnon, continues, 'Why, even from the murderer of a brother, or for his own dead son, a man accepts, it may be, a ransom, and so he (the murderer) stays in his own town, after paying a large fine' (Paley's tr.). Of what took place on such occasions we have a vivid picture in Il. xviii. 488 ff. There, in a scene upon Achilles' shield, the two parties to a feud first engage in a wrangle as to whether the amount agreed on has actually been paid, and afterwards bring their quarrel before a council of elders, while in the midst are placed two golden talents, which, at least on one interpretation, represent the ποιήσα, murder, of one party.

Among all these references to the blood-feud in Homer, nothing, it will be seen, is said about the spirit of the slain man, while the settlement by means of a fine is obviously treated as a matter in which the living only are concerned. And this is in harmony with the general view, which the Homeric poems present to us, of the state of the dead. Where the blood-feud is animated by a desire to appease the dead man's spirit, the latter is conceived as a powerful being bent on revenge, as in the cases of the vengeful spirit dwelling on the kinsman who neglects his interests. But the faith described in Homer is of a different order. Its dead are strengthless beings, ineffectual shadows of the living. There is, however, good reason to believe that this was not the oldest Greek faith. Even in Homer we meet once an again with, what seem to be outcrops from an earlier stratum of belief. Thus at the funeral of Patroclus (Il. xxiii. 138 ff.), the hair which Achilles lays in his dead friend's hand, the jars of honey and oil, the分享en (οφθαλμοί) for the eyes, and all sorts of these together with the corpse, the night-long pouring of wine upon the earth, and the oft-repeated call to Patroclus, together with many other features of the story, all point to a vivid belief in the reality and nearness of the departed spirit which contrasts sharply with the usual Homeric representation; while, as Rohde observes (Psychoe, p. 17), the whole series of offerings belongs entirely to the class which we may regard as oldest, and which meets us later in numerous instances, where the Greek shows a high regard for under-world powers. The offerings which, in Od. xi. 49 ff. (the 'Nekuia'), Odysseus promises to the departed spirits point in the same direction. But, if such was the earliest Greek conception, the deepest motive of the blood-feud, in the Homeric age weakened or lost sight of, may well have been the slain man's demand for vengeance. And that this was actually the case is indirectly proved by the fact that in Homer the consequences seem to be an absolute demand for vengeance. The one motive of homicide. The equalization of these two, says J. H. Lipsius (Das attische Recht und Rechtswesen, Introduction, p. 7), affords clear proof that the fundamental aim of the blood-feud was not punitive justice, but satisfaction to the slain.

2. Classic age.—-When now we turn to the classic age, this aspect of the blood-feud occupies the forefront of the picture. Vengeance on the homicide is primarily reparation offered to the dead, and as such it is a religious act.

(1) Poetry.—In Eschylus' Eumenides, Orestes is pursued by no earthly avenger of blood, but by the Erinyes, who are represented as coming at once to the abode of the dead and of the old religious order. At first, in all probability, they were nothing but offended ghosts, the angry spirits of the slain, and hints of this original character are to be found in Eschylus (cf. J. E. Harrison, Prolegomena to the Study of Greek Religion, p. 223 ff.). In the main, however, as seen in his pages, they are rather the personified curses that attend the shedding of kindred blood. The personality of the slain is merged in that of the malignant demons who act as the ministers of his revenge. The same natural shifting of ideas, and the same fundamental conception of the slain man's eminence, are seen in the use of the word ποιήσαμεν, which in the sense of an avenging power is applied by the orator Antiphon at one time to the dead man's spirit, at another to his ghostly champion, as in the phrase ἐν ποιήσαμεν τοῦ ἀπολαμβανόντος (Trat. 3, β. 8). Sometimes, as in Sophocles (Trach. 1292) or Euripides (Iphig. in T. 778), the outraged spirit is described by the epithet δαιμόν, a dealer of curses.

(2) History.—In the first place, one is thinking chiefly with the fancies of poets. But the view of a slain man's eminence, and of his satisfaction as a religious act, is met with when we turn to the practice of the law courts and examine the developments of the blood-feud in historic times. When the clan develops into the State, the blood-feud inevitably passes under its control and is regulated in accordance with its interests. Greece was no exception to this rule, and we have evidence of laws relating to homicide in various Greek States. But while in other States their information is only fragmentary, the procedure at Athens, though obscure in some points, is illustrated by copious references, especially in Plato, Aristotle, and the Attic orators. To enter at all fully into the Attic process would carry us beyond the limits of this article. But it will be sufficient to note its salient points. In the first place, the legal process meant a mitigation of the unreasoning vengeance of the primitive blood-feud. We have seen that originally the circumstances which led to homicide were insuperably expressed in what the chorus in Eschylus (Choep. 310 ff.) characterize as 'a thrice hoary saying': 'Blood-stroke for blood-stroke must be paid. Doer of wrong must suffer.' But from time to time immemorial Athens had separate courts for the trial of willful murder, of accidental, and of justifiable homicide. The tribunal for the trial of murder in the strict sense was the Council of the Areopagus, which exercised that function right onwards from the time of Solon, or, according to Autolycus (e.g. C. Cret. Hist. 111), from the dawn of the Athenian constitution. Furthermore, a law of Draco (c. 620 B.C.) enacted that vengeance in certain cases, including adultery, should not be followed by a legal penalty (Panss. R. xxvi. 8). But it from one point of view the law mitigated, from another it restored, the rigour of the ancient blood-feud. It did so by forbidding the ποιήσα, or money settlement, of which we have seen examples in the laxer practice of the Homeric age (cf. e.g. Demosth. Ar. 100 ff.). This was not always the case when blood-revenge passes out of the hands of private persons (cf. e.g. Grote, Hist. of Greece, i. 484). It might, indeed, be thought that this strictness in the Attic law was due to the supposed interest of the State, but the true explanation is doubtless to be found in the view that...
advanced by Rohde, among others, that the State regulated the murder suits on the basis of the old family blood-feud, and that its chief object was the satisfaction, not of the State, but of the invisible powers. These positions we shall now proceed to illustrate.

That the State process grew out of the blood-feud is first of all indicated by the fact that it was the nearest relatives of the murdered man, and only in special cases more distant kinshcen, on whom devolved both the right and the obligation to prosecute. It was a duty for whose neglect in the case of wilful murder a man might be himself arraigned by a fellow-citizen (G. F. Schömann, Antiqu. of Greece, p. 471, Eng. tr.). And this notion proceeds from the fact that the duty to prosecute was regarded as also a duty to the dead, and thus as a religious duty, the neglect of which brought pollution upon the State and involved the risk of deaths and other calamities. For we in the next place to note that the thought of the murdered man’s vengeful spirit, and of other ghostly powers who jealously watched over his interest, was a living force in Athens even in historical times, shaping the course of justice, and moving the ordinary man to superstitious fear. For it is a fact, that the right of the dead spirit’s claim was a force to which the orator knew how to appeal in capital trials. So the relatives are said by Antiphon ψυχαί τέθρων, ‘to succour the dead’ (Or. i. 31; Tetr. 1, β., 13), and sentence on the murderer is described by him as ρυπαί τέθρων, ‘vengeance to the wronged’ (Or. v. 58, vi. 6). In one of his speeches, composed for a fictitious case, he makes his clients address the jury: ἀντί τοῦ παθόντος ἐπικεφαλήσαντον ἤμας, ‘we implore you on behalf of the dead!’ (Tetr. 1, v. 7). In the next place the sense of religious duty to the dead is apparent in the several steps of the judicial procedure. It is the archon-basilisks who presides at the trial for homicide, the magistrate who inherited the peculiarly religious duties of the kingship; again, at the outset of the process, both parties have to swear by the Erinyes and other under-world powers to the justice of their cause. And lastly, we may note the procedure enjoined by law in the case of one condemned to temporary exile for an act of violence. With some of the persons of his exile had elapsed, and when he had been formally reconciled to the relatives of the slain, he had still to undergo a ritual purification from the stain of bloodshed he could share in the worship either of the State or of the family, and he had to make expiatory offerings to the spirit of the dead.

It will be seen that the conceptions here regarded as underlying the blood-feud, which have been attributed to the earliest Greek age and which are clearly reflected in classic times, contrast sharply with the picture of the Homeriac age which lies between. The problem presented by this contrast can scarcely be ignored in dealing with the blood-feud, but it is one on which we can here only touch. It can probably be best explained by the composite racial elements that went to the making of the Greek nation. It is, of course, to be supposed that the feeler conception of the spirit-world reflected in Homer’s pages, and the more untroubled gladness in life, were an amalgamation of the sentiments that had been lived. But they were the characteristics of a conquering Achaean stock, and not of the earlier population. The latter, who had no great poets to express the spirit of their religion, still clung to their local cults, and were of other orders, able to bless or curse the living. Even Homer, as already seen, is not without trace of this earlier belief. A similar hint may be found in Hesiod, whose ‘daemons’ are the souls of the men who lived in the earliest or golden age (Works and Days, 121). And the orphic (de Abstin. 4. 22) records how Draco enjoined the Athenians on the honour of their gods to procure the death of their adversaries by bringing them into the spirit-world, according to the custom of their fathers. The old faith never died, and at last, owing especially to the teaching of the Delphic oracle, its gloomier views about the under world became, as we have seen, a dominant element in religion, and helped to shape judicial procedure.

There was, indeed, in Greek religion another and very different world from this, a realm of serene piety, radiant with images of the Olympian gods. But beneath it, in an opposition which paganism could not fully overcome, was a world of gloom and misgiving, haunted by the thought of evil, and of powers whose law was justice untempered with mercy. Of that world the study of the blood-feud, and of its reflection in the thought and practice of the classic age, affords us impressive examples.

**BLOOD-FEUD (Hindu).—** Indian legislation had early reached the stage in which the right of private war, and the obligations arising from the blood-tie everywhere recognized among the Teutonic tribes, had been superseded by the view that repression of murder and violence was a function of the State. The peace-preserving power of the king had become predominant, and we have to go back to Vedic literature if we would meet with any traces of the old blood-feud. The concept of retribution, once paid as a compensation for manslaughter to the relatives of the victim. It appears that a hundred cows were considered in Vedic times the ordinary amount of the wergeld to be paid for killing a man. The somewhat obscure hints in the Vedic literature may be augmented by more explicit statements contained in the Dharma-sūtras of Baudhāyana and Āpastamba, where the fines to be paid for manslaughter are declared to have the removal of hostility for their object. Cows and other cattle were, no doubt, the earliest kind of money in India, and the payment of a hundred cows for manslaughter corresponds to the bride-price, which likewise consists of a hundred cows. Gradually, as the priestly influence made itself more felt, the compensation to be paid by the family came to be converted into a money present to the Brāhmans. This is the standpoint of the more recent lawbooks of Manu, Yājñavalkya, and others. At the same time, the kings took cognizance of all crimes committed in their kingdoms. Punishments increasing in severity were inflicted both on men and creatures, formed of Brahmān’s glory (Manu, vi. 14), and that king only was said to attain to paradise in whose dominion there existed neither murderer nor thief nor other offender (Vṛṣṇi, v. 186). Nevertheless the avenging of wrongs and the revenge did not become entirely extinct, and various instances of it are recorded down to comparatively
The murderer, however, obtains the protection of his tribe or of an influential sheikh; and if the family of the victim, supported by their tribe, follow up their vengeance, they become involved in an everlasting war, made up of isolated murders and retaliations. It is not uncommon for the murderer to be left alone at the mercy of his enemies. Sometimes, however, a sheikh will refuse to protect a man whose repeated assassinations are an annoyance to the tribe, or who has committed a murder in dishonourable circumstances. In such cases, the sheikh makes proclamation to the whole tribe that he ‘shakes his mantle’ (infard 'abatih) against him. The outlaw may then be slain with impunity by any one, even by a member of his own tribe. Sometimes a Bedaw proclaims the infard 'abatih on himself. He makes a tour through the whole tribe with a stick in his hand and a white flag flying from the top of it. Determined to avenge himself for a personal injury by a murder, he is trying in this way to take measures beforehand to render the consequences of his action to his own head.

As a rule, the murderer, being protected by his tribe, escapes the immediate vengeance of the family of his victim; but he remains none the less under a constant dread of it, which disturbs the peace of his tribesmen. As his punishment, he is expelled from the tribe, and within a few weeks, he sends a representative to the victim's family to make proposals. These are rejected, because the family are in honour bound to get the blood that is to satisfy the dead. Some months pass, and the two tribes are stiffened into, or are at least restrained from, all social relations. An interview is arranged in the sheikh's tent, at which the representative (wakil) of the murderer appears in supplication before the principal family-chiefs. On his knees, he avows three times that he has the victim's blood he has avenged on himself for the death of his tribesman. He declares himself ready to make peace, but only on condition of receiving an enormous ransom (diya) of young girls, camels, mares, sheep, money, arms, etc. The wakil consents to everything, no matter how exaggerated and impossible of fulfilment the conditions enumerated by the avenger may be. Then the sheikh intervenes, and, calling on the names of various intercessors, asks for the reduction of the different elements of the diya in succession; the avenger consents to this modification of his demand. A few months later, perhaps a year after the murder, the sheikh sends a representative (wakil) to demand the payment of the diya. Faith being the bond of this diya (afu) is, so to speak, exchanged for the diya. In certain tribes the diya always includes two young girls of the murderer's family or tribe; the avenger keeps them to himself, or gets them married at a small price. In other tribes, two girls are given to each side, and a white flag is hoisted on a stick. Sometimes they proceed to a final ceremony of baring the blood. When the family of the murderer are unable to pay the diya, they go into voluntary exile.

The amount of the diya is not usually the object of discussion except between tribes who live in close relations of kinship, or, at least, neighbourhood; for others there is a fixed amount (muddah). In ancient Arabia, the diya of a single hundred camels, and that is the figure adopted by the sunna; the legal writs determine the lists of beasts to be chosen, in accordance with the ancient customs. For this muddah, which, in practice, can be applied only among nomads, has been substituted in 1200 drachmas, according to the country. Some people have preserved customary muddahs which do not agree with the price fixed by the sunna: one allows fifty sheep and fifty mafja'; others, a thousand piastres along with the murderer's weapon and some sheep, two, or three hundred mafja', forty camels, etc.

The prescriptions of the Qur'an (ii. 173), the

BLOOD-FEUD (Muslim).—Among the Arabs, as among the other Semitic races, the blood-feud (gaceal), retaliation (qisah), vengeance (tharr), is a general institution. Attested by pre-Islamic documents, confirmed by the Qur'an (ii. 173 and iv. 94), and codified by the jurists, it is a living custom among the Bedaw, and is practised in its primitive form. We get this information from the observations collected in Syria by several authors, especially Burckhardt and Jaussen; and it is clear that it is still practised by the tribes. In the written Muslim law the blood-feud is only a chapter of criminal law. A man is killed; he must be avenged. At first, it seems to be for religious reasons: a human being who has died without having accomplished, in peace or war, certain rites of confession, could never find peace in the grave; the dead man's blood cries, in the form of an owl which disturbs the repose of his family, and which cannot be appeased except by another's blood. Then it seems also for economic reasons; generous tribes, which are also powerful and influential, who are weakened in comparison with the family and tribe of the murderer; the injured social group demands compensation.

Sometimes vengeance is immediate: a murder is committed in a village, the men of the village are in the house when the murderer is; the men rush on his tents, kill everybody they meet, slaughter the animals, and burn or break everything belonging to the murderer. But these immediate reprisals are often impossible, and then, it appears, some rites which are not very definitely stated take place. The nearest relative of the victim dips his shirt-sleeve (reden) in the spilt blood and hoists it up at the top of a lance. During a space of three days the avenger has no communication with anybody. The pre-Islamic heroes used to subject themselves to various tabus at this time: Inira' Qais took an oath to drink no wine, to eat no food, neither to wash nor to anoint his head, and to have nothing to do with women, until the day when his vengeance would be avenged. The same act is still practised. It was this that was not altogether a voluntary tabus, because Duraid ibn-as-Sama' acted in the very same way.

Vengeance is taken, as a rule, by the nearest relative of the victim; but all the male members of his family to the fifth generation have the right of vengeance; the murderer and his relatives to the fifth generation.
meaning of which, however, is difficult to settle, sanctioned a scale of values in accordance with the social importance of the victims—freemen, slaves, or infidels. Is it possible that Imrûl Qâis, when claiming a hundred human lives for his father's blood to an old mudda Binding on chiefs? The mudda for a woman was fixed by the swarna at half of what was due for a man of the same social status. The Bedawi tribes of Syriu, on the contrary, fix the mudda for a woman at four times that for a man: eight girls or their dowry, or sixty camels. For a pregnant woman, they add to her own diya the diya of the child.

The governments and jurists have set themselves to give a character of public right to private vengeance. The penalties are pronounced by a magis- trate, according to written rules, in solemn forms of procedure in which the witnessing plays a preponderating part. Sentences are executed by public authority.

The modes of action are the same in the retaliation for wounds. This consists in inflicting a wound on the criminal identical with the wound he gave his victim. But here again the diya comes in; and the application by competent authority of the physical penalty or the money-fine is one of the most important matters of Arab criminal law.

GAUDEFROY-DEMOMBYNES.

BLOOD-FEUD (Roman).—That blood-feud existed in primitive times in Italy as elsewhere is certain both from analogy and from actual traces, but the latter are scanty compared with those found amongst the Greeks. The reason lies in the comparative modern character of Roman civili- zation when it emerges into the light of history. Roman history is illustrated by no such authentic picture of a primitive age as is contained in Homer. And when we turn to the arrangements of Roman law, we find little or no such reflexion of primitive ideas relating to the blood-feud as in the laws courts of Athens. But both in law and tradition the traces, if not very abundant, are clear.

The legend recorded by Plutarch (Rom. 23, 24) about Titaus Tiatius and the envoy from Laurentum has probably a historical question and the friends and kinmen of Tiatius slew the envoy when on their way to the king; and, on his refusing to deliver up the culprits, he was himself killed by the relatives of the murdered men. Soon afterwards the gods punished both Rome and Tatius, and Tiatius was killed by his father's friends only when the murderers on both sides were surrendered and punished. The last statement suggests a public, indeed a legal execution, so that we may agree with the verdict of Mommsen (Rom. Hist. I. 158): 'This story looks very like a historical version of the abolition of blood-revenge.'

Another echo of the blood-feud comes to us in the tradition that Numa enjoined the offering of a ram (doubtless through the kinmen to the monnus of the slain) in cases of involuntary homicide. What Prof. Moirhead (EBR® xx. 656) calls 'a re-enactment in illustrative language' of the same law appears in the words which, according to Cicero, occurred in the XII. Tables, 'si telum manu fugit magis quam jecit, arietem subjicit.' In the modern code, excepting in cases of murder as part of a public execution, the original object of such a law, and that as late perhaps as the time of Numa, must have been to impose a limit on the blood-feud in the case of accidental homicide, while still in the latter sense going on to proceed unchecked (EBR® loc. cit.). But more direct re- miniscence of the blood-feud is to be found in the part which the kinsman of a slain man was expected to take in the prosecution of the murderer. So stringent was the obligation to institute the trial, that failure to do so disqualified a man from inheriting any of the property of the deceased. Thus in Plutarch (in Atthis), it reflects the family aspect of the original blood-feud.

On the other hand, the legal treatment of homicide showed how completely among the Romans the claim of the State superseded that of the family to execute justice on the criminal. For homicide was dealt with, and that even earlier than the XII. Tables, as a breach of what the jurists called the public law, which dealt with offences against the State, while the private law dealt with matters directly affecting the interest of individuals.

A word may be added as to the earliest meaning of the word poena. It corresponds to the Greek ποιε¹, and occurs in a similar sense in the XII. Tables in the sentence 'si inimium fuxit alteri, viginti quinque acria poenoa saevo.' Poena is here the equivalent in money of the revenge sought for, and it might be supposed to indicate the existence in earlier times of a manner of settling the blood-feud such as was customary in the Homeric age. That such a custom was also familiar to the Romans it is not probable, but is not supported by the use of the word poena, which is simply borrowed from the Greek in the general sense of compensation. Moreover, the passage in the XII. Tables refers to compensation for personal injury, and has therefore no connexion with the blood-feud (for an interesting account of the relation between poena and ποιε¹ see Karlova, Ṛom. Rechtsgeschichte, ii. 790).

I. F. BURNS.

BLOOD-FEUD (Semitic).—The feeling of kin- ship is the basis of the tribal system of primitive Semitic societies; kinsmen are really brothers through their participation in a common blood, and this social bond is enforced by the law of blood-revenge. Tribal blood has fallen to the earth with the killing of a member of the group. The necessity for revenge arises when any member of the tribe is killed by the enemy. The sanction of the blood has been invaded thereby. On the other hand, if one kinsman has slain another, it is not cause for blood-revenge; either he is outlawed, as Cain (Gen 4:15) from his kin (though here by Jahweh), or is put to death, as originally was the case. But the idea of the whole kin, that it may rid itself of an impious member.

The custom was doubtless of a religious char- acter. Its persistence may be taken to support this. The members are one kin with their god; they are of his blood. His rights are violated therefore by the murder of one of their number, and he requires of them that they seek vengeance, on pain of his displeasure and consequent withdrawal from communion with them, as signs of which this was manifest in any physical calamities that might befall them. It is a sacred duty a man may not renounce. The voice of blood, too, cries out from the ground for vengeance. There is a familiar idea in Arabic poetry that his spirit in the shape of a bird rises from the head of the unavenged and cries, 'Give me to drink' (viz. blood).

Only tribal life offers the necessary conditions for blood-revenge: (1) the solidarity of the tribe or family (a larger group than with us, which is explained later), in which each individual is answerable for the other; and (2) the autonomy of the tribe.

The religious motive is not always present, but
esprit de corps is so real that tribal honour is always alert in pursuit of vengeance. In many instances the slain man’s kin retaliated till a manifold vengeance was obtained. The Song of Lamech (Gen 4:21), that if Cain be avenged seven times Lamech shall be avenged seventy-seven times, is taken as a statement to confirm the custom that did not always stop at the person of the murdered. But the principle of blood-feud is ‘a life for a life.’

A person who has shed other than kin-blood is not so regarded as impious, for only the blood of kin is sacred. He has involved all his kinsmen in the consequences; but they, if possessed of true tribal instinct, will not yield him up to the avenger. Any member of the aggrieved group may retaliate upon any member of the other, and satisfaction be obtained. But such summary justice does not always conclude the matter, and retaliation may follow retaliation indefinitely.

1. Responsibility within a narrower circle.—

The family, not in the minor dimensions that obtaining with us, but embracing all the descendants of a great-great-grandfather, early began to enter as a unit into the reckoning, and family feeling, which eventually affected the structure of Semitic society, and gave it a set towards disintegration, assumed a first importance. Blood-revenge now became a matter for the family of the slain, while that the nearest relative is he who should undertake it: the goel, therefore, in Israel. Among the Arabs the brother and the son in almost equal measure were obliged to avenge. The tribe (hayya) usually, however, in its narrower sense of an aggregate of families that move en bloc from place to place and bear the same name, assumes the duty only when the family cannot from its weakness obtain vengeance. This intention of asserting the honour of the tribe may draw into the field of vengeance all its members, and that may demand a heavy toll of lives. The passive solidarity of the tribe also weakened before this narrower principle of relationship; the avenger preferred to retaliate upon some person within the fifth degree of consanguinity—a usage still in force among the Bedawin. Another consequence of this growth of the family-idea may be noted. Certain of these smaller social units, by reason of bravery or for other such cause, became a kind of aristocracy, and from this was chosen the chief of the tribe. Notwithstanding the position of this class; in early Arabia ‘a nobleman for a nobleman’ was the rule.

2. Modifications.—(1) Protection.—A man in fear of an avenger might flee for protection to a member or the chief of another tribe. Moses, e.g., found refuge with Jethro (Ex 2:18). In Arabia, by taking food or drink with a tribesman, or even by pitching his tent so that ‘tent-rope touches tent-rope,’ the fugitive secures for himself his protection, and, especially in earlier times in the desert, his ability to live. At times this relationship between protector and protected varied; it might be temporary or permanent and hereditary, or promise might be made to protect against a definite enemy, or all his enemies, or against death itself, i.e., if the stranger were slain while under his protection, the host would undertake to pay blood-money to the next-of-kin. The jar, or protégé, ceases to be under any obligation to his own tribe, and enjoys the same rights as any member of the tribe to which he is attached. It is the proud boast of a tribe that it is always able to defend its refugees; a weaker, however, under fear of attack from a stronger, may refuse to admit one to protection, or may refer him elsewhere. Sometimes the protector claimed the right to dismiss a jar at will.

(2) Asylum.—In Arabia a manslayer was unmolested by his pursuer within certain sacred areas, pre-eminently the haram of Mecca, within the tent, or if he pitched his tent over the grave of an ancestor. In ancient Israel the altar afforded shelter to any one who shed blood, but by the later time of the Judges the law of the sanctuary had not been disavowed, and the sanctuary was not only the unintentional homicide. Certain cities of refuge were provided for in the later law-codes, and these also are further distinguished from the asylums of the Arabs in that they secured from violence only, as a condition of justice. See ASYLUM.

(3) Holy Seasons.—During the four main blood-revenge and war were prohibited by the Arabs.

(4) Oracle.—The authority of the oracle, communicated through the lot, may originally have had considerable influence. That of Hubal in Mecca was famous; questions requiring ‘yes’ or ‘no’ might be settled, and it might also decide who was to undertake vengeance.

(5) Oath.—Through the qasima, or ‘oath of purgation,’ among the Arabs proof was supplied where otherwise none could be offered. Helpers, usually fifty in number, in the oath must swear to the innocence of one accused of murder, or to his blood-guiltiness. The helpers need not have been eye-witnesses. The proper application of the qasima, however, was to settle among equals the claim of one to another’s blood. The nearest community had to swear they were not the murderers. In Israel the nearest community professed its innocence through its elders, and made atonement for the blood which had been shed by laying the guilt upon an animal (Deut 21:5), for it was a fearful thought to the Hebrew that blood should go unavenged (Job 16:19).

(6) Blood-wit.—The principle of commuting the right of blood-revenge by a fine, which has been recognized by many peoples (Greek taphias, Saxon wergeld), has not been universal among the Semites. The acceptance of a surrogate was forbidden to the Hebrews (Nu 35:31)—a fact which is evidence of the increasing sense of personal worth under the growing social order. Arabs, with a fine instinct of tribal honour, reckoned it dishonourable to compromise in any degree the blood of a kinsman, but the consciousness of weakness might recommend such a course to a tribe. The material advantages to be gained by its acceptance also exercised some influence. Many tribes required the payment of a certain sum in the payment of this class; in early Arabia ‘a nobleman for a nobleman’ was the rule.

With the passage from nomadic to agricultural, settled life, local connexion begins to oast gene-
logical, the regional grouping gradually weakens the feeling of blood-community, and revenge for the injury suffered by a tribe is to a large extent put into private hands, the custom, becomes possible (Gen 27:2, 2 S 14:2). Laws of social justice arise, and imperial tribunals of State-life are instituted which remove the infliction of penalties out of the individual's hands, and dissolved desire, and murder is rendered illegal. In Babylonia, courts for the punishment of offences were early set up: the jua talionis, but not blood-revenge, was admitted. The code of Hammurabi makes exception in favour of unintentional homicide (§ 207 f.). In course of time, after their settlement in their tribal organization, and during their subsequent history the laws of vengeance passed beyond the primitive state of blood-feud and acquired an ethical character. Their law-codes represent an intermediate stage between the nomadic custom of direct vengeance and the criminal proceedings of developed State-life. All three make the distinction (not found in Homer, though made later when the community took into its hands the right of the avenger), between murder and homicide, and on the due punishment for the latter he who should fall a victim to the avenger's hasty passion; he is secure from the goel' at any altar of Jahweh (Ex 21:13), or at the Cities of Refuge (Dt 19:7, Nu 35:6). Ancient custom is preserved in that, in the cycle of the State, Jahweh is the initiative in protecting the interests of the aggrieved by bringing to the case before the elders (Deut.), or the congregation (P), and must carry out the death penalty. The Deuteronomic code indicates the growth of individual responsibility in stating that the criminal alone is responsible for his deeds (Dt 24:5). The goel' was known in Israel certainly down to the time of David (2 S 14:10). To Jahweh is due much of the credit for modifying this custom, though it did not abolish it. Jahweh came to be regarded as the goel' who had redeemed Israel from bondage, to whom blood cried out, and who avenged it through His representatives with the people, viz. elders, kings, and priests.

In Syria the Syro-Roman law—book of the 5th cent. A.D. (§ 74, Paris Manuscript) forbids the avenger to kill the manslayer, and requires that the accuser hand over the guilty person to the authorities.

Muhammad found the principles of blood-revenge too deeply rooted to be overthrown, and it gained recognition under his theocratic régime (Qur. xvi. 35). It is probable that the passive solidarity, being obliged to avenge one of its members slain and to protect a Muslim manslayer against the unbeliever. Further, he made the manslayer alone responsible for his deed, and distinguished between murder, fatal assault, and unintentional homicide. In the case of the first the talio was allowed, but blood-money could be accepted; in the others it must be accepted (Ibn Hisam, pp. 341-343, 821, ed. Wüstenfeld; al-Waqidi, 538, ed. Wellhausen). But the modern Bedawil have preserved innocence in the tribal system and the blood-feud from the transforming influence Islam has otherwise exercised.

With him the laws of vengeance for murder and homicide are the same. There is no need to regard the blood-feud as an altogether barbarous practice with nothing beneficent. Travellers in the peninsula claim that it is a salutary institution which has prevented tribes from exterminating each other, that it stays the plunderer's hand from shedding blood, and prevents the traveller to rob himself in the desert. It is likely to remain as long as nomad life is regulated by custom.

A. H. HARLEY.

Blood-feud (Slavonic).—Among Slavonic peoples the institution of the blood-feud may still be traced in good authorities, throughout all its history, alike when it was in full force and in the varying stages of its gradual decay.

I. Slavonic terminology.—The art. Blood-feud (Arv.) has extensive Slavonic expressions:

—Old Slav. vstriedit', only 'enmity,' 'blood-revenge,' but also 'compensation,' 'fine'; Old Russ. vira, 'wergeld,' then 'State-compensation'; and miril', 'peace.' Here should be added Old Slav. glavav, properly 'head,' and krun', properly 'blood'—words which are used in numerous Slavonic tongues to signify the manslaughter (deed of blood) which is to be avenged by the blood-feud. The Russian expression for 'revenge' is misti, msteti, mistiti, mistiti, which may be assigned to the same category as the Slavonic expressions (cf. in Sicilian Gr. oisir, 'retaliation'), or perhaps also may be compared with Gr. aires, 'hated' (murete, 'hate,' mitlete). An interesting designation of inter-tribal conflict is to be found in the Polish word wolveks (Czech volak, 'war,' White Rus. volak, 'struggle' or 'conflict') and the Latin lucecor, 'I avenge,' lietsholti unexplained, should be connected with it (cf. Walde, Lat. Etymol. Wörterbuch). Finally, mention should be made of the Servian ofora (Old Slav. vora, cf. Lat. vera), 'true,' probably the pledge given to the husband of the clan to undertake no hostile action against them during a specified period (Mid. Lat. treason).

2. Instances of the blood-feud among particular Slavonic peoples (principally based on Miloslav, loc. cit. infra).—The latest survival of the blood-feud in full vigour was among the Southern Slavs, where it persisted longest in Dolmatia and Montenegro. In the last named it was not till the year 1855 that it was rooted out by the stringent measures taken by Prince Danilo. Till that date the blood-feud was looked on as the sole means of preserving order and justice. Its characteristics may be described as follows: Blood-revenge is resorted to in cases of murder, wounding, and insult, and is considered a religious and sacred duty to the protect the murderer and allow the women who give the stimulus to vengeance. The mother lays the infant in the cradle to sleep upon the blood-stained shirt of the murdered father, and, as the boy grows up, she ever and anon presents this ghastly object to his view. Every male member of the clan is under the obligation to avenge (brotata, properly 'brotherhood,' cf. Gr. φιλαρχος, philarchos, philarchos, 'brother'); first the eldest son; if there are no sons, the brother. If the man to be hunted down by the blood-feud dies, his liability is inherited by his nearest relative, so that sometimes it is the sons and grandchildren who finally fight out the quarrels of their fathers and grandfathers. The chief object is to slay the murderer, or, if this is not possible, his next-of-kin—his brother, father, son, and so forth. Blood-feud also occurs inside the clan—a later and degenerate type of revenge. The woman, and, strangely enough, the man, who has been taken under protection by a woman, are inviolable. In the earliest times the man flees after the murder to another district, or at least avoids meeting the blood-feud in the church or elsewhere. The indication of war the clan-feud is allowed to rest; but, according to Rovinskij

* A star before a word signifies that the form does not occur, but is inferred.
BLOOD-FEUD (Slavonic)

(op. cit. infra, 63), it may happen that a clan living in deadly enmity with another clan forms an alliance with a national foe (the Turks or Asia Minor) and thereby comes to a bloody revenge (brotnstvo and rod ("relationship") in this instance are rated higher than nationality and religious faith. It is only by an exaction which includes the payment of the price of blood and a humiliating ceremonial on the part of the guilty man (see below) that the custom comes to a bloody revenge. The duty of revenge extends to the whole clan; it is only the clan and not individual members of it that can conclude peace. In the assemblies of the people (sbor, skupština) a question often discussed is the formulation of feuds, and the rest of the country, trusting in the opinion of the clergy, Vladimir attempted to proceed against the murderer by means of State penalties (kazna), but he soon returned to the customs of his ancestors. The later chronicer did not clearly the almost unmistakable meaning of this. Jaroslav I (a descendant of Vladimir) in his tardy sense of the price of wergeld, expressed the idea that was not actually in this passage of 50 or 40 gironen was exacted — no doubt to the advantage of the princely exchequer. The sons of Jaroslav completed their father's work by enacting that every deed of blood might be redeemed by this payment. The sense of the word is that it was not clear who received the skins — the Prince, the injured man, or both. If the murderer was unknown, the district (sveri, see above) in which the head of the murdered man was found was responsible for the vîrojite (formed from vira)—an arrangement similar to the Jewish law of liability of the whole clan with regard to the wergeld (see above). From the various rates of penalty mentioned in the above and other passages of the Russkoja Pravda, the calculation has been held to be justified (cf. L. von Schröder, Prasprany u Božům, p. 50) that the wergeld for the murder of a free Russian (oûščanin, 'householder') would come to about the value of a hundred cows, and that in this respect, too, the customs of ancient India (see above, pp. 725, 729) and of ancient Russia coincided. It must be admitted that the ground on which such a calculation is based is very insecure. (For the most ancient evidence for the existence of blood-revenge on Slavonic soil, see Mauricius, Strateg. x. 5; cf. ARYAN RELIGION, above, p. 51.)

3. Expiatory usages at the amicable settlement of a blood-feud.—When the hostility between two clans was to be terminated by payment of the wergeld, there was also a long series of solemn ceremonies of expiation, about which there have been ample information. It is quite especially the South Slavonic world (cf. Miklosich, op. cit. 176 ff.). The Archis f. slav. Philologie, xiv. 141 ff., contains a detailed account (not yet embodied in the work of Miklosich) of a ceremony of expiation among the South Dalmatian Slavs. Its characteristic features are as follows:

The two clans of the Bojković and Tužković in the extreme south of Dalmatia, where the blood-feud remains a living force down to the present day, have been on hostile terms for years, because in the year 1577 Ivor Bojković in a quarrel shot Rof, a member of the Zeci family (of the clan of the Tužković). The murderer has long since been dead, but there is no reason to doubt that Jojko Bojković and Jovo Zec, who now (in the year 1900) are sufficiently able to do business, wish to be placed in peace. It is, however, not possible to come to that pass. After long protracted negotiations the Bojković are induced to admit themselves to be in the wrong and to allow Jovo Zec the right of choosing twenty-four arbiters (Dominičci, 'good people'). These lay down the following conditions of peace: Jojko Bojković is to pay Jovo Zec and his brother Niko a little over a hundred gironen as the price of blood for the murdered man. Here we must observe that according to the custom of the district (politička običaj ‘custom of head' (sahotěta ubijenje za golovu; for the meaning of golovno see above), replacing it by permission to buy off the penalty to the tune of three hundred and offer him twelve 'sponsorships', i.e. send him twelve children, to whom Zec and his people are to stand as godfathers. Moreover, twenty and twelve small 'brotherhoods' (pobratimstvo, 'artificial relationship') are to be established
instances are furnished by the Norwegian-Icelandic sources. Not infrequently these feuds ended in an act of combined incendiarism and massacre.

The slayer, after the murder was consummated, took a night attack; his enemies surrounded the building with combustible materials, and set the whole on fire, so that he and his entire household perished in the flames. The extent to which the blood-feud extended in consequence of the murder between families is shown by the fact that sometimes the near relatives of the actual slayer was forced to fill the place of the latter as the object of retribution. As a rule, indeed, the policy of vengeance was more carefully planned, by the tribe as a whole. The slayer also chose the leader or champion of the feud, and this step was at once followed by the public proclamation of the vendetta. The blood-feud was at length superseded by the imposition of a fine upon the guilty party, and in a case of killing this was known as the wergeld, or 'man-money,' by which the slayer redeemed himself from the sentence of outlawry. The completion of this expiatory compact was followed by the reconciliation of the warring groups, and the proclamation of the oath of peace which ended the feud. Many of the Teutonic peoples, however, and especially the Norse and North German tribes, maintained the practice of the blood-feud for certain crimes even after the principle of compensation had been introduced into their laws in the early Christian Ages. This was particularly the case where the honour of a female of the tribe had been violated by adultery or rape. It was the introduction of the Roman penal code which in the end dislodged popular belief in the policy of the feud.

BLOOD-FEUD (Teutonic)—BOASTING.

Boasting is too extended and assertive a human failing to require defining. In quality it is simple, and appears even to require simplicity of character, of the type set forth in Proverbs, in which to flourish. Nevertheless, it has a history and a literature of its own; it is an interesting and instructive psychological phenomenon; it has grave moral aspects and extensive moral ramifications. It has a direct bearing on the question of the real or imaginary self of the individual human, self-esteem, and self-reverence often developed into family feuds, of which there are numerous

"The spirits of the dead may walk again" (Shakespeare, Winter's Tale, m. i. 164).
of scattering words at large seems to have produced the Lat. *jacto,* as well as our slang expression 'throwing the Customs.' The names of persons with special gifts in this or that art have been and are, as Gr. *δρακάρος,* a 'landlouper,' and Fr. *gascogneade.* Most of these words suggest that, at some period of their history, they have passed through the stage of being slang, and it is still slang which is bestowed. To this day, no language is richer than English, so that we have almost as many terms for a boaster as Arabic for a lion. 'Spread-eagle,' 'bounder,' 'cock-a-hoop,' and others equally forcible and picturesque, show that boasting still exists and flourishes, and still attracts attention.

Nor is language the only record of boasting. There may be few matters of our civilization in which it had no hand, but on *dress* in particular its influence is paramount. The motives of comfort and decency are still only secondarily impressed upon the primitive motive of display. That is only a visual boast—an assertion of our own superiority and the resources we can command, though, when the display was in war-paint, the bragging-doer was no less to be feared than is the cloaked and masked mantle which clothes itself in satin is more complex than that which wears only scalps, but at bottom it may be still the old naked assertion of power to subject other people, and it may be at the same sacrifice of better things. This more subtle combination of boasting with other elements constitutes its whole subsequent history.

A still greater triumph than dress boasting can claim. Without undue use of its own gifts, it may claim to have created literature. One of the most ancient jewels embedded in the OT is the Song of Lamech (Gn 4:25), which is nothing but sheer, blatant bragging. Lamech, by the skill of his son Tubal-cain, is the first of men equipped with a slaughtering tool. He brands his weapons and only he whom kind to attend to him—a fundamental and primitive element in self-gloration:

>'Adah and Zillah, hear my voice; Ye wives, Lamech, hearken unto my speech; For I slay a man, wounding me, And a young man for bruising me; If I kill a man, vengeance shall be taken; Truly Lamech seventy and sevenfold.'

This is the beginning of songs, and it contains all the primitive elements of boasting—arming of the male, bluffing of one's foes, joy in seeing oneself reflected in the mirror of one's own praise. Then what are the Babylonian and Assyrian, and in scarcely a less degree the Egyptian, monuments, if not boasting? A devout ascription to the god does not hinder it from being very human bragging, even to the extent of developing into what much boasting has been since—namely, lies. When it is truth, it is carefully edited truth. The same primitive motives for boasting as appear in the war-paint of the savage and the Song of Lamech, undeniably and loudly proclaim themselves on the monuments. The refrain is always, 'I am an irresistible, death-dealing person, good to follow, terrible to oppose.'

Perhaps all conquest is simply a boast in this power to destroy. Hence the justification of Pascall's saying, that Alexander might be excused for swaggering about the world conquering, on account of his youth, but a middle-aged person like Caesar ought to have had more sense. In any case the ancient motives are still modern, for they never were stronger than in Napoleon, some of whose despatches have scarce more reserve than an Assyrian monument.

Yet in matters of modesty, the progress of time has effected some change. A speech by Cicero to-day would still not ignore the speaker, but its self-praise would not be quite so direct and open-hearted. Boasting is no longer what Montaigne calls 'an inconsiderate affection with which we flattering ourselves; the restraint upon it by ceremony of which he complains still prevails. 'We are nothing but ceremony: ceremony carries us away, and we leave the substance of things: we hold by the branches and quit the trunk.' The old things that are lawful and natural, and we obey it: reason forbids us to do things unlawful and ill, and nobody obeys it. I find myself here fettered by the laws of ceremony; for it neither permits a man to speak well of himself nor ill.' As he proposes to speak of himself, in spite of ceremony, he says, 'We will leave her here for this time. And with that view of the case many still agree, whenever they find it expedient to be their own trumpeter. Self-praise may be no honour, but it may be great profit, and 'the man that will not vent his notions is less worthy than a corpse,' according to Shandy that it is a very unpleasant thing to have to praise oneself, but it is better than doing a good deed and getting no praise for it at all. As the Assyrian added Ashshur to his name and then was wont to boast to the whole world of his exploits, so do the modern adds ' & Co.,' after which it is quite correct to proclaim his integrity, his possessions, his pre-eminence in his own department of things above all his fellow-mortals. And the same is sometimes true when, in partnership, he vends his wisdom or his religion. This boasting in company and boasting in the name of Ashshur are less different than might at first be supposed. Ashshur was the tribal god, and tribal boasting in every age has had special licence and esteem. The predatory instinct, or at least the instinct of self-defence, showing itself in the sense that, if other people brandish their weapons, we must do it still better, is manifest in both. With this may be taken the most extended and calamitous of all modern forms of boasting—social rivalry. It is the supreme attempt to gain the kingdom of heaven by common partnership, the usual result being, as Peabody expresses it, to supply 'the soil in which the malaria of domestic infidelity most easily spreads' (*Jesus Christ and the Social Question, 1901, p. 178 f.*).

2. Psychology of Boasting. —Bragging, braggarting and pleasuring of one's own worth, is a very simple outcome of vainglory. Nevertheless, the vainglory does not always work in the same way, and is by no means always the same psychological phenomenon. Shakill has put two finished braggarts into Henry IV.—Falstaff and Glendonver,—but, except in the mere fact that both boast loudly, they have no real kinship even in their boasting. Falstaff's boasts are 'like the father that begets them: gross as a mountain, open, palpable.' Partly his boasting is the habit of a loud, ungirt nature, disguising its consciousness of un- worthiness by inflated self-praise, and partly it is sheer love of the art of exaggeration and decoration. When he describes himself in the character of the ideal counsellor as 'a goodly portly man,' he is not greatly disturbed or perhaps astonished to have it turned into 'a devil haunts thee in the likeness of an old fat man,' Glendonver, on the other hand, takes himself with utter seriousness:

>'These elements are a fact, Mr. Falstaff,
And all the courses of my life do show
I am not in the roll of common men.'

Falstaff delights to blow his own trumpet, not out of any respect for himself, but because he is on the
easiest terms with himself. Glendower’s ego, on the other hand, lives in state, and suffers no familiarities even with himself. His boasting, therefore, is but a mere duty to himself. This difference in boasting shows that we are no more all on the same terms with ourselves than we are with other people, which separation of ourselves from ourselves, even in the very act of sounding our own praise, deserves more consideration than psychology has yet given.

Another psychological difference indicated by Falstaff and Glendower is that some men turn in upon themselves to boast, while others go as far afield as possible. Glendower illustrates the former type of boasting, for he exaggerates himself directly, and a thing is great simply because it is his. He is the sort of person who in modern life thinks that what he does not know is not knowledge. Falstaff, on the other hand, is ready to associate himself with anything with which he can invent the most shadowy association. While Glendower sheds his glory upon the outward world, Falstaff is ready to shed all the glory of the outward world upon himself. Here, then, are two amazing qualities in human nature—boasting, not only in relation to anything but ourselves but to boast about, and the other the power to drag everything into some relation to ourselves which will glorify us. Prof. James (Psychology, i. 329) puts vainglory in the middle of the manifestations of social self-estimation which belong to the empirical self. ‘That is to say, it has to do with the ‘fame which in broad humour lies,’ and with the self which has things and does things, and transacts its business in the eyes of men. The phenomenon of boasting reminds us of how this ego can withdraw itself or expand itself,—how it can be all the circumference or the mere centre. A man may scorn all worthy things, and boast in the rest simply because they are his; or he may, though the plainest citizen, feel himself embodied in the skill and daring of his general. The person who claimed an interest in Germany because his cousin played the German concertina is scarcely an exaggeration of what goes on in sober earnest every day. Both types of boasting are carictures of the genuine power of the ego, of that which might turn out to be the source of the German reverence.—It’s presence in all experience, its possession of all experience, its power to isolate itself from what does not interest it, its value to itself above all it possesses and knows. Boasting is only a misuse and perversion of the true greatness and range of the human ego’s consciousness. Let us begin by seeing that we when we study the ego. Hume complains that he never can catch himself without a perception (Treatise on Human Nature, ed. Green and Grose, vol. i. p. 534); he never, that is, can catch himself unoccupied and alone. Had he attended to the inflating of all experience in the might of the ego, he might have discovered the still more wonderful fact that he never could catch a perception without himself, and he might have been led to see, as Kant did, that it manifests itself to us by a more direct interest than if it allowed itself to be seen keeping house at home and quite solitary.

Finally, boasting is a phenomenon which sheds light on the relation of our personality to other personalities. It is a curiously mixed relationship. Everything that one may think him boast woke some response in the minds of other people. He will boast of anything if only he thinks some one will admire him for it. Moreover, it shows a curious trust that minds around him are like, or rather, that he is like, the possessor of the boasting thought others quite like himself, he would not expect them to be interested in him, but in themselves; yet, being possessed by himself, he is unable to allow for this change of perspec- tive. Thus boasting is curiously social and anti-social, curiously interested in one’s neighbour while ignoring him as a personality.

The relation of a man to his own mind and to his neighbour’s is still more curiously illustrated by a third type of boasting. Though the most vainglorious of all, its motive is not vainglory or any form of vanity, but simply fear. According to Prof. James’s classification of the self, it would belong, not to social self-estimation or even to personal vanity, but to another order of things altogether—to material self-seeking. No motive is simpler or more self-regarding than fear. Neverthe less, the Assyrian kings do not hesitate to exaggerate in a singular way the complex relations, both with a man’s own self and with his neighbour, which may accompany the simplest and most selfish motives. In relation to oneself it is a form of auto-suggestion, and nothing shows better what that form of legendary can and what it can not do. It is crowing to keep one’s courage up, and, so long as it can crow without feeling danger at its windpipe, it succeeds. After that it exaggerates the danger, not the courage. In relation to others it is a form of boasting. If the thesis it goes on is that other people are as easily terrified as the braggart himself. The hypothesis, when applied to the proper cases, works efficiently; but when, as frequently happens, it is applied to the wrong cases, boasting, like cursing, comes home to roost. All this Shakespeare has embodied in the ancient Pistol, in whom the very boy observes ‘a killing tongue and a quiet sword.’ When his courage is lowest his boast is loudest. If Fortune allows him to meet another coward, he brags a ransom into his pocket; but if he cheats him with the appearance of simplicity and he foolishly encounters a lion, boasting only brings cudgels on his back and raw leeks into his stomach.

3. Moral.—That boasting is a perversion of what is great in human nature becomes clearer when we estimate it in relation to moral values. By way of caricature, boasting is a sort of double of the moral personality. Boasting may, of course, be of mere prowess, as when the Assyrian king boasts of the number of his fellow-men he has impaled, or as when the German boasts of his reverence—his empty at least his glasses of beer. Even so, however, it proceeds in some way on the belief that worth lies in the will. Just because a due estimate of ourselves ought to be moral, and boasting can turn the attention from the use of the powers to the mere possession of them, some philosophers find no confusing the moral judgment. Nay, boasting may be a direct attempt to surprise and corrupt the moral judgment into a false verdict. Hence it has in all ages been one of the greatest defences of a debased and impudent conscience. Could the Assyrian kings have continued to be so cruel if they had never glorified it on stone? Would the Restoration have been so corrupt if licentiousness had never been a matter of boast of? Would the French Revolution have lost so readily its hope of peace and brotherhood had Napoleon possessed less genius for military swaggering?

No man who boasts much can well hearken to duty all. Words of boasting, above all other words, do ‘give too cold a breath to action.’ Why should one think him boast woke some response in the minds of other people. He will boast of anything if only he thinks some one will admire him for it. Moreover, it shows a curious trust that minds around him are like, or rather, that he is like, the possessor of the boasting thought others quite like himself, he would not expect them to be interested in him, but in themselves; yet, being possessed by himself, he is unable to allow for this change of perspec-
It has other things to admire besides itself. The moral law thus takes the place of the poet's imagination, and the ideal of man such high demands that he who contemplates it can see himself only as an unprofitable servant.

4. Religious.—Boasting, like other elements in human nature, may be studied in relation either to man's primitive struggle or to his ultimate goal. Seen from the latter point of view, it would appear to be simply a confusion of spiritual values, and, as such, an enemy of all true religion. Yet it is a foe which is often of religion's own household. It may be an attempt by auto-suggestion to create for us an image of ourselves which shall serve us in place of God. By that device it enables us to ignore the fundamental problems of religion—our utter feebleness and our utter dependence. Religion is also a self-valuation, but it is a valuation in face of the things which boasting is a device to ignore. Yet there is sufficient kinship between the two to have developed in all religions a self-satisfied Parrisim, which thinks its own self-esteem must be the measure of God's approval; and boasting would not be so irreligious, were it not for this kinship with the chief part in the man who is self-sufficient.

According to Ritschl, the very essence of religion is a transcendent estimate of spirit as measurable by no extent and no duration. Faith in God lives by the experience that a thing so weak as the human spirit can be made mighty against time and chance and every little man, and that there is something in the humblest religious man which corresponds to that estimate. Sainte-Beuve (Port Royal) says something like this:—There is a hope and a self-esteem in the humility of the Christian which makes pale the pride and ambition of Alexander. But the point is that they are held in humility, in remembrance of God, in the knowledge that we have nothing we have not received, that by the grace of God we are what we are. Thus, and thus only, can men say with the Apostle, "Where is boasting then? It is excluded" (Ro. 4:4). The task of all true religion is to effect this exclusion. If, however, it should fail, man turns God Himself into the long shadow of his own self-praise, and that is the culmination and acme of all boasting.

The strange element in genius which Goethe has called "the demon's" stands in a suggestive way between the trust of humility and the trust of vainglory. Take as examples: You carry Caesar and Cæsar turns you: "You carry the Cæsar of the world and the Cæsar of the world still turns for us." They are too self-reliant to be religious, too reliant upon destiny to be boastful. A change in the proportion, and they would be the sayings of braggarts or of saints. Yet Caesar's and Napoleon's confidence, in face of success and backed by armies, is a small thing compared with the confidence of the humblest of the prophets, faced by disaster and backed by nothing but the Unseen. "See, I have this day set thee over the nations and over the kingdoms, to pluck up, and to break down, and to destroy, and to overthrow; to build, and to plant" (Jer 10:24). All that religion seeks is this change of proportion. Boasting is excluded, and yet the world still turns for us; for all things work together for good to them that love God (Ro 8:28); the tallest vessel carries us and our fortunes, for neither life, nor death, nor any created thing can separate us from the love of God; we can trust ourselves and be neither "mendicant nor ejacophantic," for he that is spiritual judgeth all things (1 Co 2:15). Above all, the end of Christianity is to transcend the vanity of ambition and the measure of all worth, and yet to save men from degrading merit into a boast, or giving it any place at all as merit between us and God.
LITERATURE.—In the OT boating is regarded as the fruit of ignorance, a necessary evil, and the bond of the ego, and is set forth. In James the OT way of treating the evil reappears, e.g., in the OT of Gen. 1-2, and influences the OT of Mt. and L. In Ps 46, 99 q. 67 (Ps 64.5 q. 271), Ps 101.5 q. 217 its folly, danger, and impurity are set forth. It is the OT way of treating the evil reappears, e.g., in the OT of Gen. 1-2, and influences the OT of Mt. and L. In Ps 46, 99 q. 67 (Ps 64.5 q. 271), Ps 101.5 q. 217

BOAT.—See SHIPS AND BOATS

BODHISATTVA (in Sanskrit literature).

Introduction.—(1) Etymology, (2) Little Vehicle.

I. Principal concepts relative to Boddhisattvas, naturally the essence of the vehicle, is set forth. The boater has therefore been left almost exclusively to the novelist, who has made free use of the picturesque braggart. Those who occur to the modern reader are Scott's Boddhisattvas, notably the ones who display their art on a background of rather hypocritical religion. All Psychologists attend to the phenomenon of self-assertion, but rather realize the need to display the creative urge in their theories. In Principles of Psychology, by William James (2 vols., London, 1890), self-satisfaction as a primitive emotion is discussed in a way that is more realistic. It is important to realize that there are many

in such sessions: i.e., 453, 660, xii, 227. Modern sessions tend to deal more with motives, but F. W. Robertson's Sermon (i. i) on 'The Tongue' is interesting, because it indicates the relation of boasting to slander and persecution. Cf. also C. S. Peirce's Sermons (1903), and F. W. Robertson's Sermon (ii. 4, a discussion of the modern equivalent of the Greek, hýbris); and suggestions in Newman's Parochial and Plain Sermons (1837). In this connection, and iv. 17: 'Vanity of Human Glory'.

BODHISATTVA. See ships and boats.
he is born in the womb of Māyādevī, and lives, in human form, his last existence: under the Tree he attains to Bodhi; at Bodh Gayā he enters nirvāṇa.

We must not, however, overlook the important fact that the schools of the Little Vehicle, not only in Ceylon but also in India, have long since abandoned even the remembrance of the rise of the Great Vehicle, and naturally they have profited by the advance of speculation. The Abhidharmakokalayāgi (MS of the Asiatic Society, fol. 280) expressed itself as follows, concerning Arhats as compared with Bodhisattvas:

1. Having expelled self-love from the series of samsāras that comprise their personalities, they renounce both in the affairs of others, an interest born of compassion, and then destroy all pain. The ordinary man (māyāpāpa), i.e., the Pratyekabuddha, and the Bodhisattva (candidate for nirvāṇa) merely deliver, that is to say, an end of suffering, and not a complete extinction of the causes of suffering. Because this temporal happiness is an abode of suffering. The superior man (māyātīpa), i.e., the Bodhisattva, wishes, at the cost of personal sufferings, temporal happiness (abhāpadaṃśa) for others, and the definite end of suffering, which is supreme happiness (ābhāpadaṃśa) or he desires for others supreme and temporal happiness (abhāpadaṃśa-lokaṃśa) and for himself the definite end of suffering, i.e., Buddhahood, as a means of realizing this service of others.

Explanations or improvements introduced into the above doctrines either by different schools of the Little Vehicle or by the Great Vehicle are of several kinds. They may be grouped under four heads, the discussion of which will complete the present article: (1) accurate determination of the distinction between the Bodhisattva and the Arhat, conducive to Buddhahood (buddhakāraka dharma), (2) determination of the character of the Bodhisattva—is he a ‘hyperphysical’ being? can he trace his course?; (3) determination of the successive stages of the career of the future Buddha, and (4) the practical organization of the life of a disciple regarded as a candidate for Buddhahood.

I. PRINCIPLES CONducIVE TO BUDDHahOOD.—

The Bodhi, enlightenment, Perfect Knowledge, is not the exclusive possession of Buddhas: All beings who achieve deliverance, whether as Pratyekabuddhas or as Arhats, can accomplish their aim only if the ‘sight of the truth’ has destroyed in them the conception of the ego, the idea of existence and non-existence, the desire for existence and for non-existence, etc. But the bodhi of the Buddhas, or sambodhisattva, includes not only the possession of the truth indispensable to salvation, but also omniscience (sarvajñatva), universal knowledge (sarvajñātāvatsa), and consequently omnipotence. The Perfect Buddha owes this to the intellectual development or mental formations (which have given him insight into the principles of everything, with power to subject them to his will), and to his infinite merits of charity, patience, etc.

In ancient Buddhism, the Buddha seems to differ from the Arhats especially in that he has discovered the true way of salvation, while the Arhat learns it from his life, and from the Pratyekabuddhas in that he undertakes to teach this truth. The difference, however, is more fundamental, as will be known from the study of the lokottara doctrines (see below, p. 741). The ten virtues ascribed to the future Buddha, or perfect virtues, are: (1) non-self, (2) the dharmas, (3) wisdom or knowledge, (4) energy, (5) the right resolves (anaitikā), (6) renunciation (adhiññā), (7) charity or benevolence (metta), (8) in

• Authorizations, Mahāyānaśāstra, Bodhisttva-prajñāparamitā, Lokottaratattvavivāda, Lokuttarakāra, the 190 dharmakāyas, p. 3, by Kern, Gesell, i. 455; this will probably be thought less systematic than the arrangement in the texts cited above. It will be observed that there is a general confusion between the dharmakāyas and the jñānakāyas. The scholastic explanation of the problem would lead us too far. A summary of it will be found in Kern, Manvall, p. 62 and 63 for the dharmakāyas, and in 190 for the jñānakāyas. The 190 dharmakāyas exist within the Little Vehicle from the ancient sūtras to Buddhist literature.

• See Kern, Manuel, G. I, n. 4; Oldenberg, Buddha, 321. In the art. MAHĀYĀNA the question will be discussed whether it is the dharmakāyas, or sambodhisattvas, or mahāyānins, who, incidentally, whether all beings are destined to become Buddhas.

The Bodhisattva, or future Buddha, who would attain Bodhi, must therefore practice the six ‘transcendent’ virtues or pāramītās.† By this word it is to be understood, properly speaking, praṇāda, ‘knowledge’, and bimba. Pāramītā, taken as an adjective, means ‘arrived’ or ‘experienced’ stage of transmigration, i.e., at nirvāṇa. Knowledge alone, however, or insight into the truth, will not only the destruction of the germ of existence. The other pāramītās, or the virtues of charity (dāna), morality (śīla), and patience (medhi) deserve the name only as their merit is applied to the attainment of Buddhahood. They are called natural (lakotāra) when they are not illuminated by knowledge, for example, when the charitable man believes in the substantial reality of the mendicant, the alms, and the donor; they are said to be supernatural (lokottara) when knowledge becomes their guide, ‘just as a man possessed of sight leads a group of the blind to the place.’ It is essential, for instance, that charity be practised without any idea of the supernatural reality of the donor, of alms-giving (giver, alms, mendicant), or rather, without even admitting the momentary reality of these three elements (trikotiparītādūda maitri)...

The virtues of charity, morality, and patience constitute the equivalent of merit (puṇyasaṃbhāra) of the future Buddha. They are sustained by the virtue of meditation, and contemplation (dhyāna, samādhi), which has been said that it illuminates and guides the so-called virtues of merit (puṇya). On the other hand, it cannot exist without these virtues. In fact, not only does knowledge require a pure ‘field’ wherein to be born and develop, but it also requires practical exercise. The abstract theoretical view of the nothingness of the ego (pudgalā) and of the nothingness of things (dharmaṃ) cannot destroy the illusion which makes us believe in the ego and things, unless the growing exercise of charity teaches us to sacrifice our ‘worlds’, our ‘bodies’, and our lives. Science constitutes the equivalent of knowledge (jñāna-saṃbhāra), which is the real cause of what is called the ‘body of law of a Buddha’ (dharma-rūpa); see art. ADIBUDDHA, MAHĀYĀNA, that is to say, a series of perfectly pure principles (anāṃśikātva dharma-saṃcittanitāta), empī

† See Kern, Manual, p. 66: Chhibber, p. 335. Each of these ten virtues has three degrees: yonipāramītā, pāramītā, para- māthānapāramītā. The first is the practice of external goods, the second of internal goods, the third sacrifice of limbs, the life of one. One of the canonical books (Chitrāyudhika, not one of the oldest, containing the life of the Buddha, translated by Davids, Buddhist India, p. 176), gives examples showing how Sakyamuni practiced the three virtues of the sambodhisattvas.

• F. W. Thomas, JfES, 1906, p. 547; Mahāyāna-kāraka- tāra, p. 50; and Huston, 1927, p. 378. A cognate form is parāma.; and there is also a form parāmā, which is found to play upon words. On the system of the ten pāramītās in the Great Vehicle, see below, p. 748.
ness devoid of support' (nimāṇamādādīyanta), in other words, empty aimless thought, the quiescence of intelligence which is nirvāṇa.*

Each of the pāramitās bear fruits relative to the Bodhisattva and to creatures. Giving endows the Bodhisattva with a Buddha’s mouth; the latter’s ‘causing’ (prajñā) aviruddha dharma beings; morality causes him to escape evil destinies and concentrate on the good, freedom from all selfishness, all pride, and converts wicked creatures, etc. (Jal. 34 ff.).

The pāramitās, however, are often regarded as having for chief, may for only, aim to ‘mature the qualities of a Buddha’ in the Bodhisattva who practices them. But we must not overlook the ‘cause’ (pradhāna) that has escaped from the ‘fruit’ (phala) of Buddha not for himself but solely for the good of creatures. If he accumulates so much merit, knowledge, and sovereignty, it is in order to beget the fruits of benefiting (sabda mūlānirvāṇa) of Buddha, of one’s self (paripratīti pradeśa saṃsāra), of Buddha, of one’s self (paripratīti pradeśa saṃsāra). This charitable activity is so important that the Bodhisattva is worshiped by the name for the simple reason that he devotes himself to it.

From the preceding definitions there follows, as we shall see, the whole system of the career of the Bodhisattva (bodhisattvayuddhāra). The thought of illusion (mithyākāma), the thought of becoming Buddha for the salvation of creatures, is its primary cause and basis. This thought has, of course, antecedents: in the first place, the practice of good from selfish motives, either for the sake of temporal rewards (kāya) in celestial re-births, etc.) or with a view to nirvāṇa; and then, the desire of the good of others for their own sake, which already distinguishes the future Bodhisattva (however great his faults otherwise) from the future Arhat.

This thought is naturally born of compassion (karunā) and emptiness (śāntī). If there were no compassion, as in the Little Vehicle, we should have to do merely with an egoistic saint. If there were no recognition of emptiness, the compassion would be much more shallow and liable to change, for where belief in the ego exists, how can any one prefer his neighbour to himself? He may perhaps in a moment of exaltation, but not permanently. But the teaching of Buddha is there plain in our view with reach the ego (sabda mūlā), and there produce thoughts of compassion, however imperfect these may be. This teaching then purifies and enlarges the compassion in the Bodhisattva, viz. the awakening of the Bodhisattva and a support, viz. the recognition of emptiness and the explanation of the world which it implies.

The Bodhisattva cultivates, cultivates, acquires, ripens, takes hold of the highest ‘concentrations’ of Voidness, of Wisdom, but according to the teaching of Buddha, he should obtain nirvāṇa as a Śrāvaka or as a Pratyekabuddha (see Asadharṣasthira, ch. xx.).

II. CONTROVERSY OF THE LOKOTTAVARĀDA.—The controversy on the metaphysical character of the Bodhisattva certainly goes back to one of the most ancient periods of Buddhist speculation. We are acquainted with it only in so far as we are informed concerning this speculation itself at its beginning; that is to say, our knowledge is very incomplete. The most important schism (bheda, as the Buddhists call it) was connected, according to unanimous tradition, with the question whether the Buddha is lokottara, i.e. superior to the world, ‘supernatural’, ‘hyper-physical’.

* It is in this way that the Buddhists have endeavoured to assure the stability of their system, and to reconcile the serious antagonism existing within the bosom of the most religious sages (bheda, as the Buddhists call it), was connected, according to unanimous tradition, with the question whether the Buddha was lokottara, i.e. superior to the world, ‘supernatural’, ‘hyper-physical’.

The meaning of the word lokottara (Pāli lokottara) in this connection can be ascertained. As a rule, in the current language of theology, ‘superior to the world’ in contrast to caṇḍika, ‘worldly,’ would refer to what belongs to the Buddhist saints as such; it is a question of meditation, ecstasies, merit, etc. (The Bodhisattva is said to enter the lokottara state just as he decides to become Buddha for the salvation of beings. It is most probable that the word has a distinct signification here, and is not susceptible of any equivalence in the Christian language, not admitting of definite determination, but which would certainly mean, if, in harmony with certain views of the Great Vehicle, we were to understand the term as ‘sacred’ or ‘sacredness’, the suppression, the concurrence, of material beings without concurrence, of beings free from matter, ‘superior to the world of becoming,’ or ‘independent of the world,’ or ‘world beyond the world’). In the Buddha it is ‘superior to the world’ because, although of this world, he is not subject to its laws; and the schools which are heretical from the orthodox Pāli standpoint mean quite a different thing by lokottara, otherwise the question of its significance would never have been raised, and it would be incomprehensible that a school should be characterized, or should describe itself, as ‘affirming the Buddha’s superiority to the world’ (lokottaravāda).

We ought to be cautious not to introduce too much exactness into the ancient views of the Order, and, to say the least of it, not to outrun the development of Buddhist doctrine. We may say that the traditional data and the earliest views regarding Śakyamuni’s character are as yet not very distinct. When the Pāli were capable of being arranged, if not in two systems, yet on the lines of two opposing movements or tendencies. This is due to the fact that the Pāli divided into two systems to which we may call the Mahāsāṅghika and the Sarvāstivāda which manifests itself in the Vaibhavayāmin, Pāli or Sanskrit, etc., Śakyamuni, born after the manner of men, and became an Arhat, finally, an Akanva: this idea of his superiorly consists in this conquest exerted by his own power. Given the philosophical and theocratic successes of Buddhism, no metaphysical superiority over other beings could belong to the Buddha by virtue of his birth; only as being greater, more strenuous in his efforts, was it reserved to him to trace out that path wherein others have nothing to do but to follow. In a certain sense we may say that every disciple who is pressing on to holiness is also Buddha equally with his Master. ! In reality this standpoint is not strictly maintained by any sect, and the Pāli canon, which otherwise represents rationalist doctrines, is far from committing an idolatrous error. The comparison of features scattered throughout this canon as well as elsewhere in the Pāli texts, shows a decided preference against the tendency which we shall call mythological and theological.

One text says that the conception of Śakyamuni was not independent of the intercourse of his father and mother—a fact which contradicts a universally accepted doctrine.† There are set forth, as characteristic of the Mahāsāṅghika-Lokottaravāda School, the doctrines (1) of the Bodhisattva’s imminent intercession, (2) of certain wrongs that are not to be avenged (elephant), (2) of the miracles of the uterine life (the Bodhisattva does not pass through the ordinary forms of the embryo, etc.), (3) of the birth through his mother’s side: three doctrines which are admitted in the Theravāda School (without, however, being opposed by the latter). * Buddhists naturally maintain that the doctrine was originally one, and that the ‘heretical’ views arose much later in the course of the centuries. This opinion is supported by the fact that the conception from being altogether mistaken (see artt. Mahāsāṅghika, Sāṃśa [Bud.]). In the present case, we may reasonably hold that the conflicting doctrines are both very old, or, if we prefer, primitive. See the definition of lokottara, Atthaśāsini, pp. 213-4; and on the confusion of Bodhisattva and Bhagavat, see Oldenberg, Buddh., Stud., 183.

* See Oldenberg, Buddh., 183.

† The only clear-cut Pāli texts that treat, with any detail, of the conception, the uterine life, and the birth of the Bodhisattva, are, if the writer is not mistaken, Majjhima, iii, 115, and Digha, ii, 12; the Mahāsāṅghika-Lokottaravāda School, in these texts are the only sects which adopt the extreme doctrine (the most extreme doctrine of which in the Mahāsāṅghika, Vinnāṇavasī). In all the texts the Bodhisattva is asapupaddha, that is to say, he becomes incarnate by his own wish, and without regard to the ordinary laws of conception (to deny the existence of such beings is a great heresy, Digha, i, 50). The only exceptions are (1) the Mahāsāṅghika-Asaṅgavasī, where the Bodhisattva seems to choose the moment of the love of Suddhodana and Mayādevī to study the country, the caste, and the woman in whom he is to be born. ‘We need not care for work, labour, suffer for our neighbour.’ It is certain, says a Mādhyamika philosopher, that our neighbour does not exist; but only the Bodhisattva (mohā) that he must become Buddha for the salvation of creatures; if not, the only way, yet it is the best way to destroy the falsely so-called world of beings (Mādhyamikas, Vaścīṣvāsīs).

* The word is borrowed from the Bodhisattavana; for variations in the wording and definitions, see Kern, Manual, p. 67, n. 6; Burnouf, Lotus, p. 405; Minaya, Recherches, p. 275, and below, p. 790.
Sākyamuni, then, was born as a man. It is, in fact, an ancient belief that every future Buddha, in his last existence (charanamabhavika bodhisattva) must assume human form, at one time as a Kṣat- riya, at another as a Brahmā.* He is, however, a very extraordinary man. And the question arises, To what extent has he resurrected the perfect Buddhas are superior to the world.'

To these negative evidences must be added the well-known biographical facts that the future Buddha left his home only under the pressure of external influences, that he gave himself up to the unprofitable enjoyment of sensual pleasures; to the other hand, he has expressed declarations of the Master, showing that he is superior to the world: ‘I am not a man, a god... Know, O Brahman, that I am a Buddha' and "Born in the world, brought up in the world, and destined to rise above the world.' Whence it follows that Sākyamuni, born as a man, has, by the conquest of the Bodhi, obtained a transformation of his nature; he is no longer a man, he is not an Arhat, he is a Buddha.

Neither of these texts—the second (Sahajvyottaha, iii, 140 and elsewhere) is quoted by the Vatsyakaras to support their doctrinal views (Kathāsthūla, viii, 1; see below, p. 745), the first (Arhat, viii, 1) is composed by Kern (p. 64)—is free, of course, altogether conclusive. Neither the author of the Kathā- stūla nor Prof. Oldenberg would admit the老太太 interpolation. Oldenberg says in so many words that Kern has misunderstood the meaning of the saying, 'I am not a man... I am a Buddha.' The present writer believes that, whatever may be its genuine meaning, it could lead to the conclusion that Buddha's humanity is apparent only. It is a dogma of the Little Vehicle that Sākyamuni, since he became a Buddha, possesses 'nirvāṇa-with-residue' (nirapādhiśeṣesvagge); he is pariñāmerita, that is, to say, altogether passionless, ātivarmin. But a Buddha is not only free from passion, he is free from the desire (vikāra), the craving (vimochana), the passionlessness' or 'non-consciousness' (pānāññapāramī). Therefore the visible frame, the audible words, the whole of the appearance that we call a Buddha, is only a show contrived by the compassionate resolution formed by the future Buddha. We shall not say that the author of the saying, 'I am not a man... I am a Buddha,' is the Master, but he opened the door to it, and, in any case, his testimony destroys the hypotheses of a primitive Buddha altogether, especiably.

Reference may be made (1) to the faculty that Sākyamuni possesses of living for many centuries down to the end of the age of the world (Dīgha, ii, 113); (2) to his 'transfiguration' (ib. p. 134); and especially (3) to his power of assuming the aspect of his auditors: "When I used to enter into an assembly of many hundreds (or brahmaṃs, householders, gods, Mara-gods Bhrahana-gods), before I had seated myself there... I used to become in colour like unto their colour, and in voice like unto their voice... But they knew me not when I spoke, and would have said, 'Who is this man? whom speech is this man? God?' Then having instructed them... I would vanish away. But they knew me not even when I vanished away; and would say, 'Who is this man? whom speech is this man? God?'" (ib. p. 159; Rhys Davids, SBE xi, 43). The Buddha Sākyamuni is neither a man nor a god; he appears as a man or as a god; he is a Buddha; he is also the Prototypical Buddha.

Sākyamuni, therefore, that the manifestation in this world of the marvellous being who reigned among the Tusiya gods was not in reality what it seemed to be. The Bodhisattva, after all, assumed merely an empty appearance of humanity in consequence to the ways of the world (lokānaṃvar- * śrītātā), that is to say, he hid or at least he hid himself, to be moved by a god, i.e. if Buddha were to appear as a god, men would feel discouragement.

One of the Buddhology, the Lokottaravādins Mahā- sāṅghikas of the Mahāyāna† (a half-Sanskritizing sect of the Little Vehicle), teaches not only that the Buddhhas have nothing in common with the world (lokena sammāntam), that everything about them is supernatural (lokottaram), that, if they seem to the normal mind to be gods and man on this case, it is merely by confusion, in order to conform outwardly to our weakness (lokānaṃvarātanai, but also that the Bodhisattvas are in no way born from father and mother, that they are produced by their own powers (acāya-pratītya), that their mothers (mahāpurūpa), to which, that, if they come forth from their mothers' right side without injuring her, it is because their form (ātīpa), i.e. their body, is entirely spiritual (manomaya, 'made of mind'), i.e. guṇa-immaterial. And a sect of the Mahāyānavādins (Vajraśravaśa), connected with the Lokottaravādins in the Mahāyāna, maintain that there is no matter (ātīpa) in the Buddha.§

It is evident, therefore, that the manifestation in this world of the marvellous being who reigned among the Tusiya gods was not in reality what it seemed to be. The Bodhisattva, after all, assumed merely an empty appearance of humanity in consequence to the ways of the world (lokānaṃvarātātā), that is to say, he hid or at least he hid himself, to be moved by a god, i.e. if Buddha were to appear as a god, men would feel discouragement.

† It is generally said that the mother of Buddha dreamt that a white elephant with six tusks entered her womb (Utaika, p. 210; Rhys Davids, To, p. 309; in the Lalita, p. 65, the Bodhisattva is transformed into an elephant. On the Bhūta-mallas and the Mahāsaṅghikas of the Mahāyāna, see Kern, Mahāyāna, iii, 210); in the Lalitā, p. 65, the Bodhisattva is transformed into an elephant. On the Bhūta-mallas and the Mahāsaṅghikas of the Mahāyāna, see Kern, Mahāyāna, iii, 210; Foucher, Art gréco-bou- dhique, p. 424.

* Mahāvastu, i, 98.

† On this point, which is open to dispute, see Miłinda, 134; Rays Davids, To, pp. 134, 135; and the last (p. 134). It is certain that the "Pāli" Buddha is not free from suffering.

§ With regard to this obscure subject see Fleet, JRAS, 1906, p. 321.
The body which he shows to men and gods conceals its true nature from the 'worldly' mind. One may go further, and say that this body is only an illusion. Certain heretics of the Kathāvatthu (xvi. 1), for confusing the Great Vehicle, say that there is no Bodhisattva, that only Sakyamuni is a 'saint'. Bodhisattva do not come down to the earth; he does no more than 'show' (sändarśyayati) his descent, his so-journ in the world of Mayā, his conquest of the Bodhi, and nirvāṇa.† In the Lotus of the True Law and in later systems the Buddha thus manifests himself on several occasions, appearing as a 'Bodhisattva in his last birth' (see artt. LOTUS OF THE TRUE LAW, ADIBUDDHA, etc.). This theory of the apparent descent, avatāras of the quasi-eternal Tathāgata, is the last phase of the Lokottaravāda. According to Suürālīkāra, Sākyamuni, even in the Tūtsa heaven, is a phantom, a 'contrived body' (nirñayā). According to another theory, less categorical, the Law has been preached by Ananda (Kathāvatthu, xvii. 1). This means that Ananda was a real flesh and blood, neverthless remained, since the Enlightenment, in a definite state of concentration or trance (pamāna, dhī). and can be thought of as the Transcendent Ananda.† We learn from Bhāvya that schools which were at a loss to settle this question. Desiring for the sake of peace to avoid too many concentrations of views assume that Buddha caused Ananda or even the walls of the preaching-room to preach the Law (Kunārā in Tantredda). But we find a strong view in this strand, according to the Great Vehicle such wall-preaching is a case of nairamānī which elsewhere the organ of preaching is the smile of Sākyamuni, or the light thus arisen from his ārya (white hair between the eyebrows). Elsewhere Sākyamuni is credited with having answered such questions: such discs we heard them with the developments on his disposition allowed.

Together with the problem whose various solutions have just been expanded, and which centres round the Buddha and the Bodhisattva 'arrived at his last existence' (saṃvīrtaka bodhisattvā), there is another, almost as important, concerning the Bodhisattva during the course of his long career. Is he a 'saint' or an 'ordinary man'? Legend supplies contradictory and confused answers.

According to the Introduction to the Jātaka, it is only after having ascended arākhapatī, i.e. the right of entering nirvāṇa at his next death, that Sāmeṣa (the future Sākyamuni) conceives the idea of being the Buddha. The career of Bodhisattva is, in his case, somehow geared on to the quality of Arhat. Without examining how far this is compatible with the conception of an ordinary mortal, will once more make under the Bodhi tree, we see that Buddhists inquired if all the accounts concerning the previous existences are compatible with the possession of arhatship. Assuming that the concept of Bodhisattva ought to be brought within the framework of the doctrine of the path to salihood, Buddhists further asked whether a Bodhisattva is necessarily a saint (ārya), or whether he remains, at least at the beginning of his career, an ordinary man (prthagjana), what grade he occupies in salihood, arhatpathi, the first, or arhatship, the fourth grade, and at what time he attains to those grades.

The Great Vehicle has answers to these questions, and to many others subsidiary to them (see III.). The Little Vehicle, besides having cancelled arākhapatī, i.e. the right of entering nirvāṇa, refers the matter to documents sufficiently detailed on the nature of the future Buddha, but they are silent. All the Buddhist sources who have taken the trouble (i.e. all the primary Buddhist authors) are of the same opinion that Sākyamuni is exempt from birth in the asītī, with the ghosts (poyata), among the lower animals, in all the seven classes of the senses of the senses, they are neither women nor eunuchs; they are never guilty of mortal sin; they do not lose sight of the doctrine of action and salvation during the seven lives of the senses, neither of the senses, nor of the lowest tendency, nor of the seven lower heavens, neither of the seven lower hells, nor of the seven lower hells, nor of the seven lower hells, nor of the seven lower hells, nor of the seven lower hells, nor of the seven lower hells, nor of the seven lower hells, nor of the seven lower hells, nor of the seven lower hells, nor of the seven lower hells, nor of the seven lower hells, nor of the seven lower hells.

This passage denies that the Bodhisattvas have taken

1. *These heretics are, according to the commentary, the Vetyukatikā. Minayefi has noticed that this sect is much later than the traditional but disputable date of the Kathavatthu (A.C. 240). On the Vetyukatikā and the Great Vehicle, see J.R.A.S., 1907, p. 432.
4. *Dhamma = 'storey' (of a house), or 'category' (for instance, the trade of fisher, p. 230, 232). The Lotus has once dārāma = dhamma, xiv. 3, see Kern, ad loc., and the Avadānagāthā, dhamma, arhatpathi, etc.
5. *Maṇḍadārikātātra, 13, 6; Bodhisattvabhumi, n. iv.
7. For a list of the terms see Kern, J.R.A.S., 1907, pp. 230-232. The Lotus has once dārāma = dhamma, xiv. 3, see Kern, ad loc., and the Avadānagāthā, dhamma, arhatpathi, etc.
9. *Dhamma = 'storey' (of a house), or 'category' (for instance, the trade of fisher, p. 230, 232). The Lotus has once dārāma = dhamma, xiv. 3, see Kern, ad loc., and the Avadānagāthā, dhamma, arhatpathi, etc.
10. Maṇḍadārikātātra, 13, 6; Bodhisattvabhumi, n. iv.
12. The term dhamma is used in the Pali Abhidhamma (see C. F. Waddell, Buddhist Psychology, p. 26) as equivalent to magga, way.
and so on. Consequently there are eight noble individuals (arhappuññitas or mahāsattva-puññitas). Moreover, scholastics regard a mahāsattva as being one who is not yet qualified for the liberation of the six jhānas, for whom the meaning of the term 'arahat' is the same as for 'arahata'. Although the schools disagree on this point, the general opinion is that not only the arahat but also the sākyamuni have obtained the liberation of the six jhānas.

The most ancient systematic doctrines concerning the career of the Bodhisattva seem to have been the following:

There is a preliminary stage, during which he still dwells in the five realms (the present Bodhisattva; prajñāpāramitā, and so on) and after the death of the Bodhisattva, this is succeeded by three other stages.

1. The preliminary stage is called Prakṛti-charyā, i.e. 'the period during which the innate qualities show themselves', and which begins when the future Bodhisattva plants the roots of merit which later he will apply to the conquest of the Bodhisattva.

2. The second stage is that of the Bodhisattva who for the first time conceives the thought of Bodhi (prathamacittāpādikā), or who merely steps into the Vehicle (of the Bodhisattvas; prathamavājanasampratikha), or again 'the beginner' (ādikarmika), 'who is eager to start on his journey (gantukāma), but who has not yet set out.'

3. The Bodhisattva 'who follows out the mission or career of the Bodhisattvas (bodhisattvavacaryādīśvara), who adopts a career 'in conformity with the vow' (anuvātanācaryā), who is on the march (gaṇt); who is endowed with practice (charyāprātikha).

The Bodhisattva who dwells 'in the stage from which there is no return' (anuvātanivartaniya ḍhamma). It was at the beginning of this period (anuvātanivartanacaryā) that the future Sākyamuni received the prediction (vyābarana) from Dipankara (Mahāvāra). These and similar divisions, although they are known chiefly through the works of the Great Vehicle, contain nothing that is opposed to ancient ideas; they constitute merely an advance upon the views expressed by the commentators of the Jātaka (see above, p. 730). It seems to be otherwise with the 'stages of the Bodhisattva' as understood afterwards. On the one hand, the teachers of the Great Vehicle sometimes regarded the doctrine of the bhūmīs as their special right (Mahāyāmokhaśāstra, p. 29); on the other, the Great Vehicle literature, as well as later Buddhist literature, usually referred to the bhūmīs as bhūmi, bhūma, etc., without distinguishing them. The latter, a Tibetan writer tells us, replied that a sect of the Little Vehicle, the Mahāāṅghikas, possessed a book, the Mahāvāra, in which was set forth a system of several 'stages of the Bodhisattva', corresponding to the bhūmīs. The Mahāāṅghikas were in this respect divided in their opinions. While some of them, in the so-called Jātakas (e.g., the Mātālājātaka), let alone the Mahāvāra, called the bhūmīs bhūma, others, especially at the beginning of the period of the Mahāvāra, used the word bhūmi with a more extended meaning, and referred to the eight bhūmis, while all the bhūmīs (including the first) are 'without return', at least at the beginning of the period (see above, 754a and 757).

The idea which is contradictory to the Little Vehicle is not the subdivision of the Bodhisattva's career into several periods, but (1) the practical meaning of this teaching: everybody has not yet qualified to become a Bodhisattva; and (2) the nature attributed to the Bodhisattva 'dwelling in the bhūmīs,' a kind of God-Prov- idence, who is above all human, and at the same time above all universes, etc. The Bodhisattvas of the Mahāvāra do not appear in the Jātakas, even in the higher worlds (see next col., n. 1, and p. 749).

The theory of the ten bhūmis (Wass. 262f.). On this point, as on several others, the School of the Great Assembly seems to have become separated from the ancient sects and to mark the transition between the two Vehicles. Its bhūmis, however, are not the same as those of the Mahāyāna [all of which, being exempt from return, are included under (4) of the above enumeration]. So far as we can judge, they present this characteristic, that the first seven are only a subdivision of 'charity' (2) and (3) of the preceding enumeration, the last three being the remainder of the ten bhūmis.

The account of the bhūmis in the Mahāvāra seems to be independent of the authorities of the Great Vehicle, although it has some points of contact with the Dīpaddharmas and theŚrāvakas.

Unfortunately, this account is confused, fragmentary, and perhaps contradictory. We possess on this point information supplied by Chandragiri, who, as we shall see, peculiarly should be made to E. Senart's analysis, from which we sometimes venture to differ.

The [future] Bodhisattva, who has not yet conceived the thought of the vow of Bodhi (prajñāpāramitā), possesses the privilege that his sins are purified only during seven births, pain in the end being reduced to headache (prajñāpāramitā, cf. Bodhisattvārya, i. 21 [L. 101, 5]. The first bhūmis are produced by the thought of the vow (cf. Bodhisattvārya, i. 21 [L. 101, 5]), but his actions are not those of a man, but his works are mixed with good and evil (102, 5). In theory he does not eat any evil food, etc., do not lead him to hell. Nevertheless, he should deny the existence of the Āryas (āryaparāda); here it is chiefly Buddhists and the Mahāyāna who disagree; that according to the Mahāyāna, he is reborn in a particular hell (pratyakṣaraka) instead of being re-born in the Avīci, in a Preta with a small body (as opposed to the Preta with a great body, which according to the Mahāyāna is a place from which food and drink are available to the partial salvation of the individual). He should never be an author, or a king, or a merchant, or a eunuch. But if he commits a mortal sin, the murder of a Bodhisattva, of a Śrāvaka (Arahat), of a Śrāvaka, or of a Pratyekabuddha, he is to be hanged or drowned by the bodyguard (sāvatīti) (vid. XXV).

It is said that, for scholastically expanded reasons, such and such a Bodhisattva will never be able to pass from one bhūmi to the next. The Bodhisattvas destined to proceed under the guidance of the arhat, the Śrāvakas, or the Pratyekabuddhas never appear in the Jātakas, etc. [see special Aññapāsavārīnī prajñāparamitā, ch. xxii.

* See especially Aññapāsavārīnī prajñāparamitā, ch. xxii. Instead of 'career,' or 'stage without return,' &c., text, Śākyā, 212, 12 and 313, 19; this stage corresponds to the prajñāpāramitācaryā of the Mahāvāra, and to the anuvātanivartanacaryā of Bodhisattvārya and Sūtraśāstra.

Of the great vehicle quoted in Śākyasūtra, 212, 12 and 313, 19; this stage corresponds to the prajñāpāramitācaryā of the Mahāvāra, and to the anuvātanivartanacaryā of Bodhisattvārya and Sūtraśāstra.

* See especially Aññapāsavārīnī prajñāparamitā, ch. xxii.

The Bodhisattvas who are in the first bhūmi, ordinary men though they were, secure the acquisition of fruits, and on that account become the object of the reverence of all people ...

* But he sumns up (p. xxvi.): 'The Bodhisattvas at this stage are still ordinary men.' And, with regard to the Bodhisattvas of the bhūmi stage, we have already quoted the Mahāvāra, which the present writer, like E. Senart (p. 457), understands to mean 'in consequence of their position, the bhūmis are a state of higher order.' The next, and perhaps the first passage (75, 11) thus: 'The Bodhisattvas are ordinary men, but they are worthy of the world's respect as if they were princes.' But unfortunately, Chandragiri (Mahāvāra, xxiv, 9) informs us that 'the scholars of the Mahāyāna, following the authorities, call the stages of the bhūmis stages, which are not bhūmis, but bhūma, etc., and that the Bhāvavīra in the first stage possesses the dāresāntārīpa, that is to say, has obtained the fruit of the kṣīraṣaṅkhāra.'

The formula of the Abhidhānasamucceśa is as follows: 'There are no Arhats in this world.' It implies a rejection of the True Law (mahābhāsikasutra), and seems inseparable from the denial of the morality of actions and of their fruit: miśā datātā ... etc. See Dīpa, l. 55.

* Cf. above, p. 742.

* We are told (l. 105, 4) that the Jātakas, and the heroic charities too, refer to the eighth and following bhūmis. This is very strange.
These men do not, however, immediately decide, for the sake of the welfare of creatures, for their temporal happiness and their salvation in nirvāṇa, to make the very great sacrifices that the career of a Bodhisattva entails. Therefore, before taking the vow of Bodhi, a period usually called a ‘bhāma’ (the number of years, or chaturthi) is devoted to the bhāma-vipaka (the fruit of bhāma) (Skt. bodhakāya, the Sri lanka, T'chihāvāhāthi, and adhikāmikākhyā-bhāma, 

1. First Period: The future Bodhisattva. — We have seen that, according to the Introduction to the Jātaka, the future Śākyamuni was already richly and peacefully disposed when he was born, the Buddha Dipākara caused the thought of becoming Buddha to arise within him. It is after taking the vow of Bodhi that he examines the virtues necessary to a Buddha. All this is rather poor psychology; for nothing is more opposed to the career of the Bodhisattva than the state of mind of an Arahant, isolated from everything, from his neighbour as from himself. The future Buddhas, let us rather say, are recruited from men who have not entered the path of the Arahants, and whose spiritual temperament is not the same (āhimsa). 

2. Second Period: The first seven stages of the Bodhisattvas. — The stage called sattvākaraṇa (or siddhatvākaraṇa), and more commonly the ‘Joyful’ (pramūdita), is, properly speaking, the first bhāma of the Bodhisattvas. (Until now the disciple was only a future Bodhisattva.) It is also the first in the classical list of the ten bhāmas. We shall see that it does not undoubtedly lead to srotasatpatti) cannot produce the thought of becoming Buddhas; . . . nevertheless I joyfully approve them if they come to produce such thought.’ It is unfortunate that the Prajñāpāramitā uses the phrase srotasakaraṇa just as the Nāgārjuna do (see Stūpa-buddha, E. X. 11), and contrasts it with the nāgārjuna (see p. 746, n., * p. 747, n., * and Waghara on Bodhisattvabhihāma. This is the account of the Bodhisattva-bhāma, but there is no doubt that the Mahāyāna recognized these distinctions. See Sīkṣāsūtra-sūtra, ch. v., nos. 8: Mahāyānasastra, ch. 13. 2. To have the slightest chance of being able to judge of the disposition of a future artist. Here pārāvāhāma bodhisattva-pārāvāhāma (see p. 746, n.), the Mahāyāna seems to admit mortal sin in the Bodhisattva; see p. 745. 1. Hereby when we come to the question of the purity and the quality, the denial of the fruit of actions (see art. Kāma). See p. 747, n. 1. 1. To complete this description it would be necessary to interpret and comment on Mahāyāna-sūtra, p. 32.

niyatabhumisthitasi/a
Dodkisattvasya maravam, and cf. on the same topic Abhidhanrmko^av. which has niyatipatita bodhisattva (MS. As.
Soc. fol. 331rt).
As observed on p. 745*, the eighth stage is
sometimes called niyatabhumi ; but, according to the gloss,
the reference is to the third niyati (see p. 747^, n. •). Discrepancies in sacred books as to the stage which confers niyaina
(niyati), ' predestination to Buddhahood,' led the scholastics
to specify different kinds of 'assured psychological progresses.'
The niydina of the Sth stage confers assurance of obtaining and
never losing andbhogata and anutpattikadkarmakfdnti (see
below, p. 747'') it is the 6th niyatipdta of SutrdlaAkdra, xix. 3i<.
t This phrase occurs in the Nikayas (see Sathyutta, Index)
»nd in Anoka's edicts (see Senart, i. 1S2, 186, ii. 223). Here, as
observed bj' Prof. Rhys Davids, Dialogites, i. 190, sambodhi=
ftrhat-ship, and nothing more.
On the vydkaraxia, ' predict ion,'
that the future Arhat gives to himself, see Saiiiyutta, v. 359.
t The praxiidhdnas are innumerable.
They are summed up
In the ten great ones (mahd"), which are ail included in the
tamantabhadra', 'universally propitious resolve.'

correct, it shows also tl~.at Sakyamuni was believed to have been
born as a bdla, 'an ignorant person,' 'a fool."
t In the subsequent stages the Bodhisattva is successivelysovereign king of the four continents, Sakra, Suyama, Santu?iti»
(a variant of the word Tusita, common in the ancient literature),
Sunirmitava^vartin. ... To each stage corresponds a certain
virtue which the Bodhisattva makes prevalent in the more and
more wide-spread kingdom in which he reigns. These virtuef
are successively the paramitds (see below, p. 748).
} The description of the prabhdva, or 'power,' of the Bodhisattva is the same in the succeeding worlds, except that th«
numbers increase. In the Daiabhumaka we find the series 100,
1000, 100,000, 100 kofis (koti = 10,000,000), 1000 kofis, 100,000
kofis, 100,000 nayutas of ko^is (naj-uta = 100,000 kotis of kojiis),
the number of the atoms in a hundred thousand times ten greal
universes, etc. The BodhisaltrpbkUmi is more moderate, but it
gives numbers only for the first seven worlds, 100, 1000, 100,000,
10,000,000, or a ko^, 100 kotis, 1000 ko^^is, 100,000 kotis.
§ This clause Is wanting in the description of th« higher
bhiimis.


buddha, to know the magical beings that these buddhas animate and the blessing they shower on the Bodhisattvas, to make a hundred universes tremble, to go to these in his bodily form or to enlighten them by his brilliance, to display them to creatures, to ripen a hundred creatures (or forms of the hundred magical beings) to live for 100 kalpas, or ages of the world (if he chooses), to know a hundred kalpas in the past and the future, to comprehend (or accumulate, pravichinato) a hundred months of the Law (dhammapadika), and to show a hundred bodhisattvas (or bodhisattvas of the hundred magical beings) to the very end of the Law (dhammapadika).

Sixth stage. The Turned towards (abhimukhi).
Knowledge, third part: existential, dependent origination (pratityasamutpada).

Seventh stage. The Far-going (darsanagama), which sums up the six preceding stages, and includes especially the fruits of the sixth, the full development of the intelligence of the Bodhisattva, and the complete absence of regard for the particular (mirmimitta), and the constant possession of meditation of annihilation (nirodhasamadhati).

Now the Bodhisatta dwells at the apex of existence, one of the great bodhisattvas, but he does not realize annihilation (niruddhi sakgakara). And yet, just as a Chakravartin king, although unsoiled by humanity, is nevertheless a man and not a god (brahma), so he has not yet escaped from the domain of passion (klesa). Desire, in connection with the consciousness, has in his actions (abhisamakara), and with the act of turning oneself (abhoga) towards an object, has not yet passed away. He is not subject to passion (na saklesha) in the sense that any passion whatever would work in him; he is not free from passion (na niiklesha) because he desires the knowledge of a Buddha, and because his intentions of (universal salvation) are not fulfilled.

Nevertheless, being in possession of the perfect qualities of a buddha, he is near to the Arhats and the Pratyekabuddhas. Above him there are only the Bodhisattvas of higher worlds and the Perfect Buddhas.

The intentions of all beings (abhima) of the Bodhisattva, even when he is only on the threshold of his course (dikakara), are pregnant with the Bodhi and the salvation of all beings. Therefore he is very much superior to the Arhats and the Pratyekabuddhas. These, however, are in enjoyment not only of freedom from desire (sthitagraha), but also of lofty intellectual attainments (sthitagraha).

Therefore, as the mind (pratipad) of the bodhisattva, the Bodhisattva is inferior to them. From this point of view, he surpasses them only on entering the seventh stage. Such is the teaching of the Mahayana Nikayas and the Dharmanirdeśa (Madjagananikara, 15-20).

Third period: The last three stages of the Bodhisattvas.—The eighth 'stage' is the Steadfast, or rather the Immovable (achala). Its characteristic is the possession of that supreme virtue called the anupatikadharmanakasanti (upholding the doctrine of the non-production of things).

The Bodhisatta is free not only from all nimmata (particular and enger act of attention), but also from all abhoga ('turning towards, taking into consideration'). He is immovable: His actions, of body and of voice as much as of mind, are infinite, yet numerous, merciful, and fruitful, but are in a sense foreign to him, for the idea of duality, of being and non-being, of self and non-self, has perished for him; as also all movement (umadharana) connected with or belonging to the Buddhas, the Bodhisattvas, nirvana, or the Arhats.

The Buddhas must also intervene to prevent such a Bodhisatta from entering nirvana. They do so by virtue of the vow which they made formerly when they were Buddhas, since they have become Buddhas all activity has ceased for them. They remind the Bodhisattva of the eighth stage that his task is not accomplished, that he still needs many things in order to be a Buddha: 'Your patience in the real truth' (paramartha samastipati) is in order; but you possess neither the ten powers nor the ten virtues (paramartha vihara) (a characteristic of the bodhisattva).
nor the four abilities. . . . See how infinite are our bodies, our knowledge (jiṣṇu), our kingdoms, our glory. You must acquire this body; you must appease those who are not appeased, convert those who are not converted," etc.

It is for this reason that the Bodhisattva remains in existence. Without activity of body, voice, or mind, he is not a Bodhisattva, and becomes a mere servant of the law. If he destroys the merit of the Bodhisattva, he becomes a servant of the law; if he acquires the four trances (śādyūna), the four 'immensurables' (upayāpaya), and the five supernatural powers (abhijñā). He vanquishes all beings and is nothing different in the next life, and triumphs over them in the world.

(4) The Bodhisattvabhumi is the domain of energy (prārya) which helps towards the perfecting of good works, intellectual and moral, and especially towards application to the thirty-seven wholesome characteristics (puṇḍakārāma), and also the complete surrender of the idea of 'mine.'

(5) In the Invincibl e stage (sudarśana) meditation or ecstasy (samādhi, śādyūna) predominates. The Bodhisattva, safe from demons, meditates on and understands the four noble truths (niyata'charydbhumi), or what comes to the same thing, relative truth and real truth (samākhy and paramārthastāya) (see p. 751).

The 'Bodhisattva' (bodhikāra) is the domain in which the Bodhisattva, understanding 'dependent origination,' is turned longer in the world of becoming (sattvabhumi), but, by virtue of his predominates in him. He obtains the nirodhasamāpatti ('destruction-trance'), which was not possible before, on account of the non-predomination of the prajñā, which is the essence of charity, etc. Who then may be taught the profound doctrine of dependent origination, i.e. vacuity (vākṣyā), which alone gives meaning to a thing or not being? Not on account of some 'ordinary men,' show sincere and profound enthusiasm on hearing of various kinds of things there are in the universe. In- tellingence of the Perfect Buddhas, and the love, which they will develop for this teaching satisfies the mind so well, will be a pledge and a sign of things. And if the teaching will be impaired by a Bodhisattva arrived at the first stage, the Joyful word, or, more correctly, the teacher, in his interpretation of the text, will be in line with the word of Nagarjuna, a Bodhisattva in the first stage.

(6) In the Fourth stage (dharma) together with the perpetual 'ecstasy of annihilation,' there prevails the perfection of skill in the means (i.e. upayāpālaśādāpanā), these means leading to the acquisition of unshakable compassion, (b) knowledge of the elements of existence, (c) desire for Bodhi, (d) non-surrender of existence, (e) immaculate agency in existence, (f) non-surrender of the universe that is in existence, (g) bearing fruit, (h) in their being in them of good, (i) removing all creations that is in existence, (j) to make such a person be the leader of the group and have the right to enter the Great Vehicle, (k) causing them to ripen in the Great Vehicle, and (l) leading them to deliverance in Bodhisattvabhumi, the domain in which the Bodhisattva, understanding 'dependent origination,' is turned longer in the world of becoming (sattvabhumi), but, by virtue of his predominates in him. He obtains the nirodhasamāpatti ('destruction-trance'), which was not possible before, on account of the non-predomination of the prajñā, which is the essence of charity, etc. Who then may be taught the profound doctrine of dependent origination, i.e. vacuity (vākṣyā), which alone gives meaning to a thing or not being? Not on account of some 'ordinary men,' show sincere and profound enthusiasm on hearing of various kinds of things there are in the universe. In-tellingence of the Perfect Buddhas, and the love, which they will develop for this teaching satisfies the mind so well, will be a pledge and a sign of things. And if the teaching will be impaired by a Bodhisattva arrived at the first stage, the Joyful word, or, more correctly, the teacher, in his interpretation of the text, will be in line with the word of Nagarjuna, a Bodhisattva in the first stage.

The sūtraśākāra (xvii. 47, see also xx. 10 f.) gives the following scheme:

1. Adhibhūtakāra, ācarā—Samadhāra (equipment, exertion, preparation) in order to enter a true bhūmi, to become a Bodhisattva.
2. Bhūmi i.—Samadhāra towards anuvinnata (absence of particularized and eager attention), which is obtained in the (v) vihāra bhūmi. There is samākhyā towards anubhūtī (absence of turning oneself), which is obtained in the (b) vihāra bhūmi. There is samākhyā to (4) vīṣṭa bhūmi. There is samākhyā towards adviṣṭa (constancy), which is obtained in the (5) xith bhūmi. There is samādhāra to (6) bodhikghāta, or niyata'charydbhumi, 'arriving at the goal.'

IV. SPIRITUAL LIFE OF THE BODHISATTVA, A FOLLOWER OF THE GREAT VEHICLE. The question now presents itself: What is the connexion between the follower of the Great Vehicle who aspires to Buddhahood, but who is, properly speaking, only a future Bodhisattva residing in the gotra arrhadhulaktibhāgī bhūmi, and the real Bodhisattva in possession of all the ten virtues? The ten virtues to what extent do the former participate in the 'perfect virtues'? The disciple, however humble he may be, must apply himself to the double task of merit

* The description is borrowed from the Bodhisattvabhumi.

* See above, p. 743, n. 8.
and knowledge, in which are included all the virtues that make a Buddha. He participates directly and practically in the first seven 'stages,' being generous, moral, patient, energetic, meditative, studious of the doctrine, and skilled in the means of winning in saving 'merit' (śāstra), the powers, and the knowledge of a Buddha are beyond his reach, he can always make a sort of imperfect initiation.

Śaṅkara, a 7th century theologian, who is at the same time a writer and a monk, has written a work entitled the 'Initiation to the Career of the Bodhi, or Introduction to the Practice of the Bodhisattvas,' in which, summing up some technical ideas and his own experience, he gives no place to abstruse theories, scholastic and mythological, regarding the 'stages of the Buddha,' and in possession of the Mahāyāna (bodhisattva mañjuśrī or mahābodhisattva or dāśabhūmikaśvara bodhisattva) intervenes only as protecting and helpful spirit, or supreme object of the Little Vehicle. He is the 'jewel' (ratna), i.e., the Order (sāgha), which, in the Little Vehicle, includes all the monks. They are, therefore, closely associated with the Buddha and the Law, which are the first two 'jewels' in the formula of homage and refuge. They fill an even more important part than the Buddha, being regarded as more powerful and more active. But, the more exalted they are, the less eager for the moment is the disciple to place his head beside them. The Buddha is only a beginner (ādikāriṣṭa), subject to falls, uncertain of success, relying far more on the favour of the Buddha and the Bodhisattvas than on his own powers and understanding.

1. Initiation or conception of the thought of Bodhi.—Every disciple of the Mahāyāna aspires, by charity, to become a Buddha. He has to take the vow of Bodhi and assume the obligations and rules of life of the Buddha (bhūtānusraya or bhūtānusraya-vārasa). As to mark more clearly the difference between the two Vehicles, he is not obliged, as are the followers of the Little Vehicle, to undertake to take the vow of biological (ādikāriṣṭa), and Sākyamuni was in fact married. There are Bodhisattvas who leave home (pravrajāta) and add to the obligations of the Bodhisattvas the obligations of monks. These constitute a new rule (yoavat), after the pattern of the Vinaya of the Little Vehicle, and will be discussed in art. MAHĀYĀNA (bodhisattva-pratimokṣa). Monks are more fit than the laity to practice certain virtues, less fit to practise certain others. Consequently the entrance into religion will depend upon the transformation of the merit acquired by the disciple. He must in some way have the 'vocation' in order to have the right to become a monk.

The disciple (1) reflects, either by himself or under the direction of a teacher, on the advantages of the vow of Bodhi, (2) performs pious works with a view to purifying his soul, and (3) undertakes the vow of Bodhi.

(1) 'The sin accumulated in my former existence, accumulated in all creatures, is infinite and omnipotent. By what power can I acquire by my worship of the Bodhisattva, my taking of refuge, my confession of sins, etc., I apply to the good of creatures and be the attainer of the Buddha. I wish for bread for those who are hungry, drink for those who are thirsty (word of Buddha), I give myself, all that I am and shall be in my future existences, to creatures (atāmasottapattaya). In the same manner, as those in which the former Buddhas were when they undertook the vow of Bodhi, and just as they carried out the obligations of future Buddha, I shall carry them out. Now the disciple is a beginner (ādikāriṣṭa), a neophyte, 'a seed of Buddha, 'a young shoot of Buddha' (buddhadhāra, buddhānūkāra). Of course the 'production of thought' in question belongs to the domain of the adhikāriṣṭikārya (see above, p. 749), and is only an initiation or a reduction of the all-pure 'production of thought' which constitutes the so-called 'Joyous stage.'

The series of pious deeds (bhadaracara or auspicious practices) just mentioned (from 'adoration,' the dānayuddha, to 'prostration,' the adikārya-pradaksina, the introduction to the path of the Bodhisattvas, the entrance into the Vehicle which leads to Buddhahood, but also a daily ritual (viśūka), the daily food of the spiritual life, and, to express it technically, the triple element (trikhandha) which must be set motion for, is called bhūpāla. This bhūpāla is divided into three parts: (1) confession of sins, with its preliminaries of adoration and worship, (2) acquiescence or rejoicing in good, and (3) prayer with a view to securing the preaching of the Law and delaying the entrance into the 'right path' for a new stage of existence. The application of merit (parisāmāna) and the vow (pramāna) complete the ritual of worship (pijñapa or viṣūka) which is called 'supreme worship' (amurtarapāji), and is termed quintuple, sestuple, or decuple, according to the elements into which it is broken up.

2. Protection, growth, and purification of the thought of Bodhi.—The disciple has undertaken the thought of Bodhi; he must not lose it, but he must purify and increase it by exercise. He must add the practices (pracārtān) to the bhūpāla as a matter of course. There is therefore a double duty which may be traced to a single principle: (a) vigilance on the thought of Bodhi (bodhīchittotpāramāṇa), and (b) "These formulas of Śaṅkara (bodhīcarayātārā) are well known. They recur in a more or less changed or abridged form in the Dharmaśāstra (see p. 3, note), in the Nyāya-Sūtra-pāramāṇa, p. 117 f. (with some alterations in a monothestic direction; see ADYASVAMA), in some Tantras, e.g. Chāṇakya-hṛṣṣaṁya, iv. 6, in Nepal manuals and anthologies like the Adikārśapradāpa and the Kṛṣṇaśākunehṛsha (MS No. 110, fol. 38; further, Iconographie, ii. 8; see Pousain, Études matériales, 100 and 236; and, on the Chinese authorities, Chavannes, 'Les inscriptions chinoises de Bodh-Gaya,' R.E. xxvi. p. 250 l. In the Śiṅkṣaśākunehṛsha, p. 250 l, Śaṅkara gives information about his student's most important works; e.g. Bhāṣya, a commentary on the D-vatārāṇā--charja, 'propitiatory practice,' a work in Gāthā dialect, which exists in the original, in Tibetan, and in Chinese (Nanjō, 1142; translated A.O. Hunwick, Peking, 1909); and the same commentary Bodhīcārya, translated into Sanskrit (a.d. 395-393), the Ratnamāka (A.D. 503), etc. It would be useful to trace in the literature of the Little Vehicle, at least in the commentaries of Buddhist masters on the taking of refuge (Sahajagovinī, p. 200 l, and the first alliterations of the Bhadra- charya. Apart from the thought of becoming Buddha, we find there in which form the essence of our ritual, viz the offering of oneself to the Buddhas (attasamājīpātask), as regards confession of sins, and the bhūpāla, serves as a basis, is well known. In art. KARMA will be found an account of the part it takes in the remission of sins, according to the doctrines of the Great Vehicle.

1 There are several works entitled Trisākhandha, 'work on the three elements.' One of them is devoted to the present subject (see Nanjō, 1142), and 290 l. Bhaṭṭa Śīkṣa, 259 l; Takakusu, J.-T. Ewing, p. 75, note. Another treatises of morality, dealing with the three elements, are Bhūpāla-prakāśa, p. 58, and (Sādhu, Māra, xxii. 17), it is difficult to identify Mahārīpa, 40, 59.
makes use of it to convert the creatures, that the Bodhisattva deserves to be called by that name (Bodhisattvabhuta, i. 77, c.), and the virtue of generosity may be, it must not stand in the way of its aim, must not be unreasonable or excessive (attityāga). It is especially after he has conjured a stage that the Bodhisattva is able to be useful therein, and his charities must not form an obstacle to his spiritual career, unless it be to help some Bodhisattva more capable of benefiting beings than he is himself. Moreover, there is a gradation among gifts: to give one's flesh is good, but to give spiritual food, to preach the Law (dharmabhakti), is more primarily needed. In order to follow the rule (dharma) of morality, it is necessary to follow Sākyamuni's example and allow one's self to be doved by a tiger, when safety (abhayañāna) can be otherwise won for men, and they may be repined for Bodhi.*

4. Morality or virtue (śīla).—The essence of śīla is self-preservation (ātmabāvāraṇa) for the sole purpose of benefiting creatures. Neither a preta nor one condemned to rebirth in hell can be service to others. It is necessary, therefore, to make sure of the births, in order to undertake the career of a Bodhisattva. For the sake of him, morality must be practised. It is no less necessary to avoid scandal. Every future Buddha, however great his sins, must be revered by men: if they despise him, as a fire covered with ashes, they run the risk of injuring and opposing the career of the Law, by never forsaking 'spiritual friends,' by keeping constant watch over the state of soul and body, he succeeds in avoiding all harmful actions (anarthavivarjana) and fruitless motion (niśpakalakāṇḍana), and in preserving good deeds (punyarakṣādharma).

The Great Vehicle, however, distinguishes the virtue of abstention (nīvṛttiśīla), which was the whole śīla of ancient Buddhism, from positive virtue (pravṛttiśīla); and it does not set apart the pāramitās, which have no practical existence the one without the other. The following account, which is offered as a specimen (according to Bodhisattvabhūmi, 1. 1x), ignoring a host of scholastic details, will give an idea of moral theology, as the Yogāchāras understood it. It will be noticed that all the 'personal virtues' are examined according to the same subdivision.

I. What is morality or virtue (ātmabāvāraṇa)? Not to violate the rule. It has four elements: (1) shame (apatiṣṭhāpaṇa) with regard to others, (2) a sense of intention to prevent a sin, (3) regard to one's self, (4) reformation after transgression, and (4) regard for the Law (dharma), which keeps the Law ever present in the mind (smṛti)."
selves by generosity, etc., behaving according to the rules laid down (on drinking, etc.) when there is no trouble, compliance with the thoughts of men who need conversion (dvitiyadharma-

vritti) has a mystic quality. There are mystical wonders giving them visions of hell, causing Vajra-
pujā or some other mighty Yajña to appear when some hungry ghost is identified with his personality, passing through walls, rocks, etc.

lions. These details are reduced from the definition of the Bodhisattva. There are certain acts, wicked in themselves (prakrtisuddhi), which, committed with the evil intention of the non-existing, are unfavourable; those not only are not culpable, but are even highly meritorious. When he sees a robber given to murder, and not shrinking even from the acts of murderers, he who has achieved the property of the Buddhist church or violate stūpa may be defended by the monks, as they hope to increase their robberies, and the more they possess they increase their sin still more. Directors also (śa-rūpyeśvarā, āritāke) who waste the property of the Buddha and violate the precepts, those who so practice with high degree of watchfulness and care that he hardly ever commits even a small sin.

All-round virtue (avaccheda). From this point of view moral virtue is quadruple: (1) acquired (usthāna), in so far as the vows taken are of three kinds (śrāvaka, pratyekabuddha, bodhisattva), (2) natural (prakṛti), in so far as the excellence of the character, acts purely in thought, word, and deed; (3) practical (pratītya), as it is practised in benefaction; (4) theoretical (pratītya), as it holds a being with the power to resist evil and to love good; (4) associated with the expediency, i.e. with the four elements of popu-

larity.

virtue of a good man (atmanugraha); (1) he is virtuous, (2) he inspires others with virtue, (3) he prays virtue, (4) he shows sympathy for those who suffer, (5) when he sees a man who makes a sin the other makes a sin through itself.

Omni-form virtue (pratiśrāvūka) is of thirteen classes, divided into two groups of six and seven respectively: (1) turned towards enlightenment, (2) clear through assuming all the vows, (3) defiled, (4) liberated from the two extremes of luxury and asceticism, (5) perpetual, (6) firm, (7) possessed of virtue’s ornament and itself the ornament of virtue, (8) turned towards (VI) from the virtue of the Great Man (i.e. of a Buddha), (9) reflection (adhiścitta), (10) fortunate re-births, (11) the welfare of others, (12) abstinence from all actions hurtful to others, having regard to the principle, ‘Do not to others what you would not have others do to you.’

vi. Virtue as pleasant in this world as in the next. It includes four kinds of pure actions: (1) forbidding to men what ought not to be done, (2) allowing good actions, (3) allowing the others to be done, and (4) gaining the sympathy of others, and (4) improving the virtue of morality among the gods, generosity, patience, energy, wisdom, and knowledge.

power of the passions, like a fish in the hands of the fisherman, for I am in the net of re-births, threatened by death and by the guards of the bulls. Thou hast boarded this vessel, having chosen style; cross my suffering, thou foolish, there is no time to sleep; when and at what cost wilt thou find this vessel again?" (3) To despise pleasures, which belong to the earth, the task of the Bodhisattva is not the joy of good works. (3) To remember what Skāyamunī said: "The earth is the abode of the devas, Skāyamunī, Dipākara, etc., are insects, flies, and little flies; but the great ones that they acquired the illumination of a Buddha, so difficult to obtain, and which I have already gained, that the greatest possible task is accomplished! The task of the Bodhisattvas is distressful, but the bulls are far more distressful. All the great beings are really distressed, and the Bodhisattva, a clever physician, by degrees he accustoms us to making the greatest sacrifices with ease, and besides "the future Buddha will not disturb them, and the Buddha is free from sin and suffering, and he is free from sorrow, for he realizes the truth of the nothingness of the ego. By his good works the Bodhisattva tastes ever-increasing joy, superior to those of the beings entering nirvāṇa. He arrives at nirvāṇa more quickly than the others.

To increase his 'energy' (vīryavrādhana) the Bodhisattva manoeuvres his 'armies', which are: (1) chakravartin (the wheel-turner), the root of all merit: 'What a sublime task I have undertaken in the destruction of all my vices, all the vices of the world, and the endowment of myself and my neighbour with every good quality! ... Those whose works are all good are re-born in the Paradise of Amitābha.' Pride (māna), (2) the pride of work, 'it is upon me that all difficulties in the world devolve, and it is I who create my own burden of work upon me!'; (3) pride against the passions (kṣīṇa-maitrī), pride in having acquired the knowledge of the passions (upakāya)? The most humiliating and most exacting of the passions is pride; (4) pride of power or endurance (ṣakti); the pride of Conquerors, pride in having acquired the power (bodhikṣaṇa), Joy (rati), by virtue of which, when he has finished one task, he plunges into another, like the elephant, under the midday sun, so that the earth is filled with its activity. 'He whose pride in work itself seeks in action nothing but action, (4) Abandonment (maitrī): he must measure his powers before undertaking a task, and stop when his powers fail. (5) Exclusive application (tāparāya), especially in all that concerns the means of avoiding the blows of the clever adversary, the prince of suffering. It is in this duel, in which the Bodhisattva is armed with the memory of the law of Buddha. If he happens to get wounded (for what fight is there in one's own country), he quickly gains the graces, and he says: 'I do not wish to prevent this occurring again!' (6) Self-mastery (āśrāvahita): 'Never does he forget the Buddha's sermon on attention (anippana) and of his body; he is alert and easily managed, so that he may be ready at any time and for any thing even here.' It is necessary to begin. As the seed of the cotton-plant obeys the wind, coming and going under its impulse, so, in body and thought, the Bodhisattva directs himself according to his will. It is thus that magical powers are obtained, and all happiness.'

7. Contemplation (samādhi) or meditation (dhyāna).—Contemplation or concentration of thought, which, as we shall see, is indispensable to merit and success. It presupposes a temperament, the action of two factors: isolation of the body (kṣaya-viveka), i.e. life in retirement; and isolation of thought (chittaveke), i.e. indifference to all worldly desires.

These are the qualities very favourable to literary development, and have always prevailed widely among Buddhists. Śāntideva deserves great praise for treating them with much eloquence, and especially for being satisfied with sixteen verses to describe the dangers and penalties of a worldly life 'in the midst of fools,' ten verses to exalt the life in the forest: 'with the trees which are good naturally, and whose sympaties are easily gained'; but he requires thirty-eight to deter us from love, the source of so much shame and sin, which can be explained only by an aberration of mind, a sickly passion for impurity.

All the meditations here recommended to the Bodhisattvas are merely the putting into action of the meditations on impurity

* Properly speaking, the saint is free from suffering only when he has attained the 'suppression of all attachment' (vipākārada). The consequences of which are themselves felt in two ways: (1) grief (vipākaphalā), which produces increase of compassion for others; (2) tendency to sin (nīpānaphalā), which is destroyed by patience (see Madhavakāśita, 29, 10 and 50). 1

1 Marks.

2 Pride, modesty, manānd, manāṇā, abhisāman (to believe wrongly that one is destined to Buddhahood, to rely on ascetic practice, the capital, more than murderer, etc. Māra endeavors by all means to induce the Bodhisattva, in the 'beginning' Bodhisattva (acharitānupāsrupaksha), to doubt of his own power to achieve better than the others, to destroy his hope of achieving the perfect state, because he is not the true 'isolation'; that solitary life involves many spiritual dangers, namely, pride, absence of 'spiritual friends' (kalpita-prasanna) by the 'perfection of contemplation' (vīryavrādhana, the natural abode of the Pratyekabuddha (Āgantukarikā, p. 391), 11).

(nāsavahādanta, kṣayavipākārada, sattva), oecumenes, etc., which belong to the world of vehicles. The Bodhisattva adds a note which is peculiar to it: 'What painful efforts have been needed from the beginning of time for this body, ordained to the destruction of the re-born, the spiritual body of the Bodhisattvas, and doomed to tortures in hell because a part of those efforts and sufferings is necessary to attain Buddha.' The perfection of contemplation is the sufficiency of those who are subject to desire are insensible and unknown. But the Great Vehicle adds a note which is peculiar to it: 'What painful efforts have been needed from the beginning of time for this body, ordained to the destruction of the re-born, the spiritual body of the Bodhisattvas, and doomed to tortures in hell because a part of those efforts and sufferings is necessary to attain Buddha.' The perfection of contemplation is the sufficiency of those who are subject to desire are insensible and unknown.

The mind is therefore absorbed in contemplation, being detached (vīśvīka). It is able to penetrate the ideas to which it is about to be applied, and to be deeply penetrated by them. This is, properly speaking, meditation; (meditation, ecstasy). The Buddhists have completed a system of systems of meditation, which all aim at leading to the possession of knowledge or wisdom (prajñā). None of them is foreign to the rule of the Bodhisattvas. The 'perfection of contemplation' may be meant (1) practice of the dhyānas and the samāpattis of ancient Buddhism; (2) study of the four truths, and of the two truths (relative and absolute); this is the theory of Chandrakīrti in the Mādhyanamakavāda; (3) meditation on impurity in order to destroy the vice of passion, on kindness to destroy the vice of pride, on origination to destroy error, or, further, on subjects of mindless reflection (samantātyāpāya), or, in general, on all the doctrines of the prajñā, that is to say, which relate to the true nature of things.

In the Bodhicaryavatāra Śāntideva adopts the very original plan of subordinating the virtue of meditation to the active virtues of charity, humility, and patience. On this subject, usually so dry and foreign to Europeans, he displays all the heat and emotion appropriate to a homily.

There was, however, no better way of introduction into the Vehicle of the Bodhisattvas. Although meditation on the nothingness of the ego, etc., seems to result, and in the Little Vehicle really does result, in apathy and nirvāṇa, by destroying the activity of the mind bent on the objects of knowledge (jñeya-rājya), Śāntideva maintains that it begins by putting itself at the disposal of the active virtues which destroy passion (śīla-rājya).

The nothingness of the ego does not warrant us in remaining inactive, for we find it a reason for sacrificing ourselves for our neighbour.

And soon, by a just compensation, this practice of abnegation, destructive of attachment and hatred (rāga, dveṣa), results, much more surely than selfish meditations, for the complete purging of the mind (moha); that is to say, since every idea, as such, is erroneous, abnegation purifies the mind by emptying it (moha = jñeya-rājya; buddhā-sthāna).

Śāntideva's plan is so 'orthodox,' and at the same time, so far as can be judged, so original, that it will be well to give at a detailed analysis of this part of his book, in which there is much to be commended.

The disciple must practise (1) the parāsaṅnakamat, the equality of self and neighbour; (2) the paritāma-purāṇa, the substitution of neighbour for self. Each includes a clear insight into the real nature of things, and, if the energy (vīrya) is strong enough to ensure their perfect practice, they include, in addition, all the practice of a Bodhisattva.

(1) Parāsaṅnakamat, making no difference between self and neighbour, is the beginning of the Bodhisattva (bodhisattvatvavāraṇa). (2) As the body is composed of different parts united together so that the hand takes care to protect the foot, in the same way, in this manifold world of living beings, joy and sorrow are common to all. What joy means for me, it means the same for others. It is the same with sorrow. We must do for our neighbour what we would have our neighbour do for us, because it is sorrow (moha) which interests us on account of our own neighbour's sorrow, just because it is sorrow like my own. We must serve ourselves; the greater is the self-interest, the more is the self-interest of the neighbour.

(9) If any one should object, 'My neighbour's sorrow is his sorrow, not mine,' the reply is, 'What you call your neighbour's sorrow is such that you consider it as a mere possession in you, but a series of intellectual phenomena (which series does not exist in itself, any more than a row of units), or an aggregate of phenomena with no individual unit. There is

* See Śāntideva, Sktēgaṁamakeha, xii-xiv.
therefore no existing being to whom we can attribute sorrow, or whom we can question as to its origin, or who can be held responsible for it.

Why then contend with suffering, if there is no sufferer? Because all the schools agree on this point. If it is neces-
sary to contend with it, contend with it, for its nature. If it is not necessary, do not make distinction, and occupy your attention with other objects. God, the Supreme, only understands the painful duty of a future Buddha? This duty is not painful, but if it were, yet, should the suffering of one individual put an end to the welfare of several, or of several to its entire undertaking. It is for this reason that the future Buddhas, whose spirits are fortu-
ified in the 'equivalence of the self and the neighbour,' for the neighbours are the self, and no one can despise, that when
their neighbours are suffering, plunge it into the Avichi hell to take the place of the condemned there. The deliverance of creatures causes the river of suffering to dry up, if the self is not; he is raised, praised, happy; I am poor, despised, unhappy; it is evidently because of the welfare of the world, as a whole, the self, and the good qualities.

But have I really no good qualities? If I have not, should not he toll to curce of my vices? If he is unable to say, but I, to say, 'I renounce, I forgive, I am merciful,' what is the nature of his excellent virtues? What matters it to me if he is holy only for his own sake? Has he compassion only for the unfortunate who are also his? Have you ever heard of a divin destiny that is himself, in the process of his virtues, he claims to excel among the saints. In this way, the Bodhisattva energetically voices the complaints of the sinful and wretched poor whom most men call but ask too apt to despise; and, while excusing his neighbour, he eagerly seeks every occasion to exalt himself. Thus only every is our selfish ego? 'Renounce, O my thought, the foolish hope that I have still a special interest in you. I have given you to your liberty, despise nothing of your sufferings. For I were so foolish as not to give you over to the creatures, there is no doubt that you would deliver me to the demons, the guardians of hell. How often, indeed, have you not handed me over to those wretches, and for what long tortures! I renounce your wrong estimate, and I crush you to the self, the slave of your own interests. If I really love you, I must love myself. If I wish to preserve myself, I must not preserve you.

8. Knowledge, or wisdom, as it is usually called by Europeans (prajñāpāramiśa), is the supreme virtue. It is the application of the mind to the knowledge of the truth, to the knowledge of what is (tattva). By a direct effort it destroys false views concerning self and nature, and its complete possession is impossible to the non-Buddhist. Hence, for the Bodos, religion is a matter of self-interest, and their speeches, as well as their religious lapses, are explained by their desire for personal gain.

The definition of the word prajñāpāramiśa appears contradictory. The prajñā, being in a general way the exact knowledge of all things (Jñāna as a whole, nañjana, is called prajñāpāramiśa in so far as it bears on the real nature (paramartha-rājāya-prajñāpāramiśa), and jñāna in so far as it refers to the metaphysical principles in the relative truth (sañjñā-sañjñā). (See Boddhitathavābhu, ii. iv.)

The Bodhisattva acquires first lokotkata jñāna, i.e., prajñā (whether pāramiśa or not). Then lajñā, i.e., jñāna which endows them with all the privileges of a Buddha, but which does not help fellow-beings (desikākarakā, xiv. 42). But our authors do not feel satisfied with this definition, and we find, inter alia, the following commentary: prajñā in its most comprehensive sense, (1) Self-knowledge (jñānanjana), (2) medical art, (4) grammar, (5) technical art (śīpā-karma). (See Boddhitathavābhu, i. xiv.)

LITERATURE.—The literature has been given fully throughout the article.

L. DE LA VALLÉE POUSSEIN.

BODOS. I. Name and language.—The generic term ‘Bodo’ is now, for convenience, applied to all peoples speaking the Tibet-Burman group of languages. Etymologically, the true Bodo race exists, in a more or less pure state, all over Assam, in the proper (the Brahmaputra Valley), in Koch Bhīrā and Northern Bengal, and in the valley of the Surnā river, now part of Eastern Bengal. It is probable that the semi-Hinduised caste of Chapāls or 'Manusūdras' (see nāma, a recognized fact of Bodo origin; but this cannot be settled till further ethnographical inquiries have been made. In the plains the Bodos have become largely Hinduised, and have intermarried freely with Ahoms (q.v.) and other races. But even in the plains, and mingled with Hinduised neighbours, there are large communities of Bodo people, still speaking their Tibet-Burman language and preserving the simple animistic superstitions of their race. Those who live in the hills of North Bengal are by them styled 'Mosh' or 'Mising,' 'Welsh,' or 'barbarian.' But the name has long lost its contemptuous signification, and is placidly accepted by the people themselves as their tribal title. Their Mongolian type of feature and dark-blue clothing, their religion, which mark them off from their white-clad Hindu neighbours. Adjoining them are the Koch, now mostly Hinduised, and justly proud that, in the person of H.H. the Maharājā of Koch Bhīrā, they are ruled over by a dynasty which once conquered nearly the whole of the ancient kingdom of Prājyotisīpur (see Assam). Beyond the Koch tribe, eastwards, come the true Bodos or 'plains Kaḥārīs' (as the English call them), who dwell in the faro, or submontane tract, under the hills of Bhītān, known as the Kaḥārī Dwār or passes.

It was from these people that B. H. Hodgson took the title of Bodo, for they call themselves Boro-ni-śāśya, 'sons of Boro,' or 'sons of the Man.' (It should be noticed that most of the aboriginal tribes of the N.E. frontiers of India have no specific name for themselves. They are 'men.' Other races are Bengali-men, Englishmen, China-men, etc.) There are about 300,000 of these people still unabombed by Hinduisim. Mixed with them are the Bodos on the borders of Assam and Bengal and the Nāgalás. They speak the same language, but holding themselves superior, apparently owing to a somewhat larger infusion of Western blood. These are a finer and stronger race, and at one time supplied recruits to the regiments formerly raised in Assam. In the central mountainous mass of Assam, between the Nāgas on the East and the Khasis on the West, are about 16,000 people speaking a form of the Bodo language. This branch call themselves Di-bodos, they are now totally separated from the lowland Bodos; and England's recognized authority, says that their speech now differs from that of the Boro-ni-śāśya as widely as Italian differs from Spanish. This branch of the family once formed a powerful kingdom, first at Dimāpur in the Brahmaputra Valley land, and then driven thence...
by the invading Ahoms (see Assam), at Maibang in the centre of the Hills, and afterwards at Khāspur in what is now the British District of Kachar. 

In the district of Nowgong and the adjoining hills, there are some 3000 Hōrom or Bodos, who are derived from the Bodo word Haĥō (i.e. 'earth-high,' 'mountain'), and means 'hill-folk.' They are very similar to their neighbours the Lālangs, about 40,000 in number, on the southern slope of the Gāro hills; and in the adjacent parts of the plains district of Mymensingh are about 8000 Hajijongs—another name evidently derived from the word Haĥō. Finally, there are two great isolated highland groups of Bodo people in the hills respectively called after them—those known to us as the Gāros and the Morans, etc., whose speech, so far as they have not been agglutinated to Hinduism and Assamese, is of the Bodo type, that is, an agglutinative language which has learned inflexion from contact with the Indo-European Assamese. The verb is still modified by agglutinated infixes, but in other respects the language resembles Western languages in having acquired even such linguistic luxuries as adverbs, relative clauses, and a (rarely used) passive voice.

2. Origins.—Of all these peoples and their origins there is no written record. They totally lack the historical instinct so characteristic of their Ahom conquerors. Their physical aspect renders it likely that they came from beyond the mountains to the N.E. of the Assam Valley. The Morans, the most easterly branch of the race, and perhaps the latest settlers in Assam, have indeed a tradition that they came from Maingkaing in the Hukong Valley on the upper reaches of the Chindwin river.

The story goes that there once dwelt there three brothers named Moyling, Morān, and Moyrān. Moyling, the eldest, remained in Assam, and the tribe which bears his name is still in Assam; Morān, the second, migrated into Bengal, and was there lost; whilst Morān, the second brother, became a chief of the Morans, etc., which bore the name of Morān, and the whole tribe is now called Morān, etc. Another name for this tribe is Jumā, which bears the same meaning as Morān.

Linguistic and ethnological inquiries may some day trace some connexion between the Bodo-speaking peoples and one or other of the races in Upper Burma, but the link is still missing. It is certain, however, that some 2000 years ago or more, the Bodo peoples must have covered the whole of the Assam Valley, the greater part of Northern Bengal, and the Surnā Valley. The most significant sign of their presence in this area is the Bodo element in the names of the rivers, such as Dikhōj, Tiaphik, Dipān, etc., also the names of some of the hills in similar names as the Tista, or Dista, near Darjiling, the Tiaphik in Upper Assam, and the Tipai, or Dipāi, in Kachar. (The word dī or dāi in Bodo means 'water' or 'river.') Those of them who settled in the plains of Assam, into which they gradually degenerated, have become the population of the plains of the British East India, and are conquered by successive invasions from East and West. Those who took refuge in the mountains, such as the Dimāsāt, Gāros, and Tipāpis, became a sort of people of a more primitive type than their brother, the Gāros above, and the Gāros below. The Gāros above, the Gāros below, are still called 'Bodos,' though they are not our Bodo, but a separate people, who are called Kachar in the Assam District. Those of the Bodo family who follow a religion of fear, and are haunted by many gods or spirits, who have to be propitiated by offerings of food, etc. Within historical times the Chutiyas of Upper Assam were wont to offer human sacrifices at their famous copper-roofed temple at Sadiya; but this habit may have been borrowed from the sacrificial habits of Śktikāi Hindus. The majority of the Bodos of the plains are singularly mild and inoffensive people; and though they are much given to making offerings of fowls and goats to various deities, especially, it is significant to note, on the occasion of harvest and other festivals, these are apparently excuses for feasting and merrymaking, occasions on which there is much consumption of boiled pork and rice-beer. There are indications of a now declining belief in totems, and among the Morans, etc., the chief of this tribe is a sort of totem upon which he prides himself. 'I am the tiger,' he says; 'the tiger is mine.' The people in the plains of the Bodos, etc., are septs, for instance, calling themselves Mosārā, 'sons of the tiger,' who go into mourning for a whole day, fasting the while, if a tiger happens to be killed in their vicinity. So also there are those who belong to the clan of the sacred cow, the Siju (the Euthophobon), and are proud to call themselves Siju-ārā. And there are many others. There seems to be no belief in a supreme deity or creator. Among the Western Bodos, gods are freely borrowed from the Hindu pantheon, one of the most popular of these being Kuvera, the god of wealth. The plains Bodos a.e. a simple, agricultural, and far from avaricious race, and the extent to which Kuvera figures in their folk-tales and legends is certainly curious.

The matriarchate is unknown, and the father is an extremely good-natured and easy-going head of a contented and simple family. The tribes are mostly endogamous, if the expression can be used of people who marry very much as European peasants do. There is a certain tribal communal character in their rule rather than the exception. There are signs to show that marriage by capture was once the rule; but nowadays marriages are the result of an elopement, followed by the payment of a fine to the girl's relatives, or a combination at the marriage of a few of the young people, which results in a present offered to the bride's parents, or else a term of service on the bridegroom's part in his father-in-law's house.

Running rivers and water-courses are held in high respect and honour; and the dead are either buried or cremated (if their relatives can afford the necessary fuel) near streams. A woman is laid on seven layers of fuel, and has seven such layers placed over her. A man has only five such layers. So, when a male child is born, the Bodos of either sex are offered to the gods, a great part of all who die in infancy are offered to the gods, a great part of all. All are buried in simple coffins, or Sometimes in small earthen graves, and are placed with their heads to the east, the Bodos believe that the body is at rest until the time of the great resurrection, when it will be raised to celestial regions.

There is a crude belief in a future life. When a body is buried, a reed or bamboo tube is led from
the corpse's mouth to the outer air, so as to enable the spirit to breathe if he will, and the dead man's favourite food is placed for a time near his grave. Grown-up people will not touch these offerings, but children take them without scruple. Spirits, as far as the Bodos are concerned, live in the air, and cannot cross water without help; and if a funeral party has to cross a river, a string is suspended across it to enable the spirit to follow the body or return if it desires to do so.

If the roots of the plains are a very simple and guileless race. They live on a soil which yields them rich reward for comparatively easy toil, and, as their wants are few, they lead a joyous and childlike existence. Like other human children, they are occasionally given to fits of sulks, are very clamorous, very obstinate, and sometimes what suspicious of more intellectual and ingenious races. But they readily make friends with kindly and sympathetic Europeans; and, with the sole exception of the Gáros (now also rapidly coming under gentler influences), they have long ago lost the martial tendencies the race must once have possessed. They have much of the genial joviality of the Búrne, and are extremely addicted to feasts, junks, and all manner of merry-making. Their language has now been investigated with much thoroughness, but a systematic inquiry into their ethnographical position and their beliefs and customs still remains to be made.

EYPTIAN (H. Foucart), p. 765.
Greek and Roman (W. Capelle), p. 768.
Hindu (J. Jolly), p. 773.

Among certain African tribes: 'Whenever an enemy who has bela\nsed with conspicuous bravery is killed, his liver, which is considered the seat of courage; his name is substituted to that of the\nbeak of intelligence; the skin of his forehead, which is regarded as the seat of perseverance; his testicles, which are held to be the seat of strength; and other members, which are sup\nviewed as the seat of other virtues, are cut from his body and\nlaid to circulate:&quot; (Bodley, History of Kings, p. 190.)

As the nature of certain ordeals and penalties, chosen in re\nlation to the supposed hidden psychical qualities of certain\nparts of the body. The history of witchcraft abounds in\nexamples, but the field is much wider. Thus, Lady Anne\nBlunt reports concerning an Arab dispute as to the parent\ngage of a child: 'The matter, as all such matters are in the desert,\nwas referred to arbitration, and the mother's assertion was put\nto the test by a live coal being placed upon her tongue' (A Pilgrimage to Meccah, i. 19). A parallel biblical example is\nfound in the jealousy ordeal of Noa, on which see Gray's 'Numbers' (in ICO, p. 43, for a note contributed by the\npresent writer. As an example of the same principle applied to\npunishment it may be taken Law of the Code of Jämîmarâli: 'If the doctor has treated a gentleman for a\nsevere wound, and the object of his treatment, and has caused\nthe gentleman to die, or has opened an abscess of the eye for a\ngentleman with the bronze lance and has caused the loss of the\ngentleman's eye, he shall cut out his own eye' (Bodley, History of\njorities, p. 46). This is clearly not a case of lex talionis, but the doctor's\nye would have been extracted; penalty is exacted from the\nbands whose inoffensive victim led them astray.

As the physical qualifications for special offices and activities,\nespecially when these could not be transmitted. Thus, amongst\ncertain tribes of Central Australia, the essential mark of the\nmedicine-man is a perforation in his tongue, mysteriously\ncaused in the ceremony of his initiation. If the hole closed\nduring his year of probation, he loses his professional status\n(Spencer-Gillies, p. 525). Since such perforation can only\ncarried on in a practical way, we must assume that the object of\nthe operation of such marks is to set free, in some way deemed efficacious by primitive thought, the\nmembers which the medicine-man has chosen, for his pro\fessional purposes. It is probably one out of many cases of\nnaturalization which are to be explained as the partial dedication of certain organs to the service of the invisible powers, and their use. Thus, circumcision admits of no explanation, valid for\nprimitive thought, which does not apply to the closely related ritual in the South Sea Islands. Both processes occur at the period of puberty (ib. p. 251); but both receive adequate explanation, for primitive thought, as a propitiatory preparation for the safe journey to the spirit world. A parallel to the\nmedicine-man is recorded by Howitt (p. 747): 'A mother\namplyakes a stone with the hair of the right shoulder of one of her\n
(b) Life of the organ and single organs, and particular organs.\nOne of the best known cases is that of the evil eye. How\nphysical the influence was conceived to be is shown by the\nsuperstitious measures taken by the person supposed to be\nconnected with these organs may pass into the eater. Thus
BOD

surface becomes covered with a bloody clout; and if the mirror is new the stain is hard to remove, but if it be old, the removal is easier. (On Diseases of the Body) 244.) the very fact that the organ is that, also, for the present argument, that early medicine discusses the treatment of the separate parts of the body as though they were not in vivo, in the living human patient. The Anglo-Saxon 'Leech-Book of Bald,' of which a summary is given in the English Medicine in the Anglo-Saxon Tum (p. 40). This corresponded to the popular idea of disease. Ewing writes of present-day Bedouin: 'Every disease is localised in a particular region of the body, and part of the body there is a special medicine, which the doctor requires only to take out of his chest and dispense. A special diagnosis of the part affected is not necessary. The localised affection of the patient is not considered necessary' (Tagung einer Reise in Inner- Arabien). This characterises the sickman-Hebrew-Babylonian belief in demonic influences, which is in accordance with the localisation of psychic function in various physical organs (cf. also the theory of vitalism and correspondences). 'Almost every part of the body is threatened by an evil demon; the ashakku brings fever to the head, the namtar threatens the life with pestilence, the utukku affects the neck, the ahi the breast, the ekimmu the hips, the gallu the hand, the raibus the skin' (Jeremias, Höle und Paradys bei den Baby- loniern, p. 10).

Such illustrations, which might be multiplied to almost any extent, sufficiently prove the identity, for the primitive thinker, of the sciences we clearly distinguish as physiology and psychology. This confusion is of fundamental importance for the study of primitive and ancient ideas of per- sonality, and for those who undertake to interpret ancient thought, particularly by interpreters of the Old Testament. Its further examination belongs to the subject of ancient psychology. Here, we are concerned with the evolution and development of animal consciousness, and with its present problems for psychology and religion.

2. Evolution of physiology.—It is plain that a sound knowledge of anatomy was necessary before an accurate physiology could be reached; yet of this Sir William Turner remarks: 'Amidst the greatest confusion in the ancient Greek and Roman literature of anatomy, only two leading facts may be admitted with certainty. The first is that previous to the time of Aristotle there was no accurate knowledge of anatomy; and the second, that all that was known was derived from the dissection of the lower animals only' (EB, s.v. 'Anatomy'). The most notable name before Aristotle is that of Hippocrates (n.c. 460-377), who does not distinguish vein from artery, and nerve from sinew; he represents the brain as a gland, or diverticulum venosum; he submits the heart is muscular and of pyramidal shape, and has two ventricles separated by a partition, the fountain of life—and two auricles, receptacles of air; that the lungs consist of live ash-coloured lozenge-shaped organs; that the skin is spongy, naturally dry, but refreshed by the air; and that the kidneys are glands, but possess an attractive faculty, by virtue of which the moisture of the drink is separated, and descends into the bladder. He distinguishes the bowels into colon and rectum (I.c.). Aristotle (b. n.c. 384) has confused notions of the nerves, and, though he connects the blood-vessels with the heart, he has no idea of the circulation of the blood. He regards the brain as the organ of cooling (On Sleep, ch. ii.). 'The heart is at once the physiological and psychological centre of man and, according to Aristotle astray, see Ogle, On the Parts of Animals, p. 163.) Galen (b. A.D. 130) is the first certain user of vivisection, and his writings are 'the common depository of the anatomical knowledge of the ancients. Accurate knowledge of physi- ology is given by Foster, History of Physiology, p. 12 f. No work of great importance in physi-ology was done between Galen's time and the 10th. cent., when the Fabrica Humani Corporis of Vesalius was 'the beginning not only of modern anatomy, but of modern physiology' (Foster, op. cit. p. 10, who traces the development of physiology through the 16th, 17th, and 18th centuries).

3. Body and Mind.—The problem of the relation of body to mind is of fundamental importance to a large group of sciences. Since the dawn of modern philosophy in the Meditations of Descartes, the question of the relation of body and mind has been continuously under discussion (Ward, Naturalism and Agnosticism, 11, 4). The chief difference between ourselves and the primitive thinker is that we have narrowed the problem to the relation between the nervous system (more especially the cerebral cortex) and consciousness. The full discussion of this problem, however, belongs more properly to the articles on Brain and Mind, Mind, and Psychology.

A summary review of the positions taken by some typical thinkers will serve to introduce the modern aspect of the problem. Descartes (1596-1650), starting from the existence of the thinking thing, and arguing to the existence of body (in general) as the extended thing, maintained, though in marked contradiction to the general principles of his system and to his treatment of virtue and concupiscence, the identity of mind and body in man. He assigned their point of contact to the pineal gland—a small body about the size of a cherry-stone, which lies between the upper quadrigeminal bodies of the brain, and is connected with the optic thalamus—since such a single organ might correspond to the dualism of ideas from the double sense-organs (Les Passions de l'âme, art. xxxi. f.). Here, as the chief seat of the soul, he supposed mind to influence body, and body mind. Genuinex (1625-1669)—cf. Malebranche (1638-1716)—abandoned the theory of interaction for that of 'occasionalism,' which asserts that God causes the changes in the body corresponding with those in the mind, and vice versa. Leibniz (1646-1716) introduced the conception of 'pre-established harmony,' which rejects both an external world and the duality of mind and body. Descartes's notion of mind and body, which he developed from his Divinely created correspondence of mind and body, like that of two clocks keeping perfect time. Spinoza (1632-1677) made the problem more distinctly metaphysical by his treatment of thought and extension, and attributed his problem to the unity of one substance, God. This metaphysical notion asserts that 'mind and body are one and the same thing, conceived at one time under the attribute of thought, and at another under that of extension' (Ethics, pt. iii. prop. ii. Schel.). Hume (1711-1776) emphasized the mystery of the union of mind and body (Inquiry concerning the Human Understanding, vii. pt. i.), and argued against the alleged causality of mind in relation to body. Huxley (1825-1899) extended the hypothesis of Descartes as to animals into the realm of human consciousness. Whilst holding that 'all states of consciousness in us as in them are immediately caused by molecular changes of the brain-sub- stance,' he considered that 'in men, as in brutes, there is no power of thought or memory, and that the cause of the change is the cause of the state of the organism'; the consequence is that 'our mental conditions are simply the symbols in consciousness of the changes which take place automatically in the organism.' (Collected Essays, 1, 241.) Huxley's theory forms one of the various modern solutions of the problem; but a theory which reduces
conscious experience (including activity) to a series of epiphenomena or "by-products" is not adequate to explain that experience; whilst the denial of mental causation and more specifically of the approved assumption that the universe is mechanical. This is shown most ably by Ward (Naturalism and Agnosticism, Lects. xi. xii.), who in the same context discusses Clifford's "mind-stuff" theory, and the Neo-Spinozism of the "double-aspect" philosophy. The chief modern lines of explanation of the relation of mind and body are those of interactionism, automatism, and parallelism: interactionism, asserting that the causal influence runs in both directions—in sensation from the body to the mind, in volition the reverse; automatism, maintaining that it runs in one direction only—always from the body to the mind; and parallelism, denying all causal influence and holding the relation to be of a different nature. It should be noted that psycho-physical parallelism is frequently a purely descriptive term, to denote the correlation of the phenomena of consciousness with physiological (nervous and cerebral) processes, together with the real distinction between the two series. In this sense, it is doubtless true to say that the most direct and philosophical view of the relation between mind and body at the present day (Baldwin, i. 258). The much larger metaphysical problem of the relation of mind and matter cannot be discussed on the narrow stage of the present article (see art. on MIND and PHILOSOPHY). However completely we might show the dependence of consciousness on the mechanism of the cerebral cortex and the nervous system generally, there would remain the apparent fact that psychical and physical processes are disparate. We must not hastily assume that the laws of the one can be applied without question to the other. The principle of the conservation of energy, however important as a working formula in the physical sciences, has mathematical validity but no philosophical application. On the other hand, we are not at liberty to interpret the causality of mind as though it were the interference of a new quasi-physical force with the working of that particular part of the physical system which forms the human body. The problem is made more difficult by the further proposition that God to the universe, where we have also to reconcile the existence of natural law with real causality; its further consideration belongs to this larger arena. See, further, art. BODY AND MIND.

Practically the problem to be noticed, however briefly, is the group of problems, arising in connexion with the human body, for the student of religion, which receive fuller discussion in special articles. (1) The controversy as to man's place in nature (see art. ANTHROPOLOGY) is now chiefly of historical interest, so far, at least, as the relation of man's body to the animal world is concerned. The modern theologian is usually ready to accept the clear verdict of the scientist that, 'judged by his structure, Man is undoubtedly a vertebrate animal of the class Mammalia,' (Duckworth, Morphology and Anthropology, p. 12). In exact zoological classification he forms the Family Hominidae in the Sub-Order Anthropoidea in the Order Primates in the Section Eutheria of the Sub-Class Theria of the Class Mammalia. In popular zoological terms this classification is usually given to the Gibbons, Orang-utans, Chimpanzees, and Gorillas. This does not mean that these animals actually belong to man's ancestry. "It is practically certain that the modern Similide did not themselves figure in the ancestry of Man, and that they are themselves specialized in a high degree, more specialized in many ways than the Hominide and more specialized than their own ancestors" (Duckworth, op. cit. p. 543). On Man, 'specialisation of the cerebrum has conferred an altogether exceptional development of self-consciousness (op. cit. p. 545). . . . the future modification of the cerebrum will be largely dependent on its blood-supply, which in turn is related to the quality of the cardiac muscle and various physiological factors . . . on what may, in the widest sense, be termed hygienic conditions' (op. cit. p. 546). If we grant, however, this physical relationship of man with the lower animals, then is there, according to the body automatists, a psychological. The close correlation of the extent to which brain and nerve are elaborated in them with the observed degree of their intelligence is found to continue upwards to man himself; if the series is more or less continuous on the anatomical and physiological side, it is natural to expect that the corresponding psychical series knows no hard and fast line. This expectation is confirmed by the study of comparative psychology: 'Through-out the range of the sense-experience, common to man and to the lower animals, there is a gradual transition signifying like nature with ours. . . . It is the framing of ideals, not merely as products of conceptual thought, but also as objects of appetite and desire ever beckoning him onwards and upwards towards their realisation, that is distinctive of man as man' (Lloyd Morgan, Intro. to Compar. Psychology, pp. 365, 379). The practical bearing of this may be seen from the standpoint of biology.

The balance of power between the activity of any organism and its control by the environment is continually altering in favour of the organism. Increasingly we find the organism—be it bird or mammal or man—much more master of its fate, able to select its own environment in some measure, able to modify its surroundings as well as be modified by them' (J. A. Thomson, Heredity, p. 517). In the case of man, this fact has been strikingly expressed by a leading biologist, who calls him 'nature's insurgent son' (Ray Lankester, The Kingdom of Man, ch. i.). 'If we may for the purpose of analysis, as it were, extract man from the rest of the organic world and consider him as a separate entity, and part, then we may say that Man is Nature's rebel' (op. cit. p. 26). Such a conception of man, given, it should be noticed, from the purely scientific point of view, is an implicit recognition of the nature of the relations of theologians to be noticed, the theologian to consider man apart from nature, and to claim for him that unique place in the universe which the higher religions, and especially Christianity, demand. We need hardly hesitate, then, to agree with what Huxley wrote in 1863: 'I have endeavoured to show that no absolute structural line of demarcation, wider than that between the animals which immediately succeed us in the scale, can be drawn between the animal and ourselves; and I may add the expression of my belief that the attempt to draw a psychical distinction is equally futile, and that even the highest faculties of feeling and of intellect begin to germinate in lower forms of life' (Man's Place in Nature, ed. of 1894, p. 152).

(2) The relation of the body to the conception of personality obviously requires some re-statement in the light of the general acceptance of an evolutionary view of man. Hebrew thought in its earlier stages was, that 13; and this belief is not paralleled in the case of the body; even in the theology of the later Judaism the same idea survives in the characteristic insistence on the resurrection of the body as essential to life beyond death. Against this we find an emphasis on the immortality of the soul, which assigns to the body a quite subordinate part. The attitude of St. Paul differs from both: while
he conceives a body to be necessary to personality, he awaits deliverance from this present body in which sin and soul are intermingled, as a result of death, as the origin of a spiritual or 'pneumatic' body, more suited to regenerated human personality (1 Co 15:44, 2 Co 5:17). In the early Christian Church, we gain light on the relation of 'soul' and body from the various doctrines as to the origins of the soul (see Art. Soul), viz., pre-existence (Origen), traducianism (Tertullian), which taught that the soul was begotten with the body, and creationism, which may be regarded as the final normal doctrine, holding that each soul was created by God at birth with the body and all its attributes. Thus, traducianism, has clearly the most contact with the conceptions of modern biology (though its naive distinction of soul and body is no longer possible). The subsequent nature of the individual man, physical and psychical, is now known to be conditioned by the chromosones contributed by spermatozoon and ovum respectively in the process of fertilization. When we ask what this conditioning may imply, this genic problem, like the purely psychological one noted above, brings us face to face with an entire new era in the use of science, the fertilized ovum may contain; all we can say is that from this source, or through this channel, flows the whole life of man (see Art. Life). The subsequent emergence of self-consciousness in the infant, with all that that implies for the mental character of the individual, is a realm beyond the physical. This is the consideration with which we ought to approach the problem as it meets us in the outgoing of man's life. That his personality depends on the body for its present development and expression cannot carry with it any prejudice against the continuance of personality when the body has been resolved into its chemical elements—unless we have silently begged the whole question of the relation of mind and body. As James has urged so forcibly (Human Immortality, p. 24 f.), even though we say 'thought is a function of the brain,' it still remains open to us to maintain that the function is not productive, but permissive or transmissive; in other words, that consciousness finds an organ for its expression in the brain, and is limited rather than produced by it. Under the general condition of our connexion, it is attractive to follow St. Paul's line of thought, and to think of some other 'spiritual body, which may express more adequately man's personality in that life beyond death, which the highest of spiritual life here itself demands (see Art. Immortality).

(3) The conception of the human body in ethical thought and its treatment in practical morals have given rise to a third important group of problems. It is easy for a dualistic conception of man's nature to carry the philosophical opposition of spirit and matter, soul and body, into the ethical sphere; so we may trace the transition from the Platonic view of the body as the prison-house of the soul to Philo's conception of all matter as evil (cf. Pfeiderer, Philosophy of Religion, iv. 5) and to the well-known dualism of the Gnostics and the Manicheans. Such a view is brought home to the practical consciousness of men by the fact that the most intense moral conflicts, especially at the threshold of manhood, are often those between the natural passions of the body and the higher claims of reason and conscience. An evolutionary view of man would explain this conflict as part of the process of man's upward development from a purely animal life; but a dualistic philosophy also provides the true solution of the difficulty. As a practical consequence we have the principle of asceticism (q.v.), prominent in Oriental religions generally, especially in Buddhism, though not belonging to Judaism, and only in its extreme and late development to the Essenes and the Therapeutes. In certain forms of Greek philosophy, notably Pythagoreanism, and the later Neo-Platonism, asceticism was made the condition of deeper philosophic and religious meditation. In Christianity, its special development is connected with Monasticism (q.v.). For the general doctrinal view of the body in relation to evil, see BODY (Christian), 3 (a), and SIN.

In contrast with these applications of dualism, it may be urged that the scientific view of the body is not that. The dualism of the miscellanea: 'Our body is an integral part of our human personality' (Fillingworth, Christian Character, p. 146).

LITERATURE.—A NTHEOROLOGY: see list under article of that name, which should itself be consulted in regard to man's place in nature. PHYSIOLOGY (early history of): Turner, art. Anatomy, in Ebr's; Foster, History of Physiology (Cambridge, 1902). PSYCHOLOGY: the relation of mind and body is discussed in most of the general literature of the subject (see list under art. Psychology), but the following in particular may be named: Bain, Mind and Body (1873, London); Huey, Animal Automatism (1874, in Collected Essays, Eversley series, 1901, London); Le Conte, Evolution and Its Relation to Revelation, 5 vol. (Puddington, 1873, London); Munsterberg, Grundzüge der Psychologie (Leipzig, 1901); Royce, The World and the Individual, 5 vol. (New York and London); Baldwin, art. 'Mind and Body,' in Dict. of Philos., ed. rev., vol. iv. (St. Louis); Diet, Principles of Psychology, ch. ii. (Eng. tr. by Manscora, 1903, London); Ward, Naturalism and Agnosticism, 1 vol. (London); Stout, Manual of Psychology, 2 vol. (Eng. tr. by Manscora, 1903, New York and London); Stoughton, Manual of Psychology, 2 vol. (Eng. tr. by Manscora, 1903 New York and London); Calkins, The Perilous Problems of Philosophy (1867, New York and London).

H. WHEELER ROBINSON.

BODY (Buddhist).—The Buddhist attitude towards the body has been summed up as follows: (1) the body, whether of man or animal, can never be the abode of anything but evil; (2) final deliverance from all bodily life, present and to come, is the greatest of all blessings, the highest of all boons, and the most satisfying of all aims.

The body is regarded as an 'impure thing and foul.' It is likened to a wound, a sore; it lies to be borne about, but, because of its character, there must be no clinging to it. It is thus borne about for the sake of righteousness. The body is the old worn-out skin of a snake. It is a dressed-up lump, covered with several layers of sickness . . . the heap of corruption. All evil passions proceed from the body. There is no pain like the body; hunger is the worst of diseases, the body the greatest of pains. The weakness of the body is sometimes emphasized, it is a fragile, like a jar; in death, 'I will be gone from the earth, despised, without understanding, like a useless log.'

It is 'disgust' (nibbāna) for the body that is the motive for puññatāya—but that, the 'going forth' from house life into religious life—and also for the layman to sit looses to the things of the world. Gautama was led to 'go forth' for this reason. He used to consider with himself the facts of age, disease, etc., until he determined to escape them. A later amplification of the same idea is the story of Gautama's driving through the town, of famine in the body. The emperor of Buddha sees the body only as it really is, and consequently goes to

nirvana. The noble Yasas left his house because he saw the female musicians asleep—one would think it was a cemetery one had fallen into. Mental exercise of this description is frequently given as a specimen of right meditation. The idea of dying, of suffering, the idea of demons, etc., is to be kept before the mind when a good point of meditation occurs. Yet bodily deformity, physical infirmity, or a maimed limb disqualified for pabbajja ordination.

The idea of 'disgust' with the body is set forth in Gautama's 'burning' fire-sermon, delivered on a hill, Gayáśika, near Gayá.

Everything, O monks, is burning. The eye is burning; visible things that are visible are burning by contact with visible things is burning—burning with the fire of lust (desire), emnity, and delusion, with birth, death, grief, lamentation, anger, despair, and despair. The ear is burning; sounds are burning; the nose is burning, odours are burning; the tongue is burning, tastes are burning; the body is burning, objects of sense are burning. The mind is burning, thoughts are burning. All are burning with the fire of passions and lusts. Observing this, O monks, a wise and noble disciple becomes weary of (or disgusted with) the eye, weary of visible things, weary of the ear, weary of sounds, weary of odours, weary of tastes, weary of the body of the mind. Becoming weary, he frees himself from passions and lusts. When free he realizes that his object is accomplished, that he has lived a life of restraint and cleanliness, and is delivered from re-birth.

One of the difficulties in the way of right thinking, without which nirvana cannot be attained, is lack of training in the 'management of the body', which is with- held, deliberate, and in lack of training in conduct, or thought, or wisdom, causes the thinking powers to be brought into play with difficulty, or to act slowly. It is the 'eye of flesh' which prevents perfect insight, and only by its removal can the desired end be obtained.

The body is the sphere of suffering:

Now, this, O Skikaka, is the noble truth concerning suffering: birth with its attendant pain, disease with its attendant pain, death is painful. Union with the unpleasant, separation from the pleasant, and any craving that is unsatisfied is painful. It is also the body which is the origin of suffering. The 'noble truth' on this subject has been summed up by Professor Rhys Davids as 'the lust of the flesh, the lust of life, and the love of the present world.'

According to the teaching of Buddha, suffering, subjectively, is desire, in all its varied forms. But desire originates from passion.

Buddha said: "Passion and hatred have their origin from the attachment, the desire, the horror arise from this body, arising from this body, doubt as to the mind as boys vex a crow."

"These have been recognized as causes for name and form for him good, for him evil, for Brahman, for him there are no passions by which he might fall into the power of death."13

One of the suffering lies in embolishment, or matter, and consequently the human body is looked upon as a contemptible thing.14

Complete release from suffering is possible only by emancipation from body and matter. Therefore the 'elements of existence' (upadhi) must be destroyed:

Knowing the step (of the four truths), understanding the Dhamma, seeing clearly the abandonment of the passions, destroying all the elements of existence (upadhi): one can wander rightly in the world.12 The elements of existence (upadhi) are overcome by thee (Buddha). He who, being ignorant, creates upadhi, that fool again undergoes pain; therefore let not the wise man create upadhi, considering that this is the birth and death of pain.12 Metta is a delight, without these words of the great I; well expended, O Gautama, is (by thee) freedom from upadhi.12,14

Emancipation from bodily form is therefore the

**J. H. BATESON.**

**BODY (Christian).**—1. The New Testament generally.—The New Testament ideas on the subject of the body are rooted firmly in the soil of Old Testament teaching (see Gn 2', Ps 63', Ezk 44' 4, Mt 25' 12; Christian). The body and soul are frequently thought of as a unit, as seen in Greek philosophy, between body and soul, matter and spirit, is far removed. As in the older Scriptures, the unity of the human personality is the fundamental feature in the conception of man. At the same time this unity is recognized as resting upon an underlying duality; man is conceived of as a complex being with a lower and a higher part, by one of which he is linked to the life of nature, and by the other to the Spirit of God.

In the Hebrew psychology 'flesh' (גוֹזֹן) was the prevailing notion concerning the body, 'spirit,' and 'soul' (נוֹשֵׂעַ) for his heavenly part, while 'soul' (נוֹשֵׂעַ) was the union of the two in the living creature (see esp. Gn 25). There was no proper Heb. term for 'body,' precisely because the Hebrews, with their psychological ideas of man's earthly life, used no single word to denote the bodily organism considered by itself. When we look to modern man we find a somewhat similar terminology, which has come in through familiarity with the LXX version, and is thus indirectly due to Greek influences. 'Body' (רָכֵב) and 'soul' (רוֹעֶשׁ) (םוֹרֵא) are nebulous terms that can hardly be distinguished, to express the whole inward or spiritual nature (e.g. Lk 1' 47; Ph 1' 21). The term 'body' (גוֹזֹן), again, has now come into general use, and is employed in connexions which make it practically synonymous with 'flesh' (גוֹזֹן) (cf. 1 Co 15' 58 with Col 2', 2 Co 4' 20 with 2', 2'. But, even so, body and soul, flesh and spirit are sharply antithetical terms in the sharply antithetic fashion of the Greek philosophical dualism. If the terms are used at all, the idea is still present that a soul ordinarily means an embodied soul, and a living body is always conceived of as an ensoled body. The emphasis within the idea of personality, it is true, has shifted more and more from the inner and spiritual side; existence, and even a blessed existence, is consistent with separation from the body.—St. Paul thinks of an absence from the body which is yet a presence with the Lord (2 Co 5'). But the old Hebrew view of the essentiality of the body to human nature in its completeness is asserted afresh in the doctrine of the resurrection, which had become familiar to later Jewish thought, and asserted now more emphatically than before through being confirmed from the present world of things seen and temporal into the unseen and eternal worlds of the coming age.

2. Christ and the Gospels.—When we descend to the living body of Christ, we find that there are two great lines of evidence which assert and confirm the importance for the NT doctrine of the body. The first comes from Christ and the Gospels. And here, as everywhere in the NT, the evidence points in two directions, one part of it serving to exalt more than heretofore the worth and dignity of man's physical nature, the other to show the subordination of that nature to the claims and uses of his spiritual being.

(1) In the first place, we find in the revelation of Christ's life and teaching a new and deepening exaltation of the body. (a) The fundamental fact here is found in the Incarnation itself, in the Word made flesh (Jn 1'), in the Son of God becoming the man Christ Jesus (Mt 1' 17 etc.). In the OT the soul is delimited as distinct from the body and spirit. In the NT the body is raised to a dignity surpassingly higher, by the habitation in it and incorporation with it of the very Word of life (1 Jn 1' 5).—(b) It will be seen that this exaltation is an historical truth. For this life without fault or stain, lived in the body, disposes at once and utterly of any idea that there is something essentially evil and degrading in the possession of a physical nature as such. It shows that body is not hostile to spirit, but that, on the contrary, the two may be joined together in a solidarity so true and harmonious as to become a perfect instrument for doing God's will upon earth. (c) Very significant, too, is the fact of Christ's joy in living, and His freedom from that ascetic temper which is nothing else than dualism in one form or another. He ate and drank, His practical life was one of eating and drinking, and was so far removed from a false spiritualism, with its one-sided otherworldliness, that His enemies even accused Him of sensuality (Mt 11'). He loved the scenes and shows of nature as they spread themselves before His eyes, and, so far from treating them, like some good men, as cunning traps for the unwary soul, saw in them tokens of God's presence and foretastes of the glories of the Kingdom of heaven (Mt 13'.)

(d) Parallel with this was His constant recognition in other men of the valued claims of the physical nature. He never sought to ignore or disparage what belongs to man's natural life; He came, as we read in the Fourth Gospel, not to kill or steal or destroy, but that we might have life, and have it in all its fulness. The works of healing, which formed so large an element in His public ministry, are the standing proof of this attitude of Jesus to the physical life of man. Here, too, must be considered—as contrasted with the Jews'—the conception of the mind of the Church—His vindication of marriage as forming a part of the Divinely appointed order of human society (Mt 16'); cf. Jn 20'); and further, as flowing from His approval of marriage and parenthood, His loving recognition of little children, and the place He assigned to them in the Kingdom of God (Mt 19' 10'.)—(d) The resurrection of Jesus Christ and His ascension to glory are the culminating proofs offered by the NT of the value and dignity of the human body. He not only rose with the one body, but, when He reappeared on the further side of death, resumed a life of physical conditions (Mt 28' etc.), and carried the human body with Him to the right hand of God (Lk 24', Ac 1'). For the Christian doctrine of the body this is the truth of highest significance—making the doctrine one that applies to both worlds—that, as on earth so also in heaven, as in His humiliation so also in His exaltation, Jesus Christ continues to live the life of the body as well as the life of the spirit. This exaltation of the body, the evidence which comes to us from Christ and the Gospels points always to (a) the subordination of the body to the soul. Although by word and deed, by the facts of His history and the very constitution of His Person, Christ asserted the worth of man's physical nature, it was a fundamental part of His teaching that what is highest in our personality must be sought in the inner nature, and that the body must be kept in a due subjection to the authority of the spirit. Fear (Mt 10'), which is 'a spirit of flattery,' but not able to kill the soul (Mt 10'); cf. Lk 12'). And in some of His most solemn utterances He taught that the outward world, which makes so strong an appeal to our physical senses, is worth nothing whatever in comparison with those spiritual interests and possessions on which our true life depends (Mt 16', Mk 8', Lk 12' 14'). He was no teacher of asceticism, as has been said, but He declared, nevertheless, that God's Kingdom and righteousness were the first things which the heavenly life seeks (Mt 6'), and that those who are engaged in this high quest may sometimes find it needful to pluck out the right eye or to cut off the right hand (5'14'). And whatever further meaning lies enfolded in His agony in Gethsemane and His death upon the cross, they were at all events an affirmation

*Sutta Nipata*, pp. 353-348.
for all time the truth that the life of the body must be freely yielded up whenever this becomes necessary in the service of Divine purposes, and that the spirit must be willing even though the flesh is weak (Mt 26:38).—(b) Again, the evidence points to the provisional character of the earthly body. Christ sanctioned marriage, as we have seen, and declared it to be an ordinance of God's appointment; but when the Sadducees endeavoured to discredit the doctrine of the resurrection of the body by pointing out a perplexing situation to which it might lead under the Jewish marriage law, He declared that, 'when they shall rise from the dead, they are not married nor given in marriage; but are as angels in heaven' (Mk 12:25). Clearly this was an announcement of a resurrection life very different from the present life in flesh and blood. It implies the possession of a body more spiritualized than the present one, and adapted to conditions far removed from those of our earthly life. And what was thus foreshadowed by Christ's words was ecularly proved to His disciples by His post-resurrection appearances. It was the same body they had hid in the tomb which now presented itself to the form which they had seen when the Lord of Christ had failed to recognize their Lord (Ac 1:24). And yet it was a different body—freed from the familiar earthly limitations and possessed of new and higher capacities and powers (Lk 24:13-48, Jn 20:26). The same body which, when as a creature of natural soul, had subdued it to its own uses, that the natural body of Jesus had become a spiritual body. The invisible world was now its proper home, and it was only when He chose to 'materialize' Himself (as a student of psychological research would say), to 'manifest Himself' (as the author of the Fourth Gospel expresses it, Jn 20:16-17), that His disciples were able to perceive Him by their natural senses. It was in this spiritual body that the risen Christ ascended to His Father. And it is this spiritual body of the risen and ascended Christ that becomes for His disciples the type of that glorious body which, in their case also, is to take the place of the present body of humiliation (Ph 3:21).

3. The Pauline anthropology.—The second great line of evidence comes from the Pauline anthropology. It is here that we find the great bulk of the direct NT teaching on which the Christian doctrine of the body is based. Now, in regard to St. Paul it has often been assumed that he was not so informed and influenced by Hellenistic influences, and that he sets up a hard dualism between matter and spirit, between body and soul (cf. Holtzmann, NT Theol. ii. 14 f.). But so far is this from being a correct statement of his position, that it might rather be affirmed that the Apostle is nowhere more closely in line with the OT psychology than in his teaching on this very subject. For him, too, as for the other writers of the NT, human nature is not an irreconcilable antithesis of matter and spirit, but a psychophysical unity. In which, however, the body, as the part that links man to nature, takes a lower position than the soul or spirit, by which he comes into relation with heaven and God. St. Paul's doctrine will become apparent if we consider his utterances on the relation of the body to sin, to death, to holiness, and to the future life.

(a) The body and sin.—It is at this point that the argument for a positive dualism in the Pauline teaching, due to Greek influences, appears most plausible. There can be no question that the Apostle often speaks of the body and its members, not only as instruments of sin, but as a seat and fortress of its power (e.g. Ro 6:19, 7:23)—a way of speaking, however, which is neither Greek nor dualistic, but has its roots in OT teaching, and is the direct result of an acute ethical experience. But it has been shown that St. Paul recognizes in the body the very source and principle of sin (Pfleiderer, Paulinismus, 53 f.). The argument depends on the interpretation given to the word 'flesh' (σάρξ) in those passages where the Apostle, speaking as a Christian, exalts beyond the limits of the use of the word (Ro 2:9, 2 Co 4:18), employs it in an ethical sense in contrast with 'spirit' (πνεῦμα). According to this argument, σάρξ in such cases simply denotes the physical or sensuous part of man, in which St. Paul finds a substance utterly antagonistic to the life of the spirit, and one whose working makes sin inevitable. But the objections to this view are overwhelming. When St. Paul in Gal 5:24 gives a category of the 'works of the flesh,' the majority of the sins he enumerates—for instance, idolatry, hatred, heresies, envyings—are spiritual, not physical or animal, in their nature. When he charges the Corinthians with being 'carnal' (ἀρσενικὸς, 1 Co 3), it is not sensuality that he is condemning, but 'jealousy and strife.' His doctrine with regard to the sanctification of his readers teaches that the Holy Spirit (6:13-18), would have been impossible if he had regarded the principle of sin as lying in man's corporeal nature; and equally impossible his belief in the absolute sinlessness (2 Co 5:21) of the person who once was a sinner. Even his death could not be recognized, had he given so high and constant a place in his doctrine of the future life, to the hope of the resurrection, if he had conceived of the body as the fons et origo of evil in man. He would rather have been driven to long for its utter dissolution, and to centre his hopes for the eternal future in a bare doctrine of the immortality of the soul.

The Pauline antithesis of flesh and spirit, then, cannot be interpreted as amounting to a dualistic opposition between man's body and his soul, his material and his immaterial elements. Here, as everywhere else in Scripture, the real antithesis is between the earthly and the heavenly, the natural and the supernatural. The Apostle uses 'flesh' to denote man's sinful nature generally; and his reason for doing so doubtless lies in the fact that by the law of ordinary generation it is through his flesh that the individual is linked on to the life of a fallen and sinful race, and so comes to inherit a corrupt nature. St. Paul's teaching at this point is, in line with the indications of the OT, that which is born of the flesh is flesh; and that which is born of the Spirit is spirit (cf. Laidlaw, Bible Doctrine of Men, 119). St. Paul's 'carnal' man is the same as his 'natural' man who received not the things of the Spirit of God, and is thus distinguished from the 'spiritual' man in whom a supernatural and Divine principle has begun to operate (1 Co 2:14; cf. 3:1-3).

But while St. Paul does not find in the body the very principle of sin, he does regard it as in a special sense the seat of evil. When he speaks of the old man being crucified with Christ that 'the body of sin' might be done away (Ro 6:6), when he longs for deliverance from the 'body of death' (7:24), when he refers to 'the law in our members' which wages against the law of our mind (v. 23), it seems evident that he recognizes an abnormal development of the sensuous in fallen man, and regards sin as having in a special manner entrenched itself in the body, which becomes liable to death on this very account (Ro 6:15, 17), and throughout man's earthly life is a constant source of weakness and liability to fall. Hence his determination to buffet his body and bring it into subjection (1 Co 9:27); his summons to Christ's people to mortify the deeds of the body (Ro 8:13; cf. Col
his appeal to them not to allow sin to reign in their mortal bodies, but to present their members as instruments of righteousness unto God (Ro 6:12).

(b) The body and death.—It is in accordance with the dualistic conceptions of the relation of the body to the spirit, and with the dualistic view of the soul, to consider the body as the instrument of death. Even as the soul is dead, the body is dead. In its essence, the body is spiritual, and its essential nature, under its resurrection, is spiritual; but in its present condition it is earthly, and has the marks of the earthly, and is, therefore, earthly and mortal. Yet that earthly and mortal body of Christ, in his spiritual nature, undergoes a process of sanctification, as by day day there pass—Through all this fleshly dress Bright shoots of everlastingness.

And yet this exalted view of the communion and fellowship of the body in the spiritual life of man, and its sensitivity to the power of the Spirit, did not blind the Apostle to the fact, taught him by his own ethical experience, that in the fallen nature even of a Christian man the body is weak and tainted, and ready to become the instrument of temptation and an occasion of stumbling. In this temple of the Holy Ghost there are dark corners where evil spirits linger, and from which they can never be utterly expelled until in death the wages of sin have been paid. If ever there was a spiritually-minded man, St. Paul was one, but even he was deeply conscious of the infirmity of the flesh (Ro 7), and felt the need of subduing his own body, lest, after all, he should become a castaway (1 Co 9:7). And so, side by side with the truth that the body is a Divine sanctuary, he sets forth in his doctrine of holiness the demand that sin should not be allowed to reign in our mortal bodies that we should obey it in the lusts thereof (Ro 6).

(d) The body and the future life.—Here, again, two lines of thought emerge in St. Paul’s teaching—an overwrought sense, on the one hand, of the worth of the body for the human personality; and, on the other, a clear recognition of its present limitations and unfitness in its earthly form to be a perfect spiritual organ. The proof of the first is seen in his faith in the resurrection of the body. The Pneumatistic Judaism in which he was brought up had come to hold the hope of the resurrection of the dead (Ac 23:26), but that was a dim and palpitating hope compared with the living and shining assurance which Jesus Christ had begotten in his heart. To him the present condition of the resurrection of Christ was a fact of the most absolute certainty (Ro 1:4; 1 Co 15:23). And that fact carried with it the knowledge that the dead are raised (v.25). When he writes of Immortality (1 Co 15:51), he does not mean, like Plato, the immortality of the soul (Phaedo, liv. II.), but the immortality of the whole man. He believed, no doubt, that the soul, as the centre of the personality, could survive the shock of separation from the body (2 Co 5:9). But he thought of it in existing in a condition of deprivation and incompleteness, for which he uses the figure of being ‘unclouded’; and he does not regard it as attaining to the fulness of the life and blessedness of the future world until its ‘nakedness’ has been ‘clothed upon’ (v.28). But, while he believed in the resurrection of the body, St. Paul did not believe in the resurrection of the present body of flesh and blood (1 Co 15:50). He looked for a body in which corruption had given place to incorruption (v.44), in which weakness had been succeeded by power (v.51), in which what is mortal had been swallowed up of life (2 Co 5), and humiliation had been changed into glory (Ph 3:21). He was fully alive to the disabilities which the spirit has to suffer from its union with a body that is weak, earthly, and perishable, and his doctrine of the resurrection includes the assurance that when the dead in Christ are raised—of the physical resurrection of others he has little to tell us—it will not be in the old bodies of their earthly experience, but in new ones adapted to a heavenly condition of existence (1 Co 15:35-50), bodies that are no longer psychical merely, i.e. moving on the lines of man’s natural experience in the world, but pneumatic (v.44), because redeemed from every taint of evil and fitted to be the perfect organs of a spiritual and holy life.

4. The Christian doctrine of the body.—Taking
BODY (Egyptian).—i. Man.—1. What we understand by ‘body’ was to the Egyptians simply the last and heaviest of the material coverings which together form a human being. The flesh, *awf* ('flesh' in the sense of the sum of the physical elements) that compose the body is neither of a different nature nor of a different texture from the other elements contained within and completing the person. All the elements possessed weight and were perceptible, though in varying degrees. If on earth we were not all visible or palpable, that was simply a circumstantial detail and not due to any essential difference. Magic often enabled men to see and handle these elements.

J. C. LAMBERT.
The ka, or ‘double,’ for example, was only a second body enclosed within the jibt, lighter, more subtle or more airy, but composed, piece by piece, of the same elements as the body proper. The texts that refer to the future life (see DEATH, etc. [Egyptian]) prove conclusively that the ka in the other world was constituted, in every detail, like the body of flesh which it had occupied on earth.

The habit, or ‘shadow,’ was also only a third kind of body, still more airy, still more subtle, yet of the very same structure as the first two elements of the body.

The khru, or ‘ghost,’ long misled Egyptianologists, through their relying upon hymns or over-refining texts of the Theban period. Books of pure magic or of funeral magic show us that the khru was originally only a kind of body, still more agile perhaps than the other three, and practically similar to the body attributed to jian and fairies in the wonderful literature of the Arabs, or to the body that the modern Bantus suppose to exist in their own society.

The list is not exhausted by these four names: the primitive Egyptians, like a number of modern uncivilized peoples, had a very complicated idea of the human body. A striving after simplicity came only as the slow result of very long periods of effort. What we have got are the clear impressions of the notions cherished by the Egyptians is still, in spite of the antiquity of the texts concerned, far removed from the starting-point. Glimpses of the primitive notions are caught and they have been re-constructed, but there is no direct contact with them. By the time of the historical period several of the multiple bodies composing a single being had been eliminated by speculation or by experience; and it is hard to conjecture, for example, what the shku can have been. It is to save from the theology of the Chaldeans (and with it several Egyptianists of our day) thinks to find in it a designation of the ‘spiritual body,’ opposed in eschatology to the double, the shadow, or the soul. There are also very distinct traces in the ancient texts of an earlier time when the other and the shadow were two of the bodies of the living man. But as yet we do not know clearly what was their exact nature.

The conjunction of all these bodies made a human being. What we call death was only the sudden removal of them, and was an event which, as among primitive peoples, to some violent censure, arising from the personal act of an evil being (see art. DEATH). What kept all these bodies together in a unity during life was something more subtle, lighter, more active than any of them, something which constituted, at least approximately, the personality or the self. There is no race that has not tried to penetrate more or less into the definition of the latter; and there is no inquiry that has given rise, in primitive religions, to speculations so gratuitous, so indirect, as the conception of the self. As for the Egyptian, he thought to find its nature and power in what he called the ren, which we translate so unsatisfactorily by the word ‘name.’ The ‘name’—we must be content to use this very ambiguous equivalent—is a quite different thing from the body, since the whole series given above is only, as has been said, a sort of ‘gamut’ of increasingly fluid bodies.

The nature of the ‘name’ in itself is too important to receive due treatment here incidentally. The theory of the name ‘cardinal to the mental basis of more than half of the religious ideas of Egypt. It will be discussed fully under art. NAMES [Egyptian]. Here we shall merely say as much regarding it as is necessary in order to understand the Egyptian ‘body.’

As far at least as we can gather, ‘names’ were originally what we may call ‘kernels’ of energy, vibratory, perhaps luminous (of course, material), distinct from and incapable of dissolving into the body itself. They has its own peculiar vitality, in the midst of the great chaotic mass of primordial things. The solar theology, such as that of Heliopolis, revised and corrected the ideas, gave the name the importance of the ‘stems’ and ‘dermure’ of the plant, as originally emanations, vital waves proceeding from the rising sun. These entities, distinct and irreducible, then ‘clothed’ themselves, in or out of doors, in more or less weighty coverings, which are these bodies of which we have spoken, the hard or the soft material of the latter being what we moderns mean by the ‘body.’ How was this ‘clothing’ brought about? Was it by a kind of solidification of the cosmic ‘ether,’ which, being incomprehensible, were supposed to remove a part of the physiological life round the ‘names’? If Egypt seems to have had a confused idea of some answer of this kind, she naturally could not find it only half hidden, in the smoke and lanccum, like so many strange systems of primitive or uncivilized peoples in other parts of the world. The historical period tried to introduce some appearance of a living world. It got hold of the early legends about the world of the lucifer, the world of stone, or of other substances; and the whole together had constituted the creation. Thus revised by theology, the nature of the solar ’sphires’ seemed to transform them into barbarous; on closer examination, the ren, or ‘name,’ was something like a theos, or a genealogical tree, with their special characteristics—and particularly ‘numbers,’ which the voice can reproduce if there is ‘attunement.’ One cannot help remarking that, many centuries after, the Gorgon made ‘numbers’ the basis of his system, and it is only reasonable to wonder what part ancient Egypt played in this.

The theology of the Khnum is that all creation is organized by the ‘names,’ the world of bodies and beings thus set in progress continued and reproduced itself by its own activity. This fits too indubitably with the fact that this is due mainly to the fact that nine-tenths of the Egyptian religious writings, do not possess to-day a meaning, at least, of the other world. The information we get from such texts is enough, however, to let us see that the vital principle of the body, this ren, which is equivalent of the individual personality, pre-existed before the body and its physiological elaboration by the parents of the new being. We do not know very well where it came from, according to the idea of the Egyptians, or what it was before the existence of a body for it to inhabit. But the ren usually arrived on an understanding, by studying the birth-ceremonies (or the ceremonies of the action of kings, which give them a new soul), and we got a glimpse of the combination, or vital share of the elements in which it apparently arose. Horoscopes, or the supposed relations between the condition of the world at the birth of an individual and his ‘name’ have been determined to determine the possession of the name conferred on a newborn child according to the natural phenomena in evidence at his appearance; the anxiety to choose a name: these groups of ideas are the reflection (they make his ‘self,’ with divine persons, with ‘names’ of gods—these things are only means) to re-construct Egypt to our minds, as it was thought as a whole, at least to imagine almost exactly what it was. At the birth of a child the Egyptian sought by every means to discover which group of gods, which deities permitted it to exist, and what the influence which belonged which had just formed the person of the new being. He aimed at reproducing with his voice its vibrations and its conformation, the signs which given by this to the higher beings whose protection must be obtained or whose destiny may suffer interference.

And as the Egyptian tried to do this for his own children, so he also tried to get to know the ‘names’ of the gods of or of formidable beings. The hermetic books or the books connected with the treatment of the dead, taught these names; and those who knew them exercised indubitable power over those who bore them (see art. NAMES [Egyptian]).

The ‘name’ and the series of ‘bodies’ (the body of flesh, the double, the shadow, the ghost, and the shku) together constituted a complete being. These were the only ones to which the Masonic system referred. As yet there was only a being capable of living, only the possibility of life. In these religious systems, what we shall call, for want of a better name, the ‘exercise of life’ does not result from the ‘existence of the body’ or the ‘power of the soul’ or what takes its place. It is the product of forces peculiar to the being to be animated, and it is enough if the being that these powers are going to animate is completely fitted to receive them. This is shown very clearly, momentarily, according to some Masonic books, by the body, the life of which is covered by the hand of man, which are nevertheless treated in Egyptian religion precisely like real bodies. The most ancient rituals show us that it was usual to perform a series of magical operations to enable the eyes of a statue to see, its ears to
BODY (Egyptian) 765

hear, its nose to breathe, its mouth to eat, and the other organs to fulfil their functions. And if to the development of these, we add the traces—though certain traces—of many of these old rituals, it has at least kept intact the long ceremonial of 'the opening of the mouth' (neppt-ro). We need not study these rituals here, since they dealt only with artificial bodies created by religion for the service of its gods, its kings, or its dead, or with bodies made by the magicians for the service of their 'magic spells': dolls or images of men and animals in wax, wood, earth, etc., made into 'living bodies' by the sorcerers, the thummaturgists, the scribes, the artists (hâti, and Turam Papyri). But the way in which the Egyptians conceived the necessity of enabling a statue to use its organs, after making a soul enter into it, is nevertheless a proof of what it is of interest to keep in mind for our present study, viz., that the union of the animist principle, ran, with its coverings was not enough to initiate life.

Life itself (sa^nkhu) was the result of the entrance into the body of those vital breaths which exist in all Nature, and which the air carries and the breeze distributes. These breaths enter by the nostrils, not by the mouth. Like the majority of African races at the present day, the Egyptians breathed through the nose; and in their language the breath of the nostrils was synonymous with life. They looked on them living, the nose and never to the lips, that the gods or kings in iconography hang the chains or bundles of 'handled crosses,' which are intended to signify, by a play of pictorial words, the breaths of life. Thus they penetrated within the coverings which constitute the body. It was supposed that there mixed with the blood, in the form of a kind of gas or bubbles, and circulated by the blood-vessels through the whole human system. Under their beneficial influence, the 'vessels swelled up and worked regularly.' Life accordingly served to maintain the conjunction of the various bodies adjusted within each other and the 'name.' It was, therefore, as necessary to the 'name' as to the series of bodies.

We usually translate the Egyptian phrase sa^nkhu ran by 'give life to the name of.' The translation is somewhat poetical and seems to be connected with ideas familiar to us, but it is one of those mistranslations. The word is 'self' breathe the breaths,' and this leads us to conceptions far removed from ours.

2. Once we leave the medical point of view, Egypt has preserved very few details as to her ideas of the body during its existence on earth. For although we have from the point of view of medicine a veritable superfluity of documents (we need only note among others the Berlin, Ebers, and Amherst Papyri, and those found by Petrie in the Fayyûm), the other Egyptian writings have little to do with the living body. All the moral and religious literature is exclusively occupied with what happens to the body at its physical death, with whatever has a bearing on bodily functions. More popular than the treatises or the writings of pure magic remain as a relative source of information on the subject.

It could hardly be otherwise with a religious civilization which evolved the above-mentioned conception of life and of individuals. Ideas composed in the way described cannot, either in rituals or in treatises, be brought into connexion with subjects that bear on ethics, morals, or the respective values or opposition of the soul and the body. There is, like asceticism, for example, or systems of the type of metempsychosis, avoiding by their very definition the Egyptian thought of the classical period. Hence the information as to the living body that we derive from the monuments and the religious texts of Egypt will be confined to specifications as to how the body may be affected by disease or cured (and this belongs to the domain of healing already traced)—it is to be adorned, clothed, or tattooed (and this is almost exclusively a matter of archeology); or incidentally we shall find detailed information about such and such a part of the body, and about such and such particular organs. Thus, in connexion with a special literary episode or magical operation, the texts tell us in passing what the Egyptian ideas were in regard to the various specified organs of the body; and these are the only ones of fundamentals that are of any interest in our present study.

We need not attempt to give a full account here. Certain elements of the body are scarcely mentioned by the Egyptians outside of medical treatises. In the latter, on the other hand, we find long lists of 'the twenty-two vessels of the head,' the two vessels of the breast,' etc. As regards the rest of the writings, when it is said of the heart (hâti, lit. 'the beater') that it is opposed in the economy to the liver (na^s/hu,it, lit. 'the motionless'), the entire source of life to the eyes there is a great deal more that we know of others, or organs of other bodies. Thus, the eyes have a special magical power; they fascinate and overpower by the fluid they dart forth; they repel harm or evil spirits if they fix on them living. In the nose, too, the nostrils increase their keenness exceedingly—even to the extent of enabling its favoured ones to see what the eyes of mortals do not in ordinary circumstances distinguish: invisible spirits, characters written inside a sealed roll, and innumerable other things. The mouth is an ever possible entrance for demons, phantoms, and spirits, who are always prowling round people and trying to get into their bodies. The magic or cognate writings carefully note this constant danger, and it is undoubtedly one of the strongest reasons that led the Egyptian to breathe by the nose. It is well known that, amongst many uncivilized peoples, kings and chiefs have a great aversion to being seen during meals. A long time ago the true explanation was offered—an explanation based on primitive ideas, namely, that the dread least spirits and malignant influences might enter by the mouth. It is very probable that the Egyptians shared this fear; and if conjecture is right, although it cannot be proved formally for the kings, the idea is clearly one of the anxious superstitions that the meal served almost secretly in the interior of the naos to the living bodies which are the statues of the gods.

Other parts of the system are the seats of more distinct manifestations or principles. The integrity and healthy state of the bones are apparently one of the conditions essential to the harmonious working of the vital functions. The Egyptians seem to have had a strange idea that the disorganization of the system attacked by illness or death began in the bones. It is a popular notion, which constituted somehow or other a vital reserve of special force. But this special point has received little attention as yet, and what has just been said is suggested with the greatest reserve, pending more minute study of the ancient religious texts.

We are a little more certain, on the other hand, of the Egyptian idea that the top of the vertebrae column was the precise point at which certain magic fluids or certain energies could penetrate into the body. The bestowal of the vital or healing fluid (sw) by the gods or their representatives, laying their hands on this point of the neck, is a scene reproduced in thousands of examples in the Egyptian monuments; it is enough to mention it here. The inside of the skull is the chief habitat
of that sort of agile principle which the Egyptian calls \( \text{ba} \), and which is represented sometimes in the form of a leaping or a wading-bird, sometimes in the likeness of a bird with a human head; it was thought sometimes to show itself in the form of a bee. We translate it by 'soul' (q.v.); but that is only a rough approximation, given only because it is necessary to have a word to represent it. \( \text{ba} \) is neither one of man's bodies nor a kind of radio-active substance like the \( \text{ra} \): we can hardly compare it to anything but those little genii or 'spirits,' sometimes one, sometimes several, that so many savage peoples locate in the nape of the neck and in the brain, and which are believed also—and the texts have preserved the trace of it—that a man had several \( \text{ba} \) (plur. \( \text{bis} \)) as he had several \( \text{ka} \). At the historical period, this complicated privilege was reserved for the gods and their heirs. This 'soul,' moreover, was so material that dead gods could sometimes catch it and feed upon it.

All this is only approximate translation, and necessarily so, when we attempt to reproduce in our precise modern terminological material distinction and appearance in the text, and yet have to use the same word for it and for the \( \text{ba} \) soul. It is an obscure soul, connected specially with all the manifestations of feeling and passions—impulsive, the generator of movements and of good or bad action. What is certain is that it is a soul with its own peculiar existence and activity. Originally, at least, it existed on its own account—until the time when the progress of Egyptian thought and its striving after psychological unity made the souls of the individual connected to the terrestrial \( \text{ba} \) (for more detail, see art. \( \text{Heart} \)). If the Egyptians had precise ideas on its origin, it would appear that the soul of the \( \text{ab} \) was believed to come from the vital substance of the mother (cf. \textit{Book of the Dead}, ch. xxxvi.). The ancient texts published at the present day do not enable us to give us an exact appreciation of the ideas attached to the \( \text{jesu} \) (vertebrae?), the \( \text{bekas} \) (kidneys?), and the \( \text{samun sou} \) (vessels?). We can only guess that some vital reserve force was located in these parts. It was chiefly conceived under the form of powers, 'knowledge of magic names,' and other sensitive or mental manifestations, as material emanations and, to a certain extent, as a kind of special soul. The rest of the individual is not marked by anything of special interest. The sufferings attaching to the hair, the ears, the teeth, the hands and feet, are only details, and do not bear so much upon the fundamental magic of the religious ideas as upon popular superstition, the contents of which are dissolved and re-fashioned at all periods. We should note only the continual care to protect the various parts of the body, as with magic armour, against the possible attacks of evil spirits: hence the customs relating to amulets, the use of perfume, the whole system of perfumes. The body is also connected, in the period of civilization, with the taste for physical adornment, and give rise to the greater part of jewellery (necklaces, bracelets, rings, etc.) and perfumery (ointments, paints, unguents, etc.).

Circumcision is connected with this group of ruling ideas, but it will be treated in a special article because of its importance (see art. \textit{Circumcision}).

To complete our survey of ideas of the human body, we note the following: (a) The link between the various material bodies may be temporarily broken during the earthly life, under the influence of certain forces voluntarily employed or involuntarily submitted to by man. A magician, for example, can by means of set formulas send his 'ghost' or his 'double' far away to perform some deed or other. Or it may happen to an ordinary mortal—usually during his sleep—that his 'double' leaves his body and wandering in some other place, in the form of a body of flesh and bones more or less visible and tangible. As among all peoples, dreams and apparitions are the pseudo-experimental proofs of these ideas, and the Egyptian notions about sleep, lethargy, and syncope differ very little from those found almost universally.

(b) During the whole of its terrestrial life the body is subject to whatever astral or natural influences prevailed on the day when it made its appearance. The whole body, with all the influences to which the \( \text{name} \) is submitted, and of which we have spoken. The calendar, the horoscopes, the thousand particulars noticed at the moment of birth, may serve to determine this influence and, to a certain extent, may make it possible to prophesy the fate of a child (cf. \textit{Sallier Papyrus}). The study of them determines what precautions must be taken when the conjuration of evil influences proper to such and such a body shows itself anew.

(c) Both during the terrestrial life of the body of flesh and after it, the fragments taken from its substance, its perspiration or its excretions, retain to a certain degree the force of the vital fluid of the whole individual. In Egypt, therefore, as in so many nations, we find those beliefs in the virtues of nail-parrings, hair- or beard-clippings, and of the cloth soaked in the perspiration of some individual, which played such an important part in magic and necromancy. The fluid emanation of the living body may even communicate something of the life and the powers of the individual to the clothing he has worn, and especially to ornaments, arms or badges that he has had in his hands. This idea, which can be found among several African peoples, appears even more clearly in regard to objects connected with the king's attire. He is supposed to give them a sort of 'crown,' e.g., to the power given by the king of Dahomey to his cane or sceptre.

3. A last remark is necessary in connexion with these characteristics of the body among the ancient Egyptians. When investigating the idea cherished by any one of the non-civilized races as to the body, we are able to determine its characteristics accurately enough, because we have under our eyes a population in most cases restricted in number or area, and belonging, as a rule, well at the very time when we are examining it. But we must not forget that, in the case of Egypt, we are dealing with a civilization which has, in time and space, had several different religions, each with its own evolution. These ideas of the body are distributed throughout a historically ascertained series of thirty-eight centuries, having behind it, according to the traditional texts, a pre-historic mass of documents impossible to evaluate, but certainly the product of a considerable number of centuries. Further, these ideas are not for any one period been the same in the whole of Egypt. The Helopolitans did not form the same conception of the body as the Thelban, the Hermopolitan, or the Mendesian. Consequently it is not the absolute
theory of the Egyptian ideas on the body that is given in this article. It is rather a general view, in which it is possible to shade off or accentuate different parts of the question according to the particular ideas concerning the body of an Egyptian of the Ptolemaic period, a Saiite, a Thelban, a Menaphite, a Thinite, or a man of the pre-Thinite period of some province in the Nile valley. But if we desire to gather from the whole the essential physiognomy, and to look for the distinctive characteristics of the primary notions, we shall come very near an exact expression of the early Egyptian ideas on the body if we say that it is a confused conglomeration of substances similar in nature, but of different qualities, of which the ancient Egyptian had a full knowledge, but was in fact continually united by the 'name'. The whole is set in motion by a multiplicity of 'spirits,' with no fixed mutual cohesion, and originally peculiar to a certain part or physical manifestation of the individual. Upon the whole, it is a body very similar to what is revealed to us by scientific inquiry (if not alike in every point, at least identical in the main) among the least civilized peoples of our times, such as some specimens of the non-Aryans of India, the Batikats, the Caribs, the most落后 of them all of a certain.

ii. Animate creatures or inanimate objects.—It would appear that, in a general way, without entering into exact detail, the rest of the bodies in the sensible world were considered as having the same nature as the Egyptian birds and in general as philosophical this applies not only to animals, but also to vegetables, and even to such things as a stone, a rock, an expanse of water, or any object made by man. The religious, magic, and popular literatures present sure examples with reference to the 'double' or the 'name' of a tree, a pillar, or a staff—to mention only these cases. The only restriction that must be noted is that, since it was dealing with objects of less interest than men, theological speculation took less trouble to describe their nature accurately, and to reconcile the contradictory data of their origin. One thing is certain, viz. that there was no essential difference in the structure of all things in the material world—from the inanimate object to man. All are, a priori, of the same organization, down almost to the degrees of their qualities.

iii. Gods.—1. In a country like Egypt this same unity naturally applies to divine beings. In fact, there is no dogmatic definition marking off the deity. The gods originate, not owing to the possession of the 'double' or the 'name' of a tree, a pillar, or a staff—to mention only these cases. The only restriction that must be noted is that, since it was dealing with objects of less interest than men, theological speculation took less trouble to describe their nature accurately, and to reconcile the contradictory data of their origin. One thing is certain, viz. that there was no essential difference in the structure of all things in the material world—from the inanimate object to man. All are, a priori, of the same organization, down almost to the degrees of their qualities.

2. There remains, however, a problem ill solved, or, rather, ill stated. The human being necessarily possesses only one body of flesh—one single combination of substances. But we say that each Egyptian god possessed several bodies simultaneously, each one of them animated by some of his 'souls,' and by a part, or rather an emanation, of his 'name.' On the other hand, other texts or pictorial representations seem to imply that the divine beings possessed only one body of flesh, but this is an important matter, touching as it does upon questions like the original formation of the gods and totemism.

Historical examination of the religions of Egypt fails to discover any indication that the personality of such and such a god was originally distributed among several bodies. Still less was it distributed throughout the entire species of some animal or vegetable under the characteristics of which this god was represented. On the other hand, it follows from the initial data as to the nature of beings, that the possession of several bodies animated by one and the same 'self' is not at all impossible. The 'name' (q.v.), while still remaining one and entire in each specimen of a being, may locate itself in several bodies, and in each of them may be one of the momentary subjective 'aspects' of one and the same entity. This is confirmed, in the religious monuments of Egypt, by the various epithets added to the principal name of the god. Each one expresses the particular, the refined, or the popular nature of a distinct body belonging to one and the same god.

Stated in this way, the question becomes above all a question of fact, to which it is not possible to
give one single reply, because the Egyptians themselves have given more than one. We must make distinctions according to the importance of each god, and according to the period in view. Thus the humblest and most ancient gods, restricted to a circularly understood cult, with each the very divine and limited act, have no need of more than one body. Such deities as Sekhmet the Scorpion and Marit-Soghrnu the Serpent, so far as we know, had only one body. On the other hand, when similar attributes fused two or more deities originally geographically independent, the single god, the new deity thus formed kept as many bodies as it had formerly for the separate gods of whom it was composed. A tree-goddess like Nut, for example, had as many bodies as there had been tree-goddesses with the same character and same rôle, before the one single Nut developed.

More important gods originally incarnated in separate persons led to the formation of a deity single in "name," but necessarily provided with several bodies. Thus Thoth, at once monkey and ibis, was able to live in several bodies. A fortiori, the gods with important national functions or with a cosmogonic rôle, being the product of syncretism, and being the combination of a great number of original gods, animated a sometimes very considerable number of bodies at the same time. An Ammit, for example, was sometimes shown to the attributes of the demiurge sun Minu, the hawk Harmakhis of Heliopolis, the ram and the gander of Thebes, could not but live a complete unity in each of these varieties of material body.

The series extends then, by previous definition, from the simple single body to the multiplicity that has no limitations. But it is a historical fact, and not the outcome of any religious theory. As a rule, there was at first only one body for every divine "name." Then the attributes ascribed to certain beings were added, and the more especially divine grew in importance and brought about fusions. In cases where by elimination (or subordination of the secondary characteristics of the beings originally distinct) the new god completely annihilated the personality of those whom he absorbed, he continued to have only one body (e.g. Milti Orit). Where, on the other hand, it was impossible to fuse the characteristics of the original gods into a perfect amalgamation (as in the case of Hathor), the composite deity retained all the attributes. Thus the god, in the world of dreams, could pass out of one body into another.

To enumerate all the possible combinations, it would be necessary to re-construct the whole history of Egyptian mythology. All that it is possible or necessary to explain here is the mechanism: we need not go into all its practical applications.

There is a sort of counter-evidence that the above is the case, and that the possession of a plurality of bodies by the god is only a result of fact, and does not mark a superiority of nature and supernaturality. It belongs to the series of ideal gods imagined by theology. When the latter created deities by systematic deduction or by personification of functions—deities conceived in human form, like Maat or, later, Inhotep—it gave them only one body. Created in a homogenous manner, they do not require other bodies, no matter how complex or lofty their attributes. The cult of Aten at Amarna and that of Hiqtu the Nile-god, with apparent divergencies chiefly of a literary kind, belong to this scheme of conception.

In conclusion, the case of the divine animals worshipped in the temples does not conflict with the above view. On the contrary, it indirectly confirms it. It is known that the "sacred" animals, which, by the way, are a relatively late introduction into Egypt, are not the bodies of the gods, but beings sharing by simple veneration the regard due to the gods. The animal-god worshipped in the sanctuary (e.g. Apis, Mnevis, Knumu of Elephantine, Sukhos [Crocodile] of Ombos, the Ram of Mendes) is the only copy, the only true body of the local god or, as the case may be, of the group of same deities.

This does not mean that the Egyptians thought they had in the sanctuary the one and only body of the god, but that they had the one and only duplicatum of it. In fact, the world was supposed to be divided into two great halves, symmetrical in the body, each of the great national gods (we need not take the trouble to reconcile so many contradictory data for the lesser gods) had his kingdom in the other world, and in this world possessed a part of Egypt that corresponded to that kingdom. His body dwelt in the other world; but his "name" animated an exact replica of this body in this human world—a permissible temporary representation, which is the divine animal worshipped in the sanctuary. To the divine cow of Denderah, to the ram of Elephantine, the Attic horse of Elephinte, corresponded in the kingdom of the other world a cow, a ram, and a hawk really alive, really divine, with bodies fashioned alike, perhaps gigantic, though Egypt has given no precise information on this point. One thing is certain, viz., that they sometimes lived beside their golden or stone image. As to the exact sojourn of the one body of the gods in the other world, it should be said that here again there has been a succession of beliefs.

The most ancient of them show us the gods living separate, one body in the other world, and the fashion of the world of men, sometimes in the celestial world. The assimilation of earlier and later beliefs in homogeneous groups has gone far in developing the multiplicity of bodies belonging to one and the same god; and the solar theories of Heliopolis, with the course of Ra in his bark, have given far greater importance to the stellar bodies of the divine beings.

LITERATURE.—If we exclude what belongs to medicine, ephemerology, and the disposal of the dead, the data as to the Egyptian god are scattered all over the field of Egyptianology. The existing body never having been the object of a special monograph, only a few parts of it have been studied separately, but without synthesis. We may mention specially: Amelineau, Professesions, L'etude de la religion egyptienne, Paris, 1895, viii, 40 f.; Birch, The Hawk God of Egypt, or Shen Knumu, Egypt, 1893; Budge, Gods of the Egyptians, London, 1904; Le Page Renan, *On the True Semites,* in the *BSA* for 1882; and Le Page Renan, *L'Egypte c'tr. la Turquie* (Revue d'histoire de l'oeuvre, viii, 1893, 101, 115, 145, 212, 215, 217 (where there are notes giving the principal references); also the first two volumes of his *Etudes de Mythologie Egyptienne,* in the *Bibliothèque égyptologique,* Paris, 1893.

GEORGE FOUCART.

**BODY (Greek and Roman).—I. Anthropological.**

(1) Body and soul.—Among the Greeks, as among most other races, the distinction between body and soul—the natural dualism of mankind—can be traced to a very remote antiquity. This distinction took shape in the primitive mind as a result of its experience of certain peculiar facts. It is maintained by I. Budge, that difference from such scholars as Rohde and Gomperz, that the most potent factor in the development of this dualism is that succession of inner and outer experience undergone by primitive man—as by the child of to-day—in connection with the development.

To the understanding consciousness the body is at first simply a thing among things, precisely like a stone or a tree. It is only by degrees that the growing mind, in consequence of internal and external sensations, as, for instance, bodily pain or danger, acquires a consciousness of and distinction between self-consciousness and the outer world.

An important constituent of naive dualism, no

* Gesch. d. Psychologie, 1880, i. 6f., with reference to the facts of empirical psychology as discussed by Volkmann, Lehrbuch d. Psychologie, 1876, ii. § 103.*
doubt, lies here; and so far Siebeck is right. But a number of other factors, which, to be sure, Siebeck does not mention, also demand account; as, for example, the oftentimes rapid transition from life to death, the experience of dreaming, of fainting, "possession," sudden emotions and their resultant involuntary actions, and, finally, the ecstatic trance. These were also the facts which in the dawn of Greek history generated the idea of a possible separation between body and soul; thus the soul might well seem to be temporarily withdrawn from the body in the case of dreaming, swooning, or ecstasy, and perhaps even of the living—this idea, however, which has become quite obscured in Homer. The paramount interests of the poet, indeed, lie with those who still enjoy the light of the sun, and not with the dead at all. In his unsophisticated mode of thought, he regards—unconsciously—the living and waking man with his bodily and mental attributes as a single whole, and similarly all the spiritual and psychological activities of man are evoked from the body. So far, therefore, the Homerian point of view, as contrasted to the Pythagorean, the Stoic, or the ethico-religious point of view of theologians of a later age, may be called an unreflective monism.

2. Religious and ethical. — (1) Orphism. — Homer views regarding body and soul, and their relation to each other, find their sharpest possible contrast in the thousand years or more that lay between the Hesiod of the Divan and the Hesiod of the Iliad, or between the Iliad, and the Theban and Eleusinian thoughts of the Orphic sects. According to the latter, there obtained not only an irreconcilable division between body and soul, but also a profound difference in value. The soul was no longer, as in Homer, the phantom counterpart of the man, making its influence felt in the acts of dreaming, swooning, or dying; it was now regarded as intrinsically of Divine origin, uncreated and imperishable, and as having been immured within the body in expiation of its guilt.

See Plato, Crat. 600 B (Dibel, Frag. 2, l. 1473, No. 3, cf. Abel, Orphikos, frag. 221): καὶ γὰρ σημα τυχείτε ἄνθρωπος (the body) ἢμα τὴν ψυχήν ἢ τεθυμαίνομεν ἐν τῷ ψυχῆς παραββαίνειν, καὶ Ἰδώτην, ὁ τοσοῦτον σαρκάμενος, ἢ τῷ σαρκάμενῳ θῷος, καὶ τοσοῦτον θῷος σαρκίζει. Homer, on the other hand, was quite true to nature in his theory of reincarnation, which is the central tenet of Pythagoreanism.

(3) Pythagoreanism. — In regard to the process by which such ideas, so alien, apparently, to the natural temperament of the Greeks, as of mankind in general, gained a footing in Greek thought, the reader may consult the art. ASCETICISM (Greek). It will be sufficient here to emphasize the fact that the ideas in question, wholly un-Hellenic as they appear to us so many appear not only in the philosophic as well as the religious systems of the Greeks, but are repeated in the system of Pythagoras as a whole, and also in many of the systems of the Pythagorean sect. It is therefore the aim of the Orphics to make of the soul a perfect and a living being, to which end they taught the study of music, and the religious rites by which the soul is freed from its impurities, and elevated to a higher sphere of existence (cf. Plato, Phaedo, 62 B, and Diels, in reference to Philebus, frag. 14 and 15. The body is accordingly the grave or prison-house of the soul, which in many systems is even identified with it, and the soul, when released from the body, finds itself at once in the sphere of the Deity. It is therefore the aim of the Orphics χρήςμον ἐμέλλει ἀναπαυθοῖν τούτους μοι τοῦ κρατοῦσαν τοῦ ψυχῆς καὶ πρᾶγμα ἡ αὐτὴν τούτῳ παρατάτεν καὶ τοῦ φαινόμενον τῆς σοφίας—καὶ αὐτοθύβανα (Philo, 67 C; cf. Diels on Heraclitus, frag. 115).

3. Architecture. — In regard to the process by which such ideas, so alien, apparently, to the natural temperament of the Greeks, as of mankind in general, gained a footing in Greek thought, the reader may consult the art. ASCETICISM (Greek). It will be sufficient here to emphasize the fact that the ideas in question, wholly un-Hellenic as they appear to us so many appear not only in the philosophic as well as the religious systems of the Greeks, but are repeated in the system of Pythagoras as a whole, and also in many of the systems of the Pythagorean sect. It is therefore the aim of the Orphics χρήςμον ἐμέλλει ἀναπαυθοῖν τούτους μοι τοῦ κρατοῦσαν τοῦ ψυχῆς καὶ πρᾶγμα ἡ αὐτὴν τούτῳ παρατάτεν καὶ τοῦ φαινόμενον τῆς σοφίας—καὶ αὐτοθύβανα (Philo, 67 C; cf. Diels on Heraclitus, frag. 115).
regarded as the worst of plagues, impeding the soul in its endeavours to reach its celestial home, and detaching it from its high destinies.

That Empedocles likewise held a similar theory of the relation between body and soul may be inferred from what is said inASCETICISM (Greek) (above, pp. 81, 82) regarding his indebtedness to Orphism and Pythagoreanism. Direct reference to the point, however, is found only in a single fragment of his writings (126, cf. Diels): σαρκων ἀλλόγων περιστέλλουσα χιτώνια. We may well suppose that similar views were cherished by several other thinkers and poets who were more or less influenced by Orphic or Pythagorean doctrines. This is at least the case with the famous lyric poet Theognides of Syros.† In Heracleitus also (frag. 4. 96) we may trace a certain disparagement of the body, though he does not, like the 'theologians,' regard body and soul as antagonistic to each other, but rather as subsisting in a state of constant interchange (frag. 36; cf. 70, 77). Admistrations of this idea are also found in Pindar (frag. 131, Böckh).

(3) Plato.—It was a matter of vast significance, however, that the cardinal ideas of the Orphic-Pythagorean schools should have been assimilated and adopted as the foundation of his philosophy. The way in which the founder of Western idealism interpreted the relation of the human body to the imperishable soul is known to every reader of the Phaedo. As we have already given an account ofEmpedocles' theory of the soul, it is but necessary here to lay emphasis upon the leading ideas in Plato's system of philosophical and theological thought, we confine ourselves here to the most indispensable points.

The human soul occupies a peculiar position between the sensible and the supersensible world. Though itself technically uncreated, of the latter it is drawn into the vortex of becoming. It does not rank as an Idea, but is at best 'most like' one, participating in the Idea of life. In the pre-monad existence of the soul, while dwelling amongst gods and spirits like itself, it has beheld the 'super-celestial realm,' and the world of real being, but in consequence of a decline in its cognitive faculty, and an ascendency in its impulses of desire, it has been drawn down to the earth, and has fallen into corporeality.‡ Partici-
PPlato was more and more influenced by the body, and the body has become for him the only limiting factor of cognition, so that it has completely forgotten its pre-existence and the world of Ideas in which it formerly lived. Its knowledge of truth is now impeded by the illusion of sense-perception, while the body, by means of its impulses, and the desires and affections to which they give rise, wields a most dangerous influence over the soul, deranging its capacity for thought, and wholly perverting its judgment regarding the true good.

† Cf. Phaedo, 69 B. See also Empedocles: B-D: ... το τοῦ σώμαν ἐμπνευσμένον ἡμῶν τῇ φύσιν τῷ ταύτῳ εὐκαίροις αὐτὸν ἀναγκάζει τῆς σοφίας τὸν ἀναλόγως ἀναφέρουσαν ἡμῖν τῷ ταύτῳ ἀναλόγως ἀναφέρουσαν τῇ φύσις τῷ ταύτῳ εὐκαίροις αὐτὸν ἀναγκάζει τῆς σοφίας τὸν ἀναλόγως. And see also Phaedo, 252. Plato has probably here a reference to Orphic doctrine, the Pythagorean doctrine of the soul, as held by the Musonians and the latter. Plato's doctrine was also held by the Pythagorean school of Diels.

‡ Socrates was, for instance, regarded as an 'intellectual soul'; for, according to Plato's original view (in the Phaedrus), the human soul is an immaterial entity, i.e., not only the λογική, but also the ψυχική and the ἀκολούθουν, of which the last two cramp the first, and, still clinging to the soul after death, cause the latter to remain within the world of sense and its tendency to further incarnation (Phaedo). On the other hand, according to the Timaeus—a much later work—the entrance of the soul into the material realm takes place in pursuance of the Divine order, being destined to spiritual union with the body. Hence the soul is not only in two inferior capacities of the soul arise out of its union with the body, just as again they pass away with the latter from this mode.
doctrine of the soul. We may also venture to assume, notwithstanding the absence of positive testimony, that a theory regarding body and soul akin to that of Plato prevailed in the Old Academy. It is at all events certain that such a view was held in the first half of the 4th century by Philo of Opus and Heracleides Ponticus, and probably even by Aristotle in his earlier years.

(4) Aristotle.—With ripper experience, however, Aristotle abandoned his master’s dualistic standpoint, save in regard to one important feature, and advanced to a entirely different conception of the relation between body and soul, a conception which stands in the closest connexion with his metaphysical teaching about the relations of matter (ἀέα) and form (εἶδος), of potentiality (δυνάμεια) and actuality (ἐνέργεια). Here we come upon the pregnant idea of the ‘organic,’ which Aristotle was the first to formulate. An object is said to be organic when its parts are ‘instruments’ (ἐγγραφή) for the realization of the end for which the nature of the object as a whole is designed. A whole of this character, however, is characteristically endowed with a view to life or animation, and accordingly the organic and the animate are but different designations for the same thing. The human body, as indeed the body of any ἄνθρωπος, attains its realization only in the certain connexion (the principle of form working from within outward) ἀγαμενος φυσικόν εἶναι ἔγγραφος δύναμις (de Anima, ii. 1. 412 A, 20ff.). The ‘end’ of the body is the soul, which realizes itself, and at the same time realizes life, in the body and its organs (de Partibus Animalium, i. 5. 645 B, 14ff.). Apart from the soul the body is but a corpse. It is therefore the entelechy of the body ... οἵ τε σώματα ἔπειτα ἐνεργείαι φύσεις, ἀλλ’ ἄλλα σώματα τινές, καὶ διὰ τοῦτο κάθε ἐπε φανερώσαντες οἶος ἡμάς ἄλλ’ ἄλλα σώματοι εἶναι εἰσῆλθον ἐνεργείαις (ibid. ii. 4. 415 B, 7. 8. τῇ ἐνέργειᾳ τοῦ ἄλλου σώματος ἀνίμη καὶ ἀρχῇ. Body and soul in a living man may well be distinguished as concepts, but they cannot be dissociated in actual fact. The two form an inseparable synthesis, like the material and the form of a ball of wax, or like the eye and the sense of sight. In the words of Eucken, ‘the soul forms with the body a single life-process.’ When man dies, his body is deprived of its function as a purposive organism.

The fundamental principle of dissonance between body and soul, as propounded by the theologians and Plato, is therefore quite foreign to the philosophy of Aristotle. It is true that the latter regards the νοῦς, the thinking spirit, as coming from without (ἐκωτῶς) which controls and conditions the organism, and combines within itself the physical and the psychological; and here no doubt we come upon an inconsistency in the Aristotelian psychology, a residue of theological and Platonic speculation. Nevertheless, there is for Aristotle no opposition between the νοῦς and the living body, so that the presence of the former constitutes no end in human life relative to the body.†

(5) Stoicism.—Among the earlier Stoics, not

[Note: The text is missing a paragraph or section, possibly due to a break in the source material.]

† The teleological point of view was first applied to the human body by the Stoic school of Antiochus of Syracuse. It is set forth in popular form by Socrates in Xenophon, Memorab. i. 4. 5ff., and in a truly scientific style by Aristotle, e.g. in de Partibus Animalium, i. 6. 667 A, 7ff. Popular views regarding it re-appear after the middle stage of Stoicism: cf. Cicero, Nat. Deorum, ii. 134-148.

‡ Concerning Aristotle’s physiology, we cannot deal with it here, it may be noted that he regarded the activity of the soul as being combined with the natural life of the body, the head being combined with the blood as the animating breath or ἐνέργεια. Aristotle placed the central organ of psychic life in the heart, not the brain. The views of Antisthenes of Apamonia, like Plato, had identified it with the brain. The influence of Aristotle long prevailed to keep the earlier and correct view in the background.

† The last stage of the Stoic system was the extreme or Epicurean, which seems to have been applied to the body in a disparaging sense first of all by the Orphics (cf. Empedocles, frag. 195; Empedocles, frag. 194; Xenocris, frag. 21); later, it seems to have found sporadically among the Tragedians; also in Plato and Platonizing thinkers.

‡ Cicero, De Leg. i. 58, 54, 60, 62, 66, 68, 73ff.; Quaest. Nat. i. 34, 35, 18, ad Marc. 21ff.; Gaius, de Pote. Legg. ii. 1. 448ff. (Millier).
a soul carrying a corpse." To the wise man, indeed, his body is of no concern.* Above all, the body is a potential obstacle to happiness, since it stands in the way of what must be achieved, in reality the only good. Something more than the influence of Plato or Posidonius, or of the Stoics, is required to explain such hatred of, and disdain for, the body as we find in Epicureans; and it is possible that his experiences with his own flesh may have given some bitterness to his sentiments.

To the high-souled Marcus Aurelius likewise, though, like Epicetus, he was a professed adherent of Stoicism, there exists a keen antagonism between body and soul, and he too speaks repeatedly of the body as a necessary evil. He spoke of it especially as the source of carnal appetite, and as tending to enervate the soul. He welcomes death because, among other reasons, the soul, whether she then 'is dispersed,' or becomes extinct, or is re-absorbed into the universal soul, is at least released from the body (Stich, 71, 4 ff.).

A markedly dualistic tendency appears also in his general views regarding man, though he rejects the belief in a continued personal existence after death.

(6) Neo-Pythagoreanism and Neo-Platonism. — Among the obvious examples of the persistence of Posidonius, and through him of Plato, upon a later age is to be seen in Neo-Pythagoreanism, which became widely diffused throughout the ancient world, especially in the first three centuries of our era. The remarks of the former (above, p. 46) how in this school the Orphico-Pythagorean-Platonic conception of the body as the prison of the soul, conjoined with the notion of matter as the cause of all evil, was resuscitated in intensified form. Similarly, as regards Neo-Platonism (Plotinus), we would refer the reader to the account given on former pages (86, 87), merely supplementing it here with an instructive passage regarding mankind from Enneads, 47, 10 K:

...  ἡ γλυκὰ ἡ ἀκράτης, ἡ συμφώνωσθαι τοῦ θεοῦ ἢ τὸ σώφρον ἢ τὸ ἑκατέρον ἢ τὸ πάλαιρον ἢ τὸ παλαιότερον ἢ τὸ πλῆκτυ ἢ τὸ ἀθέρετο ἢ ἄλλο τὸν τούτοις τὰς ἄντικας ἡμιοῦν τὸ ἐκ νοημίσως ἢ ἐν νοημίσως τῇ ἀνακυκλώσει ἢ ἐναρτάναι φύσις ἢ ἐναρτόρρητα τὰ ἐναρτήθη ἡμῖν, ἀπελαθεν ἢ ἀπελευθερώθη ἢ ἀπελυθρώθη ἡμῖν.

A human king had a beautiful garden, in which there were some fine early figs. The fig tree in it was in two weeks from the same size as the other and the blind. Said the lame man to the blind, "I see some fine figs, carry me on your shoulders and we will get the fruit and eat it." After a day, the lame man has left the garden and comes after his figs. The lame man protested that he could not walk, the blind that he could not see. So the master put the lame man on the blind man's back and judged them together. So God brings the soul and casts it in the body (after death) and judged them together." (Sanh. 91b-9).

Body and soul thus form one whole, and the persistence in later Jewish thought of the belief in the bodily resurrection was in part, at least, due to the impossibility of separating body and soul, even in the aspect of immortality.

The wonderful structure of the body, its delicate adaptations to ends, was the subject of admiration as an expression of the Divine wisdom. This finds its analogue in the liturgy of the Synagogue in a remarkable benediction, which is recited daily in the morning prayers, and is repeated after the normal functions of the body. Blessed art thou, O Lord our God, King of the universe, who hast formed man in wisdom, and created him in many offices and vessels, and revealed and manifested to his glory, that if one of these be opened, or one of those be closed, it would be impossible to exist and to stand before thee. Blessed art thou, O Holy, Holy, Holy Lord, who wast holy before the ancient ages, and art holy drouelly." (Singer, Authorized Daily Prayer-Book, p. 4. The benediction is Talmon, p. 2.)

Though the Jews, especially from the Maccabean period, were strongly opposed to the Greek games and culture of the body, and felt an especial aversion to nude exposure, they had a keen appreciation of physical beauty, not only in women, but in men. The stature of Judas Maccabeus was glorified, and the beauty of various Rabbin is specially recorded (especially Johanan b. Nappaha, Berak. 20a; cf. Emil G. Hirsch’s remarks in JE lii. 617). In the medieval Heb. poetry (imitating the language of the illumination of the sages) there is at once a thorough-going eulogy of female beauty and an application of sensuous phraseology to the mystic relations between man and God.

The body was in the Rabbinic view originally a shapeless mass (galaq): it was a sexual, or rather bi-sexual, and it became differentiated (see the early chapters of the Midrash, Genesis Rabba). The number of the limbs (or bones) was calculated as 248, and of nerves (including sinews and even blood-vessels) 365 corresponding to the affirmative of the 248 letters of the Hebrew alphabet (which were enumerated as 615). Adam’s dust was taken from all quarters of the globe (Sanh. 38a), to express the unity of human nature.
The provision of food, drink, and attire was regarded as a religious duty (Maimonides, Mishne Tora, 'Deoth' v.). Bodily cleanliness was similarly regarded; and as part of the 'Law of Holiness,' dietary restrictions and ablations were prescribed. From the middle of the 2nd cent. A.D. hand-washing before and after meals was the rule. Washing the face in the early morning was older. During ablations pietists would avert their eyes from their own bodies. The bodily seclusions were not unclean until they separated from the body; in the latter case ablation was rigidly enforced. Special conducive practices have always been part of Jewish settlements. The Biblical conceptions as to the defilement caused by dead bodies were continued in later Judaism. But the great bulk of the early Rabinic laws as to ritual purity applied only to priests or to Israelites about to participate in Temple rites. Maimonides sums up the Rabinic rulings as follows (ib. 'Tumuth Okhelim' xvi. 9):

'It is permitted to every one to touch an unclean thing, and thereby to become unclean. For Scripture only forbids praise, and Nazirites from becoming unclean by touching a dead body: hence it is inferred that everybody else may become unclean. And there are many different Nazirites, as it is inferred to become unclean through a human corpse. Every Israelite is enjoined to be clean at the time of the festivals, in order that he may be able to offer these sacrifices, and eat holy food' (Montefiore, Hibbert Lectures, 1892, p. 476, note 4; Bucher, Der Galiläische Anuha-Ausdrucke, chs. 1-4).

Some of the anatomical peculiarities in relation to the body and its stature and proportion were derived from an anthropomorphic interpretation of the text that man was made in the image of God (Gn 1:26). The bodily sign of the covenant is discussed under CIRCUMCISION.

LITERATURE.—Besides sources already noted, see L. Löw, Die Lebensalter der jod. Literatur, 1875; M. Joseph, Judaisches Leben, as Creed and Life, 1903, p. 394; art. 'Body in Jewish Theology,' in JB ili. 283.

I. ABRAHAMS.

BODY (Hindu).—The Sanskrit terms denoting the various parts of the body agree remarkably with those of the other Aryan languages—a circumstance which renders it probable that a certain knowledge of anatomy may have been part of the common heritage of the Aryan nations. Their acquaintance with anatomy would seem to have extended to the internal organs, such as the heart, liver, lungs, bile, kidneys, etc. The ancient Hindu sages have improved and extended this traditional knowledge. Thus, in a hymn of the Atharvaveda (x. 2) on the creation of the soul, which is supposed to belong to the highest portion of that venerable collection, we have a careful and orderly enumeration of the several parts of the skeleton. The hymn consists of a series of questions, such as these:

- By whom were the two heeds of man? By whom was the flesh constructed? By whom the two limbs? By whom the slender digits? By whom the apertures? By whom the two sets of long bones in the middle? How did they (the deas, or gods) make the two ankle-bones of man below, and the two knees-caps above? How many deas, and who among them, contributed to build up the bones of the breast and the cartilages of the windpipe of man? How many disposed the ribs of the two breasts? Who, the shoulder-blades? Who picked up the two arms, the nostrils, two eyes, the mouth? Whatever first constructed that brain of the two 20, and disposed the embryonic humum, and the structure of the jaws, and, having done so, ascended to heaven—who, of the many deas, was he?

The composition of this hymn is ascribed to a certain sage called Nārāyaṇa, the same to whom the famous Rīgvedic hymn (x. 90) on the sacrifice of man (prajñāsātkā) is attributed, in which the four classes of priests, nobles, husbandmen, and serfs are declared to have sprung from the mouth, arms, thighs, and feet of the Primal Male, or original sacrifice. The body of the hymn is a repetition of the earlier formulae, which occur in some of the earliest Sanskrit tracts on medicine, are also supposed to have been proclaimed by this Nārāyaṇa.

Descending from the Vedas to those early pantheistic compositions, the Upaniṣads, we meet, in the Garbha (or Embryo) Upaniṣad with an interesting description of the constitution and growth of the human body, which is said to consist of the five elements—earth, water, fire, air, and space or ether. From habitation, a small compact mass is produced, which, within a month, becomes a solid lump. This is formed for two months; the feet are developed after three months; the ankles, belly, and thighs, after four months; the spine, after five; mouth, nose, and eyes, after six months; the soul (jīva) enters the fetus in the seventh month; it becomes altogether complete in the eighth month.

The later systems of philosophy assign to each person two bodies—an exterior or gross body (ākāśa-sāraṇa), and an interior or subtle body (vīkṣepa-sāraṇa, or linga-sāraṇa)—much as Nyāyaśāstra claimed a subtle ethereal clothing for the soul, apart from its grosser clothing when united with the body. Indian philosophers had to admit the existence of a subtle body, in order to make the process of migration after death intelligible, according to the Indian doctrine of metempsychosis. The subtle body is that which cleaves to the soul in its migration from existence to existence. According to the Vedānta system, this subtle body arises from the so-called upādhis ('conditions'), and consists of the senses of the body (āleheendriyas, the perceptual), of the active (karmendriyas), and of mind (manas), intellect (buddhi), sensation (vedāna), implying beyond itself the vijnānas, or objects required for sensation. Its physical life is said to be dependent on the vital spirit (mukhya prāṇa), and on the five prāṇas, or specialized spirits. According to the Sāṅkhyā system, the subtle or inner body, which is, of course, invisible, is formed of eighteen elements. The coarse material body consists either of the earth only, or of the four or five other elements, and is covered by coverings—hair, blood, flesh, sinews, bones, and marrow. In some systems, each organ is connected with its own peculiar element, the nose with the earth, the tongue with water, etc.

The whole subject of anatomy is treated at great length in the vast medical literature of ancient India. The Indian theory of the skeleton, in particular, has been transmitted to us in three different systems, one of which, the anatomical system attributed to the mythical sage Ayreya, while agreeing with the material views with the statements quoted above from the Atharvaveda, is also found in several later non-medical Sāṅkhyā works, notably in the celebrated law-book of Yājñavalkya. In its original shape, as restored by the researches of Dr. Hoernle, this enumeration of human bones seems to have been made up of the following thirty items:—(1) 32 teeth (danta); (2) 32 sockets (uñkha) of the teeth; (3) 20 nails (nokha); (4) 60 phalanges (ākuti); (5) 20 long bones; (6) 4 bases of the long bones; (7) 2 heels; (8) 4 ankle-bones; (9) 4 wrists; (10) 4 forearms; (11) 4 bones of the legs; (12) 2 knee-caps; (13) 2 elbow-pans; (14) 2 hollow bones of the thighs; (15) 2 hollow bones of the arms; (16) 2 shoulder-blades; (17) 2 collar-bones; (18) 2 hip-blades; (19) 1 pubic bone; (20) 45 back-bones; (21) 14 bones of the breast; (22) 24 ribs; (23) 4 sockets of the ribs; (24) 24 tubercles fitting into the sockets; (25) 15 bones of the neck; (26) 1 windpipe; (27) 2 palatal cavities; (28) 1 lower jaw-bone or chin; (29) 2 basal tie-bones of the jaw; (30) 1 bone constituting the nose, prominence of the cheeks, and brahms; (29) 2 temples; (30) 4 cranial pan-shaped bones:—total, 360. The large excess of this number over the some 200 bones in the adult human skeleton, which are distinguished by modern anatomy, is principally due to the fact that, besides including
BODY AND MIND.

1. The problem of the relation between body and mind has occupied philosophers and scientists since the dawn of thought, and to many it appears no nearer to solution now than it has been named the central problem of all philosophy, fundamental alike in the theory of knowledge, in ethics, and in religion. Not less fundamental, however, is the problem of the relation between the physical and the spiritual; for the point of view from which we regard mental development, the changing forms of nature, animal life and evolution, will be radically different according as we do, or do not, attribute to mind a controlling or directing part in the process of change and growth. The question of the relation between body and mind cannot be discussed apart from the question as to the nature of the two factors, and the difference between them. Both are really metaphysical questions; that is to say, the solution put forward will necessarily be incapable of scientific verification; but it should be such as to give a rational account of the possibilities of knowledge, of individual and race progress, of ethical and religious life.

2. Whether we are dealing with the special relation between the individual mind and the individual body, or with the general relation of finite mind to matter, there are three possible solutions of the problem:—(1) That matter or body is the 'real' or 'substantial' thing, while mind is its product, or in some way dependent upon it for its existence and for its qualities—the solution of Materialism. (2) That mind alone is real or substantial, and that matter or body is its appearance, its manifestation, or in some other way dependent upon it for existence and quality—the solution of Idealism, and of Spiritualism. (3) That mind and matter are equally real, and independent entities; or equally unreal, as the two 'aspects,' 'appearances,' 'sides' of one and the same reality. The former is Dualism, the latter 'Substance Dualism' or the Philosophical Idealism. There are of course many shades of difference and many overlappings in the different views that have actually been held. The divergencies are especially apparent when a given principle is applied to the relation between the finite body and the finite mind. Thus, even when we regard body as unreal, it is clear that 'my' body is not the manifestation of 'my' mind, but is to a large extent at least independent of it; therefore one may quite well speak of 'my' body and 'my' mind as two separate entities, with an unmistakable similarity between this Indian theory and the ancient Occidental theory of four humours in the human body. Blood (rakta) is sometimes mentioned as a fourth humour in India, as it is in Western medicine.

The supposed parallelism between the microcosm and the macrocosm may be found in Indian thought. Thus, as the universe consists of earth, water, heat, air, ether, and Brahman, which is unmanifest, even so Purusa, or the male, is said to be made up of six ingredients: the form is earth; the liquid secretions are water; the animal heat is heat; the life-breath is air; the hollow places are ether; the inner self is Brahman. The self or soul is an emanation from God or the Universal Soul, from which it springs in the same manner as sparks do from a red-hot ball of iron.

the former ones: the relation between finite mind and finite body may be either (a) that of complete dependence; (b) that of parallelism, the two series, mental and bodily, corresponding step for step, element for element, with mind wholly non-spatial in itself, acting on its own bodily organs. It is also the standpoint of Dualism on the one hand, and of several forms of Spiritualism or Idealism on the other.

3. It is necessary here to refer only to one of the many forms of Materialism, that in which the mental is regarded as an effect of physical processes, although in itself immaterial; or again as not strictly an effect, but as a by-result, an accidental accomplishment, of material processes. Matter—the physical universe—is upheld on this theory as the necessary condition, and the ground of all that which mind is as one of the changing and temporary phenomena, adding nothing to the whole, forming no essential part of it, existing merely, as it were, for the delectation of some imaginary spectator.

(1) Haeckel holds a view similar to that of the object of the mind to a secondary place is the first principle of Einfühlung, Einfühlung, the doctrine of empathy, viz, that matter or body is given only as idea or content of consciousness; it cannot be the source of that which is a presupposition of its own existence. It is an actual inversion of the true order of things, therefore, to place matter first and mind second. Not only is it not a justifiable inference that matter may be the source of mind; it is not even a possible thought; it is a form of words without meaning.

(2) The second difficulty the view has to face is that of the incompatibility of mind and matter; they contain no common characteristic except that of change in time; in other respects, as the Cartesians pointed out, every attribute of mind may be denied of body, and vice versa. Thus matter occupies space, has form, resistance, etc., while mind, as a system like that of man—has been achieved in the course of evolution and development. Others, among whom are Fechner, Spence, Haeckel, Höfling, and Paulsen, make the parallelism universal: mental life is the correlate of bodily life, mental change of bodily change, that is, of movement. Hence, where there is mind there is also body, and wherever there is mind there is also physical motion. The two series, as Spinoza taught, are parallel throughout the whole extent of each; for every mental there exists a physical correlate, for every physical a mental; the motion of the atom or other physical element has, as its 'inner' side, a phase of feeling, of sensation, of will. The complexity of the human mental life is in direct correspondence with the complexity of the physical substratum, the nerve and brain organs and the processes that occur in them. There is unbroken continuity first of all in the 'evolution' of inorganic forms, next in that of plant and animal forms, and finally in the development of the individual organism; and this holds both of body and of mind. Thus in mind we pass from the simplest 'feeling', the correlate of the atom-movement, to the highest thought or act of intelligence, the correlate of a process in the cortex of the hemispheres of man, without a change of kind. Causal relations nowhere exist, however, between the one series and the other.

6. There can be little doubt that for a parallelist the larger scheme is the more consistent. In partial parallelism we have continuity in the
physical series, where every event depends upon a previous physical event out of which it arises; on the mental side there is no such continuity, but while causally connected with each other in continuous trains of thought, etc., there are on the other hand constant breaks or gaps in the series. In sleep or other forms of unconsciousness, in the animal life prior to the growth of the higher brain centres, in the transitions from one line of thought to another—in all these cases, there are stages of unconsciousness between, or prior to, the conscious moments. How, if we keep only to the mental series, are these gaps bridged—through what causal agencies are the transition-marks replaced? The transition-marks are made through the body, or through some constant supernatural agency or 'pre-established harmony.' The latter alternative will not readily be accepted by scientists, and as a matter of fact the former is frequently adopted, as by Huxley, for example, although it is inconsistent with the principle of parallelism. Wundt, on the other hand, although partial parallelism is put forward as a 'working hypothesis,' finds himself compelled, when in his Philosophy he attempts a rationale of mental life as a whole, to pole the principle of causality of the individual mind, to postulate sensation, feeling, and will, not only in the lower organisms, but even in the inorganic world itself. If there is complete continuity on the one side, as Biology and Geology assume there is on the physical, there must be complete continuity also on the other side, the psychic.

7. We have seen that the question of causality on the psychical side is also a subject of difference between parallelists. It is admitted that there is relation of cause and effect between the different states of a material system, such as the bodily organism is. Is the same true of the mental series? It would seem that it must be, if parallelism is to hold, but there are heavy penalties to face for the admission. The chain of causes and effects on the physical side is a mechanical one, each link following its predecessor by a blind necessity which is quite regardless of the ideals, desires, or judgments of the mind connected with the body. If causality on the mental side holds, and the parallelism between the physical and the corresponding link on the physical side, then the time-order must be the same in both; therefore the mental life, the course of development, the history of the soul must also be the subject of a blind mechanism; or, per contra, if the mind is self-determining, if it has free will and originality of action, freedom to choose and to act according to norms or ideals of value, then the physical organism cannot be subject to the blind necessity that science assumes. Its laws are not inexorable, and the most confident expectations based on centuries of past experience may be suddenly disappointed. In other words, either mental life is wholly determined by an influence which governs it from the beginning of its history, or the attainment of scientific truth about the physical world is impossible.

8. From this dilemma some have sought to escape by denying that there is any causal link between mental states; there is 'transversal' causation, from body to mind, as well as 'longitudinal' causation from body to body, but there is neither lateral nor transversal division in the other two directions, viz. from mind to mind, or from mind to body. In order to justify the very subordinate role attributed to the mind, it is argued that the principle of causation demands the existence of a relation between cause and effect, and that no such experience is possible with regard to the sequence of bodily upon mental states, or of mental upon mental. In reply it may be said (1) that the origin of the idea of causality is to be found in our direct experience of mental activity, and not of causality as such, and therefore in the facts appearing in the body; the first idea of causality (and it remains at the root of the ideas of causality in modern science) is that causation is spiritual or mental; body, on the other hand, is dead inert matter, and has no spontaneity, no source of movement in itself. Accordingly some modern theories of science seek to dispense altogether with the idea of causation. But (2) 'transverse' causality, from body to mind, is inconsistent with parallelism, and means a return to Materialism; it makes mind a function of body, in contrast with the body-mind. (3) Mind and body, each is a mental process, and so there is a mental process of mind itself, and something else, the body. It is not clear, as either in Spinoza, his originator, or in his modern followers, whether by the one reality is meant an unknown z behind both body and mind, or which they are the diverse 'appearances' or 'manifestations,' or whether the reality is simply their identity, the same being which appears to itself as split in two, the body as an extended manifold—the body. In either case, as almost inevitable, the primacy is found to be given to mind. Thus the unknown z becomes a conscious mind. After all we are conscious both of our 'own' minds, and through sense-perception of our 'own' bodies. But our cognition of the body is a mental process, and so we become aware of the body only in and through such a process: the mind is therefore a presupposition of the body; the body is a mode or manifestation of mind. Aristotle's reason applies to the second standpoint. The body stands in a two-fold relation to the mind: (1) it is the object of knowledge, or of a particular kind of knowledge, and (2) it is the accompaniment, the condition, apparently, of every case or instance of knowing, or of any other mental process. A given sense-perception has (a) its object in the physical world—say the flight of a bird through the air—and it has (b) a physiological process in the brain of the individual as its accompaniment and apparent condition. With which of the two is the mental process identical? In the natural process, then the possibility of knowledge remains wholly unaccountable. The 'knowing' of an external object by the mind is a mental act to which no physical parallel can be given, and therefore mind has a much wider reach than body. It has rarely been denied that the mind is identical with the perceived object, in this case the flight of the bird. Schuppe, indeed, attempts to combine both object and brain process with the mental process in an ingenious way: 'I see, because my eye sees, or because I am this seeing eye, so my motor nerve wills, because I will, because I am this motor nerve' (Das Grundproblem der Psychologie, p. 60). That is, both sensation and volition, being mental, are also bodily processes, the eye or mind being identical with the body. I am therefore the same thing as the content of my perceptions, and the same thing as the object of my volitions. But if the connexion between eye and brain is cut, I no longer see, however healthy the eye itself remains; and, again, what I see may always differ widely from the picture in the retina or in both retinas. It is not the eye, but eye plus optic fibres plus optical brain centres, that is the 'organ' of sight. Now, whatever similarity there is between the picture on the retina and the object, there is no object, there is no connexion of the brain process and the seen object; hence the dualism between physical object of knowledge and physical basis of knowledge re-emerges: a mind
stands always in this double relation to body, and therefore cannot be regarded as identical with the individual organism to which it 'belonges' as a part. Neither the body nor the nervous system is a unity in itself: each consists of a aggregate of cells, molecules, atoms or other elements. Still less possible is a physical correlate for the freedom, spontaneity, originality, which the individual mind claims for itself; this also, like sensation, is a subliminal form of necessity to an atomistic conception of consciousness. The apparent function of consciousness as the unifying and binding bond of successive mental states or processes has no physical correlate, and therefore must be rejected as unreal. Neither the body nor the nervous system is a unity in itself: each consists of a aggregate of cells, molecules, atoms or other elements. Still less possible is a physical correlate for the freedom, spontaneity, originality, which the individual mind claims for itself; this also, like sensation, is a subliminal form of necessity to an atomistic conception of consciousness. The apparent function of consciousness as the unifying and binding bond of successive mental states or processes has no physical correlate, and therefore must be rejected as unreal.

The Use of the Term 'Appearances' or 'Aspects' is Misleading. Aspects or appearances presuppose an observer; who is the observer in the case of body and mind? He must be something both more and less than either. If he is something more than either, he must be mind. Thus we come back to our starting-point: mind has priority over body; body is the appearance of mind. This, however, is not parallelism.

The alternative is interaction—the assumption that body acts upon mind, and mind upon body. Unfortunately, such a theory is subject to objections of great force from the points of view both of the physicist and of the spiritualist.

1. The chief advantage of Parallelism as a hypothesis is undoubtedly the same as that of the 'Twofold Truth' of an earlier philosopher: it enables its adherents to side with the materialists from one point of view, with the spiritualists from another. Both systems, it held, may be true; each at least may present one aspect of the 'real' world: the one that is materialistic, the other that is vitalistic. It is not necessary to go back to the old view of the Ego as the source, the principle or cause, of its own states: but even as the subject of experience, every conscious mind is something more than any one of the elements of which it is conscious. In particular, the advance from 'lover' to 'higher' mental achievements, from simple to more complex mental life, as from sensation to conception and from perception to thought, is possible only on the assumption of a directive activity of the mind, an activity which cannot possibly intervene in, or belong to, the elementary states or simple processes themselves, out of which the higher forms are derived.

11. The chief advantage of Parallelism as a hypothesis is undoubtedly the same as that of the 'Twofold Truth' of an earlier philosopher: it enables its adherents to side with the materialists from one point of view, with the spiritualists from another. Both systems, it held, may be true; each at least may present one aspect of the 'real' world: the one that is materialistic, the other that is vitalistic. It is not necessary to go back to the old view of the Ego as the source, the principle or cause, of its own states: but even as the subject of experience, every conscious mind is something more than any one of the elements of which it is conscious. In particular, the advance from 'lover' to 'higher' mental achievements, from simple to more complex mental life, as from sensation to conception and from perception to thought, is possible only on the assumption of a directive activity of the mind, an activity which cannot possibly intervene in, or belong to, the elementary states or simple processes themselves, out of which the higher forms are derived.

An action—a form of behaviour—is explained only in terms of physiological, that is, ultimately, physical and chemical processes. Design, selection, choice, feeling, desire, emotion play no part in the world's activity—"the point of view." On the other hand, seen from the inner side, this necessity becomes freedom and spontaneity; the mechanism of the atoms, the movement of the molecules, become desire and judgment, feeling and will: the organism is a personality, and determines its own ends, its own life. To the Cesar of science are rendered the things which are Caesar's—the conservation of energy, the reduction of the whole life of the universe to chemical, electrical, and mechanical processes, and to God the things that are God's—the spiritual life with its struggles and falls, its ideals and its redemptions. The question is not, however, whether there is any advantage in this theory; there certainly would be, if it were true: but is it ever taken? Are the two not mutually independent, without any meaning behind them, when we speak of the same reality as being at once determined from without, and self-determining? A man has an alternative of going abroad for a holiday or remaining at home for his work; he 'decides' for the latter. Does he decide, or is the body itself attracted by anything? Human action is really determined by his structure, as it has come to be through physical heredity and environment. It has also a perfectly good meaning to say that his choice is free, is an expression of his mental character, of the ideals by which he is attracted; but it has no meaning whatever to say that it is both determined and free. Whichever form of parallelism is adopted, a given bodily action has its mental correlate, which is either the same in reality as the bodily action, or is at least its necessary and possible antecedent. The existence of the one must also govern the existence of the other: if a physical process is a necessary sequent of a and b, then its corresponding mental process C must also be a necessary sequent, not merely of mental A and B, but also of the physical series a b.

The use of the term 'appearances' or 'aspects' is misleading. Aspects or appearances presuppose an observer; who is the observer in the case of body and mind? He must be something both more and less than either. If he is something more than either, he must be mind. Thus we come back to our starting-point: mind has priority over body; body is the appearance of mind. This, however, is not parallelism.

12. The alternative is interaction—the assumption that body acts upon mind, and mind upon body. Unfortunately, such a theory is subject to objections of great force from the points of view both of the physicist and of the spiritualist.

1. If action of any kind takes place from the mental upon the physical world, or vice versa, then the principle of conservation of energy cannot be maintained. No means exists by which the amount of energy lost by the brain in effecting a sensation, or added to the brain in a volition, may be measured. Some energy must presumably be lost, however, when a physical process is the condition of a mental impression: there cannot remain the same quantity in the body, since, in fact, the action of the body is found to be different, according as there has or has not been a conscious process. Again, the same stimulus does or does not give rise to consciousness, according to its intensity, i.e., according to the force with which it acts upon the nerve-centres; in the case of subliminal stimuli we can only assume that the energy is lost, but cannot measure or account for the change in consciousness. The principle of conservation has two sides (cf. Wundt, System der Phä., 2. p. 483)—(a) that the total amount of energy in the physical universe remains always the same, and (b) that, when work is done by any physical system, the amount of energy lost must be fully compensated for (however different the form it takes—heat, electricity, light, motion, etc.) by the gain of the other physical systems affected by the work. The second part of the principle may be accepted apart from the first; it has, however, no bearing on the relation between mind and body. The first part is more purely hypothetical, and need not be admitted by psychology, if inconsistent with the facts of that science.
mystical pre-established harmony. The only defence possible is to admit the charge, but to deny that the action complained of is a crime. The principle of conservation is a hypothesis formed to explain certain phenomena of the inorganic world, verified as far as experience has gone (although now being doubted in question) and these only; not verified at all for organic processes, such as growth and reproduction, still less for those physical actions which we ascribe to mental influence. It has also been suggested (by Stumpf, for example, and from another standpoint by Fechner) that we may regard mental activity as itself a form of energy; that the physical energy expended in the central nervous system is transformed into an equal quantity of mental energy, and vice versa. We call mental energy certain influences with physical, or, between bodily and bodily, it decreases with the degeneration or decay of the brain. It is questionable, however, whether the term ‘energy’ in the two cases is really being used in the same sense, as it must if there is to be ‘energy’ of the same kind.

(2) It may be said that the action of body upon mind is inconceivable; that the only forms of action given to us in experience are either (a) of body upon body, or (b) of the mind upon itself. The first we have from external, the second from internal causes. Berkeley and Hume were long ago disposed of the view that we ever directly experience the action of body upon body; and Hume also questioned the assumption that we are conscious of, or have any direct knowledge of our own mental activity. Causality may be a presupposition of experience; it is certainly not given in experience. On the other hand, the ‘uniform succession’ which we regard as the cue for the application of this category is found far more frequently between mental and bodily processes than between mental and mental processes. In other words, we may be less likely to be observers of our own minds, than of ourselves working upon our own bodies.

(3) But how, it may be said, is mind to set about its action upon body. A ‘voluntary’ movement starts, let us say, in certain brain cells, and proceeds outwardly to the muscles. How does the muscle know what to do? What is the process going? Somewhere the push must be given, or the spark applied. How is it done? Here the difficulty of the disparity of mind and body presents itself with great, and for many, it appears, with overwhelming force. It is not, however, in principle any more curious or incomprehensible than that body should correspond, to mind, whatever may be taken as the meaning of that mysterious word; not more so than that one reality should appear as two totally disparate entities, as mind and animism appears. Somewhere or other we must arrive at an unexplained and, perhaps, inexplicable fact of experience; and for interaction, this local action of mind upon body, with the converse qualitative action of body upon mind (as when a given, definitely localized, nerve process gives rise to a sensation of red, while another, differently localized, gives rise to a sensation of cold or of bitter), marks that point.

Body may ultimately ‘prove’ to be mind, and yet maintain between themselves no such mind be one of interaction. A system of this nature is contained in Professor Busse’s critical and thorough study of the subject. We have seen that our own and all other bodies are given to us, and are known by us, only as contents of consciousness, as actual or possible sensation, perception or thought, while various social experiences forbid us to regard them as merely our individual or subjective impressions. We may conclude, then, that our own body and other bodies, which we only gradually learn to distinguish from our own, are appearances to us of mental or spiritual realities—realities distinct from and independent of, or different from, us; that these realities differ widely from each other, and from us, in the degree of mental development at which they have arrived, and of which they are capable; that they affect or influence us only through that entity or system of entities which appears to us as ‘our’ body, and that they in turn are influenced by us only through the same intermediary. Thus our body is not the ‘manifestation’ or ‘outer aspect’ of our mind, but is relatively independent of it, being the manifestation of another, or different, mind. On the other hand, our mind’s development is bound up with that of the body, which is so intimately connected with it. What we may regard as in a special sense the growing-point of the body, or the actual, or potential, or future, or organization, in large part determined by the actions of our mind, by which it becomes a more and more perfect instrument for the realization of our desires and our ideals, whether high or low. It may be held also that the gradual failure of power to withstand the progressive failure with illness or fatigue—failure which, though primarily physical, seems to reach to the very core of the mind’s being—is defect not of the player, but of the instrument on which he plays, and through which along with his own volition expression. See Brain and Mind.

BOHME.—I. LIFE.—Jacob Bohme (sometimes spelt Behmen), called the ‘Teutonic Theosopher,’ was born in November 1575, in the province of Old Seidenburg, near Götritz, in Upper Lusatia, which in his time seems to have belonged to Bohemia, though in 1635 it was transferred to Saxony, the Elector of which was Bohme’s protector during the later part of his life. The parents of Bohme
were poor pious folk, who trained up their son in their own (the Lutheran) faith and in a knowledge of the Scriptures. The only education he got was of the most elementary character. At an early age he was put to tend cattle, with other children of the village, and, while they ran the first remarkable experiences. Having climbed (says Martensen) to the top of a mountain called the 'Land's Crown,' he saw 'a vaulted entrance composed of four red stones, and leading into a cavern. When he had toiled through the brushwood that surrounded the entrance, he beheld in the depths of the cave a vessel filled with money. He was seized with an inward panic, as at something diabolical, and ran away from the spot in alarm. Subsequently he often returned to the spot, accompanied by other boys. But entrance and cavern had vanished.'

After this, he was apprenticed to a shoemaker in Görlitz, and had another strange experience. While he was in charge of the shop during his master's absence, a stranger entered and priced a pair of boots. The lad, thinking he had no authority to sell, tried to get out of the difficulty by naming a prohibitive price; but the stranger paid it, and, after having gone out into the street, turned and called in a loud voice, 'Jacob, come forth!' Surprised that his name should be known, Jacob went out to the stranger, who then revealed that he was a penetrative gaze, said, 'Jacob, thou art yet little, but thou shalt become great, and the world shall wonder at thee. Therefore be pious and fear God, and especially read diligently the Holy Scriptures; for thou must endure much misery and poverty and persecution; but God loves and is gracious unto thee.' After this Jacob became still more serious and devout. Unable to endure the rihald and profane language of his mates in the shop, he felt obliged to reprove them, whereupon his master began to reproach him with having become a 'house-preacher' to stir up strife. Jacob now entered upon his Wunderjahr. In the course of his travels he discovered how many warring sects the Protestant party was split up, and how fierce and uncharitable were their contentions. They seemed to him as Babel, and he has much to say about this Babel in his writings.

At the end of his wanderings, he returned to Görlitz, and in 1599 married the daughter of a tradesman, with whom he lived happily for twenty years. During this time, a succession of further visions came. When he was sitting one day in his room, his eye caught the reflection of the sun's rays in a bright pewter dish. This threw him into an inward ecstasy, and it seemed to him that he beheld the inward properties of all things in nature opened to him. It was one of his ideas that the quality of everything is expressed by its shape, colour, scent (which he calls its 'signature') to such as have eyes to see. Ten years later, he had another 'opening' which went much further, and showed him how the world was made, and how it arose, and its meaning and end. He felt an inward impulse to write down what had thus been revealed, not for publication—for he felt himself too simple to teach others—but (as he says) for a memorial to himself, so that, should the power of interior vision fail, he might have a record of what he had seen, and thus hold it permanently. The book he now wrote was the Aurora, or Morning Redness, and was the cause of many complaints of that description which for so many years embittered his life. The work was, of course, in manuscript. The written copy chance to be seen by a nobleman, Carl von Endern, who had called on him. Being greatly pleased with it, the nobleman begged permission to borrow it for a short time, and then, without Boehme's consent, had some copies of it made. One of these happened to fall into the hands of the Pastor Primarius of Görlitz, Gregorius Richter, a violent man and inflamed with the dignity of his office. He attacked Boehme in a sermon on 'False Prophets.' A degree of banishment was passed, and no time was allowed him to wind up his affairs and make arrangements. Boehme meekly submitted, saying, 'Yes, dear Sirs, since it cannot be otherwise, it shall be done.' There is some difference of statement as to what happened after this. Martensen says that the next morning the Council sent to recall him, and told him he might continue to live in Görlitz if he would give up writing books and stick to his trade. This he undertook to do, and for five years abstained from writing, though much troubled in conscience as to whether he ought not to obey God rather than man. At the end of this tole, conscience and the entreaties of friends triumphed, and he again began to write, and was then finally banished. Others say that the Council offered to revoke the sentence of banishment, but on the explored him—for the sake of the peace of the town—to remove away of his own accord, and that he did this.

It is certain that, when banished finally, he went, on a citation for heresy, to Dresden. Here the Elector appointed six learned doctors to examine him and report as to whether he ought to be protected or punished. His answers seem to have produced a striking effect on these men. One is reported to have said, 'I would not take the whole world, and condemn this man.' Another replied, 'How can we, when he himself has no 'house-preacher' to stir up strife. Jacob now entered upon his Wunderjahr. In the course of his travels he discovered how many warring sects the Protestant party was split up, and how fierce and uncharitable were their contentions. They seemed to him as Babel, and he has much to say about this Babel in his writings.

At the end of his wanderings, he returned to Görlitz, and in 1599 married the daughter of a tradesman, with whom he lived happily for twenty years. BOEHME'S SYSTEM.—I. His doctrine of origins. — Boehme's system goes back to the beginning, to the time when the Divine Being first proceeded to manifestation. To attempt to go behind this, he says (Three Principles, xiv. 84), confuses the mind. He also says (ib. v. 19) that the origin of things ought not to be inquired into at all; yet since so much has now appeared, we must ourselves from the glory of God, we must know how sin arose, or we cannot know the remedy for it. And we cannot know how sin arose without opening the mystery of the process to manifestation, and the arising of the second, or contrary,
Will, and the seven Forms of Nature, and how the two eternal Principles—darkness and the first Form or Light—are related. It is a presentation of this present world of the third Principle which stands between the two, and is qualified in good and evil. The ability to open this mystery is ours only when we are led by the guidance of the Holy Spirit, and not (as in the second Form or Light) out of the darkness. We are able (in this spirit) to penetrate so far; for every spirit can see back into its own Mother, but no further (ib. ii. 1).

Of the state before manifestation, all we can say is the following. The Supreme Spirit (whom we call the Father) is either the first Form or Light, or 'Still Rest.' In Him was active one only Will, which, being one, did nothing but be, in one state and without any happening. All that afterwards came into manifestation through the process about to be described was in Him in a state incipient and purely subjective. There was yet no creature to know Him and rejoice in the knowledge, and find the highest delight in the recognition of His Power and Goodness. All was yet pure potentiality; all were in Him as undifferentiated elements, and He, the self, knew not themselves or each other. In short, all was Essence in the simple Being of the Deity as a One Will, and there was no existence.

It is clear that such a statement as the above is derived as an impression from primitive considerations, and the cases of the dead (the case of the case) as they must appear to our highest metaphysical perception. Boehme does not claim that such a presentation is a full and complete account of so stupendous and mysterious a matter, but only that it is the best we can yet see. To him it was probably presented in mystic vision; but, we lacking this, can only follow him with our best thoughts. It is well, really, not to speak in these terms, but to remember that the transcendent Fact is not a thing in these terms; and there is no harm in so doing so long as we bear in mind that the transcendent Fact is only freshly apprehended, and never in any way comprehended, by our thought. Therefore, while we have to speak of a time before manifestation, we must remember that this is only by a logical necessity, arising from our present limitation, and not a full presentation of the Fact.

When manifestation was to take place, the first necessity, says Boehme, was that a second and complete Will and everything connected with it be introduced—a new thing in God, for, as to His content, He changes not. It is again a logical necessity, because out of a one Will no 'manifolds' can come, no conflict or strife or dramatic interest. So we must think of Will and its immediate result of its arising within darkness of the primal and, till now, universal light. Even light cannot be known consciously as such if there is nowhere any darkness. And as we know and appreciate only through experience of a contrary, and God had made us thus, the presumption may very well be that there is something in Him which answers (though in a far-off and exalted way) to this law of our minds to which we know no exception.

Immediately upon the darkness there arose the first Form of Nature, which Boehme calls Harkness.* This is the principle of hardness, closing holding of itself to itself, and resistance to modification—a strongly conservative principle. The second Will must produce the contrary of the first—darkness, overshadowing, drawing together, hardening. Spiritually it is the power of self-centredness, self-satisfaction; of that inertia which

* One of the difficulties in following Boehme arises from the fact that, in different passages, he calls these Forms of Nature by different names, according to different points of view. Thus he sometimes calls the first a hand attracting, though he calls the second a hand repelling it, and all the others thing that there is so hard an attractor of itself to itself that it attracts nothing else, while the second seeks to attract other things to itself, but does not attract itself to itself. The original idea of the Forms will soon become clear upon patient study.

resists conviction of sin, submission to the will of God, and love of the brethren.

Immediately upon the light of this Form, the first Will, disliking the darkness, seeks to turn back again to the light. But this it cannot do without reversing the Will to manifestation, which is impossible. Thereupon arises the second Form of Nature, Attraction. It is the reverse of the first. It seeks changes and new combinations, and will let nothing alone—the principle of dissatisfaction and unrest. Spiritually, it is that which forces us into ceaseless activity, whereby we enter into experiences, and so (in the end) work out our reductio ad absurdum.

Out of the conflict of the first two Forms arises the third, Bitterness. It may be easier to catch the ideas of these first three Forms if we call them (in modern terminology) Homogeneity, Heterogeneity, and Strain. The Strain, or tension, arises from the contrariety and opposition of the first two. It is the bitterness of dissatisfaction which, as to the darkness, expresses itself in discontent and complaining, but, as to the light, becomes discontent with our own sin, sorrow for it, and tears of repentance of sin.

Out of the Strain, as it increases in intensity, there arises the fourth Form, Fire. At this point, the operation being carried on reaches the degree at which a self-consciousness arises, with a sense of own will and choice. At this point also the evolution divides itself into two conflicting directions, and it is within the power of the consciousness to decide which of the two it will take. The Fire at first is a cold, dark fire which can burn and hurt, but cannot purify—like an iron heated to just below redness. As it burns and the Strain increases, it grows in heat till it reaches redness, which is a light of low illuminating power, and shows things very dimly. Such is the light of the external man, and the light is the quality of the self-consciousness, which in this case is full of greed, wrath, and pride.

But if the evolution goes on in the right way, then the dull glow of the Fire grows stronger and stronger, until it passes into the fifth Form, Light. This is the true Divine Light, and makes manifest things as they really are. When this Light arises, the Fire sinks down from its horrible raging and becomes only a meek and pleasant warmth, giving all its power to the Light. Thereupon the first three Forms also change their character and become gentle and soft and harmonious. It is as though in the Light they first see their true function and then, with the self-conscious content to fulfil it, and cease to express themselves as they are in themselves (in own self-will) without regard to the end they are there to produce. It is the change which (in modern terms) would be called the passage from self-consciousness to cosmic consciousness, when, instead of thinking of the universe as made for our self, we think of our self as made for the universe. Thus we rise to a higher grade of being and a truer joy than the self-fulliment of our own small wishes and loves could ever give us.

The sixth Form of Nature Boehme calls Sound. The quality—first fixed towards good by the arising of the Light—now begins to express itself to perception. The manifold ways in which this expression is effected—by speech, cries, colours, scents, tastes, feeling, lightness, heaviness, and so on—are what he means by Sound.

The seventh and last Form of Nature he calls Figure. Here the whole 'thing,' thus being attained its form, attains its one essence. It rests on a shape, a body, fit to be its full and perfect expression, and a mansion of the six Forms. Hence, as the evolution has gone on in right order, arise all forms of beauty, all fair colours and sweet
scents and pleasing sounds; and the creature stands marked with the 'signature' of God, a being to His honour and glory and its own indescribable delight.

But should the evolution proceed from the fourth Form in the false direction, that is, should the will elect to stand in self-will, and prefer might, power, anger, to meekness, humility, and love, then its light is but the dull, red glow of the fire; its sound is discordant and harsh, and its figure repulsive and monstrous. For the first three Forms are the real bases of Becoming, and originate the Essence which becomes substantial in the sixth, and embodied in the seventh. If these first three are not manifest in the true eternal, and hidden, but in the fifth, they must remain expressed in their own self-quality of fierce rage and fury, and the creature of which they form the basis will be of like nature and signature. It is in the fourth Form that the great choice has to be made whether the Fire shall be the fire of 'self,' which consumes, or the fire of 'love,' which illuminates.

It is absolutely necessary, says Boehme, that the first three Forms shall be there; without their presence no creature can come to being. They are the roots of things, existing at the presence of the plant, and are animal. But they should never be allowed so to be known or manifested as that their essential 'own self quality' should have any influence in determining the quality manifested. We know that Love is strong, the very strongest of all things; but in Love this strength is never on the surface. As soon as Love strives to 'force,' it ceases to be Love; when it keeps the strength in a hiddenness, and shows as its seen quality only meekness and gentleness, then the unseen base makes the meekness and gentleness strong. But should the creature despise the meekness, and resolve to compel and force others to love it, then the force, being shown, can no longer act as a base, and the supposed force becomes the weakest of all things, because devoid of its basal strength.

Nevertheless, it is in the power of all creatures, from human upwards, to open the first three Forms, and make this quality their quality. This Lucifer did. He was created a Throne-Angel, but allowed the might of the Fire to become dominant in him, and from that time forth despised the meekness of the Light of love. Hereupon his light went out, not, as afterwards happened to Adam, into a hiddenness, but into absolute extinction. The meek love of God, which alone could re-kind it, that he has destroyed by his imagination. From the Light, shut up to the Fire he has chosen, and in which alone he is capable of finding joy. He is now God manifested as to the first Principle, as Jesus Christ is God manifested as to the second; for Christ is the true Light, and the Devil is the apparent Darkness. Each abides eternally in his own Principle.

Of these Principles, it is now time to speak. There are three: two eternal, and the third temporal. The first Principle is the dark world of the Anger, in which the first three Forms stand open and operative in giving quality, and the last three are hidden. The second Principle is the light world in the Love, where the first three Forms are not allowed to give quality, but remain practically hidden, while the last three alone quality. But to understand this we must go to the third Principle, the Present World—which had a beginning and will have an end. The first Principle is all evil; the second is all good; the third stands in good and evil. While man is in it, both the two eternal Forms are manifest to him; the dark world strives to draw him down into it, and the light world strives to lift him up into it. He stands between the two, and to whichever of them he here inclines his imagination, to that he will hereafter belong (Boehme says eternally). For there is no open way from the first Principle to the second, or the second to the third, which stands opposite to the both, and when this temporary world of the third Principle has passed away, no passage will remain, and the two will be so absolutely shut off from each other that each will seem all that is to itself, and be unconscious of any other.

2. Doctrine of Sin and of the Fall.—Sin, in Boehme's system, is really a false imagination. But, as our imagination defines the real for us, the concept is much stronger than it might sound. If the false imagination lasts eternally, we are eternally in deception and error. But, if it is destroyed eternally, we are eternally in Heaven. For nothing short of the power of God, co-operating with the consenting will of man, can enable man to alter his imagination; that is, his consciousness of his state and surroundings, of what is real and of what is not.

The problem of the origin of Evil has long perplexed students of Divine wisdom. Boehme seems scarcely to be conscious of those aspects of the problem which press upon many hearts and minds to-day. His teaching is strongly anti-blame and anti-blame responsibility on the altered will of a creature (Lucifer), and this only removes the difficulty one step further back. Nevertheless, his system contains a remarkable suggestion of a solution.

He is careful to assure us that God (as He truly is, as He appears to an imagination formed in, and by, the Light) is never angry and never punishes. Seen by such an imagination, what looks to its opposite like punishment appears as loving warning and guidance. But the false imagination cannot but think of God as like itself; therefore it takes God's mercy for His wrath, and His guidance for revenge. All the six Forms of Nature have come out from God, and so the first three (which, when manifested, appear as wrath, anger, jealousy) are in Him, only in Him they are never manifested. Boehme commonly needs careful interpreting. He calls the first Principle the Principle of the Father, and the second that of the Son. But he adds that in the denial of the Father apart from the Light of love, that which is known as the blame and responsibility on the altered will of a creature (Lucifer), and this only removes the difficulty one step further back. We see, therefore, that what he really means is that, if the Father should (by a false imagination) be thought of as existing alone, and apart from the Son, He must (by such an imagination) be thought of as existing alone, and apart from the Son, and from that time forth, without an imagination exists, He must speak to it in the terms of its own apprehension. But in Himself, as known by a true (because Divinely illuminated) imagination, He is all Love and Goodness. Sin arises when the first three Forms are brought out of the hiddenness, not merely to look at (as will be explained further on), but to be tasted and known, and their own self-quality accepted as our quality. But as to the transcendental reality, they are never thus brought out. The transcendental reality is known to man only through his imagination. When illuminated by the Light, his imagination rightly pictures to him the reality; but when not so illuminated, the reality is wrongly pictured, and what he imagines to be the fact is the reverse of the fact. Therefore sin is possible only if a false imagination can take on an appearance of reality only in such a false imagination. Thus at once sin is, and is not. When it is said, 'God cannot look upon sin,' the expression is more profoundly true than we suspect. It is a profound truth that the thing Himself has made, but as the imagination of the thought of the heart of a creature who is unaware that the light in him is darkness. The fact is not
as the false imagination pictures it, and the thing pictured exists nowhere save in the false imagination. That gives it reality to the man whose imagination it is, but cannot make it truly real.

But however unreal the content of the false imagination may be, the false imagination itself is real. It was real to Boehme because he believed that, if not rectified in this life, it would eternally abide; for there is no better test of the real than that it should hold its ground through eternity. To determine this idea of its eternity, the problem would be solved, for sin would then be but as a passing madness, and Hell and Earth but an episode in the eternity of Heaven.

But it would have been most important in this clear principle (Myst. Mag. i. vi. 12), that the fullness of joy might know itself, the keen tartness of the Source [that is, of the first three Forms] must be a cause to the Joy; and the darkness, a manifestation of the Light; that so the Light might be manifestly known, which could not be in the One. But can this be, if the three first Forms are never to be explored? Here again Boehme offers us a key.

'The outward spirit and body were unto the inward as a Wonder of the external to the internal in the Light-world, a mirror of the great Omniscience and Omniscience of God, and the inward was given to it for a ruler and guide. As the outward spirit and body are inward, Divine man should play with the outward in the manifestation of the whole in this world, in this world, in this world, in this world, in this world, and one of the original of the holy Light world. All this was given him for his play' (Myst. Mag. i. vi. 9-11).

Through the clumsy (and, to some, repellent) wording,* it is not hard to catch the suggestion here contained. The first three Forms are the sole causes of variety in the manifestations. As the first or second or third predominates—which is possible in an infinitely varying series of grades or of tenses or of times—the world varies.

Through these three Forms arise the wonders. These may be looked into—by a will so set in the Will of God that it is in no danger of wanting to do more than look, never to taste or know—with perfect safety and propriety. We should not omit them. Let little children play at 'shop,' without ever dreaming of making it the serious business of the whole life. They play for the time, and then let it go, and so shut it up again. The harm is where the will plays too long from looking it passively, and then longing after, and from this to tasting and proving; so that the might of the Fire-world gains a hold, and moves the being to put his whole imagination into this 'play,' whereby from play it passes to earnest, and surrounds the whole life, and becomes its one desire. Then the true imagination becomes as dead, the spiritual perception closes, and the being lives henceforth in the world of its false imagination, and knows no other.

The consequence of sin, in Boehme's teaching, is a disturbance of the relations of the parts to the All. Man should be to the lower creatures what God should be to him. Over him God should have sole dominion, and over them he should have sole dominion. Thus, through all the infinite multiplicity of the external, the individuality of the Divine properties, one Will should be dominant—the will of man in whom God's Will is dominant. Thus God would be (virtually) All in All. All the creation would then be in true harmony and temperature, each would love and serve the rest, and forever be in peace, without strife and discord. The elements whence strife arises, and the strife itself, might be known as a speculation (in the old sense of 'looking into'), but never as an actualization. Such was the first world of the Temperature, before Lucifer's and Adam's fall.

The outer process by which the Fall was effected was, as the first and initiatory step, the sin of Lucifer, who was pleased with the might of the Fire in the fourth Form, and rejected the meekness of the submission in the Divine Light, which would otherwise have qualified the might. Secondly and directly, it was the act of our first parents in eating of the fruit of the Tree of Knowledge.

Only a hasty, general sketch of Boehme's teaching as to this can be given here. Adam was created out of the two Principles on which he had an extensive operativity, the fire of the Earth-source and the fire of the inner Fire-source from the Soul of the Lord. The former is the masculine element, the latter the feminine. The two sex-elements were produced the first time from the One, the image of the masculine Virgin. The Fall had a preparation and a culmination.

The preparation was that the Being of Adam, left 'alone.' He should have 'propagated magically' through the union of the two elements in himself, for he was a two-in-one element, corruptible matter, made (as science tells us) 'bone for bone, muscle for muscle, and nerve for nerve' like the beasts that perish. Instantly also the result reacts through to himself, but he looked around and saw the earth and the earth produced fruits wholly good, now withdraws into the hiddleness, and the earth bears 'thus', as the only such grain, but not the whole contains with the good of nourishment for the animal body—the evil which through digestion and excretion is eliminated. It is now only the lower class of animal, which could never be in heaven where no corruption can enter. Disease and sickness manifest themselves, poison manifests itself in certain forms. The fiery fiercest of the lower classes of animals. Thus the Fall of man infected the whole dominion' he should have ruled as God's vice-regent, so that now the whole nature of his 'creation and progression' was infected by the evil, it was a self-will which manifests or it will, and not in the will of God.

3. Doctrine of Regeneration.—St. Paul declares that the creation was thus subjected to 'vanity' in hope that it should 'be delivered from the bondage of corruption into the liberty of the glory of the children of God' (Ro 8:21). Lucifer's fall was beyond remedy, says Boehme; Adam's was not. Lucifer imagined into the first Principle (which is eternal); Adam only into the third. He desired to know good and evil; Lucifer had said, 'Evil, be thou my good.' Though it was introduced into his mind, he knew his knowledge which yet did not entirely obliterate, but only obscured, the true, so that he yet can know evil as evil; while Lucifer knows evil as good. Therefore Adam died, not to the entire ability to know good, but only to the true, Divine, which is good. But though he died to this, it did not die to him; it went into a hiddleness, but is still there as a latent potentiality in him, though at first he is so completely unaware of it that it is as if it were not in him, and so in his state, for it is less than an absolute death; it is practically absolute as far as his consciousness goes, but his consciousness does not embrace the whole content of reality.
His natural life is a life in death, and if the dead life is to come to real life, it can only be through that whereby we come to this life—a birth; therefore (as our Lord said to Nicodemus) 'ye must be born anew' (John 3:3). The power to this New Birth is the power of God in His life and life in His death, and when Christ who came down into our false imagination (but not into its dominance) to re-etiure the disappeared Divine nature that stood as dead, that it might again spring forth to newness of life. He brought the true imagination into the false, and showed it to us visibly in His born and charred flesh. If we may catch the idea that ours is not the true, and so come to desire the true. Then He leads us in the one way to the recovery of the true, by leading us to the Cross, wherein we must (in and with Him) crucify the false which lies over and obscures the true; then the true arises necessarily and becomes our new imagination, that is, our new 'self' and life.

The promise given to our first parents of the Treader on the Serpent, though not immediately fulfilled, till the iniquities after. Man was handed over to our Fall—availed to preserve the Divine nature in man from doing more than disappear, from actually abandoning him. It remained hidden and unrecognized, but it was there; till the fullness of time. And while the Virgin—there may be a man—neces-sary for the Virgin-birth lies in this, that the male seed is from the Fire-source, and the female from the Light-source; so the special nature of the Fire—a hard-set selfhood—is less present in the female than in the male (Myst. Mag. 1, xxiii., 45). Thus our Lord was born, not of 'bloods' (i.e. a divided parentage) nor of the will of the flesh, nor of the will of man, but of God; that is, of the heavenly Water and of the Spirit; and Man must again be 'born anew.' All through His life till the penance of Heaven, only in Heaven, stood where Adam fell. He stood in the forty days' fast, and refused to eat of the earthly substance (though it looked 'good for food'); refused to long after earthly adulation and worship (though it seemed 'pleasant to the eyes'); refused to act from the outer wisdom of the serpent (though it would have given Him the external dominion and glory of this world).

Thus He gained the power required. But, to avail ourselves of His salvation, we must enter into this matter of the temptations of the world, the flesh, and the Devil; that is, the lust of the flesh, the lust of the eyes, and the pride of life. Through His power we can now put the self-will again into the hiddenness, and so bring out of the hiddenness, and live in, the meekness in which He ever lived. Thus we regain what Adam lost—the high glory of being so one with God that He dwells in us as our will, and what He wills seems to be what we will.

When this central Will is inoperative, myriad's of errors arise, foetum with false imagination do then 'what is right in their own eyes,' and all peace and harmony is destroyed. The world is plunged in conflict, everything is 'out of joint'; and all this for the sake of a false idea of freedom, the glamour of which seduces us, but which proves a more horrible bondage than 'His service,' which alone is 'perfect freedom.'

A powerful aid to the regeneration is found in 'Christ's Testaments,' Baptism and Holy Communion. In each it is not the outward element that counts, but the power which has arisen in the soul, then it perceives the inward in the outward element, and it is the inward water which cleanses, and the inward sustenance which feeds, the inward man. In all earthly matter of the four elements the inward One Pure Element lies hidden from the outer man, but open to the inward, first through faith, afterwards actually.

Many other points in Boehme's system might be noticed, but enough has been said to give an idea of the general trend of his theosophy. His terminology constitutes the greatest difficulty in understanding his writings, and many who have studied and made with students of Alchemy, and one of them induced him to read the works of Paracelsus. He thus became acquainted with the terms of Alchemy, and uses them constantly, to the perplexity of his readers. For he saw in them a meaning beyond the outward, and many who will catch his real purport who cannot detect the spiritual allusion underlying the terms used. To him the Magnum Opus seemed a magnificent symbol of the 'maximum opus' of regeneration. The transmutation of the base metal into the perfect stands for the transmutation of the fallen, external nature into the unfallen internal in which man was originally created in the image and likeness of God. And the process through solution, purification, and re-fixation marvellously exemplifies the spiritual process, and the 'eous character. was to plunge in the imagination to death, purification through the Spirit, and the re-creation of the 'new man.'

III. BOEHME'S IMPORTANCE AND INFLUENCE.

The philosophical value of Boehme lies in his suggestion that if men would only begin to apprehend themselves, and what they are, human apprehension there must exist a hidden and unmanifested element. If both are explored, they can appear only as absolute contrary, evil and good. Yet what is required is not to annihilate one that the other may exist alone, but to unite the strength (without the quality) of the evil (which, without its quality, is not evil but strength) to the quality of the good, making the former the unseen, unmanifested, basal power of the latter. For, while evil is manifested as such, good lacks the elemental substance. The Devil is 'the very presence of the evil proving. What is wanted, therefore, is not the destruction of one of the two terms, but such a change of relation between the two as shall virtually reduce them to one. This is the Hegelian triad of Thesis, Antithesis, and Synthesis; and absolutely on all fours with this is Professor G. Boole's formula (Laws of Thought), 'Universe of thought equals Unity,' most graphically represented by his suggested expression, x + not x = 1.

The real interest of the fact that Boehme lies in his clear and unmistakable teaching as to the nature of true regeneration and the true Christian life. Many who will fail to understand his cosmology will find him lucid and most helpful here.

In England, Sir Isaac Newton, William Law, William Blake, and others have been students of Boehme; in France, Louis Claude de Saint-Martin; in Germany, Hegel, Schelling, Schopenhauer, J. G. Gichtel, and many others.

LITERATURE.—The principal edition in English of Boehme's works is the edition of the Philosophical Works, translated by J. Jacob, 1840-47. There is also a German edition (1705). Another edition in English is Izaak Walton's edition of the Mystical Works (1678-89), and another in English by John Shuster, 1833. The most recent English edition is in the Writings of John G. Gichtel, 8 vols., published by J. C. Barker, 1909.

The Bogomils were a sect of dualistic heretics who declared the kinship of the Paulicians and Eutycheians (q.e.). Mainly to the former may be ascribed their peculiar form of Dualism, and to the latter their specifically ascetic element. Both these earlier movements took root in Thrace during the 2nd century, A.D., and spread from their native soil in the Eastern Byzantine provinces (Armenia, Mesopotamia, and N. Syria). They flourished most among the people of Slavic race, particularly the Bulgarians. Here they passed through a process of intermingling and local modification which issued in a system relatively new and strange,—whose adherents increased rapidly though secretly, and are known to have been called Bogomils in the beginning of the 13th century, if not from the middle of the 10th century. Bogomils were usually found in the frequent use by them of the two Slavic words Bog mütus, "Lord, have mercy." A more likely explanation derives it from Bogumill, "Beloved of God," in which case it may be taken to denote the idea of a pious community analogous to the "leper" (i.e. Friends of God) in the early Christian sects in the vulgar tongue under the Bulgarian Tsar Peter, who ruled from 927 to 968. This would seem to afford a surer clue to the name, and (if correct) puts back the active emergence of the movement to the middle of the 10th century. Basilissa Zizanija (died after 1118) is the main source of what is known about the Bogomils. His account is given in titulus, or chapter, xxvii. of the work Πανορμία Σωτηρίας which he devoted to the refutation of twenty-four different heresies. He gives an article on the forty-eight articles of the reigning Emperor Alexis Comnenus (q.v.) and a story of his daughter of the latter, shows how he came by his information. Alexis, having invited the physician Basilissus, chief apostle of the sect, to Constanti- nople, induced him, under an affectation of sympathetic interest, to make a true statement of his doctrines; meanwhile a sopher, hidden behind a curtain in the room, took down a verbatim report of the conversation, and at the end of the interview the work was raised. In this way

2. "This is the Greek interpretation, and is given by Euthymius Zigabenus (tituli xxvii. of Πανορμία Σωτηρίας)." Zöckler favours this and says it is thus "wohl Specialbezeichnung" der Herkunft der Secte, die sich wohl gegen "Freundliche Gottes" (θεολογία)." With this, too, would agree their own self-description as Χριστιανοί, Χριστοπολίται (Euthymius Zigabenus, Πανορμία Σωτηρίας in Migne, FG cxxxi. col. 451; Anna Comnenus, Alexia, lib. xv. (ib. vol. cxxxi. col. 1177).

3. Zöckler favours this, and says it is thus "wohl Specialbezeichnung" der Herkunft der Secte, die sich wohl gegen "Freundliche Gottes" (θεολογία)." With this, too, would agree their own self-description as Χριστιανοί, Χριστοπολίται (Euthymius Zigabenus, Πανορμία Σωτηρίας in Migne, FG cxxxi. col. 451; Anna Comnenus, Alexia, lib. xv. (ib. vol. cxxxi. col. 1177).

4. See "Liber des Bogomils in Bosnia and in Bulgaria at the beginning of the 13th century," in Revue des questions by Louis Lebret, pp. 479-517. Bogomils = Theophilius, and was (Bogomils = Theora) pope's second (assumed), name, his first perhaps been Judicella. These were also spoken of as Fandhagelata (θανδηγαλεία), i.e. pursers-funders, from fundo, "pursers" or "funders," with reference apparently to a habit of begging by their way from place to place like the Friars (see Euthymius Zigabenus, c. Φανθαγελαίας in FG, vol. cxxxi. col. 47).

5. Anna Comnenus, lib. xvi. 457 (FG, vol. cxxxi.).

Basilissus found himself ensnared and self-accused. His doctrine thus craftily obtained is set out by Euthymius (PG, vol. cxxxi.) under 52 heads, of which the main are as follows:

(1) The Bogomils accepted all the Mosaic books of the OT, but accepted as canonical the Psalms and the Prophets. In addition, they accepted the four Gospels, the Acts of the Apostles, the Epistles, and the Apocalypse, assigning a peculiar sacredness and authority to the Gospel of John. So far as Moses was used, it was as allegory to support their own views. A favourite book was the apocryphal "Visio or Ascensionis Isaiae."

(2) While accepting the Gospel-history, they did so not altogether in its literal sense—Christ's infancy, life, miracles, and reign were set in political clothing of higher facts—and they held, moreover, that its meaning had been falsified by the Church. Chrysostom, in particular, seemed to them a falsifier. Nor would they have anything to do with the "grammarians," whom they chanced as scribes and Pharisees.

(3) They taught a Sabellian conception of the Trinity, saying that all three names—Father, Son, and Holy Spirit—apply to the Father; and that in the end, when Son and Spirit have done their work, they will merge into one in the true God. The Son was represented as human in form, though not corporeal. They pictured the Father as the ancient of days (θεοπάπα), the Son as an adolescent youth (θεοπάπα, δηθος), and the Spirit as a beardless youth (θεοπάπα, χειροκοπα). See Euthymius Zigabenus, c. Φανθαγελαίας.

(4) God's first-born son was Satanael (the Satan of the NT), the highest of the spiritual beings, his Father's universal vicegerent. Tempted by his pride, however, he sought to set up an Empire of his own, and drew after him a great company of angels. Cast down from heaven on this account, but not yet deprived of creative power, he made a new heaven and a new earth. They held that Satanael also made man, but could not do more than fashion his body. For life or spirit he had to fall back upon God, whose help he besought and obtained on condition that from the human race the places of the fallen angels in heaven should be refilled. So God breathed into man's body the breath of life. But Satanael, moved by envy of man's glorious destiny, repented of his promise. He seduced man to eat forbidden fruit, and from that time on man became subject to the principle of evil in humanity. This principle prevailed over the good principle represented by Abel, the child of Adam and Eve. By its aid he imposed himself upon the Jews as the Supreme God. Moses, under his influence, placed his Law—hence sin—his fatal gift. Thus all men, save a few, were led astray. Then the good God intervened. In the 5500th year after the creation of the world, a spirit called the Son of God, the Logos, the Archangel Michael, the angel of the Great Council (Is 9), came forth from Him, entered the world in an ethereal body by the channel of Mary, and proceeded to overturn his evil brother's kingdom. Satanael plotted and brought to pass his death unaware that, being bodily in appearance merely, he could not be affected by any physical pains. When, therefore, Jesus showed himself after the resurrection in his true heavenly form, Satanael
had to acknowledge defeat. His divine power departed from him. He lost the angelic syllable (Εε) in his name, and became Satan only. Christ then ascended into heaven and took the seat of power once held by Satanael. His own place among men was hereupon taken by the Holy Spirit, introduced by the Son as the Son by the Father. 1

(5) The twelve Apostles were in a spiritual sense the first creation of the Spirit; and the true successors of these, in whom alone He continues to dwell, are the Bogomils and their converts. As manifestations of the Spirit they spoke of themselves as parents of God. 2

(6) People of the true faith cannot die, but may be said 'tangani in sonno transmutari.' 3

(7) Their own place of assembly (synagoga) they called Bethlehem, because there Christ, or the Word of God, is truly born and the true faith preached. 4 All other so-called sacred temples are the home of demons. 5

(8) Accordingly their attitude to the 'Church' was hostile throughout. Quoting Mt 4: 11 ('and led him into the wilderness') and Deut 31: 9 (in Capernaum), they applied the term 'Nazaretli' to the 'Church,' reserving 'Capernaum' to themselves. 6 All the Beatitude were spoken concerning them, not the 'Church,' 7 and not to the latter has been given any power either to do any wonderful work. 8 As to the Sacraments of the Church, its Baptism is that of John, not Jesus, of the water, not the Spirit; and those who come to it are Pharisases and Sadducees. 9 For John the Baptist was a servant of the Jewish God, Satanael. They despoiled also the Church's doctrine and practice of the Lord's Supper. 10 It seemed to them a sacrifice to evil spirits. Their own conception made the Supper merely symbolical of communion with Christ as the bread of life and the wine of heaven—a consistent outcome of their Docetism. Equally consistent was their protest against the worship of the Virgin Mary, of the Saints, and of images. 11 When the Church attempted to rebuke the protest by appeal to the miracle-working virtue of relics, they did not deny the miracles, but ascribed them to evil spirits which attended the so-called Saints in life, 12 and were permitted to go on working after their death. Similarly the power of the exorcist over the demoniacal world was not denied in some cases, but an attempt to nullify the power was made. The exorcism is a symbol welcome to evil spirits, inasmuch as it was the cross by which they were fain to have compassed the death of Christ. 13

(9) On the ground that the demons, under Satanael, possess a certain power for an appointed time, and that it is permissible to secure safety from unjust treatment by doing them outward honour, they took part in Church worship. 14 But they had their own secret 'conventicles' and a definite mode of initiation. After the candidate had confessed, and after the fastings and prayer, the president laid the Gospel of John on his head, and together with the brethren invoked the Holy Spirit and repeated the Lord's Prayer. 15

A probationary period of strict abstinence followed. Then, if approved, he came a second time into the assembly, when, with his face toward the east, the Gospel of John was again laid on his head, the brethren touched his head with their hands, and sang together a hymn of thanksgiving. It is submitted by their enemies that the monk abode before the candidate was one month. 16 They were to keep the precepts of the Gospel, and fast 17 and pray, and be pure in life and compassionate and humble and truthful and loving to one another, and without covetousness. 18 Nor is there any evidence that the Bogomil hypocrasy and secret vice had any foundation in fact. The Bogomil practice, as well as standard, seems to have been far above the average level, and to have had no small effect in attracting those whom the corruptions of the Church repelled.

(10) The monk and physician Basilius seems to have been the first martyr of the sect. He did not recant the confession obtained from him in the manner already described, and was led away to prison. This was about 1111, at which time he had given up and the convertity of the Bogomils for 40 years. In 1119 he died at the stake. 19 Many others were 'ferretoed out' by the combined zeal of Alexius the Emperor and Nicholas the Patriarch—especially (it is said) from among the laity and the so-called Constantinopolitan clergy—on their 'errors under threat of punishment or promise of reward; some remained firm and went to lifelong imprisonment. 20 But the heresy lived on for centuries—the same in substance everywhere, though modified in detail here and there. A strong influence on its side was the monk Constantine Chrysomalus, whose writings were condemned by a synod at Constantinople in 1140. Another synod at Constantinople in 1143 deposed two Cappadocian bishops as Bogomils—a sign that the heresy had spread to Asia Minor. About 1230 the Patriarch Germanus complained of its widespread activity in the capital, and of the success with which its emissaries wormed themselves into private houses and made converts. In Bulgaria, most of all, it held its ground, and did so in the form of an organized Church-community. Distinct traces of this are met with as late as the second half of the 14th cent., and the smaller societies into which it separated are traceable to a much later time.

BOHEMIAN BRETHREN.—See HUS, HUSITES.

BOLDNESS (Christian).—Boldness (zappoia) is used in the NT to describe the perfect confidence which the Christian, depending upon Christ and His work, has in all his dealings with God. Three passages may be cited as illustrating the idea: (i.) Heb. 4: 16 'Let us therefore draw near with boldness unto the throne of grace'; (ii.) Heb. 10: 25, Eph. 4: 15 (ii.) Heb. 10: 19 'Ceust not away therefore your boldness, which hath given you great recompense of reward'; (iii.) 1 John 4: 18 'Herein is love made

The Bogomils fasted three times weekly—"secunda et quarta et sexta dies" (§ 25).

1. In the Hippodrome at Constantinople (see Anna Comnena, lib. xv. [PG xxxii. coll. 1181-6]).

18. VOL. II.— go
perfect with us, that we may have boldness in the day of judgment;” cf. 1 John 3:21. In (i.) the ‘boldness’ denotes the perfect confidence with which the Christian approaches God in this present world; in (ii.) the confident expectation, or joyful and hopeful assurance, which he has with regard to his future relationship with God; in (iii.) the boldness, conceived as existing in the future, denotes the absence of fear, or the simple confidence, which the Christian will experience in the day of judgment. Of the latter, boldness certain important facts require to be stated.

1. It was a new ingredient put into the religions consciousness by Christianity, and is a distinctive feature of the Christian faith. To come boldly to the throne of grace is a new and living way (Heb. 4:16). This can be seen by a comparison between the way in which man approaches God under the OT dispensation, and the way in which the Christian approaches Him under the new covenant. In the OT man approaches God with fear and trembling; he stands afar off ‘at the nether part of the mount’ (Ex 19:18); even Moses said, I exceedingly fear and quake (Heb. 12:2); in the NT man approaches with boldness ‘the city of the living God, the heavenly Jerusalem,’ God the judge of all; and Jesus the Mediator of a new covenant, and the blood of sprinkling which speaks better things than the blood of Abel, testifies that in this matter of boldness the Christian religion is distinct, not only from the Hebrew, but from all other religions. Fear and shrinking rather than boldness and confidence are, universally, the accompanying traits of the natural man’s approach to the unseen and Eternal. The Christian alone has boldness of access to the throne of God.

2. The ground of Christian boldness is Christ, and especially His atoning work; it is not any virtue or grace which the Christian may have in himself to recommend him before God, but that in Christ is the sole ground of boldness. In Christ the Christian has a great High Priest with whom alone he can boldly approach the throne of grace (Heb. 4:13-16, Eph. 2:18; cf. Rom. 5:2); in Christ’s blood he has a sacrifice for sin with which he can boldly enter the Holy Place (Heb. 10:19). In 1 John 4:14 is the love of God perfected in the Christian’s boldness, and perfect love casts out all fear; but the perfect love of God is, according to this Epistle, embodied in Christ and His propitiatory work. It is a new confidence, not for the Christian’s own purposes, but a confidence built on the ground of Christ and His work, and united to Christ and Christ’s work by faith, the Christian found a new standing—one of confidence and joyful assurance—before God, and exhibited it to the world.

3. Christian boldness is not inconsistent with humility and reverence before God. The Christian is bold when he realizes the perfect and sufficient right which he has in Christ to approach God, but humble when he realizes that this right is not in and by himself, but in and by Christ, who has given him such boldness and freedom of access he can feel nothing but grateful reverence. In the Christian consciousness, boldness and humility are met together, confidence and reverence have kindly fellowships within him. From the audacity which defies all authority, which fears neither God nor man, and which leads a man to be and to do whatsoever he will; such audacity is not boldness towards God (1 Jn 3:22); it leads away from God. It is irreligious and immoral in its tendency, and exercises itself in the sphere directly opposite and opposed to the sphere of Christian boldness; (ii.) From the courage or confidence which is due to an imperfect or incomplete conception of God. Where God is conceived as pure clemency or simple kindness, and as having a forgiveness so easy to grant that it amounts to an indifference to sin, He can be approached with a certain boldness which, however, is but the courage of a moral ignorance and spiritual blindness as to the true character of God, and is very different in religious quality from the boldness of the man who holds God to be so inconsistent with Himself, and so opposed to His nature, and so incapable of vengeance, that a sufficient sacrifice, be dare not approach Him. (iii.) From courage in the face of difficulty, or danger or opposition in the world. From such natural courage the spiritual boldness of the Christian differs in several respects. The sphere of their exercise are different. Natural courage exercises itself in the world of phenomena, Christian boldness is towards God and exercises itself in the world of spiritual realities. Then natural courage requires for its exercise danger or difficulty, Christian boldness is, on the contrary, the exercise for all difficulty of approach to God has been removed by Christ. Natural courage takes risk, Christian boldness feels no risk; it has ‘full assurance.’

5. But, while Christian boldness is in itself distinct from natural courage, it was doubtless the secret and source of the marvellous bravery which was shown by members of the Apostolic community in face of danger and death.* Perfect love casts out all fear, first the fear of God, and then of every other thing in God. God’s people are always ready to die for God, and so to be martyrs. From this it follows that a true Christian, and a Christian who has been living in the spirit of the new covenant, is naturally disposed to be ready to die for the sake of his Christian faith, when this is demanded by the truth of God. In this boldness the Christian is expected to be, and is expected by Christ. Wherever the Christian has the true Christian consciousness of the boldness of the Christian faith, the Christian is expected to be bold.

6. This article would not be complete without a reference to the boldness of Jesus. In the Fourth Gospel boldness is mentioned seven times as characteristic of the bearing and speech of Jesus (cf. Mk 8:9). Then it only need be mentioned that confidence and assurance were supremely evident in the attitude of Christ towards God. Notice His attitude at the grave of Lazarus, or as He draws near to the Cross.

For boldness in general sense, see COURAGE.

D. RUSSELL SCOTT.

BOMBAY.—The Presidency of Bombay, the most western of the provinces of India, takes its name from that of its capital city, which is believed to be derived from the title of the local goddess, Mambá or Mamáb Devi, interpreted to mean Mahá-Andô, the great Mother-goddess of the non-Aryan population. Her shrine, which once stood in the site now occupied by the Bombay city, was moved to the Bhéjdi Bázár in the native city, where she still receives the offerings of her worshippers. The Presidency, as now constituted, consists of scattered groups of districts lying along the W. coast of the Peninsula, from lat. 18° 55' to 26° 29' N., and includes an area of 188,745 square miles, and a total population of 25,424,235.

The religious conditions of a great Indian province have been discussed in some detail in the case of Bengal (see), and separate articles dealing with the more important divisions, sacred places, and castes in the Bombay Presidency illustrate so many phases of the local religions.

* "repurapu" is used of the boldness which the Apostles showed in bearing and speech (Ac 4:19); "representation" is used frequently in the Acts of the fearless preaching of the gospel.
beliefs that it is unnecessary to discuss them in detail (see, for instance, AMARNATH, BARODA, DWARKA, ELEPHANTA, ELLODA, GHIR despairing of the result, the Paltan of the Vaghre, SOMNATH; and, for castes and tribes, BAIHAG, BANJARA, BHILS, DHIVDISHANS (North), MACHAR, RAIPUT, RAMOSHI, YOGI). In this article, therefore, it is proposed merely to give a general sketch, historical and descriptive.

In the case of Bombay, perhaps more clearly than in other provinces, the varied environment of the people has influenced their religion. The Presidency consists of several regions widely differing in climate and vegetation, and liable to external influences, as well as in the ethnical origin, history, and character of their population.

(a) Sind.—Thus, beginning from the extreme west, we have the valley of the Indus, the climate of which, owing to its prevalent aridity and the absence of the monsoons—a condition relieved only by a great system of artificial irrigation—ranks among the hottest and most variable in India. By its situation it was especially exposed to the attacks of the Arabs from the west, which began early in the 8th century and gradually forced the desert to submission. The original population consisted of an Aryan race with a non-Aryan substratum, leavened by an important element derived from foreigners, including the Ephthalites or White Huns, and more especially after the armies of Islam appeared upon the scene. The permanent result of the Arab invasions has been that, at the present time, rather more than three-fourths of the population are Mosalmans.

(b) Cutch, Kathiawar, and Gujarat.—Farther east come Cutch (Kachchh), Kathiawar, and Gujarat: the first almost an island, severed from the mainland by the Rann, half desert, half morass; the second a peninsula, stretching westward to the Arabian Sea; the third a fertile plain, watered by the rivers Narbada and Tapti—the Garden of India, as it used to be called before its recent devastation by famine. This region was from the earliest times exposed to invasion from the north of India. The inscription of the Satrap Hrudrabana, engraved on the rock of Girnar in the Kathiawar Hills, of the establishment, in A.D. 150, of the Saka or Scythian dynasty, known as that of the Western Satraps. Kathiawar and Gujarat seem to have been the most southerly tracts which came under the rule of the Huns, and the theory advanced by S. E. Roberts (Arch. J. v. 114), that the well-marked Scythian element can be identified in the population of the Deccan, will not bear examination.

(c) The Konkans.—The remaining seaboard districts of the Presidency, included under the general name of the Konkans, are separated from the central region by the barrier of the western Ghats, range, which, until it was pierced by British road and railway engineers, formed a permanent obstacle to communication between the coast and the interior. This portion of the western seaboard was from the most ancient times the seat of a flourishing trade, and formed the centre of commercial and intellectual intercourse between India and the nations of the West. Perhaps as early as 1600 B.C. trade routes were established between its ports and those of the Red Sea. Communication with the Gulf of Persia and the cities in the Tigris-Euphrates valley certainly started not later than 750 B.C., and probably dates from a much earlier period. From the beginning of the Christian era, commerce was opened between Gujarat and Rome; a colony of Jews from Yemen is believed to have reached Kolâb in the 6th cent. A.D.; the Parthians, driven from Persia by the advancing armies of Islam, landed at Sanjan in the Thana district in A.D. 775. The long line of Christian missionaries to W. India begins with Pannijus (189-90);* in Gujarat this line continued to grow until the Portuguese, established in Goa in 1510, steadily undertook the conversion of the native races which fell under their control. This continuous intercourse between this part of India and the West must have profoundly affected the religious beliefs of the country. About the same time, with some measure of probability, has been attributed the growth of the conception of lively faith in a personal Godhead, which is a leading tenet of the Vaishnav sect. This, however, is strenuously denied by those who dispute the originality of the Vaishnav religion.

(d) The Deccan.—In direct contrast to the seaboard is the scantily watered, comparatively unfertile, plateau known as the Deccan (Dakkin, Skr. Dhakshina, 'that on the right hand,' 'southern'). While the barrier of the W. Ghats divides it from the coastal region, it is separated from N. India by the Vindhyas and Mahâdevo ranges, and in ancient times was specially isolated by the tract of forest country known to the ancient Hindus as Dandakâranya, which has been identified with Mahârashtra (see H. Brébner, 'IJanjara, the original of the Dakhin Mountains'). This early Hindu legend is said to have been occupied by fierce demons (Kâshmara), in other words, the non-Aryan tribes who resisted the pressure of the new civilization from the north, and were forced to take refuge in this most predominant element in the present population. In the Deccan the sturdy peasantry were much less accessible to priestly control than the less bulky races of the seaboard. In Gujarat the preservation of the original Hindu beliefs was due chiefly to the Rajput aristocracy, largely recruited from Huns and Scythians admitted to Hinduism; the wealthy trading classes devoted themselves to the building and endowment of temples; even at present among the laity there is found a sectarian fervour absent in other parts of the Presidency. The condition of religious thought in the Deccan was and is very different. Here there is a lower general average of wealth, culture, and religious devotion. The population is more scattered, and is absorbed in the care of the precarious crops which along the soil produce. Consequently, like the practically minded Jât of Upper India, the Deccan Kumbh or Marâtha, parmi sexurum cultur et infrequens, cares little for the Brahman, whom the wider political education of the Hindus (see p. 114), the influence of other literate classes has led to prefer the occupation of the layman to the segregation of his own fraternity in religious institutions (Baines, Census Rep. 1851, l. 125). The Marâthas are of opinion that the spiritually-minded Brahman should not interfere in secular affairs; and those who devote their lives to the study of Hinduism conceive the divine ordinances are held in great esteem; but otherwise, in the Marâtha country, there is no veneration for the Brahmic character (Grant Duff, Hist. of the Mahrattas, 5, 36). Siváji, the founder of the Marâtha State, steadily pursued the policy of appointing Brahmins to the highest civil posts in the administration; and the Peshwa, or Marâtha Mayor of the Palace, was always a Brahman. Thus the modern Marâtha

* It is possible, however, that the 'Indus' of Pannijus was really S. Persia. See Roth, 'India,' vi. 467; cf. Bernal, 'Sed Indianum omnem plagam Aegipii acscipiamus,' and see Lassen, in Arch. J. iv. 253; and Wormald, 'Eckhodt'schipschreiber,' ii. 63-65, 132-135; Moller, 'Lehrb. der Kirchengesch.,' i. 108. On the other hand, it is tolerably certain that Christianity entered India between 700 and 900 (Lassen, Ind. Alterthumskunde, i. 1118-1125; Aiken, 'The Dravidians of Gotta the Buddha and the Gospel of Jesus the Christ, 255-292; Hopkins, India Old and New, 193; Berg van Blijings, Ind. Indiënboek Op de Christlikheit Verhaken, 118-120.
Brāhmaṇ is reared to cherish the tradition that his forefathers directed the policy of the last independent. Hindustan in the Finnsian end looks with jealousy on the Government which has replaced it. Poona has become a centre of restless intrigue, to which much of the recent disloyalty in Bengal, and in particular the modern dedication and training of Marhaṇa can be traced. Next to the Kāśmir, the Marhaṇa Brāhmaṇs are perhaps the most capable Hindus in the Empire (T. C. Arthur [A. T. Crawford], Our Troubles in Poona and the Deccan, 1897, Reminiscences of an Indian Police Officer, 1898, p. 141).

Lingāyāt.—The independence of Brāhmaṇ authority, which is characteristic of the Marhaṇa, was possibly one of the main causes of the growth of the remarkable Lingāyāt sect, which will form the subject of a separate article. They have their own priests, and have long severed all connexion with the Brāhmaṇs. But the old leaven is still working, and they now exhibit a tendency to revert to Brāhmaṇical Hinduism, with which they claim their creed to be coeval, and are attempting to apply the fourfold caste organization of Manu to their social divisions (Enthoven, Census Rep. 1901, i. 387).

3. Extension of Brāhmaṇ influence into S. India.—The process of bringing that portion of the Peninsula which lies S. of the Narbada within the Brāhmaṇical fold probably began with the peaceful settlement of the new-comers on the west coasts. This may have occurred at an early period, when the Aryans had worked their way into the Sind delta and Gujarāt on the one side, and down the lower Ganges valley on the other. In Bombay the movement further south was effected either by the sea route or along the western coast districts, where the mountain ranges diminish in altitude and melt into the alluvial plains of Gujarāt, the valleys of the Narbada and the Tāpti. The advance into the Deccan was checked by the natural obstacles already referred to and probably occurred at a period long subsequent to the movement along the coasts. Prof. Bhandarkar, by an examination of the early grammarians, has shown some reason for believing that the Aryans had acquired a knowledge of the script by the 7th cent. B.C.; that up to this time their advance had been along the coast districts; but that by B.C. 350 they had become acquainted with the country as far south as Tanjore and Madura (DG i. pt. ii. 141). These conclusions cannot be regarded as strictly accurate, but it is reasonable to suppose that the Brāhmaṇism of S. India is of comparatively recent origin has been disputed by Hinda writers. But the theory of a comparatively late introduction of Aryan culture fits well with the existing facts, and it involved important consequences. Not only have the local Dravidian languages held their ground, but art and general culture have developed on original lines. Still more is this the case in the domains of religion and politics. The newcomers found well-organized communities and ancient kingdoms in occupation of the country. The forms of belief characteristic of the non-Aryan races retained their influence over the minds of the people. The early Tamil literature shows that the evolution of religion in the south took a shape very different from that which, in the case of the northern races, was more familiar to students of the development of Hinduism (V. Kanakasabhai, The Tamils Eighteen Hundred Years Ago, 1894, p. 227 ff.).

The application of Buddhism into the region south of the Vindhyā range was the work of Aśoka (c. B.C. 272–231; see Aśoka). Two copies of his fourteen edicts have been found on the W. coast; one, fragmentary, at Sopara or Srīprāraka in the Thāna District, N. of Bombay; the second, nearly complete, on the Gīrṇā hill, E. of the town of Junāgarh in Kāśmir (Smith, Asoka, 103). The discovery of three copies of the minor Rock edicts in the Chitālḍrāg District of Mysore shows that his authority extended as far south as that kingdom (Rice, Mysore, ii. 499).

The progress of the three great religious movements, Jainism, Brahmanism, and Buddhism, is recorded in a series of monuments, the rock-cut halls and temples of W. India, of the greatest historical and religious importance. When their story is carefully examined, it appears that they are spread practically without material breaks over the several centuries of the darkest, though most interesting, period of Indian history; and throw a light upon the rise of India as greater than can be derived from any other source. In addition to the facts claimed to attention, the western caves afford the most vivid illustration of the rise and progress of the three great religions that prevailed in India in the early centuries of our era and before it. They show clearly how the Buddhist religious rose and spread, and how its form became afterwards corrupt and idolatrous. They explain how it consequently came to be superseded by the nearly cognate forms of Jainism and the antagonistic development of the revived religion of the Brāhmaṇs. All this, too, is done in a manner more vivid and more authentic than can be either gained from an enumeration of the inscriptions now available (Fergusson-Burgess, Cave Temples, 160).

More than nine-tenths of the caves at present known are found within the limits of the Bombay Presidency. The view once held, that they are in some way connected with the monuments of Egypt, is now rejected; and their abundance on the W. coast is due solely to the fact that the region lies to the west of the formation of that region, with horizontal strata of amygdaloid and other cognate trap-formations, generally of considerable thickness and uniformity of structure, and with their edges exposed in perpendicular cliffs, favoured the construction of such excavations to serve as halls, temples, or monasteries (Fergusson, Hist. of Indian Arch., 1876, 107).

Many of these caves are described in separate articles (see AJANTA, KĀÑHERI, ELLORA, NĀSIK); and therefore it is only necessary to say that, as a whole, they fall into two groups, though naturally the same site was occupied by successive builders, and accordingly the distinction of schools of Buddhist belief is not always rigidly observed. The first group represents the Hinayāna school, the earlier form of Buddhism, and includes the caves at Junāgarh and other sites in Kāśmir, dating from B.C. 250 to the Christian era; those of the Konkans and Deccan, all S. of Bombay, dated between about B.C. 200 and A.D. 50; those E. of Bombay, in the range of the W. Ghāṭa, dated between B.C. 100 and A.D. 100; and those in the hills of NāsiK (wh. see), and the earliest of the Ajanta (wh. see) group, which are of various ages, ranging from B.C. 100, and including examples of the Mahāyāna, or later school, as late as the 7th cent. A.D.; those at Mārol and Kāñheri (wh. see) near Bombay, between B.C. 100 and A.D. 150. The second group, that of the Mahāyāna school, extends from the 4th nearly to the 8th cent. A.D., and includes the hall at Junāgarh, the later specimens of the Ajanta series, and those at Aurtangāzil and NāsiK.

These monuments bear eloquent testimony to the religious fervour, generosity, and taste of the rulers, nobility, and merchant princes who provided funds for their excavation and decoration. Their endowment had the effect of attracting a number of monks. The Buddhist pilgrim, Fāhien, who began his travels in A.D. 399, gives a lively account of the monastery at Kāñheri, and describes the magnificence of the festal decorations, the beauty of the relics, the costly illuminations, the rich endowments of the community (Beal, Fāh-hien, 55, 76, 178). Huen Ts’iang, a later pilgrim, who in A.D. 641 visited the capital (probably NāsiK) of the great king Pulakośin H.,
who came to the throne about A.D. 608, found some hundred religious establishments (saṅgharṣāna), containing many thousands (prakāśa), in about 527. But even at this time Buddhism was in a stage of decay. Possibly the picture which the same writer gives of the famous establishment at Amarāvatī (wh. see) is true of other foundations of the same period. For, as we have already said, there have been no priests (dwelling here) in consequence of the spirit of the mountain changing its shape, and appearing sometimes as a wolf, sometimes as a monkey, and frightening the disciples; for this reason the place has become deserted. It is possible that some other place has remained there.

5. Jainism.—The history of the rise of Jainism—a faith contemporary with the rise of, and resulting from the same causes that gave birth to, Buddhism—is similarly little known concerning the process by which it attained a high position in W. and S. India for several centuries. The Jains of the Bombay Presidency are at present represented by two classes: the first, comprising the merchants of Gujarāt, who are remarkable chiefly for their extreme tenderness to animal life, as is shown by the hospitals (pinjrapol) established in the chief cities for all sorts of creatures; and the Mārvarī Bahūṣ of Mārvarī in Rajputāna, who are generally money-lenders and immigrants into the Deccan. The second class includes a class of cultivators found chiefly in the Belgaum and Dharwar districts of the Karnāta or S. Maratha country. The first division is connected with the northern centres of the faith, in Rajputāna and Gujarāt, such as Mount Abī (wh. see) and Palitana (wh. see). The second group, that of the southern Jains, represents the relics of a belief which was once the State religion of a large part of S. India. In Mysore, according to Rice (some of whose conclusions have been disputed by H. V. Fleet), there is a large community of Jains. The pure form of Buddhism by the missionaries of Asoka, and here it continued to be the official religion of certain dynasties and kings throughout the first ten centuries of the Christian era. Here the three rival faiths, Buddhism, Jainism, Brāhmaṇism, appear to have existed side by side. In the 5th and 9th centuries A.D. an active revival of Brāhmaṇism in the form of Linga-worship resulted from the missionary labours of Kumārila and Saṅkarāchāryya, which raised Saivism to a position of superiority amongst religious sects. In the 7th century, the 12th century, the Vaiṣṇava sectarians gained ground, and, through the teaching of the reformer Rāmānuja-chāryya, dealt a deathblow to Jainism. After this the adherents of the Vaiṣṇava and Saiva doctrines seem to have effected some kind of compromise, of which the form Harīhaṇa, uniting the cult of Hari (Vigūṇa) and Hara (Śiva), was the outer symbol. The almost contemporaneous growth of the Lingāyat sect, which popularized the Saiva cultus, led to the final decay of Jainism as a leading faith in this region, while the later forms of Vaiṣṇavism absorbed all that remained of Buddhism (Rice, Mysore, i. 450 ff.).

6. Development of Brāhmaṇism.—It would be an error to suppose that Brāhmaṇism suffered a complete collapse during the ascendancy of Buddhism and Jainism. The excavators of many of the Brāhmaṇa remains, however, both religious and social, have found traces of both Saivism, and in the great cave at Bādāmī a Vaiṣṇava temple of the 6th cent. A.D. still survives. Some of the Saiva caves go back to the 2nd century. But it is only in the 4th cent. that they become common, and nearly all the Hindu caves of later date belong to that sect. The work of Brāhmaṇical cave-excision seems to have almost ceased in the 8th century. The methods by which the original Buddhist models were adapted to the Brāhmaṇical cultus are described by Fergusson and Burgess (Temple, 369 ff.). The most important architectural development was due to influence from S. India, and resulted in the construction of the remarkable Kailāśa rock-temple in the reign of the Rāṣṭra-kūta king Krishnā (Kṛṣṇa), about A.D. 760 at Ellora (wh. see; Smith, Early Hist., 2nd ed.). The Jains also undertook the excavation of cave-temples, but at a later date than those of the Buddhists or Brāhmaṇs, none of these Jain works being apparently dated earlier than the 7th century. The most important are at Ellora (Fleet, 490 ff.).

7. Modern Hinduism.—At the Census of 1901 the Hindus numbered 19,916,438 (78.4 per cent of the total population). Here, as in other parts of India, the line between Animists and Hindus cannot readily be determined. The list of the sects and classes of Hindus shows the prevailing characteristics of Hinduism; a polytheism replaced by an enlightened pantheism, and that absence of dogma which is the best asset of Hinduism. This, however, applies only to the more intelligent classes. Apart from the forest tribes, whose creed is purely Animism, the lower stratum of the people still preserves its primitive animistic beliefs, obscured, and to some extent modified, by the vencer of Brāhmaṇism. Bathing in holy rivers and pilgrimages to the tombs of deified heroes and saints are the chief modes by which purification from tabu and spiritual advancement are believed to be attained. The sacred stone haunted by some spirit, the holy tree or other natural object, the abnormal shape of which indicates that it is occupied by a spirit, the ecstatic possession of the village seer or medicine-man, the various devices by which the spirits of the household dead are brought into communion with the living, or the malignant ghosts of the murderer or his victim, and of the cow, are on the one hand, and the ecstatic trance, controlled—these are the chief elements of the popular cultus. The forces of evil are ever in conflict with those of good, and there is little or no trust in a benign, fatherly Providence.

Sectarianism is imperfectly recognized in the statistics. So far as the Census returns go, the Saivas or Sańñartas, with the kindred Pā spies, Saṅkarāchāryya, and similar sects, number about 3 millions; while the Vaiṣṇava sects, such as those of the Rāmānuja, Vallabha-chāryya, Madhābabha-chāryya, number only half a million. In addition to these, affiliated to the Saivas, come the Lingâyats, numbering 800,000. Many influences may have affected the accuracy of the returns; but, at any rate, the vast majority of the Hindu population were ignorant of the sect to which they belonged, or did not care to record it.

The most important and interesting development is that of the Vaiṣṇavāchāryya sect of the Vaiṣṇava group, to which Kṛṣṇa (Kṛṣṇa) is the chief object of worship. The immorality of the Mahārājas or heads of this community has attracted much attention since the notorious case decided by the High Court of Bombay (Karsandas Mulji), History of the Sect of the Maharajacs, 1860).
8. Jains.—Jains, who number 532,050 (2.1 per cent. of the total population) are here, as usual, divided into Digambaras, who worship naked idols and their spiritual preceptors (gurus); Svetambaras, who dress and adorn their images; and Dhunshiyas, who are opposed to the worship of idols, venerate their preceptors, and dress in white, wearing a linen mouth-band to prevent possible injury to animal life. In Gujarat, the headquarters of the Jains, the Svetambaras are in excess of the other sects.

9. Animists. — As has been already remarked (§ 7), the enumeration of Animists, who in 1901 numbered 91,815 (9.4 per cent. of the total population), is incomplete, and merely includes those members of some forest tribes who are most completely, in beliefs and customs, separate from Hindus. Of these tribes the most numerically important are the Kolíc, Binó, Varí, Thákur, Dubá, and Kájkhet. They are most numerous in the Districts of Pánch Maháls, Thar and Párkar, Thána, Surat, and Khíndesh. A full account of the Binó is given in a separate article, and that on the Northern Dravídians gives a general sketch of the forms of Animism which prevail among these tribes.

10. Muhammadans.—Muhammadans in the whole Presidency number 4,367,285 (17.9 per cent. of the total population). There is a decided tendency to increase, not so much as the result of any special propaganda, but rather because they have been less exposed than Hindus to the stress of plague and famine. For the interesting class of Bolioras or Bohras, see sects (Muhammadan), Thá Krójas (Pers. Khwájah, 'honourable'), are remarkable as tracing their origin to Hašan Saábób, who in the beginning of the 11th cent. A.D. founded the Order of the Šidáwí or Šidá, 'the devoted ones,' known to Europeans as the Assas- sinás, (Aráb. Asásíní, 'eaters of the intoxicating hemp drug'), of whom and of their leader, known as Šáikh-ul-Ájabal, 'The Old Man of the Mountain,' many marvellous tales are told (Máro Polo, ed. Yule, i. 132 ff.; EBr i. 722 ff.; art. Assasínás). Their spiritual leader is the Agá or Klíán, the descendant of a refugee from Persia, who commands great influence among his followers. Except in Gujarát and Sindh the Shi'ite element is small, and in many districts is confined to the Bolioras and Krójas (for a full account of their origin and beliefs, see sects, BG IX. pt. II. 36 ff.). A more recent development is that of the Ahamdíyah sect, followers of Mirzá Ghulám 'Allí of Kádámí in the Gúrdásapur district of the Panjáb. The founder repudiates the necessity of jihád, or war against the infidel; traces a parallel between himself, as Míssiah or Imám, and the Founder of the Christian faith; claims that his advent was foretold, and that he is charged with the duty of laying the foundations of general goodwill and peace upon earth. On the whole, the Muhammadans are divided into various sects according to their individual views of the influence of Christianity upon Islam (Enthoven, Census Rep. i. 69; Rose, Census Rep. Panjáb, i. 143).

11. Jews.—The Jewish colony in the Presidency numbers 10,800. Like those further south in Cochin, they are divided into a 'white' and a 'black' section. The former claim to be the descendents of the original colonists, whom Dr. J. Wilson, on the ground that none of their names is later than the Captivity, and that all their Scriptures are of early date, claimed to represent the Levite tribes. It is now generally supposed that they came from Yemen in the 6th cent. of our era. Their own traditions fix their exodus in the 2nd cent., while other accounts place it as late as the 15th. The 'white' Jews do not eat, drink, or intermarry with the 'black' section, who are believed to be later converts from Hinduism. The Bombay Jews call themselves Bunít-Isrá'íl, 'children of Israel,' in preference to Yáhúdí, which is the general designation of the race in N. India. In their houses, on the upper part of the right door-post, is placed a box containing a tablet inscribed in verse from the OT, so fixed that through a hole the word 'The Almighty' (El Shaddai) can be read from the outside. Their synagogues contain parchment copies of the Pentateuch (BG XI. 85 f., xiii. 273 ff.).

12. Christians.—Christians number 204,901 (1.11 per cent. of the total population). They fall into several groups. The most numerous are the Roman Catholic inhabitants of the old Portuguese settlements now included within British territory, who were originally converted from Hinduism by missionaries from Goa. Those of good birth were admitted to communió with the Portuguese. Though the names of all the Christians of this description are Portuguese, it is only among the upper classes that there is any trace of the foreign element, even, it is now admitted, the name of Indo-Portuguese, which is sometimes given to them, is scarcely acknowledged among themselves; and though the higher families speak Portuguese as the home-language, the rest habitually use either Kónkání- Maráthí or Bengálí. The Christian settlers in Bombay are entitled to follow the hereditary occupations of the castes to which their Hindu ancestors belonged, while the upper have taken to the learned and clerical professions.

In spite of rumours that have occasionally been heard in the last half century, those who have lived amongst these classes give evidence of the reality of their adherence to the faith of their ancestors. There is a remarkable difference between Christians of this description and those of Goa. Both are Roman Catholics by persuasion, and both bear Portuguese names, and are ruled by the supervisors who control the Jews and Parsees beyond this the likeness ceases. The Native Christians that come from Goa are mostly domestic servants, an occupation never undertaken by Christians from other districts (Baines, Census Rep. i. 51).

Including recent converts, the Roman Catholics in 1901 numbered 106,655—not far short of half the total Christian population. The remainder are more recent adherents, whose adoption of the faith is the work of various missionary societies, those attached to the Anglican communion numbering 35,614. While the Roman Catholics have slightly fallen in numbers between the last two decennial enumerations, the total Christians has increased from 158,765 to 204,961, the rise being greatest in those districts where the pressure of famine has been most severe, an indication that their numbers have been largely recruited from famine wails supported in missionary orphanages.

Literature.—The best authorities are Sir J. Campbell, Bombay Gazetteer, 27 vols. (1873-1904), of which the most useful are those dealing with the general history (vol. i. pts. i. and ii.) and those describing the population of Gujarát (ix. pts. i. ii.); and the Census Reports: J. A. Baines, 1882; W. W. Drew, 1892; S. E. Enthoven, 1839. The following works should be consulted: J. Wilson, Indian Caste (1877), useful but fragmentary; Major E. J. Gunthorpe, Mems. of the Criminal Law and Police (1858); A. W. H. Gurney, Gazetteer of Sind (1876); J. Forbes, Oriental Memoirs (1815, 2nd ed. 1864); A. K. Forbes, Indo-Malá, or History of the Province of Goa (1757); Dosáábát Fránnjí Karaká, History of the Parsis (1884); (Kárándoseáz Múniyí, History of the Set of the Mahárájas (1855), and History of the Assasínás (1855). For the religious architecture of the Portuguese see J. B. Burgess, The Carc Temples of India (1889), and numerous memoirs by the latter writer in collaboration with H. Cousens in the Reports of the Anthropological Survey of W. India. These Progress Reports, vols. i. to ix. in the Imperial Series, numbered i. xxII., xxIII., xxIV., extending to 1900, contain generally useful descriptions of the older books, such as Sir T. C. Hope, Surat, and Baroda, and other Cities of Gujarat (1859); J. Ferguson and P. T. Ford, Architectural Remains in the Thanesar and Múnpur (1866). Among the early travellers, the following, published in the Hakluyt society series, may be referred to (the dates are
BON CHOS.—BONES

W. CROOKE.

BONES.—It may help us to understand the important place occupied by bones in primitive psychology and religion if we recall the nature of their development. 'Osseous tissue...consists essentially of an animal matter impregnated with calcareous salts' (q.v.). They are of vital significance. Thus the soul of primitive man is 'skeletal.' When certain period of embryonic life there is no bone in any part of the body. Microscopic examination shows that the calcareous salts are deposited in the intercellular substance ('ib. p. 557). Minute passages in a bone allow its permeation by nutritive fluid, so that 'throughout life, or at all events in early life, its tissue is the seat of an extremely active vital process' ('ib. p. 311). These facts were, of course, unknown to primitive thought, but they are in some measure paralleled by the careful studies of processes of special significance. Thus we find the words for 'soul' and 'bone' etymologically connected among the Crooquis (otken, bone, atisken, soul), and the Athapascans (yoni, bone, iyane, soul) (Arnett in Amer. Jour. Phys. Anthrop. 1904, p. 257). The story of Eva's origin, and the phrase 'bone and flesh,' used of relationship, are also significant. Many popular beliefs witness to the same idea; the bones of a murdered man are said to have given out fresh blood when handled by a murderer as long as twenty years, or even fifty, after the murder' (Trumbull, The Blood Covenant, 1887, p. 146). Conversely, the life supposed to be still resident in bones can be renewed by anointing them with blood (Jevons, Introd. Hist. Rel., 1886, p. 32). Tylor collated the way in which practices of essentially similar relatives are cared for, and talked to, as though still conscious (ii. 150 f.). He gives them as cases of the fetish-theory, but they are ultimately to be explained as products of primitive psychology. Funeral customs in general usually supply illustrations, even though more or less obscure, of the same standpoint. A good example out of the great multitude available is afforded by the elaborate burial rites of certain Australian tribes (Spencer-Gillen, pp. 590-546). The body is left on a tree-platform till the flesh has disappeared from the bones. The skeleton, except an arm-bone, is then buried, without being actually touched. The arm-bone, in which the spirit of the dead is supposed to be present, is wrapped up in paper, bark, and figures in complicated ceremonial. These combine with the breaking and burial of the arm-bone. 'When once this ceremony of breaking the bone, which they call ambringa-jinta, has been performed, and the bone deposited in its last resting-place, the spirit of the dead person, which lives in the body, will return from it and depart' ('ib. p. 357). The story of Eva's origin, and the phrase 'bone and flesh,' used of relationship, are also significant. Many popular beliefs witness to the same idea; the bones of a murdered man are said to have given out fresh blood when handled by a murderer as long as twenty years, or even fifty, after the murder' (Trumbull, The Blood Covenant, 1887, p. 146). Conversely, the life supposed to be still resident in bones can be renewed by anointing them with blood (Jevons, Introd. Hist. Rel., 1886, p. 32). Tylor collated the way in which practices of essentially similar relatives are cared for, and talked to, as though still conscious (ii. 150 f.). He gives them as cases of the fetish-theory, but they are ultimately to be explained as products of primitive psychology. Funeral customs in general usually supply illustrations, even though more or less obscure, of the same standpoint. A good example out of the great multitude available is afforded by the elaborate burial rites of certain Australian tribes (Spencer-Gillen, pp. 590-546). The body is left on a tree-platform till the flesh has disappeared from the bones. The skeleton, except an arm-bone, is then buried, without being actually touched. The arm-bone, in which the spirit of the dead is supposed to be present, is wrapped up in paper, bark, and figures in complicated ceremonial. These combine with the breaking and burial of the arm-bone. 'When once this ceremony of breaking the bone, which they call ambringa-jinta, has been performed, and the bone deposited in its last resting-place, the spirit of the dead person, which lives in the body, will return from it and depart' ('ib. p. 357). of Lucilla of Carthage, who habitually kissed a martyr's bone before partaking of the Eucharist (cf. DCP, s.n. ‘Lucilla’). Newman quotes Tho-
doret, with apparent approval of his theory of the virtue of the bodies of martyrs: ‘And though each body be divided, the grace remains indivisible; and that small, that tiny particle is equal in power with the whole martyr, the bath never been dispersed about’ (Development of Chr. Doctrine, p. 374). This can be accepted as a true statement of primitive theory, especially in regard to the bones, as being the parts most easy to preserve; it is paralleled in the Greek practice, and the supposed bones of their respective heroes (Rhode, Psyche, i. 162). Primitive thought, however, applied the theory on a wider scale, and included animal as well as human bones. ‘Among the Kalang of Java, whose totem is the red dog, bride and bridegroom before marriage are rubbed with the ashes of a red dog's bones’ (Frazier, Totemism, p. 33). We frequently meet with the belief that the bones of animals slain in the chase must be carefully dealt with, to secure their resurrection and the future supply (Frazier, On the Sudden Resurrection of the Dead, p. 13). If a dog is thought to be aware of the fate of its bones, and the future success of the hunter depends on its proper propitiation (ib. p. 405).

From various customs in regard to bones, Frazier infers that ‘it is a rule with savages not to let women handle the bones of the dead, and that the animal is thought to be aware of the fate of its bones, and the future success of the hunter depends on its proper propitiation’ (ib. p. 405).

Among the many other usages in which bones figure may be mentioned the bonfire (originally ‘bone-fire,’ cf. Jevons, p. 150, and Skoat’s Dict. s. v.), the practice of fastening the bone of a murdered man on to the spear that is to avenge him (Spencer-Gillen, p. 554), and even the use of a cleft bone by the Masurians treated by Doughty (Arabia Deserta, 1888, ii. 360).

**BOOK OF LIFE.**—The science of the Semitic East was based upon the axiom that the con-
stitution of this lower world corresponds to that of the heavens above, as seen in the cosmos and its cycle. The whole course of events upon the earth, it was believed, was prefigured in the cyclical phenomena of the higher spheres. On its mythological side, therefore, the doctrine could postulate the existence of celestial tablets on which were inscribed both the wisdom of heaven and the history of earth.

The books (tablets) of wisdom.—(1) Babylon.-According to Babylonian science, the pro-
cess of the world realizes itself in signs, which arise out of the primal sea; and this world-ocean, accordingly, is regarded as the seat of Divine creative wisdom. The mythical representative of the primal sea was the animal-figures of the higher spheres. On its mythological side, therefore, the doctrine could postulate the existence of celestial tablets on which were inscribed both the wisdom of heaven and the history of earth.

On its mythological side, therefore, the doctrine could postulate the existence of celestial tablets on which were inscribed both the wisdom of heaven and the history of earth.
the secret places, and the purloining of the books of the sanctuary.' The priests, as bearers of revelation, are called 'scribes of the book of God.' A memorial-stone in Abydos and Osiris for the purpose of executing their Divine commands (Ernan, Egyptian Religion, p. 80; A. Jeremias, Im Kampfe um den alten Orient, i. 67). With this agrees the statement of classical writers, who represent Thoth as the founder of theology and political economy, of the sciences and the arts. Clement of Alexandria enumerates forty-two 'Books of Thoth,' of which the first ten, or those of the prophet, treat of the law of and of the gods, the following ten contain regulations regarding sacrifices and feasts, and the third ten the mystical cosmogony; the next four embrace astronomy and the science of the calendar, two contain hymns about the gods and the kings of primeval times, while the last six deal with the science of medicine. Dragsch (op. cit. 449 f.) is of opinion that he could not find these 'Thot-Tracts' in Talmudic books in a hieroglyphic text of the temple of Edin.

(3) Persia.—The books of the Avesta also claim to constitute a Divine book, and it appears to the present writer that they may be brought under our present category. According to Hals, Avesta means 'knowledge,' i.e. Divine knowledge; its root, like that of Veda, being vid. Ahura Mazda together with Asha formed the word of bliss by the agency of Vohu Mano (i.e. logos, corresponding to Marduk, the son of Ea), and received it from the Divine teaching amongst men (cf. Gathà, Yasna xxix.). According to Vendidad II., Yima, the first man, was chosen for the task of preserving the celestial truth upon the earth. The religious system of Zarathustra purports to be an attack upon error, and a return to the truth and knowledge issuing from the original wisdom revealed by Ahura Mazda (cf. Gathà, Yasna ii. 13, xiii. 3, lii. 2, xxxii. 2). In Gathà, Yasna xxviili., he who knows the secret doctrine is praised as a true teacher; personified as Yima, he dedicates it to Mazda (i.e. God). According to Seneca (FIG i. 510), Berosus says that in Chaldaean science 'all things take place in harmony with the movements of the stars.' Cf. Job 38:23 'Knowest thou the knyght of the heavens?' The parallel clause, on the principle that the Chaldeans learned from the Persians, as reads, 'Or canst thou set their dominion upon the earth?' See also Qurân, xliv. 14: 'The revelation of the Book is from God . . . for in the heavens and on the earth are the signs for believers. Likewise in your own nature, and in all manner of beasts in every place . . . and in the succession of night and day, and in the supplies which God sends from heaven and with which He gives life to the earth when dead, and in the change of winds.' Cf. xxxvi. 16: 'For by the stars are the things set in order: men, His creatures, and such as serve Him.'

(4) India.—The early Aryan religion of India and the Indian systems of religion allied thereunto to consider the Veda ('knowledge') as the pillar of the world, and a mere theory expresses a theory, for the hymns of the Veda are partly of a secular character, and first acquired their religious significance from their association with sacrificial worship. It is an article of belief that the Vedas were composed by the ten rāgs, or wise men of the world's first age. Even the Upanisads ('secret doctrines'), the spirit of which is altogether characteristic of India, lay claim to a direct connexion with the primordial wisdom of the Vedas; while the Law-book of Manu (Manuṣya Dharmasastra) professes to be a revelation which the first man Manu received from the Deity. The doctrine of the ages of the world (yuga) given in the Mahâbhârata and in the Law-book of Manu asserts that in the Golden Age the Veda existed in a perfect form, and that in each of the three succeeding ages it was changed by the power of Vohu Mano, and therewith one quarter of perfect righteousness, has been lost.

(5) China.—The State-religion of Confucius, as established by the Han dynasty (B.C. 206 A.D. 220), embraced the sacred writings, or 'webs of wisdom,' and four shu, 'books,' in which the primordial wisdom, from the period of the mythical emperors of the remote past, is believed to be codified. This is quite in accordance with the attitude of Kung-tse, the great reformer Confucius, who record of 'the wooden clapper whom Heaven had made use of' to redeem the people from their degeneracy by resuscitating the institutions of ancient days.

(b) Islam.—In Islam, Muhammad is regarded as the 'Seal of the Prophets' (Qurân, xxxiii. 40), the last infallible messenger of Divine revelation. In the Muhammadan faith, therefore, the Qurân ranks as the book of heaven. The Mahalism prevalent among the sects looks to the coming Mahal as prophet, who will complete the work of the original revelation from all error. Only in a few sects has the prophet lost the distinction of being 'the Seal of the Prophets,' and sunk to the level of a mere forerunner.

With this Oriental conception of the book of the primordial revelation of God, it is closely connected the tendency of the Jewish Synagogue towards the theory of the verbal inspiration of Scripture.

2. The book of destinies.—In Oriental science the analogue of the cosmos is the cycle. The conception of space is equivalent to that of time (cf. 'edus, 'kinds of time').

The revelation of the Deity in the cosmos and the cycle is seen in the starry sphere, and especially in the movement of the heavenly bodies. A Babi name for these bodies is šír šâmē, šíršt šâmē, the writing of heaven.' According to Seneca (FIG i. 510), Berosus says that in Chaldaean science 'all things take place in harmony with the movements of the stars.' Cf. Job 38:23 'Knowest thou the knyght of the heavens?' The parallel clause, on the principle that the Chaldeans learned from the Persians, as reads, 'Or canst thou set their dominion upon the earth?' See also Qurân, xliv. 14: 'The revelation of the Book is from God . . . for in the heavens and on the earth are the signs for believers. Likewise in your own nature, and in all manner of beasts in every place . . . and in the succession of night and day, and in the supplies which God sends from heaven and with which He gives life to the earth when dead, and in the change of winds.' Cf. xxxvi. 16: 'For by the stars are the things set in order: men, His creatures, and such as serve Him.'

In the teaching emanating from Babylon the heavenly bodies, as arah, are called, and five planets that move in the zodiac are in a special sense the interpreters of the Divine will. The zodiac forms the book of revelation proper, while the fixed stars, grouped in constellations which are regarded as 'correspondences' to the phenomena of the zodiac, are, so to speak, the commentary on the margin.

Cf. H. Winckler, Forschungen, li. 104. In Arabic the constellations lying outside the zodiac are called bayanâypt, or 'beams of the zodiac.' According to Qurân xxv. 6 f., the mysteries of the Divine will lie in the zodiac. With reference to the 'interpreters' (ضمير), cf. Nieder, Sie. ii. 30, who reproduces 'the Chaldean doctrine.' The name of the temple-tower E-rûf-timân-kâit would seem to signify 'House of the messengers of the commands of heaven and earth,' and the same name may apply to the planets; cf. A. Jeremias, 'Das Alter der babylonischen Astronomie' (Im Kampfe um den alten Orient, ii. 5).

In the cosmic mythology of Babylon the revelation of heaven, which is made manifest in the cycle of the world, is known as tav simât, 'tablets of destiny.' These are borne upon the breast of the ruler of the world's destiny. Hence we should probably assume the existence of two heavenly tablets, not only 'the earth axis of gods,' but also 'the life of men' is written thereon. In the myths concerning the war against the chaos-dragon
and the restoration of the world, the victim and demerit receives the tablets as his reward (see below). In the calendar of 776 B.C., which the ḫwil, having won the battle, has power to open). In the Bab. Creation Epic they were, during a previous eon, in the possession of Kingu, the partner of Tiānat. The narrative relates how Tiānat delivers them to him with the words: 'Let not thy decree be changed; the word of the mouth stands firm.' Then Marduk receives them as the reward of conflict and victory. Elsewhere it is En-lil, the cosmic representative of the zodiac, who appears as the holder of the tablets of destiny. Or they are summarily held by Re (or the Divine record of destiny). In an exorcism-text (King, Assyrian Magic, No. 22) he is called 'the bearer of the tablets of fate,' and in other passages 'the writer of the All, who holds the style of the tablet of fate' (Kwzl. 52). The day for the determination of destiny is New Year's Day. On this day is reconstituted the cycle of the year, which represents in miniature, as was believed, the cycle of the cosmos. The conqueror of the power of darkness is, as 'the one who determines destiny,' the possessor of the tablets of fate. In the purak šituditi, the chronicle of the events from the birth to the 11th of Nisan, the destinies of the year are determined with the assistance of the gods, whose statues are conveyed in wheel-barges to the sanctuary of Marduk. This mythical conception seems to have become imbued with a specific historic time, in the act of casting lots by the king (the Assyrian king says: puru abur, 'I cast the lot'), i.e. in a ceremonial inquiry regarding destiny.

The same notion survives in the practice of inquiring after one's destiny on New Year's eve, and also in that of taking the twelve holy nights (one for each month) as times for dreaming of one's destiny. The Bab. spirit of the idea is particularly preserved in the Talanian ritual, to which reference was made in the preface to the book. The New Year's festival is the occasion on which the Divine determination of destiny is made.

In applying the doctrine of the celestial tablets of destiny to individuals, Bab. texts make mention of one particular tablet on which is inscribed the duration of life, the happiness of mankind (and on the other hand the curse, or shortening, of life). The construction of tablets of this kind is specifically assigned to the Taladian (the name of the temple within each zodiacal sign) of the chamber of destiny. Thus Ashshur-ina-pel in a hymn (cf. Jeremiah, art. 'Nebo, in Roscher) says to Nebo: 'My life is written before thee.' His brother Samesamunilk speaks thus: May Nabû, the tablet-writer of E-sagil, write upon his tablet the years [of life] [that up to the present I have inscribed] for long duration.' Nebarchadrazar says: 'O Nabû, declare upon thy tablet, which fixes the puluukku of heaven and earth, the long duration of my days; write it for my posterity.' Antochus Soter expresses himself thus: 'O Nabû, by thine august stylius, which establishes the puluukku of heaven and earth, may my salvation be made sure, through thy holy decree.'

The same conception has doubtless given rise to the tablets of good works, in which, according to IV R. 11185, entries are made; also to the 'table of sins' mentioned in ritual texts from Babylon, which are to be 'broken in pieces'; and to 'the tables of transgressions, misdeeds, anathemas and imprecations, which are to be cast into the water' (cf. H. Zimmer, Beiträge zur Kunstwiss der bab. Religion, pp. 22, 125). We may also here mention a text ( Conj. Texts, xii. 29 f.) which contains injunctions regarding sacrifice, prayer, and friendship, though it perhaps belongs rather to the group of tablets of Divine wisdom than to the tablet of destiny (3) look at the table: The fear of God brings forth grace, Sacrifice gives increase of life And prayer (cancels) sin.

The idea of a celestial process of reckoning in connexion with the most important festival of the Babylonian calendar, the inception of a new cycle, exhibits the renewal of the world on a small scale, had an influence upon Jewish religion after the Exile. Thus, in the tractate Arakhlin, 10, it is written:

'The ministering angels inquired thus of God, "Lord of the world, why do the Israelites, on New Year's Day, make an offering of Atumon, utter no song of praise (557) before Thee?" God answered them, "When the king sits upon the throne and passes judgment, and the Books of Life are open before Him, then may the Israelites feel themselves disposed to sing a song of praise before Me—at a time when it shall appear fitting for them to give themselves to repentance."

In the New Year's tractate Rôsh Hašhánâh, 10b, it is said, 'Everything is decided on New Year's day, and the judgment is sealed on the Day of atonement.' In this case the 'judgment' signifies the fortunation of the year, as the context refers, amongst other things, to the fruits of the field.

Allied with the above in idea, though of a different character, is the conception of a reckoning kept in heaven of men's good and evil deeds, and of their lot in life and death. This may have been suggested by the public display of the names of citizens were enrolled. But we must not summarily dismiss the theory of a link with the book of destiny, for even the drawing up of such lists was brought into connexion with New Year's Day, the feast of destiny. According to Jerus. Rôsh Hašhánâh (Mish. eders, 12a 590 b. D.), knows of three registers—of the good, the bad, and the undecided, respectively—which are unrolled at New Year. Jubil. xxx. 20 (cf. xxx. 22) speaks thus: 'He is enrolled in the tables of heaven as a son of Enoch; his name are written down before the majesty of the exalted one'; 105 the Book of Life and the Books of the Saints.

The same thought is adopted in these Christian Apocalyptic writings which have been influenced by Judaism. According to the Apocalypse of Enoch, in the second year of heaven and write the deeds of men upon the rolls of a book; while Apocal. Pauli, 10, says that at the evening hour in heaven all things that men have done during the day are written down by the angels.

Within the canon of Scripture we find mention of the heavenly book, as the book of destiny, in the two outstanding apocalyptic writings, viz. Daniel and Revelation. In Dan 7 the seer beholds the books opened before the great a'anim in the Ancient of Days. In face of the assembly is fought out the battle against the beast which uttereth great words—a characteristic feature of the conflict with the dragon. The warrior and victor is the heavenly man. After his victory he is brought before the Ancient of Days, 'and there was given him dominion, and glory, and a kingdom, that all peoples, nations, and languages should serve him: his dominion is an everlasting dominion, which shall not pass away, and his kingdom that which shall be set up, forever.' The conqueror receives as his reward the sovereignty of the world in the new age, and the power of determining destiny. Here too, therefore, the books are books of destiny.

* Again, however, in ch. 80, Enoch appears as 'leader of the shepherds of the people; and, in the Ascension Liturgy, of the registers of the heavenly Jerusalem.

† Such is the conception which the present writer has proposed once more to draw special attention (cf. his Der AT im Lichte des alten Orients, on this passage). The connexion with the
This comes out still more clearly in the companion picture of Revelation, where the conflict with and the victory over the power of darkness are transferred to the historical appearance of the crushed and risen Christ. It is He who has conquered the dragon who has cast the destines of the world, and His Parousia will bring about the final victory over the dragon, and usher in the new and glorious world.

'These are written more to the commune in heaven.' God sits upon the throne, and to right and left, in two semicircles, sit the twenty-four elders, in priestly robes and with crowns on their heads. He sits on the throne in His hand a book-roll having seven seals, of which the four inner indicate the seven sections of the roll. ‘Who is worthy to open the book, and to loose the seals thereof?’ This simply means: ‘Who is worthy to sway the destinies?’ The Christ who is to be glorified comes forward. In this vision His victory and exaltation are already described in the imagery and colouring of the ancient Oriental myth of the conflict and victory of the year-god, who as the reward of his success receives the book of destiny, i.e. the command of the world, and who is therefore loudly praised in the heaven of heaven (see Jeremias, Babylonisches im AT, 13 ff.): ‘Worthy art thou to open the book, and to loose the seals thereof.’ A similar signification attaches to Rev. 5, where the Book of Life is in the possession of the Lamb. In 5 we have the seven prime saengers in the convoluy and in form the song resembles that accorded to Marduk, who after his victory over Tiamat received fifty names of honour (cf. ‘the name above every name’, 1 2), as also that given in the Egyptian myth to Horus in the hall of the gods after his victory over Set, the representative of the power of darkness: ‘Welcome, Horus, son of Osiris, the courageous, the justificed, son of Isis and heir of Osiris.’

Mention of a book of destiny in which are written the destinies of the individual is made in Ps. 138 7. ‘Thine eyes saw me when I was yet in the womb, and there was written in thy book all the days that were to be;’ cf. also Ex. 322 ‘Blot me out of the book which thou hast written’; and Ps. 69 27 ‘Let them be blotted out of the book of the living, that they be not written with the righteous.’ The last-mentioned passage might also come under a different heading, that, namely, of the heavenly list-making already touched upon (p. 794); and it is this group to which we must refer Is. 4, which speaks of the names being written in the book of life, as also Mal. 3 17 with its mention of a ‘book of remembrance’ before Jehovah, in which are written those that fear Jehovah and have respect to His name.

The two ideas of a heavenly book of life and a heavenly register of names find expression also in the NT. The book of life in which the destinies of men are inscribed is referred to, not only in Rev. 5 and 21, as already noted, but also in Rev. 13 and 17 the ‘book of life’ in which names are written from the foundation of the world; cf. 3 1 5 in which the usual out of the book of life (one of the seven variants of the promise given at the close of the messages to the Churches, to assure him that overcometh in the strife that he shall be saved in the transformation of the world).

‘The book of destinies, in minute form, so to speak, is spoken of also in Ezk. 3 6, and Rev. 124. The two passages are essentially the same in char- acter. Ezekiel must eat the roll of a book, and it was in his mouth as honey for sweetness. The roll contained the intimation of God’s will, which the prophet is required to convey to the captives in Babylon, and the Spirit carries him thither through the air. In Rev. 10 the Lamb is made to lift up the little book, with which the angel carried in his hand. It is to take the taste like honey in his mouth, but to cause pain within. In it are written the destinies ‘concerning many peoples and nations and tongues and kings’ which he is to proclaim.

The heavenly registers are suggested by Lk. 196. ‘Rejoice, son of man, which the angel carried in heaven’; Ps. 4 ‘the rest of my fellow-workers, whose names are in the book of life’; and Hb. 12 the general assembly and Church of the first-born who are enrolled in heaven.

Boycotting.—This is a modern name for a practice as ancient as civilization itself. The name is derived from the experiences of one Captain Boycott, a landowner in the employment of Lord Erne, an Irish landowner who in 1880 came into conflict with the agrarian societies in the district in which he lived, in County Mayo, Ireland. It is a method of social ostracism, informally applied by public opinion, and may be carried to almost any length. The term, which has been adopted in a wide sense into French (boycotte) and German (boykotten), is used as implying any measure of avoidance of or holding aloof from those judged, by organized or unorganized public opinion, unworthy of social intercourse. It may vary from the schoolboy’s ‘sounding to Coventry’ to the extreme measures adopted in Ireland during the days of the land agitation. In so far as boycotting is the expression of individual aversion, the law can take no cognizance of it; but when it is decreed by an association, or organized body of men, it becomes a criminal offence under the law of conspiracy, and in Ireland has been treated as such. A boycotted person in Ireland was cut off from all intercourse with his fellow-men, so far as he himself, or people supplied to him, or supply goods to him, associate with him, or help or assist him in any way, under penalty of being subjected to the same treatment; and this treatment was decreed for landlords and their agents who, in the opinion of the local agrarian association, had treated their tenants harshly.

The boycott, as it has been said, is as ancient as civilization itself. The outset of the outlaw from primitive social communities was simply subjected to the extreme form of boycotting, and no other security of life nor chance of justice. Ostracism in the Greek world was a survival of primitive tribal law dressed up in a constitutional form. Excommunication by the Church in the Middle Ages, since it affected civil as well as ecclesiastical privileges, was a tremendously powerful weapon against the interests of the Church; but in modern times, with the separation of Church and State or the subordination of the Church to the State, ecclesiastical excommunication has been deprived of much of its terror, because it no longer affects civil rights. Excommunication, however, is the privilege of every society or association, which may expel or discipline those of its members it considers unworthy; and conflict with the State can arise only when civil rights are affected or the
The Boy Scouts is a kindred organization. Lieut.-General Baden Powell, C.B., is its founder. Its beginning was practical, in 1889, in Mafeking, S. Africa. The town was under siege, General Baden Powell commanding the defence. That men might be released to strengthen the firing line, it was decided to organize a corps of boys. The boys were, as far as possible, selected as orderlies, and carried messages, often under fire. Very good reports are given of their usefulness and courage. The plan was acclimatized in Great Britain, for purposes of moral training. But it is 'peace-scouting' that is taught. Mr. E. Seton-Thompson, founder of the British Boys' Brigade, is widely recognized as the first leader of that organization in the United States, especially among the Indians. Now there may be seen in and around most towns groups of Scouts, marching, signalling, camping. Statistics are estimates; for the movement is elastic. When a 'patrol,' a squad of five or seven, is trained to efficiency, its members are encouraged to enlist patrols of their own. These are usually linked into 'troops,' or are sometimes independent. They may be connected with Churches or Boys' Brigades. The ideals held up are: 'to help the King and to the King's aid, to help other people at all times.' Observation of Nature, self-reliance, and chivalry are inculcated. The manual of the movement is Scouting for Boys, by the General. Its sub-title is 'A Handbook for Instruction of Citizens of Great Britain. It describes its scope. The Scouts are put upon their honour to be clean and kind in language and in habits. Clubrooms in winter and camps in summer are used for the ends in view.

The Life Brigade is, in idea, an offshoot of the Boys' Brigade. Its aims are identical, and so are some of its modes. But it strongly opposes the militarism of the earlier body. It organizes girls as well as boys, but without the material element. Like the other, it uses ambulance work, gymnastics, music, etc., to teach its members to themselves, and for training in Christian principles and character. It thus provides bright, healthy nucleus-centres of good citizenship. It is extending, especially under those who hold strong views on the subject of peace. Its watchword is 'Life-saving.' Its president is Rev. Principal J. B. Paton, D.D., Nottingham.

The answer of the promoters of the earlier work to their critics is that the military element is formal, not essential; that there is less and less of it proportionately as the corps grow, and that there is of it in 'defence, not defiance.'

The Boy Scouts is a kindred organization. Lieut.-General Baden Powell, C.B., is its founder. Its beginning was practical, in 1889, in Mafeking, S. Africa. The town was under siege, General Baden Powell commanding the defence. That men might be released to strengthen the firing line, it was decided to organize a corps of boys. The boys were, as far as possible, selected as orderlies, and carried messages, often under fire. Very good reports are given of their usefulness and courage. The plan was acclimatized in Great Britain, for purposes of moral training. But it is 'peace-scouting' that is taught. Mr. E. Seton-Thompson, founder of the British Boys' Brigade, is widely recognized as the first leader of that organization in the United States, especially among the Indians. Now there may be seen in and around most towns groups of Scouts, marching, signalling, camping. Statistics are estimates; for the movement is elastic. When a 'patrol,' a squad of five or seven, is trained to efficiency, its members are encouraged to enlist patrols of their own. These are usually linked into 'troops,' or are sometimes independent. They may be connected with Churches or Boys' Brigades. The ideals held up are: 'to help the King and to the King's aid, to help other people at all times.' Observation of Nature, self-reliance, and chivalry are inculcated. The manual of the movement is Scouting for Boys, by the General. Its sub-title is 'A Handbook for Instruction of Citizens of Great Britain. It describes its scope. The Scouts are put upon their honour to be clean and kind in language and in habits. Clubrooms in winter and camps in summer are used for the ends in view.

The Life Brigade is, in idea, an offshoot of the Boys' Brigade. Its aims are identical, and so are some of its modes. But it strongly opposes the militarism of the earlier body. It organizes girls as well as boys, but without the material element. Like the other, it uses ambulance work, gymnastics, music, etc., to teach its members to themselves, and for training in Christian principles and character. It thus provides bright, healthy nucleus-centres of good citizenship. It is extending, especially under those who hold strong views on the subject of peace. Its watchword is 'Life-saving.' Its president is Rev. Principal J. B. Paton, D.D., Nottingham.

The answer of the promoters of the earlier work to their critics is that the military element is formal, not essential; that there is less and less of it proportionately as the corps grow, and that there is of it in 'defence, not defiance.'

JOHN DAVIDSON.

BOYS' BRIGADES.—Organizations of boys, military in form, moral in purpose. Their ultimate origin is remote. Boys have played at soldiers ever since figments began, and have been moulded by their play. For many years, up to 1880, Mr. John Hope, an Edinburgh lawyer, carried on a corps of 'Cadets,' which regularly numbered some hundreds of boys. They had uniforms, arms, and a band. Mr. Hope's purpose was to enforce Protestant principles and abstinance from drink and tobacco, and generally to cultivate manliness. This pioneer corps deeply influenced many generations of boys.

The Boys' Brigade proper was instituted in Glasgow, in the presence of Sir W. A. Smith of the Volunteer force there. He was a teacher in a mission school, where discipline was difficult, and hooliganism incipient. He adopted the military metaphor, as did General Booth, with some differences. In 1883 the first Company of thirty boys was formed, and drilled in martial exercises, and in the Bible. A red rosette was the first uniform, but caps, belts, haversacks, etc., were soon introduced, and dummy arms. So successful was the movement that before the end of 1908 there were 70,000 Scouts in 1,500 Companies, with 1,400 such Companies, with 1,400 officers, and 60,000 boys. The world-figures, at the same time, were 2,300 Companies, including over 10,000 officers, and 100,000 boys. There are, besides, Episcopal, Roman Catholic, and Jewish adaptations of the idea, whose figures are not included here. The objects of the brigade are: 'the advancement of Christ's Kingdom among boys, and the promotion of habits of obedience, reverence, discipline, self-respect, and all that tends towards true manliness.' The Bible is class central. Every boy must attend it, or lose membership in the Brigade. In many companies there is development in the direction of ambulance work, gymnastics, music, etc. The more fully organized corps have become many-sided Clubs for boys.

THOMAS TEMPLETON.

BRAHMÁ.—See BRAHMANISM, p. 810.

BRAHMAN.—The philosophical system of the Vedánta adopts as its aim the search after Reality, the ultimate. One of the greatest teaching. The loftiest conception of Brahman speculation is there set forth, and handed down from generation to generation. It is, however, only the climax of a long intellectual development, the beginning of which may be traced in the Rigveda. They kept look-out, the most ancient poetry of early India. And for the religious and philosophical history of that country the word brahman possesses at least an equal significance with that of the term Aṣṭādhyāyī for Christianity. There is contained in it, as Roth says, the religious development of India during thirty centuries.

It is difficult to grasp the original meaning of the word; for as early as the Rigveda it appears endowed with various meanings, and cannot be identified precisely with any of our conceptions.

victim is deprived of contract privileges. The State, which has uniformly set its face against all authorities which intervene between it and its subjects, has always regarded boycotting with suspicion; but in a modified form the right to boycott is inherent in the social nature of man. It is a feature in the forms in which public opinion expresses itself, and is liable to all the excesses and lack of uniformity to which public opinion itself is liable. Organized boycott alone is of sufficient importance to require State interference; or at least is alone sufficiently definite to permit of responsibility being brought to bear upon it. In the economic world the boycott has been extensively used by Trade Unionists (cf. the Economic Journal, vol. i. 'The Boy as an Element in Trade Disputes'). When accompanied by violence, the boycott is a criminal offence at common law in the United States; and even where there is no violence or intimidation, many States hold that the boycott is criminal; and at the present time (1909) a case which will decide this question is pending in the United States Supreme Court. The Consumers' Leagues in America and similar associations elsewhere to apply an organized boycott to the products of sweater industries, and to the establishments in the retail trade where the employer does not show sufficient consideration for the welfare of his hands.

The Indian thought is hardly adequately expressed either in the definition of devotion, of which manifestations being as long and satisfaction of the soul, and reaches forth to the gods, or in general, 'every pious utterance in the service of God'; or in that of Denussen, 'aspirations and cravings after the Divine.' It is Hang's merit to have himself discovered in the fourth century B.C. the whole meaning of the Christian ideas of 'devotion' or 'prayer' as being wholly foreign to the Indian brahman, and that the entire sacrificial act was no more than a kind of magic, which compelled the gods to gratify the wishes of the worshippers.

The word brahman, from which brahma is etymologically derived, means as early as the time of the Rigveda. Accented on the first syllable (brâhman), it is neuter; oxytone, i.e. with an accented ultima (brâhman), it is masculine. The root denotes the object or the thing; the masses line the person who is endowed with or possesses the brahman. With no little probability research infwines now to the view that the fundamental meaning of the word is neither 'devotion' nor 'prayer,' but 'magic'; and that its origin is to be sought in the word which expresses the general idea of magic, thought, from which it was gradually developed into an expression for the loftiest conception formulated by Hinduism. On the assumption that the word denotes 'magic,' 'witchcraft,' Osthoff has connected it with the Sanskrit word brâhman, 'Irish bricht, 'magic,' 'magical spell,' and has endeavoured to find the real fundamental idea in the meaning 'formula,' 'fixed mode of expression.' To these words the ancient Islamic and ancient Norwegian heart, 'poetry,' 'art of chanting'; and the Celtic heart, the ceremonial word, 'magic,' the 'ceremonially conceived' word, of which Jacob Grimm lays stress as the essential requisite of the magic, if it is to be effective.

The etymology of brahman is obscure. Besides the uncertain possibility of a derivation from the rare root bhr, 'to speak,' earlier writers referred to the root bhr, 'to grow,' from which barh is taken, and thus connected brahman with the Persian barqeh (see BALES). But, as Osthoff shows, this combination is improbable, since words derived from the same root are generally in a primitive sense exhibit an l (e.g. Prussian po-balzo), and brahman, if derived from barh, could not be related to bragh.

Hang has collected the numerous explanations of these letters of the word brahman as meaning: (a) food, food-offering; (b) the chant of the Sâma singer; (c) magical formula- or text, mantra; (d) duly completed ceremonies; (e) the chant and sacrificial gift together; (f) the recitation of the hât priest; (g) great. The first of these interpretations is not confirmed by the numerous verses of the Rigveda in which brahman occurs, and must be abandoned as erroneous; while in favour of the others various arguments may be advanced.

What we see the Rigveda, brahman appears not as a possession common to all men, but as the religious property of a narrow circle. It is still far from being extanted to a position of superiority over gods and priests. Rather it is to gods, and to the chancers and pias of the ritual that it owes its rise. It is 'new,' had 'kitherto not yet existed, or come into being from the fathers. It originates from the seat of the pia, springs forth at the sound of the music of the sacrifice, begins really to exist when the Soma juice is pressed, when the sacrifice is performed.
mistaken, insomuch as they are opposed to an important passage of the Rigveda,—byahspatiin sadaiva sadyadhyakte, . . . dama a didivrahyah hiruyoyovaram spema,—which treats unmistakably of the establishment of a sacrificial fire on the hearth, caste into which the brahman or priestly man, which in itself is entirely unexceptionable, and cannot be regarded as late, the question whether Bhṛṣpati in the Rigveda is an abstraction or not must be answered in the negative. If Bhṛṣpati is a name for the fire, the reference in every case into which the rṣita or the rṣi can cast the ancestral fire on the south of the place of sacrifice where the Brahman sits. Sometimes, it is true, Indra and Bhṛṣpati are brought into close connexion, the former as the king the latter as his pujaṇa; but the inference is clearly that we are as little compelled to regard Bhṛṣpati as an abstraction as Indra. Indra-Saṁya corresponds to the Kṣatra, the moon to the Brahmān. It is asserted in Rg. x. 90. 13 that 'the moon is born from the Brahma,' and statements to the same effect are found in the Aitareya and Bṛhadāraṇyaka Upaniṣads.† We meet with the comparison in Dhammapada, No. 837, where ādīco corresponds to the saṃuddho khattiya, and cañḍama to the jāti brāhmaṇa, and similarly in Kṛgavaniya, xi. 84. When, therefore, ethnographers take up the doctrine that the rṣita or the rṣi, its work in the darkness, continually changing its aspect, is quite natural for the southern fire, which witnesses magical art and is usually represented as a half-moon, to receive the name of the planet Jupiter, just as the name of the Aśvins, which is parivāra, and the inference was forgotten, was transferred to a constellation.

Bhṛṣpati is the heavenly brāhmaṇa, the prototype of the earthly. He awakes the gods by means of the sacrifice, and, according to one passage of the Satapatha Brāhmaṇa, bears the sacrifice to men who had become faithless. An examination of all the passages in which the masculine brāhmaṇa is found shows that it denotes in general a distinct class, if not a caste, with their dependents, and is frequently used in direct connection with special offices; in the Satapatha Brāhmaṇa, for instance, we are to understand by brāhmaṇa a definite class of priests, co-ordinated with the hotṛ, adhvaryu, or udgātra. In one passage only, where Agni is addressed as Brahmān, who takes his seat on the seat of men, does the latter appear to rank higher than the hotṛ.‡ With these exceptions the bearers of the brāhmaṇa office are found in the Rigveda which would assign to the brāhmaṇa duties distinct from those of the hotṛ or adhvaryu. We read nothing either of a special priest of magic or of the brāhmaṇa of the later ritual, whose function it was to apply his superior knowledge to the superintendence of the sacrifice as a whole, and to make atonement for the mistakes of the individual priests. Thrice the word ved is used of his action. But just as the general practice of magic is older than the particular forms of sacrifice known to the other officials of the Indian ritual, which was raised above the sphere of ordinary magic without ever losing its association with it. There is no ground for supposing that the brahmān named in the few passages referred to, and co-ordinated with the hotṛ, adhvaryu, etc., is other than the precursor of the brāhmaṇa of later times. There is no doubt,' writes V. Henry (La Magie, p. 37), 'that the earliest brahmāna of India was nothing more than the sorcerer and medicine-man, the retailer of the remedies and charms of the Atharvaveda or Bhāramaṇa.' Here again, also, the conservative character of Indian development shows itself: it does not break with the past, but retains it even under changed conditions. Although the hotṛ, adhvaryu, and udgātra, with their higher, verbal, or magical accomplishments, were placed in the forefront, and the artificial and dramatic routine of the sacrifice overshadowed the primitive magical rules of the brāhmaṇa, the ancient pūjārī of India was nevertheless not banished from the sacrificial ground, but retained his place as 'physician of the sacrifice,' lingering in the neighbourhood in order to make good all its defects by virtue of his secret magical art. His mere presence, more than the hymns of the hotṛ or the chants of the udgātra, by means of the magical fluid with which he is endowed, preserves for the sacrifice the benefit of the inner sanctum, and maintains the sacrifice in effective order.

A later age credited him also with wider literary knowledge. There was provided for him a special book of ritual, and the Atharvaveda, the magical practices of which harmonized closely with his character, was devoted especially to him. It was even required that he should be acquainted with all the Vedas.† His position, moreover, south of the place of sacrifice, near to the southern fire which was dedicated to the fathers and the demons who employ magical practices, is a further indication of the original character of the pūjārī; and it was only gradually that there came to be assigned to him a higher literary rank.

All members of the Brahmāna caste, according to their qualifications, were, as it seems, eligible to undertake the duties of a hotṛ, udgātra, adhvaryu, brahmāna, or purohita. Apparently, however, one or the other office was held by preference by certain families. We know that the office of the brahmāna was claimed in the most ancient times by the Vaisyas, and the Vaisyas, as early as the Satapatha Brāhmaṇa, xii. 6. 1. 41, and Taitt. Saṁh. iii. 5. 2. 1 ff., that the Vaisyas were originally in sole possession of certain formae which were essential for the performance of the duty.§ It is worthy of notice that to the god Varuṇa, who is closely associated with the brahmāna, more numerous hymns are dedicated by the Vaisyas in their maṇḍala than by other poets. The pre-eminent efficiency of their brahmāna is emphasized by the hymn Rg. vii. 34. The Vaiśvāstras praise their brahmāna as protecting the Bhāratas. Bloomfield has attempted to show how the Atharvans came to put forward their especial claim to the office.¥

We recur now to the abstract form of the office. The attempt to find a unity behind the multiplicity of the Vedic gods, to discover an all-comprehending first principle, makes its appearance as early as the hymns of the Rigveda, and is there linked with the names of Prajāpati, Visvakarma, and Puruṣa. It is first in the Satapatha
Brahmanism. That is why we find the former brahman exalted to the position of the supreme principle which is the moving force behind the gods. The thirty-three gods, it is said in Satap. Brah.. xii. 5. 3. 29, 'have Brhaspati as Purusha, but Brhaspati is Brahman, therefore the meaning is, That which exists is Brhaspati, but Brhadha is Brahman.' Brhadha is identified at one time with the wind, at another with the praajas (see BREATTH), and at another with the sun. In a hymn, which has been preserved only in fragments, the epithet of 'born first in the east' is applied to him, and he is designated as Purusha, that is as creator and controller of the universe, who brings the gods and the universe into being. Here, however, he is only the firstborn of creatures (prathamajja), not yet 'self-existent' (vishvambhah). We recognize still the connexion with the view of the Veda in passages like Satap. Brah.. x. 2. 4. 6, which represents yonder sun as resting upon the seven-syllabled Brahman, and adds: 'the Brahman is seven-syllabled, he is one syllable, yajus two syllables, sman two syllables, and what is left over is the remaining month in which he is seven-syllabled; therefore this is the entire seven-syllabled Brahman.' And in another passage Brahman is identified with the syllable o, which is the essence of the whole Veda. In some parts of the Vedanta system devoted to the Brahman, like the Brhat Samhit.. and the Upanishads, one finds, as Donnells shows, Prajapati holding a position above the Brahman of which he is creator, while in others Prajapati, as 'Bhrama Svayambhena,' creates this universe, and in a third series the mind (manus) which creates Prajapati originates from the non-existent, and is itself identified with Brahman in the cosmogony of the later books of the Satap. Brah.,. Brahman has been exalted to the position of the supreme first principle, which, itself without beginning, creates the universe: 'Brahman in truth was this universe at the beginning; it created these gods.'

This thought was taken up by the Upanisads, which made it their aim to search out the Brahman, and to impart the knowledge of it. Here religion passes into the wide arena of that philosophy which, in the Vedanta system devoted to the Brahman, has consistently and fully expounded the doctrine of Brahman, and has taught the unity of Brahman and the universe.

By the side of the all-comprehending Brahman, which in its philosophical aspect affords a ready abstract form in the centre of Indian thought, later times conceived of a personal Divine creator Brahman. At the present day he appears to be a god to the adherents of practical Vedanta, and plays no part in the popular life. Crooke points out that only one text of that kind is found in the Upanishads. He says: 'And he has four faces, and holds a drinking vessel in his hand, he is usually represented also with four arms. His wife is Sarasvat.., a logical result of the ancient connexion of Brahma and Vishnu. But though his personality is now obscured behind the more vividly conceived Vishnu and Siva, the form of Brahman is of great antiquity. Belief in him pervades the entire Mahabharat.., as Hultzmann shows, in its later as well as in its earlier portions. Brahman is omniscient; he is acquainted with the past, present, and future, and without any external sense of touch, he infuses himself into the body of a living being, and into the material world as well as into the mind of a being. From him proceed the castes, the regular orders; and he is usually exalted above the gods, although there are no wanting passages which subordinate him to Vishnu or Siva. He is a popular figure also in the Pali texts. He appears, for example, before the Buddha in order to move him not to withdraw from the world; he is looked up to in heaven; he is recognized by the Buddha himself. He is, however, not adorned with more serious traits, which afford evidence of his connexion with the conception of the Brahman. The history of this connexion has not hitherto been investigated; and little therefore on the subject can be advanced. In the Kashmiri elements of the Dharmasastra, Brahman is referred to as 'the great Brahman, the unapproachable, the observer of all things, the lord of all, the father of all beings past and future,' etc., and he is described as the one who can answer the question as to the ultimate fate of the four elements. Brahman draws near, and a bright light goes before him, announcing his approach. He is, however, not the Brahman to Kavadiga that the gods are mistaken in regarding him as omniscient, and that only the Buddha can answer that question. Here Brahman is the idea of the supreme, corresponding to the Tathagata; but in other passages, as in the Brahmanajatak.., this author is not Brahman, but is apparent, but the relation of the micro dhuravanta saruparampikan with Brahman to the Brahmanical conception is still more immediate. It would be too great a task within this limited space to undertake an essay devoted to the elaborate creations of Buddhism, with its numerous Brahman heavens and Brahman gods, to extract the ancient kernel out of the wealth of fancy has thus luxuriously overlaid and concealed from view.

A. HILGERANDT.

BRÅHMANISME.—I. DEFINITION AND DIVISIONS.—The word 'Brahmanism' seems originally to have been used, and popularly still to be understood, to denote the religion of those inhabitants of India who regard Brahman as their Supreme God, in contradistinction to that of the Buddhists, and, in more recent times, of Mohammedans. But this is founded upon a misconception. Brahman was never universally worshipped (cf. preceding col.); and his acknowledgment as the Supreme God is not even, so far as it is known, less a prominent, characteristic of Brahmanical religions and sects. The characteristic mark of Brahmanism is the acknowledgment of the Veda as the Divine revelation. In Brahmanism, as thus defined we must distinguish two forms of religious development. The earlier one is the religion taught in the Brahmanas (the ritualistic books forming the greater part of Vedic literature); it is, strictly speaking, a part of Vedic religion. The later forms of Brahmanism are a new departure from the former, and only in a certain extent developed from the religion of the Brahmanas. From them they appeal to the Vedic Scriptures, more especially the Upanisads (perhaps even forging new ones), in order to build up a theology of their own, while in their cult they worship partly Vedic deities,—changed, however, in character,—partly deities of post-Vedic origin or growth. In these forms of Brahmanism there is an important non-Vedic element, which, however, cannot be said to be non-Brahmanical; for the beliefs and practices of which this new religion is made up were shared by Brahmanas, and, to some extent at least, modelled by them. This element may be called 'Hinduistic.' When it became all-important, and when the influence of the Brahmanas on its formation grew less and less, Brahmanism merged into Hinduism,—by which term we understand the modern phase of the religious development of India. The religion of the Brahmanas is but a continuation of that of the Yajurveda Sanhita, and thus comes within the broad limits of Vedic religion (q.v.). We must take cognizance of it here, in so far as it influenced the growth and development of later
Brahmanism. The Brāhmaṇas are almost entirely concerned with sacrifice. Indeed, the most orthodox school of Vedic theologians, the Mīmāṁsakas, go the length of maintaining that the sole aim of revelation is to teach the doctrine of sacrifice (karma). The Mīmāṁsakas are the representatives of the Karma-mārga (‘way of works’), the doctrine which declares that the highest end of man is to be realized by works, i.e. by sacrifices and other observances taught in the Veda. There is an extreme view, however, fairly well presents the meaning of the Brāhmaṇas to us, i.e., to be more accurate, of the greater part of every Brāhmaṇa. But this does not apply to the last chapters of, or appendixes to, some Brāhmaṇas called Aranyaka, or to certain independent treatises within the Veda itself, called Upānīyaveda, i.e., which are the latest works of Vedic literature. For these texts contain philosophical speculations which for the most part are entirely unconnected with sacrifice; and on these texts another school of Vedic theologians, the Vedaántins, have based their theosophical systems. The Vedaántins are the oldest representatives of the Jñāna-mārga (‘way of knowledge’), or the doctrine which declares that the samādhi bonum is to be obtained through knowledge. There is a third ‘way’, the Bhaktya; and it is only in early Vedic literature that there are no works of devotion to, or devotion of, God leads to the highest goal. This doctrine was developed later than the ‘way of works’ and the ‘way of knowledge’, but it became the most important one for practical religion, especially in more recent times.

Thus, Hinsa themselves have divided their religions into these three classes, according to the three ‘ways’ explained above; it is therefore necessary that we too should take cognizance of their classification, which, on the whole, well presents the facts and the historical development of religious thought in India.

II. RELIGIOUS AND PHILOSOPHICAL IDEAS.

1. The first form of Brāhmaṇism, as already stated, is mainly a religion of ceremonies and observances; it is chiefly concerned with sacrifice, compared with which devotion and moral duties are of so little importance to the authors of the ritualistic books that they scarcely ever mention them. Of course, the religion of the priests belonged, strictly speaking, to that exclusive class only; it was not the religion of the people at large, or even of that of the Brahmans; but it was established by the latter, in theory at least (and is so generally down to recent times), to be the most sacred, the revealed religion. Its influence on the religious development in India should not be underrated; in order rightly to understand the latter, we must have a clear notion of the nature of the Vedic sacrifice. It is not offered to a god with the view of propitiating him or obtaining from him welfare on earth or bliss in heaven; these rewards are directly produced by the sacrifice itself, i.e. through the ceremonial observances connected with it. These connected ceremonies constitute the sacrifice, and which are more of the nature of magic than of worship. Though in each sacrifice certain gods are invoked and receive offerings, the gods themselves are but instrumental in bringing about the sacrifice or in completing the course of mystical ceremonies composing it. Sacrifice is regarded as possessing a mystical potency, superior even to the gods, who, it is sometimes stated, attained to their Divine rank by it. The efficacy of sacrifice is further supported by scattered many statements about this mystical potency—sacrifice in the abstract. The general notions contained in them have been combined by Martin Haag in a description of sacrifice which we shall transcribe from the introduction to his edition of the Aitareya Brāhmaṇa (Boujary, 1863), p. 73 f.

‘The sacrifice is regarded as the means for obtaining power over this and the other world, over visible as well as invisible beings, animate as well as inanimate creatures. He who knows its proper application has it done for him, and he is looked upon as the real master of the world; for any desire he may entertain in the world, the most atavistic, can be gratified; any object he has in view can be obtained, which was the object of the yajña (sacrifice) taken as a whole is conceived to be a kind of machinery, in which the part consists of a small piece must be supposed to be the object of a sort of great chain, in which no link is allowed to be wanting; or a staircase, by which one may ascend to heaven; or as a montage, emerging from all the constituent parts of the body. It exists from eternity, and proceeded from the Supreme Being (Prajapati, or Brahmā) along with the Trāyīdah, i.e. the three-fold sacred form of the sacrifice (the Śākta sacrifice, and the Vajra, or sacrificial formula). The creation of the world itself was supposed as the result of such a sacrifice performed by the Supreme Being. The Vajra exists as an invisible thing at all times; it is like the latent power of electricity in an electric machine, which is only the apparatus in order to be elicited. It is supposed to extend, when unrolled, from the Ahavaniya, or sacrificial fire, into which all oblations are thrown, to heaven, forming thus a bridge or ladder, by means of which the sacrificer can communicate with the world of gods and spirits, and even ascend when alive to their abodes. The term for beginning the sacrificial operation is “to spread the sacrifice”; this means that the invisible thing, representative of the gods, which was lying dormant, as it were, is set in motion, in consequence of which its several parts or limbs unfold themselves, and thus the whole becomes extended. The sacrificial words, the ritualistic formulae stand in relationship with all the sacrificial implements, the sacrificial place, and all the sacred verses and words spoken during its actual performance. The sacrificer being of being of a body like that of men, certain ceremonies form this head, other, the oblation as an altar, etc. The most important element in a sacrifice is that all is done without fail, and that consequently there should be nothing in excess, and nothing done by mistake. This harking from the whole form of the sacrifice constitutes its rūpa, i.e. form. The proper form is obtained, when the mantras which are repeated are in strictest accordance with the ceremonies, or the oblations are repeated, if the sacrifice lasts for several or many days) when they have the characteristics of the respective days. If the forms be vitiated, the whole sacrifice is considered as an unavoidable on account of the extremely complicated ritual, the sacrificer will be deemed guilty by a god as much as in the person of the Brahman priest. Each mistake must be considered a good by a prāyaśchitta, i.e. penance, or propitiatory offering.’

It is obvious that the dignity of the gods could not but be high, in the opinion of those who had such exaggerated notions about the nature and importance of sacrifice. And, as a matter of fact, the gods descended from the high position they once had held in the esteem of the Vedic poets, and came to occupy quite a subordinate, ring ding position. The degradation of the once popular gods is a marked feature of later Brahmanism, and we can trace its effect on the development of Indian religion in many important facts, as will be explained in the sequel.

The religion of the period of the Rigveda did not lack germs which, duly developed, would have raised the conception of the Deity to a higher level. Not only, during its last stage, had a Father-god, Prajāpati, become the object of speculation and adoration, but even before that time it had become a habit of the poet-priest to ascribe the attributes, functions, and powers of several gods to that particular one whom he was for the time invoking. This tendency to identify many gods with one has been called by Max Müller ‘kethonism’ or ‘kethonismus’. It is conceivable that kethonism might, in the end, have led to monotheism, or at least to a purer form of religion than the old Vedic polytheism. But in the Brāhmaṇa period the priests cared less to exalt the personal gods than to convey to the sacred dignity of the impersonal sacrifice. The conception of the Deity as embodied in the Vedic gods was first debased by the ritualistic procrucification of the priests; and the degradation of the gods was consummated by their identification with the object of their sacrifice. But the same cause which diminished the dignity of the ancient gods gave rise to a new idea of God as Controller and Lord of man and the universe. The constant occupation of the priests with sacrifice and the symbolic interpretation of the meaning of the rites and ceremonies produced those ideas,
described by Hang, about sacrifice as a paramount power, the essence, as it were, of the whole world; and such ideas prepared the Indian mind to admit a belief in a Supreme Deity. A movement appears in full vigour in the Aranyakas and Upanisads; in these works we behold a spectacle unique in the history of religion, viz. the search for a Supreme God after the popular gods and goddesses.

During the Brāhmaṇya period the theologians had always been searching for those cosmical, physical, and psychical phenomena and forces which, as they thought, were symbolized in the rites and appurtenances of sacrifice. Thus they arranged the sacrificial system in a mysterious knowledge of these potencies, and a rough kind of estimate of their importance. The earliest parts of the Aranyakas and Upanisads contain several attempts at a systematic arrangement of the physical and psychical forces, first in connexion with some part of the ritual, and then in various other allegorical directions. There is a gradual advance in these fanciful attempts at classification; the several items are arranged according to their dependence upon one another, till that one is reached from which all others are to be derived.

It is impossible to sketch, even in outline, these attempts, which frequently contradict one another; but it may be remembered that the Cosmical Deity and the Immortal, which is beyond the sun, where the blessed go who no more return to the earth. The name given to this mysterious power is Brahmā (g.v.), which originally may have meant 'prayer' [but see above, p. 797, near top], but already in the Atharva Veda and other Vedic texts (see Muir, *Origin and Growth*, ii. 256) of the class called the Brahmanas, a primitive deity, who is identified with the Supreme God, the Upholder of the world. Brahmā is the infinite, the unchangeable, the eternal, the absolute; it is pure Being, on which all that exists depends, and from which it derives its reality. Brahmā cannot be apprehended by the mind, although the Vedic writers stated that all known attributes of things must be denied of Brahmā, which therefore cannot be described only by negations (nāti nāti, 'no no'). In Brahmā is reached the ultimate end of the series of cosmical and physical powers—its First Cause.

This advance in speculation seems to have proceeded step by step with another, concerning the series of psychical phenomena and powers, the ultimate member of which came to be designated as Atman (g.v.). Atman originally meant 'body' or 'person,' and also as a reflexive pronoun, it came to denote the Self, as the principle which constitutes the identity of an individual, that on which the whole of the physical and psychical functions of an individual depend, and from which they derive their reality. Atman is therefore the transcendental Self or Soul. Frequently it is identified with the space within the heart. Brahmā and Atman mark the greatest heights which speculation reached; the one in the cosmical order of things, the other in the psychical. To compass both these views of things, a new practice was developed, the relation subsisting between them, is the chief object, the ever-recurring theme, of the fully developed speculation of the Upanisads. Brahmā is declared to be the innermost essence of all things, animate and inanimate; it abides in them unknown to them, and controls them from within; all things therefore are brahma (it is 'intra' as well as 'within'). Brahmā, as immanent in us, is declared not to be different from our atman. The Upanisads insist on the non-difference of the Brahmā and Atman; but it may be doubted whether thereby absolute identity is meant, so that the Atman would cease to be a distinct individuality other than that joined to Brahmā. On this point there is great diversity of opinion among the interpreters of the Upanisads—the Apanisads or Vedantins.

These philosophies are founded on the Upanisads their true teachings, and to show that they formed a self-consistent system. The older view seems to have been that followed by Rāmānuja, who maintained, that as soon as Brahmā, still retain some kind of individuality of their own when joined to him, and that the world has the same relation to Brahmā as the soul has to the body. The younger view, expounded by Śaṅkara has, however, become the prevailing one among philosophers; it maintains that Brahmā alone is real and everything else is an illusion (maya), and that the souls reaching Brahmā are completely merged in him and cease to exist individually. The advocates of both views advance specious arguments in their favour from the Upanisads themselves. The truth seems to be that the authors of the Upanisads held various opinions on the points which form the basis of the different schools of Vedanta.

However this may be, the great achievement of the Upanisads is to have established the firm belief in a transcendental, impersonal, and un-moral God mysteriously identical with our Self. This new idea of a pantheistical Deity has nothing in common with, and cannot therefore have been developed from, the popular notions of the Divine nature as represented by the old Vedic gods. Brahmā, in particular, is outside the category of good and bad; it is an un-moral deity as it is an impersonal one.

The theosophical movement, which found expression in the Upanisads, was not restricted to India, but spread to the West, though one great sage, Yāṣavalkya, had a great share in establishing the final doctrine of Brahmā. Nor were these speculations the exclusive property of priests or Brahmans; for kings are mentioned who 'knew the Brahmā' and taught their knowledge to Brahmans; and even women took part in the discussions about the nature of Brahmā. It cannot be doubted that the ideas of Brahmā and Atman formed the principal interest of the philosophical and religious men of the period of the Upanisads; they became one of the chief factors which brought about the new phase of theosceological religion, for 'Brahmānism' and 'Brahmānists' are names which the theosophical ideas taught in the Upanisads, has been made, of the most flourishing and profound religions in India, the philosophical basis of their teachings.

3. Another factor which greatly influenced religious life in India, and contributed in a high degree to give it its peculiar character, was asceticism (jīva, 'person'). The ascetic is one who lives a life of power, sometimes by 'work,' sometimes by 'space.'

In the Rig Veda (s. 136) ascetics (manus) are mentioned as the protectors of the various magical powers. And later, in the Brāhmaṇya, we meet with them under the name of kramāṇas, who are mentioned in conjunction with Brahmans as their rivals (cf. Patañjāli, *Aphorisms*, ii. 412. 2). We get a distinct view of these ascetics in much later times, when a certain practice was reduced and reduced to a kind of system. The principal methods were the following: silence, various postures of the body and of the limbs, fasting.
regulation of the breathing, self-mortification, and contemplation. By such means, which are denoted by the word yoga (q.v.), the ascetic (or yogin) strove to propitiate a god and to induce him to grant the boon he solicited (varada), or he attempted to gain superhuman powers. At all events he acquired merit by these means, which were looked upon by all as a merit. It deserves to be noted that in the Epics the Rṣis of old are generally regarded as holy men, not so much on account of their offering sacrifices as on account of their severe penance; they are superhuman yogins, not deified priests. We see therefore that the religious ideal of the Epics was no longer that of the Brāhmaṇas.

This change will also become evident, if we consider the four āramanas (q.v.), or stages into which the religious career of the Hindus was divided about the end of the Vedic period. The first stage is that of the brahmachārin, or disciple, who learns the Veda; the second, that of the grhaśtha, or married householder; the third, that of the vānaprastha, or old man, who retires to the woods and lives there the life of a hermit; the last, that of the sādhu, or ascetic. Now the bhikṣu is an ascetic by profession, who is never to return to common life, but most of his ascetic practices he has in common with the yogin. The high value set on asceticism is acknowledged in principle when ascetic life is made the last stage of the religious career which has been the period of the Brāhmaṇas, ‘religious’ men seem to have passed the last part of their life as hermits in the woods; for their use were destined, as the name indicates, the Aranyakas (q.v.), which formed the last chapters of, or were appendices to, the Brāhmaṇas. In later times, however, the ārama of the hermit fell into disuse, and now it is practically abolished; while at the same time the ārama of the ascetic gained in importance, and was chosen by all those who adopted a religious life. This changed relation between the ārama indicates that the ascetic ideal finally supplanted the older ideal represented by sacrifice.

There have always been two kinds of yoga. The one, now called hāthayoga, is practised in order to obtain magical powers; the other, rāja-yoga, for the attainment of spiritual perfection. In the latter, the higher yoga, dhyāna (‘contemplation’) is regarded as the most effective means for attaining the desired ends, while the other ascetic practices are enjoined as a preparatory course only. By dhyāna is meant a process of mental abstraction, intuition, we may call it, on the strength of which the wildest fancies have been accepted as truths. The Jaina Umasāvītī lays it down in his Tattteethādhyājyam Śutra, i. 37, that by means of dhyāna the structure of the universe becomes known. But the chief use to which dhyāna was put was the discovery and comprehension of religious truths, and it is therefore regarded by orthodox as well as by heretical thinkers as the noblest of all religious exercises.

The refined yoga of the later systematical philosophy, the Sāṅkhya of Kapila—a theory, if not invented for the purpose, at least well adapted to account for the efficacy of yoga in general, and of contemplation in particular. We might call it a system of natural religion; for it was regarded as a Śrīvidya—a title which is given to works of an authority inferior only to that of the Veda. Hence the Sāṅkhya theory of evolution, combined with the doctrine of the Upaniṣads on Brahman and the Powers (ātman), has been put in requisition to solve religious problems and to explain the relation between God and the world; it has thus exercised the greatest influence on later Brāhmaṇa theology. In conclusion, the bearing of asceticism on ethics must be pointed out. In India, ethics is not regarded as an independent branch of philosophy or of religion, but as preparatory to the exercise of the highest religious practice, dhyāna, which leads to emancipation. It is therefore not to be wondered at that the fundamental moral precepts should have first been formulated in the Smṛti; nor that they should have five great vows binding on all bhikṣus. Four of these five vows, viz., not to kill, not to steal, not to lie, and not to commit adultery, are common to all orders of ascetics, orthodox as well as heretical. Whatever may have been the actual state of morality in India at the time under consideration, it is evident that the principal moral laws had been clearly grasped, notwithstanding the indiscipline of the priests to ethics.

The sumnum bonum is defined as emancipation (mokṣa, mukti, nirvāṇa). In the Upaniṣads, emancipation, union with Brahm, is frequently mentioned and praised as the end to be desired; but it does not yet appear in the same light as in later times, as the only real good. In the Upaniṣads there is some evidence that the asceticism which henceforward becomes the most characteristic and dominant feature of Indian philosophy and religion. Theoretical pessimism was first taught in Brāhmaṇical philosophy by Sāṅkhya-Yoga; it is also the keynote of Jainism and Buddhism—religions in which human suffering, the logical outcome of pessimism, always associated with it, is the doctrine of liberation as the sumnum bonum. But mundane existence, this phenomenal world, the Saṁsāra, in which the soul is born again and again, is essentially bad, and if the soul fettered to the Saṁsāra experiences infinite pain and no happiness that is not vitirated with and inseparable from suffering, then indeed the true aim must be the definite release from the Saṁsāra, i.e. the reaching of a state subject to no change and suffering. This absolute state is reached in mokṣa, mukti, nirvāṇa, or nirvikāra. To teach the way to mukti is the aim of most of the philosophical and religious systems of India after the Vedic period; they profess to open a way to salvation for those who are wearied with the continual suffering produced by mundane existence.

III. MYTHOLOGY.—The religious and philosophical ideas, the rise of which has been sketched in the preceding part of this article, were at the same time so many factors in the mythology of the Brāhmaṇa period. This mythology is not the exclusive property of the priests or of the Brāhmaṇs; it may be described as the sum of those myths and legends which were current among the Indians of higher culture, and which found expression in general Sanskrit literature, chiefly in the Epics and the Purāṇas. It inherited, from the preceding period of the Veda, the principal gods. Theoretically they remained what they had been believed to be before, but practically there was a marked change. As looked in the hymns of the Rig Veda were forgotten, and those who were retained generally lost much of their pristine dignity, owing to the exclusively sacrificial interests of the priest as explained above; only a few were promoted to a higher position. Besides these, some new gods were received into the Hindu pantheon. The majority of the Vedic gods lost their share in popular worship without ceasing to be considered powerful deities. This brought about a changed theological conception. The gods were no longer anthropomorphous in their character was greatly developed, since it was not to the priests, but to poets and legend-mongers that the care of mythology was now entrusted. (2) The gods generally became departmental divinities to a
much greater extent than before. This fact is most striking in some instances where gods have attributed to them definite functions with which in the Rig Veda they had but a very slight, if any, connection. Thus Varuna became the ocean-god, while in the Rig Veda his connexion with water seems in like manner appears as the rule. Savitri is not a proper sun-god; in later mythology he is identical with Surya, and represents the heavenly luminary. Soma, whose character as moon-god in the Rig Veda is still controverted, is acknowledged as such in Brahmanical mythology, and Yama in like manner appears as the ruler of the nether world. This tendency to distribute the departments of nature among the gods, clearly discernible in most cases, prevented the gods from becoming little more than holy names after they had ceased to be worshipped by the people.

The Vedic gods who continue to be generally acknowledged in the Brahmanical period are Agni, Indra, Savitri, Soma, Varuna, Yama, and the Asvins; and, in addition to them, Prajapati, Visnu, and Rudra. The three last named, who become the.dyocratic Gods, were occasionally considered towards the end of this article; we shall treat first of those other gods borrowed from the Veda, and next of the principal new gods who originated or came to the front in post-Vedic times.

Agni is, in the Rig Veda, the personification of the sacrificial fire; he, therefore, was the god of the priests and the priest of the gods. The Vedic conceptions of Agni are partly retained and occasionally revive in later mythology. Thus he represents Brahmanhood just as Indra represents the Linga, or warrior-class; he is the leader of the gods, who are therefore agni-puragama. The common synonyms of agni, ‘fire’, in classical Sanskrit, viz., vahna, hatavahana, hatadasana, are derived from Vedic conceptions of Agni. But, on the whole, the function of Agni in the Veda is that of personification of the element of fire. Therefore he is spoken of as having wind for his charioter (vyatasastrati), and smoke as a banner (abhamakuta). The various aspects of fire occasionally appear as traits of Agni’s character, as will be seen in the legends related of him. Some forms of fire, especially as the terrible and destructive element, seem to have been worshipped under other names. According to the Satapatha Brahmana, Agni was called Bhava by the Vahikas, Sarva by the Eastern people. He was adopted also by Rahula and Rudra. This seems to indicate that the popular worship of Agni was early transferred to deities of the Rudra type. It may be questioned whether there were any temples of Agni, and whether he had worship except in Vedic sacrifices.

Agni is present in every fire; therefore it was possible to relate legends of many Agnis and to make out genealogies of them (Mahabharata, iii. 219–222, and differently Vayu-Purana, i. 29). This accounts also for the fact that contracts were made in his name, and not that of the unincorperated, insensible god, was a witness to the contract. Fire, in a mysterious way, resides in all creatures; it is recognized as the cause of digestion. Therefore Agni is an omniscient god. The following legends will give an idea of Agni’s position in later mythology:

Agni was created by Brahma, and invested by him with his functions. But Agni was, on account of his mysteries, comparatively little known as a deity. Agni was not wont to hold his offices, but Agnits dissuaded him from retiring, and was therefore adopted by him as his son (Mahabharata, iii. 217). Agnitas son was Bhringa, from whom the race of Agnis, mentioned above, is derived.

The Veda, Brhad-purana, or the race of Bhringas, is said to have kindled Agni for the establishment and diffusion of fire on earth; but in the Mahabharata the relation between Agni and Bhringa is very different. Bhringa had been sent by Brahma from the fire at Varuna’s sacrifice. His wife was Pulomak. When she was pregnant, the Raksiya Pulomak visited her during her husband’s absence, and falling in love with her wanted to carry off. He assumed that he had been betrothed to her before she married Bhringa, and he called Agni his own. She discovered that Bhringa had first chosen her, but that she had been bestowed on her father by Bhringa, who with Vedic rites made his wife. Then the Raksiya, in a fit of rage, cast a bair, called the flight Pulomak miscarried, and the child dropped from her, whence he was called Chakrapana. At the same time the Raksiya resolved to ask of Agni for Pulomak, to which Agni had made Pulomak known to the Raksiya, Bhringa pronounced on Pulomak as a wife. The Raksiya should develop as a great king (Mahabharata, i. 5 ff.); see, further, art. Bhringa.

The references of Agni from the world, his hiding in the ocean, in the earth, in plants; especially the Sani (used in fire-rubbing), is as yet a mystery spoken of in the Mahabharata. Some animal always betrayed Agni to his father, and he hid as a curse upon the betrayer some defect which characterizes it. Agni accordingly asked whether these speculations formed part of a general belief. The same may be said about his parentage, or rather origin, which is various, so that his deeds become incredible. He is one of the eight Vauses, their leader, just as in later Vedic texts.

Agni’s wife is Svaha, daughter of Daksha. He jointly with Siva was father of Skamna, as will be related below. We hear occasionally of other offspring of Agni, among which the best known name is that of the sage Agnivaish. In one case, however, he became connected with epic history through his descent to the dynasty of Mahimati on the Narmaid.

Durjodhana, king of Mahimati, had by Narmaid a beautiful daughter called Sudarshana, with whom Agni fell in love. In the guise of a beautiful maiden he asked Narmaid for the hand of his daughter, but she would not consent, and her father not consenting, he withdrew from the sacrificial fire. He then made himself known, and received the maiden on condition that she should always live near the king. Agni’s son by Sudarshana was Sudarshana, who as a householder vanished (Mahabharata, iv. 103). In another place the story is told differently. Nila, king of Mahimati, had a beautiful daughter who used to stand near the sacrificial fire and look to it. Her mother became enamoured of her, and the fire would not burn unless agitated by the sight from her lips. One day the god, in the guise of a Brahman, visited the girl, but she was discovered, and the king was ordered to be executed. Then Agni revealed himself to him, and Nila gave him daughter in marriage. The god henceforth aided the king in battle, so that his deeds became incredible. It is said that Sahadeva the Pujavan on his digesya, or conquest of the world, could not overcome Nila till Agni allowed the king to submit. Another local legend in which Agni plays the principal part is the burning of the Kshapya forest, which is connected with the main story of the Mahabharata, and is there (i. 222 ff.) told thus. Agni had feasted twelve years, during king Svetasis condition, on fire, and after wandering among the kings of other men; he accordingly grew feeble, and complained about it to his father. Agni’s father was Bhrgu, the first king of the Rudra type. This seems to indicate that the popular worship of Agni was early transferred to deities of the Rudra type. It may be questioned whether there were any temples of Agni, and whether he had a worship except in Vedic sacrifices.

Asvins, two of the gods who were first created, and are therefore agni-puragama. The common synonyms of agni, ’fire’, in classical Sanskrit, viz., vahna, hatavahana, hatadasana, are derived from Vedic conceptions of Agni. But, on the whole, the function of Agni in the Veda is that of personification of the element of fire. Therefore he is spoken of as having wind for his charioter (vyatasastrati), and smoke as a banner (abhamakuta). The various aspects of fire occasionally appear as traits of Agni’s character, as will be seen in the legends related of him. Some forms of fire, especially as the terrible and destructive element, seem to have been worshipped under other names. According to the Satapatha Brahmana, Agni was called Bhava by the Vahikas, Sarva by the Eastern people. He was adopted also by Rahula and Rudra. This seems to indicate that the popular worship of Agni was early transferred to deities of the Rudra type. It may be questioned whether there were any temples of Agni, and whether he had worship except in Vedic sacrifices.

Agni is present in every fire; therefore it was possible to relate legends of many Agnis and to make out genealogies of them (Mahabharata, iii. 219–222, and differently Vayu-Purana, i. 29). This accounts also for the fact that contracts were made in his name, and not that of the unincorperated, insensible god, was a witness to the contract. Fire, in a mysterious way, resides in all creatures; it is recognized as the cause of digestion. Therefore Agni is an omniscient god. The following legends will give an idea of Agni’s position in later mythology:

Agni was created by Brahma, and invested by him with his functions. But Agni was, on account of his mysteries, comparatively little known as a deity. Agni was not wont to hold his offices, but Agnits dissuaded him from retiring, and was therefore adopted by him as his son (Mahabharata, iii. 217). Agnitas son was Bhringa, from whom the race of Agnis, mentioned above, is derived.

The Veda, Brhad-purana, or the race of Bhringas, is said to have kindled Agni for the establishment and diffusion of fire on earth; but in the Mahabharata the relation between Agni and Bhringa is very different. Bhringa had been sent by Brahma from the fire at Varuna’s sacrifice. His wife was Pulomak. When she was pregnant, the Raksiya Pulomak visited her
BRAHMANISM

Anuła, Pārvāka, Kuśāṇa, Yāhūvāyu, Jātavāyu, Hiranyarote, etc. (Amarakokha, i. i. 1. 48 ff.). See, further, Adolf Holtzmann, Agni nach den Vorstel-

lingsen des Mahābhārata, 1878.

Indra (Sakra) in Brahmanical mythology is the ruler of the heavens. He is sometimes represented in a powerful form resembling a warrior or, more usually, a powerful ruler (cf. Muir, Original Sanskrit Texts, v. 211).

Indra's weapon is the thunderbolt (vāyūra); the rainbow is called 'Indra's bow.' He rides on the elephant Airavata in a heaven palace (bhavan) driven by his charioteer Mātāli. His capital is Amāravati, his palace Vaijayanta; his park, situated on the north of Mount Meru, is Nandana; in it grows the Pārijata tree (which was torn from it by Kṛṣṇa and planted in Satyabhama's garden). He is the regent of the East. He is usually called Sachi or Pañoloni, daughter of the Asura Puloman, whom he slew. His son is Jayanta.

Indra has a thousand eyes, which may be interpreted as the stars of the firmament; but in legendary mythology they are explained differently. Indra seduced Gautama's wife Ahalyā, and therefore the saint laid upon him the curse that his body should be covered with a thousand marks resembles the female organs; when Gautama re- lented, he changed these marks into eyes. According to another story, the thousand eyes originated when Indra was gazing on the heavenly nymph Tilottama (Mahābhārata, i. 211).

Many stories are told of Indra, some of which have developed from Vedic myths. His most famous story is the slaying of Vṛtra, which is variously told. According to one version of the story (Mādhyānta Purāṇa or Tāṇṭārīya Purāṇa), Vṛtra was a son of Vāyuva or Trivikrama, and was worshiped by the gods, but he favoured also the Asuras, to whom he was related through his mother, Hiranyakāśipu, the leader of the Asuras, brought him over to his party, and dismissed his karta Yasiṣṭha, who thereupon cursed him to the effect that he should be killed by a being not existing yet (Vivūna in the Vāyuva story). In the shape of a man-lion, Tāṇṭārīya, a giant, attempted severe vengeance; but heavenly nymphs sent by Indra and the Sun god, Vivasvat, clung to him. Thus aroused him to great wrath, and he began to utter powerful words, by virtue of which his size increased immensely. With one stroke he destroyed all the offerings, and with the third he drank up the energy of Indra and the gods. Reduced to weakness, the gods asked the help of Viṣṇu, the Supreme Lord, who in the guise of the golden fish, from which the thunderbolt was produced. With this weapon, which belonged to Indra, Viṣṇu at once confounded the giants and struck Trivikrama. From the corpse rose a mighty Asura, named Vṛtra, who became Indra's enemy, but was at last killed by him with the thunderbolt (cf. Muir, Original Sanskrit Texts, v. 220 ff.).

According to another version of the same story (Māhābhārata, v. 19), Indra killed Vṛtra in the twilight with the froth of the sea. For the Brahmanas had conferred upon Vṛtra the boon that he might slay Indra by any weapon, dry or wet, in the daytime or at night. According to a third version (ib. iii. 100), Vṛtra is not connected with Indra; he is the leader of the Asuras who offers his life freely to the gods. It is in this emergency that Dāivata yields up his horse, from which Indra was accustomed to ride; Indra, in the shape of a lion, leaped onto this horse, and killed Vṛtra in the battle with the gods. It is in this emergency that Dāivata yields up his horse, from which Indra was accustomed to ride; Indra, in the shape of a lion, leaped onto this horse, and killed Vṛtra in the battle with the gods. Thus Indra's victory over the Vṛtra was not a cruel one, Siva's energy, which entered the demon and weakened him, was of no avail.

By the killing of Vṛtra, Indra was polluted with the helminth sin of Brahmanicide (brahmahati), and he fled in great terror to the end of the world. Upon his entering was the Vṛtra himself in the fibre of a lotus. The gods then placed Nābhusa, his son, on the throne of Indra. But Nābhusa at last came to reason in his inordinate desire of Sārama, the wife of Indra. The gods discovered Indra's retreat, and Bhūmapati cleansed him by the horse-sacrifice and dedicated him to himself. According to a fourth version (ib. xii. 251 f.), the cause of Vṛtra's defeat was a dreadful fever, Siva's energy, which entered the demon and weakened him, was of no avail.

In some legends Indra appears as the opponent of other gods. When the Raś Chayavana was giving the Āsins a share of the soma-flotation as a reward for having made him young again, Indra tried to prevent the Āsins from sharing it, and created a huge monster Mada (intoxication). In great fright Indra then yielded, and Mada was distributed over women, wine, and thunderbolts. Indra and the other Asuras were cast into the sea, and there was born a giant named Sūrya, who, as the sun-god, was the manifest form of the sun. Asura Indra tried to protect the Āsins from the Mada, and created a huge monster Mada (intoxication). In great fright Indra then yielded, and Mada was distributed over women, wine, and thunderbolts. Indra and the other Asuras were cast into the sea, and there was born a giant named Sūrya, who, as the sun-god, was the manifest form of the sun. Among his other exploits, Indra used his thunderbolt to give life to the waters. Thus Indra's victory over the Vṛtra was not a cruel one, Siva's energy, which entered the demon and weakened him, was of no avail.
times they are all merged in one, who is called indiscriminately by their names—Sūrya, Savitri, Mitra, Aryaman, Pāsan—besides bearing such names as Aditya, Vivavast, Vikartana, etc. He continued to be a popular god even after the rise of the supreme gods: temples were dedicated to him, and he is also called Dakṣa. The Veda, the oldest of the two, contains hymns in his praise. He is also called Śaternatha, and he is thus called Dakṣa. Thus Vivavast, the sun-god, and Vivavast, the wife of Dakṣa, became the husband and the wife of the sun-god, and they were assigned by him to the order of night. By this Vivavast had become the slave of his sister Dakṣa. For the sisters had washered as to wash the divine husband. The moon was white or black, and Dakṣa by fraud had won the bet, which stipulated that the loser should become slave to the winner. Thus Dakṣa, living in the servitude of his sister, was compelled to obey their commands. The promise, however, to set him free, if he brought them the aurata (which in this account is confounded with the soma). After many adventures Garuḍa came to the place where the aurata was kept, vanquished the guardian-god, extinguished the fire which was burning round the aurata, overcame all obstacles, and succeeded at last in carrying off the aurata-soma. In vain Indra hurled his thunderbolt at him; it brought down only one feather of the bird. Indra then entered into friendship with him. Garuḍa placed the aurata on the ground strewn with kusa grass, and invited the assembly of Brahmans to partake of the custom to do before meals, Indra carried off the aurata. Garuḍa was rewarded for his deed by Vīṣṇu, who chose him for his service as the bird on which he rides, and assigned him his standard to rest upon.

This myth represents part of which can be traced back to the Rig Veda, leaves no doubt that the sun is meant by Garuḍa, and consequently darkness by the snakes, his food. Apparently Garuḍa was never regarded as the equal of Sūrya, who therefore engrossed the whole sun-worship; still Garuḍa's claim to worship was recognized by making him the servant and companion of Vīṣṇu, who from being a solar deity had been promoted to the rank of a Supreme God. Garuḍa is also called Surajā, and it may be remarked that there is a goddess called Surajā. Garuḍa is frequently figured on ancient sculptures. He is also identified with Tārakeśa, originally a distinct mythical being, figured either as a bird or as a horse, and apparently representing the sun. Garuḍa seems, therefore, to be a combination of different divine forms of the sun represented as a winged being.

Soma, the moon-god.—As a departmental god, Soma represents the moon; but since he is identified with the Vedic god Soma, who especially represents the sun, this identification represents the two deities as the same. It is not improbable that the latter are also ascribed to the moon-god. Hence he is the sovereign of the stars as well as of the plants and of the Brahmans; and in poetry his rays are said to consist of amrita. Though he was a deity of great holiness, he seems scarcely to have received popular worship as a separate god; at least no temples seem to have been dedicated to him. (The famous shrine at Somānātha was sacred to Siva, and so was Somatirtha in Śrenagura; see Stein, Kalhana's Chronicle of Kāśmir, i. 450), and it is not ascertained whether he was introduced either from the eye of Atri, son of Bhrāma, or, together with other precious things, at the churning of the ocean. He married the 27 Nakṣatras, daughters of Dakṣa, i.e. the 27 mansions of the moon. But he preferred to have beautiful wives. Dakṣa fruitlessly blamed him for his neglect of duty towards them, and at last he cursed him to the effect that he should die of consumption. So the moon began to wane, and at the same time it became fatter and weaker. Then Dakṣa mitigated his curse to the effect that the moon should alternately wane and wax every month. At full moon only a trace of his illness remains; it is the dark spot on his disc in the shape of a hare. His curse was brought to
about by boating at Prabhāsā, where the Sarasvati falls into the western ocean.

From Soma sprang the Soma-savāni, or lunar race of kings. Soma carried off Tārī, the wife of Brahmapati, though Brahma had restored her to her husband, the teacher of the Asuras and the enemy of Brahmapati, together with the Asuras’ wife, Soma in the conflict between gods and demigods. At last Soma was compelled to give up Tārī. After some time she gave birth to a boy whose parentage was doubtful; but when he had grown, the boy revealed himself as Soma. The boy was named Budha (the planet Mercury), who afterwards married his, daughter of Manus. Their son was Puru, who was the lineage of Indian kings.

The moon plays an important part in the ancient belief about the life after death. The souls of the deceased are supposed to go to the moon, and assembling there cause her waxing. At full moon, the moon sends some spirits on to the world of Brabu (dreams) and sends the rest as rain down to the earth to be born again (piṭrīṇa). Their stations on both paths are variously stated (see Denissen, System der Vedānta, 1883, pp. 392, 409, 475).

Vāyu (Vātā Mārata) is the divine personification of wind, the fourth element of the Indians, which, it should be noted, constitutes as much the principle of life; Vāyu has therefore power also over the animal world. He presides over the North-west. Since the invisible element of wind does not easily lend itself to anthropomorphism, scarcely any myths are told of Vāyu; nor do wind gods receive popular worship. He was too much of an abstraction to appeal to the religious feelings of the people. But there were popular wind-gods, variants of Vāyu as it were, who in epic language were therefore styled sons of Vāyu or Mārata. One of them is Hanumān, the valorous monkey of the Rāmāyaṇa, who jumped the ocean and brought Rāma tidings from his bride Sītā; he is now the tutelary god of all village settlements. The writer of the present article believes that he is connected with the monsoon (dādara) winds. Another son of Vāyu is Bhima of the Mahābhārata, the second of the five Pandava brothers. There are traces in his character which seem to indicate a demonic origin. He is frequently brought into relation with the Rākṣasas; he not only fights them, but he marries the Rākṣasi Hidjīpa, by whom he has a son, the famous Ghodotkacha. He is a ravenous eater (vyakoṭara), and is of great fierceness; he tears open the breast of his enemy Dūṣasana and drinks his blood. He may have been held god as the god of storm, but this storm-wind is a far different spirit of the Satapatha Brāhmaṇa and the Mahābhārata (see Miur, op. cit. v, 250 E.). Another cure brought by the wind is the destruction of rain in drought. For Vāyu is the god of storms (see Usanas and Miur, Mahābhārata, xi. 2: the wrath of the Kṛta, the wind of Vamana, who had fallen into a well and there invoked them in an interesting hymn).

With epic history the Aevins are connected in the Mahābhārata as the fathers of Sahadeva and Nakula, the twin sons of Mādhra; and in the Rāmāyaṇa they are the fathers of the monkeys Dividda and Mainu.

Finally, we must mention Brāhmapati, who, in the hymns of the Rig Veda, is invoked as a god, the impersonation of the power of devotion; in Brāhmanical mythology he is not a god in the proper sense of the word, but rather a divine sage. He is the teacher (guru) and household priest (puρāṭaka) of the gods; he is identified with Vichaspati (‘lord of speech’), and with the planet Jupiter. According to Mahābhārata, iii. 217 ff., he is the son of Angras, and from him is descended the family of Agnis. His wife is Tārā (see above). In the epic he is a rival of Kāvya Usanā or Sukra, teacher of the Asuras, who is identified with the planet Venus.

* An incident which is thought to show some resemblance between Neptune and Varuna is related in Mahābhārata, iii. 214 ff. Varuna gave a horse to Rākṣasa, to which Gāṇi demanded of him as the prize for his daughter Sāryaṇī.

About the Aevins, which is the name of the authors of the Aevins, as they are known in ancient Hindu literature. The names of the Aevins are given as Vasaras, Mahābhārata, v. 98). Mention is made of a bow of Varuna, from which originated the gūrdvā, the bow he gave to Arjuna. Wine (sūrva) is called vārūṇi, i.e. ‘belonging to Varuna’; and the goddess of wine, Vārūṇi, who appeared at the churning of the ocean, is regarded as Varuṇa’s daughter or his wife.*
Most of the gods treated of hitherto have this in common, that, though fully recognized in mythology, they lost more or less of their importance as popular gods. It was different with two old gods, Viṣṇu and Śiva, and with the youngest of Vedic deities, Ājīvika. They advanced to the position of the great leaders in the modern Vedic pantheon, the highest objects of worship. Before we treat of the rise of these three gods, we must complete our description of the Indian pantheon. First we shall treat of the post-Vedic gods of similar rank to the old gods, but in a later period, then of minor divine beings, and of saints.

2. Post-Vedic gods.—(A) Those of high rank.—To the post-Vedic period must be assigned Ku-māra, the war-god (called also Skandā, Kārttikeya, Guha, Mahāśeṇa, etc.). He is first mentioned in the Chhodūyaga Upaniṣad, vii. 20, 2, where he seems to be identified with the sage Sanatkumāra. His origin, however, must be looked for in popular belief, which seems to have varied a good deal in details respecting the war-god, as will be seen in the sequel. Kumāra is regarded as the general (sena-pati) of the gods. His introduction as a new god was probably due to a change in the government of Indian States. Originally the king was both ruler in peace and leader in war, but afterwards the office of general became distinct. When this generalship was recognized, it was thought necessary, as we may assume, that there should be in heaven too a senapati as well as a king. And since the senapati frequently succeeded in supplanting the king, and the latter was often justly in being jealous of the former, it is but natural that Indra should at first try to suppress Kumāra, as is told in the narrative of the latter’s birth.

The myth of the birth of Kumāra is variously related (Mahābhārata, iii. 225 ff., ii. 44 ff., XIII. 1, and Gāndhārī Vāma, 236). The first story is that the gods, both as Śiva and as Agni, his mother as Umā, Gangā, and quite a number of minor deities. These rival claims to his parentage had to be settled, and this was effected by the assumption of a sort of joint parentage, and by making some of the female deities his nurses or adoptive mothers.

The most generally adopted account of Kumāra’s birth is as follows: The gods were afraid that from the embrace of Śiva and Umā a child would be produced whose world would not be able to bear, and therefore they entreated Siva not to embrace his wife. He agreed, but walked abroad, and this was taken by Agni and thrown into the Gaṅgā. But the latter could not retain it, and threw it on the earth, where it grew into a third form of Kumāra. There it was transformed into a fine boy, who was found by the six Kṛttikas (the Pleiades). As each of them desired him to be her son, he was assumed successively to both breasts simultaneously. Hence he is called Kārttikeya and Śrīmukha. (In point of fact, the name Kārttikeya seems to be derived from Kārttika, the first month of autumn, when, on the cessation of the monsoon, the roads became practicable, and kings were wont to set out on war expeditions. According to another version, the Kṛttikas were formerly the wives of the seven Rājas (for the Indians knew that there was a seventh star in the Pleiades, though they usually counted but six). Agni fell in love with the wives of the seven Rājas, and Siva, his own wife, becoming aware of it, assumed the form of one of the Rājas, and kidnapped Agni, and with her he then brought Agni’s semen to a golden lake, and threw it on the earth; but its natural fate was to be destroyed. Before this fate was to befall him, it was used to assume the form of Arumati, the faithful wife of Vasistha. The remaining six Rājas foresaw their wives, who were transferred to the sky as the Kṛttikas.

The feats of Kumāra which are most generally known are the killing of the Aśura Tāraka, and the splitting of Mount Kaurava. When Tāraka had finished his games and was oppressing them, they asked Brahmā for a leader, and were told by him that only from the seed of Siva would arise a saviour to deliver them from the enthroned Aśura. Siva, however, was still an anchorite, practising severe austerities. But Pārvati, the wife of Śiva, was summoned, and this was called upon to cause Siva to fall in love with Umā (or Pārvati), the beautiful daughter of Himalaya. He succeeded in his inordinate desire, being induced to yield to sensual temptations, and this was followed by the opening of his eye on the forehead of Siva, who was in great wrath when he became aware that Kāma had dared to disturb him in his ascetic exercise. Siva was, however, won by the graces and merits of Pārvati; and finally married her. These incidents form the subject of Kālidāsa’s famous poem, Ku-māramantra. The rest of the story, telling how Kumāra was born, has been mentioned above. He was afterwards installed general of the gods, engaged in battle with Tāraka, and killed him.

On another occasion, the Daitya Bāpa, son of Bālū, attacked the gods from the mountain Kraukūsha, but he took shelter in the mountain. Kumāra, after vanquishing the latter, placed the mountain with its javēlī, split it in twain, and killed the demon. Thus an opening was effected for the free passage of the heavenly army. This passage of the mountain is variously stated by different authorityes (see Wilson, Vīra Purāṇa, 1865, ii. 141 note). The wife of Kumāra is Parvati, a daughter of Brahmā. Her desire to get a husband superior in strength to the rest of the gods was, according to one account (Mahābhārata, ii. 228), the original cause of the birth of the war-god. Kumāra rides on the peacock, the son of Sūrya.

The strange myth about the birth of Kumāra appears to be best interpreted on the assumption that in different parts of India there were several popular godlings of the war-god type, and that these have been combined into the one Kumāra, the war-god common to all Indians. But this process of amalgamation has left traces, which cannot be mistaken, elsewhere than in the strange myths related above. For there are three variants or alter-egos of Kumāra, viz. Viśākha, Śakā, and Nāgamanva. The first of these is known to have received popular worship (Patañjali, ad Piṅgale, v. 3. 99); he originated from a wound which Indra, as the leader of the gods, sustained in his head. From the same wound issued a great number of Kumāras, and Kumāris, goblins, who spirit away little children (Mahābhārata, iii. 228, where two more brothers, Sīru and the goat-faced Bhurāsākha, seem to be assigned to Kumāra). The war-god has a great retinue of monstrous followers, male and female, of whom long lists are given in Mahābhārata, iv. 45 ff. He was probably in the beginning conceived as the representative of a whole class of uncanny spirits somehow connected with water, fire, and vegetation; but afterwards, as a sort of heir-apparent, he assumed the position of a war-god, equal in rank with the ancient gods. His worship seems once to have been fairly general; at present he is worshiped chiefly in the south, where he is known under the name of Subarānyaka.

Another son of Siva, or rather of Pārvati, is Gāṇesā. Originally he seems to have been conceived as the ‘remover of obstacles,’ as his names Vināyaka and Viśnukrūma indicate. As such he is figured with an elephantine head; he carries a club in one of his four arms, and in the other holds a new-born mouse, of his tusk, which has been broken off; he rides on, or is attended by, the rat, the animal which finds its way to every place. As ‘remover of obstacles,’ he is invoked at the beginning of all books, and thus in a secondary way he became the god of learning, especially of priests and clerks. He is the latest of all Brahmanical gods, for he is not mentioned in the Rāmdānya and some of the older Pārīśīya; and he was absent from the original Mahābhārata. He is first mentioned in Veda saṃhitā, i. 250, 290, 291, and is often taking possession of men, and thus hindering their success, but furthering them when propitiated. The name Gāṇesā or Gāṇadhīpa designates him as the leader of the Gaṇas, or followers in the retinue of Siva. Yet he is not, as a rule, represented as leading the Gaṇas, whose actual leader is Nandi. But there is a class of demons, Vināyakas (see Peters堡 Teitz, s.v.), who probably were represented by the new god Gāṇesā. It does not seem to be noted in this connexion, that, in the Rig Veda (xxii. 1, 1), Brhaspati is addressed as gānoda sankapāt; and Brhaspati, who is identified with Vāchaspatai, is something like a Vedic counterpart of Gāṇesā as a god of learning.

Gāṇesā is the son of Siva and Pārvati, or rather of the latter, for he was produced from the ungenitals with which the goddess
had anointed herself. With the water of her bath they were conveyed to the mouth of the Ganges, and were thereby imbued with the head of an elephant. She named this head four armed Viśravas, and gave him four eyes, four ears, and four tusks, and the head fell off when Parāsati in the pride of her heart invited the planet Saturn to look at her baby, and that Viśv after wards danced with delight over the head of the Brahmān head, which was figured with one tusk only (ekadanta). The loss of the other is very easy to understand. It was cut off by Rāma by order of Sītāputradāna, i. 60, by Rāvana; according to the Brahman Viśvāsūla, i. 40, by Parāsura; and he lost it, according to the Harpadī, xvii. 28, through a bet with King Kumāra as to who should go most quickly round the earth. Besides the particulars of his figure mentioned already, he has an exceeding number of adornments. Above his head, for example, is a tusk, a rosary, an axe, and a sweetmeat; in some pictures he carries a manuscript in one hand, and a globe or Vaiśravana, the 'lord of treasures' (vītāsā), 'king of the Yakṣas,' and 'regent of the north,' is already mentioned in the Atharva Veda as chief of the 'good people' (puyajjana), or 'other people' (itarajjana), and as concerned with 'concealment' (vyāpakajjana), according to the Timskunde, etc.

In the Satapatha Brāhmaṇa and in later Vedic texts he is mentioned as king of the Yakṣas, and in the Teiturīya Aranyak, i. 316, as lord of wishes and as possessor of a wonderful car (yavākala). In later mythology he is the king of the Yakṣas as well as of the Kinnaras and Guhyašakas, while the Rākṣasas are the subjects of his half-brother, Rāvana. According to the Rāmacarita (vii. 34), he is the son of Viśrava, and grandson of Pālaśa, Prājapati. Viśrava had two wives, Desvarṣiṇi, daughter of Bhūvardeva, and Kākṣi, daughter of Sumallī. By the former he had one son, Kākṣi, Indra, by the latter Vīravas, Vaiśrava, and Śūryavas. Vīravas gave Kubera for his residence the town Lākkā, built by Viśravas on Mount Triśūla in the southern Ocean, and Kubera had with him as a capital and own capital. Kubera then, by the advice of Vīravas, took up his residence on Mount Kālīka, and became the regent of the north. But his connection with the south, to which the above legend refers, was perhaps suggested by the name of the southernmost river of India, the Kāviyar, for Kētavana or Kērubena occurs already in the Atharva Veda as a patronymic derived from Kubera. In support of this conjecture it may be mentioned that in the text known as the town Triśūlīkapi (Viśravasvah), explained as Triśūlkapālī, according to Lassen (Ind. Altertumskunde, 1873, i. 106) = 'town of Kubera,' for Trīśūla is also a name for a river. Kubera's town is Alakā, his park Chātiranathā; he has nine treasures (nākā). He rides on a man (nāravaghava); this curious item seems to indicate some near relation to men, and the same is suggested by his epithet or name Vṛddharman, which probably refers to his quality as bestower of riches (vriddha). His son is Nalakūlā, whose wife Rambhā was ravished by Rāvana (Rāmacarita, vii. 26). Kubera, as we have seen, was believed from very early times to preside over the guardians of treasures, who, it would seem, were originally called yakṣa, and later—to distinguish them from the devilish rakṣa, the disturbers of sacrifices—had been named yakṣas. As chief of the Yakṣas, he was supplanted, as far as popular worship is concerned, by Maniḥbhadra, who is already mentioned in the Rāmacarita (vii. 15), but who appears chiefly in popular tales.

A god who is very frequently referred to in classical Sanskrit literature is the god of love, Kāma (Mānmati, Madana, Kandarpa, Śuvara, Ananga, etc.). Originally Kāma is 'desire,'—not of sexual character, but of good fortune, and as a personification of desire he is invoked in Atharva Veda ix. 2; but in another hymn of the same Veda (iii. 25) he is already conceived as the god of sexual love, in which function only he is known to later mythology. His parentage is variously stated, but usually he is regarded as the son of Dharma and Laksāni. His wife is Rati, the impersonation of sexual enjoyment; his friend and companion, Maniḥbhadra, the first son of Kāma, is also a Yakṣa. The sons of Kāma are occasionally mentioned, Harṣa and Yāśas.

The ideas entwined about Kāma may be gathered from his emblems and attributes. He carries a bow formed of flowers (puṣpadāpā), the string of this bow consists of dews, and the arrows of flowers (kuṇmadhara). There are five such arrows (paṇḍavākṣa), allegorically representing the infatuating powers of love (dōṣa, mokha, etc.). He has on his banner the dolphin or a fish, denoting procreative power (śukṣma, or maṭyaśūlī); or he carries a flower in his hand (puṣpadakṣa). He is often spoken of as ātmanāh or chittajñanam, 'born of the mind,' and was therefore called anuvāya, 'bodiless.' This latter quality is accounted for by a well-known myth mentioned above in connection with the war-god. Siva reduced Kāma to ashes; he will get a new body, according to Kumrāsāvanā, i. 42, at the wedding of Siva and Parvati, and will become a yakṣa. But, according to the Harpadī, xv. 1873, 34, he will be born as Pradyumna, Kṛṣṇa's son. The baby had been stolen by Sambha, whose wife Śyākayati brought him up. The latter, however, was Kāma who had assumed the form of a woman in order to deceive the Asura, and thus to cause his destruction by Pradyumna (Khāra). As a god, Pradyumna is a representative of Kāma, to be more accurate, a god of love popular in those tracts of India where the worship of Kṛṣṇa prevailed. Kāma has also been identified with Śiva, according to the Buddhists; hence, in later Sanskrit, Māra becomes a synonym of Kāma.

Some of the goddesses of Brāhmaṇical mythology have already been mentioned in connexion with the gods whose consorts they are: Śvāhā, wife of Agni, Sachi, wife of Indra, Saṅhī, wife of Śūrya. The most important goddess, Pārvati, will be considered when we come to treat of Rudra. Kāma's wife or consort, Laksāni or Śiva's wife, the personification of love; seems originally to have been an independent deity impersonating beauty and wealth. She rose from the ocean when the gods and demons churned it for the production of amṛta, and then she was made over to Viśvav. But we meet also with a word, which, at any rate, is of Vedic origin: she is the daughter of Bhūrī and Kṛyā, or has been produced from the lotus which grew out of Viśva's forehead; she is the wife of Prājapati, or of Dattātrey, or of the sun-god, or of Dharma to whom she was afterwards devoted, and to whom she was finally devoted, as the consort of Śiva. She is conceived as a very beautiful woman, and is intimately connected with the lotus, the most beautiful flower of India; she is called after it Padmā or Kamalā; she is enthroned on a lotus, and holds one in her hand. As Fortuna, she is the fickle goddess, who stays nowhere long; according to Mahābhārata, xii. 225, 228, she lived once with the Dānavas, then with the gods, and with Indra. From an abstraction the goddess in the Rig Veda she became the goddess of wisdom and eloquence, and as such she is most frequently invoked by the poets in the classical Sanskrit literature. She has been identified with Vāch, 'speech,' and as such she is the wife of Brāhma; she is further identified with Bhṛāti, a separate goddess invoked in Vedic hymns. She is also called Śraddhā, whom the inhabitants of Kashmir regard as the goddess of that land, and called Śraddhāsinī or śraddhāśuddha (Stein, Kolkolen's Chronicle of Kashmir, ii. p. 286). Poets speak of the hostility of Laksāni to Sarvasvati; for wealth and learning seldom go together.

The principal river-goddess of India is the Gāgā, who has lent immortality, as it were, to
many smaller rivers which are fabled to be miraculously connected or identical with her. The Ganga is said to have a male and a female form (the milky way), on earth as the most sacred river, and in the lower world as the Patalaganga; she is therefore called Tripathagā, 'going in the three worlds.'

King Bhagiratha, the great-grandson of Sūrya, induced the celestial Ganga to come down from heaven to earth and from the earth to the lower regions, in order to purify the ashes of the departed. In the Veda, where she is personified, she is called Bhāgirāti. Siva caught the river up in his matted hair to check the impetus of her fall. The river then entered Jambudvīpa (the land of the Asuras) as a raging torrent by its right bank, and was discharged by her left bank into the sea. The daughter of the earth, then, is called Bhūmidevi. These legends are told at length in the Mahābhārata, where the ancient and the most recent descent is given in the Mahābhārata, Book xx. Gāṇa is also said to come forth from the toe of Viṣṇu. In the Mahābhārata (I, 887) she is the first wife of King Sāntam and the mother of Bīṣma. It has been said above that Kunāra is considered to be her son. Mythologically she is the eldest daughter of Himālaya and Menā.

In conclusion, it may be added that there are several other sacred rivers or river-goddesses: e.g. Yumāṇa (Kāliṇī) is the daughter of Sūrya, and so is the Taṇḍātī (a younger sister of the goddess Śiva); Nārmāḷī (Reva) is a daughter of the moon.

The enemies of the gods are the Asuras, Daityas, and Dānavas. In the Rig Veda, Āsura is an epithet of Vārūṇa and other gods, which has been rendered 'mysterious being.' But in later times they are a small and the antithesis of the rājas, the masculine, and the word is derived from sura with a privative, while in point of fact the word sura is artificial, and has been abstracted from āsura. The Asuras are the elder brothers of the gods, both being sons of Prajāpati. They continually waged war with the gods, and frequently got the better of them; some of them even acquired the sovereignty over the whole world, till at last they were slain by Indra, Vīśnu (hence called Daityārī, or some other god. They dwell in the nether world, in magnificent palaces. As enemies of the gods, they are regarded as wicked demons; but, as mere rivals of the gods, they are not necessarily bad. So they have for their teacher and spiritual guide a great saint, Suṅkra, the son of Bīrga, who has been mentioned above in connexion with his antagonist Bhṛgaut, the teacher of the gods. The Asuras occasionally appear in a better light in epic stories, and still more frequently in popular tales. In popular belief they seem to have come to be looked upon simply as superhuman beings, very much like the Vīyādārvas; e.g. in the Taittirīya-sūtras (Book iv, Chapter iv, verse 4), they are represented as being of pure spirit, and as seducers of women, and possessing a mysterious power over them. In the Mahābhārata they frequently appear very much like the Yākṣas, and their king Airāparnava or Chitraratha is a friend of Kubera (whose park is called Cōṭhrāratha). But usually they are represented as devils, and as being condemned to live in living in Indra's heaven; from them the Sanskrit name for 'music,' gāndharva, is derived. It may be mentioned that the sūtra morjana is called 'town of the Gandharvas' (gandharvamahārāja).

The mistress of the Gandharvas are the Apsaras, heavenly nymphs of wonderful beauty. They too belong to the court of Indra, and they are employed by him to seduce saints when they become a danger to his sovereignty through their severe penance. The effect of their successful interference is usually the birth of some great man or woman; e.g. Menāka seduced Viśvāmitra and became mother of Sakuntalā. In other stories some Apsaras incur the displeasure of some god, and by his curse is born on, or banished to, the earth, where she marries some great man. Thus Uṛvāṣi became the wife of king Pūruravas; their adventures form the story of Kālidāsa's play Piṣkramoreti. The most famous Apsaras are Tilottama, Rūmbhā, Uṛvāṣi, Gvyātika, Menāka, and others; but there are millions of them, and they are held out as examples of virtue and as symbols of beauty. The Yaksas, as a class of superhuman beings, are of post-Vedic origin, though the word yaksī as a neuter occurs in the Rig Veda (on its meaning see Vedische Studien, ii, 126 ff). As yaksā means 'magical power,' yaksī probably means etymologically 'being possessed of magical power'; and this was without doubt the meaning of the feminine yaksini. The original conception of the Yaksas would therefore be much the same as that of the Greek Nymphai, neither intellectually nor etymologically and actually means 'possessing spells or witchcraft.' The Yaksas are brought into close connexion with the Rākṣasas, as stated, above under 'Kubera,' though the Yaksas are generally not unfriendly to men, and the Rākṣasas are. Still there are instances of wicked Yaksas and of kind Rākṣasas.) Both Yaksas and Rākṣasas are also called panyajaran—a name of the subjects of Kubera in the Atlantisa Veda. It has been assumed above that there were originally two sorts of Yaksas; the first, the Rākṣasas, who were identified with the Yaksas, and the other are the well-known disturbers of sacrifice usually called Rākṣasas; thus the apparent confusion between Yaksas and Rākṣasas would become intelligible.
Very much like the Yakṣas are the Guhyaśakas. They too are followers of Kubera; they guard treasures and live in mountain caves. Mythical beings with other characters are the Kinnaras, divine songsters, who have a human body and the head of a horse, while the Kimpuruṣas have the body of a horse and a human head. Both Kinnaras and Kimpuruṣas are followers of Kubera, and they are frequently identified with one another. The Kinnaras are occasionally confounded with the Gandharvas.

Other classes of mythical beings who are frequently mentioned, but not described in detail, are the Chāṇaras, divine panegyrist; the Siddhas, and the Vidyādhāras.

The Vidyādhāras deserve a fuller notice. In the older popular tales, especially in Pāli literature, the Yakṣas are the principal superhuman beings; in the younger popular literature (represented by the Bhaktacūḍāmaṇi) they are supplanted by the Vidyādhāras, the most human-like of all inferior divine beings. They live under kings and emperors (chakradhāras) of their own, in towns on the northern mountains, just like men, with whom they have much intercourse and even intermarry. Many of them possess divine properties and acquire sovereignty over them. They possess superhuman powers, especially the faculty of moving through the air, and of assuming their vīḍāya, or witchcraft, any shape at will (whence they are also called Khechara, and Kamarūpīṇa).

The Vidyādhāras seem to have been at the height of popularity during the early centuries of our era; there is a Prakrit poem by Vimalasūri, the Padmācharita, which belongs to that time; in it the Rākṣasas, the Yakṣas, the Monkeys, etc., of the Rāmāyana are declared to be different tribes of Vidyādhāras.

Among the malicious superhuman beings the Rākṣasas are the most prominent. In the Rig Veda they are mentioned in the neater form rākṣas as fiends who disturb the sacrifice and injure the priests. They are possessed of enormous power, especially at night, when they prowl about (rātṛīśahāra) and devour their victims (kṣraṇīyā, kavaṇa); they are of hideous appearance, but are able to assume different shapes. The Rig Veda speaks of them as the "spirits" and yānudhānas ("ghosts"), but in later literature, Yādudhāma is synonymous with Rākṣasas. Originally equal in rank to the Yakṣas, the Rākṣasas have become more conspicuous than in ancient mythology, apparently through the influence of epic poetry. They are regarded as the sons of the king of the Rākṣasas, his brothers, etc., as the powerful enemies of Rāma; thus the Rākṣasas were invested with a new personality which they retained in the imagination of the Hindus. In the Mahābhārata, Bhīma’s son Ghatotkaca is a Rākṣasa who fights on the side of the Pāṇḍavas. He and Vībhīṣaṇa, the virtuous brother of Rāvaṇa, and his successor on the throne of Lanka, are instances which prove that the Rākṣasas, like the Asuras, were not always looked upon with unmitigated horror.

Piśācas are not unlike, and occasionally are confounded with, the Rākṣasas; they are hideous and bloodthirsty monsters who haunt wild and desert places. In the Rig Veda there is once (1. cxxxii. 5) mention of a Piśāca, a spirit supposed to be connected with the will o’ the wisp; the Piśācas as wicked spirits frequently occur from the Atrharva Veda downwards. It may be remarked that a Praṅk dialect, in which the original Bhaktacūḍāmaṇi was written, was spoken after the Pāli.

Bhūta is the most general term for spirits; thus Bhūtabhūta, the ‘language of the Bhūtas,’ is synonymous with Paṁbhiṭtā. But frequently they are mentioned as a separate class, in juxtaposition with other classes of wicked spirits. The ghosts of the deceased, who are not received among the nanes. They play a more important part in Buddhist literature than in the Brahmancial Sanskrit literature. In later times, especially in popular works, they seem to have been supplanted by the Vidhānas, wicked goblins who haunt cemeteries and animate dead bodies; they belong to the last phase of the development of demonology, inaugurated by the Brhatkatha, in which the Vidyādhāras are the leading figures.

(3) We shall here speak of them. The most important figures in Brahmancial mythology are the famous Rṣis of old, the traditional authors of the Vedic hymns, and ancestral founders of the Brahmancial gotras or gentes. These holy men, saints or sages, were looked upon as possessing superhuman powers which made them almost equal, and in some cases even superior, to the gods. We may distinguish three classes of Rṣis: devārṣis, i.e. Rṣis of the gods or living among them, e.g. Nārada; brahmarṣis, i.e. priestly Rṣis, e.g. Vainantu, and Viśvānu; and πaṁbhriṇis, Рṣis of the common people; and visvāṃtris. Besides, the Rṣis belong to different periods: some lived in the beginning of the world and took an active part in creation, as Dakṣa, Kāśyapa, Marichi; others belong to a more recent period, as Manu, Vivasva, Valmiki, etc. An ancient group are the seven Rṣis (identified with the seven bright stars of Ursa major); but the names are differently given. The oldest list is: Gautama, Bharadāvaja, Viśvāṃtrī, Jamadagni, Vasishtha, Kāśyapa, and Ātri. A common one is: Bhīṣma, Kāṇḍu, Viśvāṃtrī, Vasiṣṭha, Kāśyapa, Ātri, and Agastya. From the Mahābhārata we get a different list: Marichi, Ātri, Aṅgiras, Pulaha, Kratu, Pusāyana, and Vasiṣṭha. The stories and legends of which the Rṣis are the heroes, or in which they play an important part, are very numerous, especially in the Epics and the Purāṇas, far outnumbering the myths told of the gods.

The ideas entertained about the Rṣis have changed considerably in the course of time in correspondence with the changing rank of the Veda. Originally they owed their exalted position to the fact that they were believed to have revealed the sacred lore, the whole of Vedic religion, which, it will be remembered, is concerned chiefly with sacrifice. But in the epic period the sacrifice was no longer the only religious function of the Rṣis; by tapas or yoga, ‘asceticism,’ in the opinion of the people at large. Therefore the Rṣis began to be regarded less as experts in the sacrificial art than as great ascetics, who by means of severe austerities and deep meditation had acquired superior human power and such sanctity that their utterances were infallible and their curses must take effect. In popular opinion they are yogins rather than priests; they are saints and sorcerers at the same time; but, of course, elevated to the highest rank.

3. The three Supreme Gods—Brahmā, Viṣṇu, and Śiva—occupy a peculiar position in the Hindu pantheon, highly exalted above the rest of gods and divine beings. A detailed description of them would be out of place in the present article. In a sketch of Brahmancial mythology only the causes and processes by which they were promoted to the highest rank can be dealt with.

Brahmā, the creator of the world, is the Prājapati, Pitāmaḥ, the father, grandfather of the Vedas and the Bhūtānayas. He had his origin and basis in speculation rather than in popular cult, and therefore he did not appeal, in spite of his sublime character, to
the religious feelings of the masses. Hence the worship of Brahmā has become all but extinct, and the worshipers of Viṣṇu, in whatever form they adore their favourite deity, form the overwhelming majority of the Hindus. Notwithstanding these sectarian tendencies, the three Supreme Gods are regarded, in principle, as of equal dignity and importance. This kind of theodicy is found in the doctrine of the Trimūrti has been acknowledged since about the 5th cent. A.D. There were contradictory elements already in the conception of the Prajāpāti of the Brahmānas. For sometimes he is identified with the universe, and described as the mind or soul of the world. Sometimes he is regarded as a secondary deity subordinate to Brahmā (Muir, op. cit. v. 391 ff.). The same holds good with the Brahmā of later mythology: Brahmā proceeded from Brahmā, the First Cause; and, on the other hand, he is, in a vague way, identified with it, whence he is called Svayambhū (‘self-born’) or aja (‘unborn’). The generally received opinion, as given in Manu i. 5 ff., comes to this: Svayambhū rose from primeval darkness, created the waters, and deposited in them a seed; this seed was Svayamvara, a man born as Brahmā or Hiranyagarbha. But, according to another opinion, contained already in the famous Purana Utkata of the Rig Veda (x. 90), the Puruṣa was in the beginning, and from him the world originated.

The deity rising from this Puruṣa is called Nārayana, identified with Brahmā (‘time’). The name which is also coupled with Puruṣa is Śatāpatha Brahmāna. Thus Nārâyana is identified with Brahmā (in the above quoted passage of Manu). But usually Nārâyana is identified with Viṣṇu, and thereby Brahmā’s claim to paramount superiority was contested. There was still another cause which detracted from Brahmā’s significance as creator. For part of the creation, notably of men, gods, and divine beings, was transferred to secondary Prajāpāti: Daśa, Marichi, Atri, and other Rṣis whose progeny is detailed in cosmogonic myths and legends of the Purāṇas. Thus many causes were at work to reduce the importance and dignity of Brahmā and to deprive him of active devotion. The reason which the Hindus allege in explanation of this fact is Brahmā’s incest with his daughter Vāch (‘speech’), by which the creation was brought about. Still the idea of creation and of fate is personified in Brahmā, and in this character he is universally acknowledged by all classical writers down to the 18th century.

While Brähmā–Prajāpāti retires step by step from the superiority over all gods ascribed to him in the Brahmānas, the reverse development obtains in the case of Viṣṇu. In the Rig Veda he is not one of the prominent gods; there he is chiefly extolled for the three steps with which he encompassed the universe. But it should be remarked that in the Rig Veda he is intimately associated with Indra as his friend and companion, while in classical times he is regarded as the younger brother (Indraṇu). As this kind of relationship is little in keeping with Viṣṇu’s paramount rank, it must be regarded as a relic of the preceding period, when Indra was still greatly superior to Viṣṇu; and, at the same time, it seems to indicate a dim consciousness of the fact that a part of Indra’s character or functions had been transferred to Viṣṇu. For Viṣṇu becomes in classical mythology what Indra had been before, namely, the slayer of demons, the Daityāgiri. On the whole, however, the possession of this same office of the same as before; he is regarded as the equal of the other gods, not yet their superior. But the Brähmānas record only the views of the priests; popular opinion may have differed from theirs, although ignored by them as not worthy of notice (cf. Muir, op. cit. iv. 156 ff.). It should, however, be observed that Viṣṇu is generally identified with the sacrifice—an honour which he shares with Prajāpāti. He seems gradually to have usurped some positions formerly occupied by Prajāpāti, and thus to have arrogated to himself the superiority which Vedic speculation had assigned to him. Thus Viṣṇu, according to Manu, identical with Brahmā, but afterwards Viṣṇu is Nārâyana. In the Satapatha Brāhmana it is said that, ‘having assumed the form of a tortoise, Prajāpāti created offspring’; and, according to the Taittirīya Brāhmana, he became in a second form of a boar raised the earth from the bottom of the ocean (Muir, op. cit. pp. 27, 39, 52 f.). But common opinion ascribes these feats to Viṣṇu in his tortoise and boar avatāras.

Here we meet for the first time with the theory of incarnations, which in the course of time passed into a generally adopted doctrine, and enabled Vaishnavism to absorb popular cults by declaring the objects of their worship to be avatāras of Viṣṇu. Probably the tortoise and the boar were originally popular theo- morphic deities worshipped by the masses (including Brāhmaṇic families), and were afterwards elevated by the so-called Brahmāns to a higher rank by assuming them to be forms of some recognized god. Traditionally, the incarnation of a tortoise and a boar is considered the case of the boar and tortoise avatāras of Prajāpāti. For in the Taittirīya Brāhmana, as we have seen, Prajāpāti assumed the form of a boar and raised the earth, and was then favoured by Viṣṇu for his deed. Here it is supposed, that this boar was transferred to Viṣṇu in the form of a boar with Prajāpāti. Something similar occurs in the case of his tortoise avatāra; for it is first said that Prajāpāti took the form of a tortoise, and then the tortoise kaṭakkha is identified with Kaṭaka, one of the secondary creators. We observe in both cases a certain indecision; the theomorphic god was at first hastily identified by members of the priestly class with one of their great gods. Afterwards, perhaps, when the theory of avatāras was firmly established, it furnished a ready means of legitimizing popular pilgrimages and heroes. Thus the fish avatāra of Viṣṇu and that of the man-lion may have been accounted for the same reason to the idols of such shapes had been the objects of popular worship.

The fifth avatāra of Viṣṇu as a dwarf (Vāmana) is of peculiar interest. For in this incarnation Viṣṇu conquered the world by three steps, for which feat he is chiefly extolled in the hymns of the Rig Veda, although neither there nor in the Brahmānas is he said to have done this in the shape of a dwarf. That notion may have developed in the same way as the notion of the lion as a giant steps, the body of the god may well have appeared dwærfish; or there may have been some popular god figured as a dwarf, with whom it was thought convenient to identify Viṣṇu. At any rate, the fact that the principal feat of Viṣṇu was not ascribed to the god himself but to an incarnation of him, proves that at the time this opinion became current Viṣṇu had been promoted to a much higher rank than belonged to the Vedic Viṣṇu who, strange to say, was then regarded as an incarnation (viz. the dwarf) of the Supreme Viṣṇu who was radically not different from him.

The next avatāras—Rāma, Jñāndagnyā, Rāma Dāśarath, Kṛṣṇa, and Buddha—are of a different kind, and belong to the modern times. Vaishnavism has become a dominant form of Indian religion, and when the universally received doctrine of incarnation made it possible to impute on independent cults a Vaishnave stamp. Rāma Jñāndagnyā is the hero of legendary story, the other Rāma of epic history. But it is a well-known fact that in the original part of the Rāmasya, i.e. in Books ii.—vi., Rāma is not yet conceived as connected in any way with Viṣṇu; but after he had become, through epic poetry, the favourite of the people, he was at last made the avatāra of Viṣṇu by being declared to be the incarnated Viṣṇu. In Kṛṣṇa, a Rajput hero has condescended to a shepherd-god (Govinda) into a new deity; he appears first in the Ch idadeya Upaniṣad (iii. 17, 6)
as a human teacher who knew the Brahman; in the Mahabharata he is already acknowledged as Visnu in a distinct godhead. In Brahmanism, even as early as the period of the Vaisnavas, he is described as a human hero. The worship of Krṣṇa-Vāsudeva must have been highly popular about the beginning of our era, for it gave rise to the curious Jaina doctrine of the 9 Vāsudevas, 9 Bhadadevas, and 9 Pratvāsudevas, who play such an important part in the iconology of the Jains, even as early as some of their canonical books. And in later times the worship of Krṣṇa and that of Rāma are the two prevailing forms of Vaiṣṇavism. The recognition of Badalina as an avatāra of Visnu is a proof of this. But he has also been a popular hero (as) assimilating energy even with regard to a hostile sect.

Most of the creeds which have been merged into Vaiṣṇavism were of un-Brahmanical origin; i.e., they did not grow out of Brahmanism, but were in the end brahmanized. The gods, godlings, or heroes, whose cult was the object of those creeds, were probably grhadevatas, or ṛṣidevatas, worshiped by families belonging to various castes and classes, inclusive of Brahmins; their identification with Visnu, which probably was due chiefly to Brahman, elevated them to a higher plane, and annulled their Brahmanical character. But the Brahmanically legitimized these Vaiṣṇavite forms of religion as Brahmānical, or as in harmony with the Veda, was the adoption of Brahmānical theosophy as their theological foundation. Visnu (Nārāyaṇa, Vāsudeva) was declared to be the same as the Brahman of the Upanishads; the creation and destruction of the world were explained in accordance with the Vedānta and Saṅkhya philosophies. The ascetic ideal is still acknowledged, and knowledge continues to be regarded as an important means of reaching emancipation; but a new way of salvation is now proclaimed, the ‘way of love’ (bhakti-mārga [q.v.]): love of, devotion and entire submission to, God is the shortest and surest way to union with Him. One of the earliest and most perfect products of this movement is the famous Bhagavata-Gītā (q.v.), which forms part of the Mahābhārata; it has become a canonical text for all Vaiṣṇavite sects. A later authority for them is the Vedānta Sūtra, which almost every founder of Brahmanical sects feels obliged to interpret in such a way that its instructions shall be in perfect harmony with his own doctrines.

Rudra-Siva became in the Brahmanical period a Supreme God, the highest god according to the Saivites as Visnu is the highest god according to the Vaiṣṇavas. The Vedic god and the Vedic godhead is the father of the Maruts or Rudras (wind- or storm-gods), but no distinct coeval function is ascribed to him; he is principally regarded as a malevolent deity who by his shafts brings disease and death on men and cattle. A plurality of Rudras, the host of Rudras, is frequently mentioned in the following period, and has never been forgotten; in classical mythology the number of Rudras is eleven, but in addition to them Rudra is surrounded by hosts of spirits, called his ganas and pramanathas. He thus appears as the leader of troops of beings greatly inferior, yet similar, to himself; it may therefore be assumed that from the beginning he was the representative of a class, or rather classes, of evil spirits, and that the many Rudras whom the Satarudrīgas mentions have all been gathered round one of robbers’ and demons’ godlings. Rudra, who is present in woods, streams, desert places, etc. A similar process seems to have gone on in the later Vedas and the Brāhmaṇas; for other terrific gods, notably various forms of Agni, containing the destructive element, have been combined with the original Rudra. As mentioned above, the Satapatha Brāhmaṇa states that Agni was called Ṣava by the Prāchyas, and Dheva by the Yāhikās; but in the Atharva Veda, Bhava and Sava are the names of a distinct deity, which in later times has become the Vaiśānayya Sākhita, Bhava and Savva occur as names of Rudra, and in classical literature they are common synonyms of Śiva. It is therefore a plausible conjecture that other names or epithets of Śiva, besides Dheva and Savva, originally denoted distinct deities who were blended with him into one great god, Mahādeva. Thus his epithets Nilagriva, Sītikathan, Nilalohita, of which the two first names occur already in the Satarudrīga of the Vaiśānayya and Tattīrīya Satarudrīga, have come to be blended with him into one great god, Mahādeva. Hence a fire-god merged in Rudra.

Girīva and similar epithets of Rudra in the Satarudrīga, which have become names of Śiva in later mythology, seem to indicate that he was identified with the mountain-sprite, or that he absorbed, as it were, into his character the anonymous mountain-goblins born of the imagination of hill tribes in India and other parts of the world. Rudra-Siva is therefore intimately connected with the mountain spirits, and his name has been transferred to all Dravidians, which prepared them for the adoration of Bhātēvāra, the lord of ghosts in general (bhittan), and especially of those who haunt cemeteries. Connected with the latter are the sorcerers, yogins, who practise their awful rites in places haunted by such spirits, and were imagined thus to acquire power over them. Śiva is also the master of the yogins as Yogīvarā, and hence is believed to practise yogā. The garland of skulls which Śiva wears, the corpse on which he is seated, the terrible shape in which he is adored as Mahākāla, the destructive god of time, death as well as the vanquisher of death (Mrtyunjayā)—all these items are so many indications that Śiva was regarded first as the ruler, and then as the representative of the vast and various powers of death that are created in the imagination of the superstitious by the fear and awe inspired by everything relating to death and the dead.

Though the concept of Rudra-Siva seems to have had an almost unlimited power of adapting and thereby absorbing, kindred spirits and godlings of the popular creed, still gods of a well-defined personality or of distinct functions were not subject to this process of assimilation, however like they might be to Śiva in character and perhaps even in origin. Thus Kumāra and Ganesa, notwithstanding their striking affinity with Śiva, have not been merged in Mahādeva.

It will have been remarked that most of the elements which coalesced with Rudra were malicious spirits; still Śiva is not an exclusively malignant deity. Probably it was thought that as leader and king of those spirits he might be appeased, and thus the harm apprehended from his subjects be averted, just as a chief of robbers is bought off by blackmail (Rudra is called ‘lord’ of robbers); such is the original meaning of the word. Therefore he has given auspicious names as Ṣrī (cf. Pāṇini, iv. 1, 49) and Śīva, ‘the Gracious’; the latter has become the most usual name in classical mythology.

Finally, mention must be made of a prominent feature of the Śiva-rite, which is lost in the form under the name of the śaiva or phallic. It can hardly be doubted that phallic worship was once a widespread popular cult in India, but how it came
to be connected with Śiva we are at a loss to understand. But a curious mythological parallel may be drawn between the name Kumāra, which means the impersonator of death as Mahakāla, but he is also the vanquisher of death as Mṛtyunjaya; similarly he impersonates the generating power worshipped in the Śiva, but he also destroys the god of sexual love, Kāna. Siva's consort, Kumāri or Māṇḍāni, is known by many names, as Devi, Uma, Gaṇā, Parvati, Durgā, Bhāvanī, Kālī, Kapalikī, Chāmuulī. Unlike the wives of other gods, she is a very prominent figure in classical mythology, and may be said to be scarcely inferior to Siva himself. Her equal, the Dakṣa-śivā, is treated in the dual form of this divinity, the Ardhanarīśvara, of which one half is male and the other female, representing the right side of Siva and the left of Devi. The great number of names of this goddess and the diversity of her character (benign, apī, cruel, horrid) render it probable that, like Siva, she is a combination of many deities. One of her names, Kumāri (Kanyakumāri in Tatāyāma Aranyakā, 10, 1, 7),—after which the southernmost point of India, Cape Comorin is named,—is that of the time of the Peripus, —seems to be given her as a female counterpart or equivalent of Kumāra, probably as the representative of the Kumāris who ensnare little children. Malignant spirits are of both sexes: the representative of female spirits must be a particular class of Indubras, identified with a male deity. Therefore, if Kumāra be the representative of the Kumāras, Kumāri may be assumed to be the representative of the Kumāris. Similar may have been the origin of Ambikā, who in the Vaiṣṇavīja Sambhāla is called the sister of Rudra, but in later mythology is Siva's wife; for Ambikā means 'little mother' and there are superhuman beings, both benign and malignant, called 'mothers' (matāras), who are connected with Kumāra; therefore Ambikā may be assumed to be the representative of the mothers, just as Kumāri is that of the Kumāris.

As Siva is Lord of the Mountains (Girīṣṭ), so is his spouse Lady of the Hills (Pārvatī). According to classical mythology, Siva married Uma, daughter of Bahu, but in the Kena Upanishad, where she is first mentioned (iii, 25), Uma Haimavati appears as a heavenly woman, conversant with Brahman. Apparently she was originally an independent goddess, or at least a kind of divine being, perhaps a female mountain-god, an aspect of the Himalayan and was later identified with Rudra's wife. A similar mountain-goddess had her home in the Vindhyas; she was of a cruel character, as might be expected from a goddess of the savage tribes living in those hills. Her name is Vindhyavāsimi, and she too is identified with Siva's wife. Other names of the latter indicate some connexion with Agni (as was first pointed out by Weber, Indische Studien, i. 237, ii. 188 f.), for Kālī and Karālī are names of two of these connections of Agni (Mrṇḍalī Upanishad, i. 2, 4); and these seven tongues of Agni may be assumed, with some probability, to have been originally female demons representing fire as the destructive and voracious element, since they are also names of Durgā as the object of a bloody sacrificial worship. Finally, a plausible guess of Weber with regard to Durgā may be mentioned. He is of opinion that this goddess is connected somehow with Nīrīti, the Vedic goddess of all evil, by which assumption the terrible character of the latter is explained. Agni may be the god of the people, he can scarcely be doubted that several goddesses or female demons from different parts of India, and worshipped by different classes of people, have in the course of time been combined into one great goddess, the spouse of Śiva, who was adored as his Lakṣitī, or 'energy.' In the case of Siva and Devi this syncretism, this impersonal divinity, has been a most powerful factor in the formation of Indian gods is beyond question; but the same factor has also been at work, as we saw above, in the case of the sun-god, of Kumāra, and perhaps of Ganeśa.

The cult of Rudra-Siva and of his consort, originally, perhaps, chiefly the property of tribes, loosely or not at all connected with Brahmanical society, has in course of time been fully brahmanalized, in the same way as the cult of Viṣṇu and his avatars, by being based partly on the doctrines of the Upanishads, partly on the syncretistic systems of Saiva philosophy. Thus the worship of the two Supreme Gods, Viṣṇu and Siva, under a great variety of shapes, represents the highest form of religion of Brahmanical India; but at the same time some sects claiming to worship the Supreme Siva and Sakti, without any worldly ties or entanglements, and with a purity, simplicity, and gross immorality, and thus exhibit religion in its most degraded form.

In conclusion, it may be remarked that we have left out of sight the great un-Brahmanical religions. Buddhism and Jainism, which are treated in separate articles; yet it cannot be doubted that they have in many ways influenced Brahmanism. Buddhist ideas, especially, have been adopted and adapted by Brahmanical thinkers and religious men, and they survived in their religious systems and in the Brahmanism itself declined and decayed in India.

Besides the elements of religious life described in this article, there were other social forces at work which had a great influence upon the development of Brahmanism, viz., the system of caste and the organization of the family. But as these subjects have an interest of their own, distinct from their religious aspect, they must be treated in separate articles.

The Upanisads themselves are the deposit of the first great movement in the direction of pure spirituality. The Vedânta, and Yoga-philosophies and the theistic sections known as Bhâgavatâs, Pâśupatâs, and Pâńcharâtras followed; and the Bhagavad-Gîtâ is the expression of a similar movement in Kṛṣṇa-worship. The modern Bhâkti movement, both North and South Sāmâjik (from their literature in the various vernaculars, had similar ends in view. But the impact of Europe, and especially of Christianity, started new currents of religious thought of great force during the 19th century. Of these the earliest is the Brâhma Sâmâj, founded by Ram Mohan Roy; and other movements of less importance. Towards the close of the century there came a great revival of orthodox Hinduism. The Brâhma Sâmâj is not only the earliest of the group, but is also a much more direct and legitimate result of Christian influence than the others.

2. History of the movement: antecedents. — Ram Mohan Roy (Râmahomâna Râi) (1772–1833), who founded the Brâhma Sâmâj, was the son of a Bengali Brâhman landowner, and received, in addition to his general Bengali education, a thorough training in Persian and Arabic, which brought him into contact with Muhammadan thought. Consequently, when he was only fifteen years of age, his outspoken condemnation of idolatry led to his having to leave his father's land and to establish himself as a landowner, and settled at Benares to master Hinduism, and, finally, through the study of English and intimacy with an Indian civilian named Digby, became acquainted with Christianity. Thereafter, in 1804, he gave expression to his religious convictions in a pamphlet in Persian, Tuhfátul Ma'ârâkhîdtîn, 'A Gift to Deists.' It is a brief and arid argument against all formal religions, and in favour of deism. For some ten years after this he held a financial position under Government, and gave most of his energy to his duties, amassing a fortune for himself the while; yet he continued his religious inquiries and discussions in his leisure, and suffered a good deal of persecution in consequence.

In 1814, now a man of forty-two, he left the service of the Company and settled in Calcutta. For twelve years the Vedânta-sûtras and other Upanîsads, in Bengali and English. Then followed, in 1820, The Precepts of Jesus, the Guide to Peace and Happiness, being a catena of passages from the teaching of Jesus. It is as deplorable as it was inevitable that Christian missionaries should have condemned this most remarkable work, pregnant as it was with prophecy for the religious future of the Hindu people.

Ram Mohan early made the acquaintance of the Serampore missionaries, and indeed gave them both advice and help in the translation of the New Testament into Bengali. Questions arose as to the meaning of certain passages, and collaboration ceased; but one of the missionaries, the Rev. W. Adam, sided with Ram Mohan, and finally became a Unitarian. In consequence of this a Unitarian Congregational church (now first introduced into Hinduism), consisting of the reading of the Scriptures, a sermon, and the singing of hymns, is quite sufficient proof. Prayer seems to have had a very subordinate place, if it had any place at all, in the service; but that is sufficiently explained by Ram Mohan's deistical turn of mind, and by the absence of prayer from the Hindu philosophical systems. Already the forces of reaction were organizing themselves against Ram Mohan. To fight the BrâhmanSaâkha, Ram Mohan's social crusade, the Dharma Sâkha, or Religion Association, was formed, and a newspaper was published to support the orthodox cause.
Very soon after the founding of the society a site was bought in Chittapore Road, and a building, specially designed for the use of the Samaj, was erected. It was opened on the 23rd of January 1830, a date which has since been observed by all Brahmanas with great enthusiasm. The Trust Deed of the building is rather a remarkable document. The following extract will be read with interest:

'To be used... as a place of public meeting of all sorts and denominations of people without distinction as shall behave and conduct themselves in an orderly sober and devout manner for the worship and adoration of the One... Unsearchable and Invisible King who is the Author and Preserver of the Universe but not under or by any other name designation or title peculiarly or applied to any particular Being or by any man or set of men whatsoever and that no graven image statue or sculpture carving painting picture portrait or likeness of anything shall be admitted within the said building... and that no sacrifice... shall ever be permitted therein and that no animal or living creature shall within or on the said premises be deprived of life... and that in conducting the said worship and adoration no object animate or inanimate that has been or is... recognized as an object of worship by any man or set of men shall be reviled or slightly or contemptuously spoken of... and that no sermon preaching discourse prayer or hymn be delivered made or used in such worship but such as have a tendency to the promotion of the contemplation of the Above and reverence and adoration of the Unsearchable and Invisible King. Charity morality piety benevolence virtue and the strengthening of the bonds of union between men of all religions persuasions and sects.'

Religion was the chief, but by no means the only, interest of Ram Mohan's active mind. He was an eager social reformer, and worked hard against polygamy, and in favour of the marriage of Hindu widows. But no social question stirred him so much as sati, the burning of Hindu widows. For the abolition of this inhuman custom he wrote and spoke and toiled for many years, and finally had the joy of seeing it put down by Lord Bentinck on the 27th of December 1829, six weeks before the opening of the Brahmapuri building.

Now that the battle against sati was won, and the Brāhma Samāj not only established but comfortably housed in a building of its own, Ram Mohan thought he might safely carry out his long meditated plan of a voyage to England or India. He had written to his friend Digby about this project as early as 1817. Many reasons would unite to urge him to go. Realizing to the full the meaning of the introduction of Christianity and of European thought and influence, India was naturally the most eager to see with his own eyes the land and the people which were destined to help so largely in the rejuvenation of his own. There were also a number of questions on which he hoped to influence the Government at home, notably the granting of naturalization to Indians for service in the East India Company. The Old Emperor of Delhi, now a pensioner of the Company, wished him to plead his cause with the home authorities, and with this in view gave him the title of Rājī. Ram Mohan undertook the task.

Before sailing for England in November 1830, Ram Mohan appointed three trustees to look after the Samaj; Mahāraja Ram Nath Tagore, Kāli Nath Munshi, and his own son, Radha Prasad. Viswanath Das became secretary. The services which he rendered to the society during the years he was in England were changed from Saturday to Wednesday, and this rule obtained in the old building to this day. In arranging to cross the ocean, Ram Mohan took great care to preserve his caste. He took two Hindù Brahmanas with him to be responsible for requiring to cook his food in accordance with caste regulations.

Ram Mohan, now Rājī Ram Mohan Ray, was received in England with the greatest warmth and honour by the public generally, by leading Unti- terialists and co-religionists, by the disinterested statesmen of the day. He exercised a much greater influence than he could have ever hoped to do; and at the same time came into such close living touch with the best in English life as to be deeply influenced himself. But, to the great sorrow of the nation, he died at a premature age, in agency, and died at a Bristol on the 27th of September 1833. He was a man of unusually wide sympathies and of large judgment. He realized, as very few men did in his day, the immeasurable results that were destined to flow from the association of England with India, and believed that India would reap very great good therefrom. He also looked forward to India's becoming a Christian country: the exact meaning of this prophecy is discussed below. On the other hand, he realized to the full that no real blessing could come to India by the mere adoption of Western things unchanged. India, he said, would inevitably remain Indian. No gift from the outside could be of any real value except in so far as it was naturalized. His long bold struggle, on the one hand, for religious and social purity, for educational progress and journalistic freedom, and his brilliant literary work and unchanging fidelity to Indian ideals, on the other, had made him not only the most prominent of all Indians, but the one man able to stand between Indians and Englishmen as interpreter and counsellor.

His death cast a profound and dismay in the infant Society which he had left behind in Calcutta, and many of those who at first took part in its work fell away. Prince Dwarka Nath remained a staunch friend, but the chief stay of the whole work was Ram Chandor Bidyalag, who took charge of the services. Yet the cause steadily decayed. Had it not been for the liberality of the Prince, the current expenses could not have been met.

In 1838, however, five years after the great leader's death, Prince Dwarka Nath's youthful son, Debendra Nath Tagore (Devendranath Thākur) passed through a very decided spiritual change, which made him a consecrated man for the rest of his life. He was then twenty years of age. Next year he gathered a few serious-minded young men round him and formed the Tattvānātī Sahā, the "Truth-learning Association." They met once a week in his house for the discussion of religious questions, and once a month for worship.

4. Second period, 1841-1865: Debendra Nath Tagore: Indian theism.—In 1841, Debendra and his friends joined the Brāhma Samāj, and the young man was soon recognized as leader. Then the tide turned, and a new period of growth and fruitful labour opened for the Samāj. The Tattvānātī Sahā, the "Truth-learning Association," now took considerable headway in Calcutta under Dutt's leadership. From beginning to end Debendra wished to be a Hindu, and, unlike Ram Mohan, believed that India had no need of Christ. In 1843 the Society's monthly paper, the Tattvānātī Patrika, the "Truth-learning Journal," began to appear. It was edited by a friend of Debendra, Akshay Kumār Dutt (Akhāyakumāra Dotto), one of the greatest of Bengali prose-writers, and soon became a very influential paper, leading many thinking men to serious and systematic thinking and action. Debendra saw that the Samaj required to be more carefully organized; that, if it was to be a permanent and growing influence, it must have a regularly appointed ministry and definite rules of membership. By the end of 1843 he had drawn up what is known as the first Brahmapuri Constitution, a short series of solemn vows to be taken by all who
wished to become members of the Samaj. The most important of these vows were promises to abstain from idolatry and to worship God by love and not by force or by force of habit. The old reciter, Ram Chandra Bidyalabghish, was now formally set apart as achārya, i.e. minister; and Debendra and twenty of his friends solemnly took the vows of the Covenant before him. The conscientious observance of these vows involved a good deal of trouble and difficulty. Debendra himself had to leave the paternal mansion and wander in the fields when any of the domestic ceremonies were being performed, as they were full of idolatry. At the same time a brief form of prayer and adoration, known as Brahmanāyana, i.e. the self-sacrifice, work and knowledge in the sense of becoming an ascetic, was prescribed, and Debendra himself became the norm for the services. This introduction of prayer is a most noteworthy point.

The work of the Vedie school began to bear fruit. By 1844, Debendra was able to send out a number of young missionaries, who began to appear outside Calcutta. From time to time Debendra himself also travelled and preached in the chief towns of the north, from East Bengal to the Panjab. By the year 1847 the number of covenanted Brahmas had grown to 647.

The Vedas were lectured in Vedie, and in 1845 the Tattvedābhini Patrīkā declared that the Vedas were the sole foundation of their belief; and in 1846, Debendra said: 'We consider the Vedas, and the Vedas alone, as the standard of our truth.' Questions arose about the text, the interpretation, and the inspiration of the Vedie hymns and the Upanisads. Duff had twitted Brāhmas with believing in the infallibility of the Vedas. Consequently four scholars were deputed to go to Benares so that each might study and give an account of the four Vedas and might return to Calcutta with the fruit of his labours.

Debendra steeped himself in the Upanisads, and compiled from them in 1850 a volume of extracts for use in the services of the Samaj. This volume, named Brahmanas Dharma, 'Religion of Brahman,' contains what is known as the vijā, or seed, a brief outline of Brahmano doctrine in four statements; the Brahmanopāna, or order of service; and then a selection of passages from the Upanisads collected together, all of them from other Hindu books. Later an exposition of Brāhma doctrine was added by Debendra.

Meanwhile the results of the labours of the four Vedie students had become available. After much discussion the doctrine of the infallibility of the Vedas had been declared, and it was decided that only those parts were to be accepted as true which harmonized with pure theism. As Keshob Chandra Sen afterwards said, 'The Vedas were thrown overboard by Babu Debendra Nath Tagore, and the Brāhma Samaj bade farewell to Vedantism.' This happened in 1850. The Samaj thus found itself without an authoritative sacred standard, and was thrown back on natural religion. This raised the whole problem of religious knowledge. At first no definite theory was advanced, but within a few years the leaders found it possible to express themselves; and the Brāhmano doctrine came to be this, that our knowledge of God has two sources, Nature and Intuition.

The faith of the Samaj at this time may be summed up by the following statement:

(1) God is a personal being with sublime moral attributes.
(2) God has never become incarnate.
(3) God never sancs any prayers.
(4) God is to be worshipped only in spiritual ways. Hindu ascetics, temples, and fixed forms of worship are anachronisms. All castes and races may worship God acceptably.
(5) Repentance and cessation from sin is the only way to forgiveness and salvation.

(6) Nature and Intuition are the sources of knowledge of God. No book is authoritative.

It is noticeable that the doctrines of the Fatherhood of God and the immortality of the human soul had not as yet found their way into the creed.

The Samaj had proved itself a progressive movement; but circumstances were now approaching which were destined to accelerate the rate of progress for a time. In 1857 a young man named Keshob Chandra Sen (Keshobchandra Sen) joined the Samaj. He was not a Brāhman, but belonged to an influential and well-to-do family of the Baidyā caste and of the Vaishāvia sect of Hinduism, and he had received a good modern education. He had suffered from religious melancholy, but he had shewn himself a thorough student of Hinduism; he took no active part in the work, but from 1850 he threw himself into it with great energy. Keshob Chandra Sen had to endure serious persecution for the sake of his faith. Debendra took a great liking to this gifted young man, while Keshob looked up to Debendra with love and reverence. From this time they enjoyed five years of strenuous, yet happy and harmonious, work together.

The Brāhma Vediyālaya, or School, was opened—a sort of informal Theological College. Keshob and Sen lectured in Vedie, while Debendra discussed in Bengali the theology of the Brāhma Samaj, with the double result that Brāhma doctrine was more clearly formulated, and a number of young men received a very advanced instruction in Vedic literature. As a lecturer in English became known, so that he frequently addressed audiences both of Brāhmas and of others in Calcutta, in English, and occasionally took a tour in the country.

The year 1860 produced large results in social reform. Keshob formed the Saṅgat Sabhā, or 'Friendly Association,' the meetings of which were now devotional, now given up to the discussion of pressing questions both religious and social. The findings of this enthusiastic group of young men greatly influenced Debendra himself. As a result of the reason given by them, he gave up wearing the sacred Brāhmical thread. He also took up the whole question of domestic ceremonies. Every noticeable event in Hindu family life is marked by the careful performance of the ceremonies. All of them were held against Brāhma with references to the gods of Hinduism and with idolatrous practices. Debendra set to work to purge his own family of idolatry; and also worked out, for the use of the Samaj, new or modified rites whence everything heathen and idolatrous had been eliminated. These are known as Brāhma rites; the manual is the Anuvaktha Paddhati; and Brāhmas who use them in their families are known as Anuvakhāne Brāhmas. At Keshob's suggestion the Samaj also began to follow the example of Christian philanthropy, and gathered money and food for the famine-stricken.

After leaving college, Keshob had obtained a post in the Bank of Bengal. In 1861 he gave this up in order to devote his whole time and energy to the work of the Samaj. Several of his followers belonging to the Saṅgat Sabhā followed the example of his self-sacrifice, among them his life-long friend and biographer, Pratāp Chandra Mozomādar (Pratāpachandra Mozumāder). The Indian Mirror was started, that the movement might have a direct line of expression of its views; and the Calcutta College was founded—the earliest attempt made by a native of India to found a college for English education.

Next year (1862) Debendra resolved to honour his brilliant friend by giving him the place in the Samaj which his great capacities deserved. Hitherto only Brāhmans had been
allowed to lead in the services; and while Debendra himself was the acharya, or 'minister,' the other two who took part in the services were called upacharyas, or 'under-ministers.' Debendra decided to ordain Keshab, non-Brahman though he was, and to give him the full title acharya. It was also arranged that henceforward no 'minister' should officiate without the help of the acharya. The steady pressure of rational principles, urged largely in the Satyag Saheb, had brought Debendra to this notable advance. Keshab had to struggle and to dare before he succeeded in being allowed to bring his young wife, in defiance of Hindu custom, to the solemn service in which he was set apart as acharya; but his courage produced fruit, for from this time Brahmans began to give their wives more liberty, and the uplifting of the women of India was thus helped onward. From this time Debendra was known as the pradhan acharya, or 'chief minister.'

Two years later, Keshab took a more extended tour. Among other places he visited Bombay and Madras, and was received with so much honour and the brand, ‘Brahman,’ was stuck on him only by two who afterwards founded samajas in these great cities. His brilliant success on this tour, and the wide outlook which the journey gave him, first suggested to his mind the idea of a Society representing the whole of India—a Brahma Samaj of India.

But the pace at which affairs were moving was too fast for some of the older members, and Debendra himself began to be afraid that Keshab and the other progressives would lose spiritual religion in their zeal for change. As we have seen, Debendra had gone a long way in the matter of reform; yet there were several points on which his Hindu prejudices had not given way. He disliked inter-caste marriages, and he could not endure the marriage of widows. Then the two men looked at the whole matter from different points of view. Debendra regarded social questions as secondary in comparison with religion, and wished to initiate no change unless it was absolutely necessary. This explains his unwillingness to drive men by regulation to give up the sacred thread. Keshab, on the other hand, saw clearly that the social health of the people demanded radical change. There were also religious differences. Debendra’s was a deeply devotional nature, but he was still Hindu in his notions of sin and repentance and did not obtrude themselves much in his prayers or his teaching; while Keshab was keenly alive to the ethical side of religious experience, and was daily coming more under the influence of Christ.

During Keshab’s absence on his long tour, the more conservative spirits gained an increasing hold of Debendra; two parties began to appear more distinctly in the Samaj, and suspicion was soon rife between them. Attempts were made to heal the breach, but without success. Debendra was determined to resist Keshab. The cyclone of 5th Oct. 1864 so damaged the building that it became necessary to hold the services in Debendra’s house, and he took the opportunity to allow upacharyas wearing the sacred thread to officiate; Keshab and his party protested, but received no satisfaction. Finally, they sent Debendra what was really an ultimatum. It contained three points, but only one had any significance, viz. the old demand that no man wearing the sacred thread should be allowed to lead the service of the Samaj. Keshab felt it to be his duty to refuse. Debendra then sent his party withdrew, leaving all the property of the Samaj behind them. The date was Feb. 1865. Keshab was only twenty-seven years of age, and Debendra, who had already been a religious leader for thirty-five years, was now forty-seven. He had still forty years of life before him. At this time there were only a few samajas in existence outside Calcutta.

5. Third period, 1865-1878: Keshab Chandra Sen: universal theism: the two Samajas. Keshab did not organize a new Samaj at once, but put some eighteen months in seeking to rally sympathy and supporters to his cause. He had carried the Indian Mirror with him. He started a very national paper called Dharma Tattva, ‘The Truth of Religion,’ in opposition to Debendra’s paper, the Tattwoodhini Prakrti. Both were used vigorously in favour of his party. He toured in East Bengal and lectured in Calcutta. Early in 1866 a copy of Seeley’s ‘Ecc Homo fell into his hands, and he was deeply impressed by it. He was not only thoroughly orthodox, but deeply impressed by Christ; this made his heart overflow. He delivered a lecture on 5th May in the theatre of the Medical College on ‘Jesus Christ: Europe and Asia.’ It is no theological discourse, but a manly appeal to his fellow-countrymen to fly to the true teaching of Christ and to imitate Him. The most notable point in the address was the calling of attention to the fact that Jesus was an Asiatic. Keshab got at the heart of his audience by the appeal founded on that telling fact. He speaks of Christ’s ‘extraordinary greatness,’ His ‘supernatural moral heroism,’ but nowhere does he depart from the strictest theistic position. Yet the enthusiasm for the character of Christ and the very high estimate of His influence which the lecture expressed led many to believe that Keshab was about to become a Christian. At least one young man was won by this lecture to the spiritual life, and afterwards to the position of a Brahma missionary—Tyari Mohan Chaudhuri.

On 11th Nov. 1866 a meeting was held to form the new society. It was opened with a rather startling religious service. Besides the usual prayer and hymns, it included the reading of passages from the Hindu, Christian, Muhammadan, Zoroastrian, and Confucian systems, with the result that a distinctive ideal, the rising above the limitations of the Hindu system to a rational faith which should give complete social and intellectual freedom, was thus set forth in a way which no one could misunderstand. His immediate object, however, was to receive the adhesion of all Brahmans in every part of India to the organization which he proposed to form. Hence the following resolutions, which were put to the meeting and carried unanimously:

(1) That the Brahma Samaj of India be established for the admission of all Brahmans, and for the wide propagation of the religion.

(2) That the adhesion be bound to preserve the purity and universality of its religion.

(3) That people of both sexes, believing in the fundamental principles of Brahmanism, shall be admitted.

(4) That motives and maxims agreeing with the principles of Brahmanism be published and issued from the religious writings of all nations.

(5) That a vote of thanks be given to Debendra Nath Tagore for the zeal he has exhibited, and the indefatigable labour he has undergone for promoting the progress of the religion.

Keshab was appointed the secretary of the Samaj, and the full organization was left altogether in his hands. From this date onward, then, we have two societies—Debendra’s organization, hereafter known as the Adi Brahma Samaj, or original society, and Keshab’s new body, the Bhiratwarskya Brahma Samaj, or Brahma Samaj of India.
BRAHMA SAMAJ

As to the balance of the two parties, Mr. P. C. Mozoomdar writes: 'The Pradhān Achārya had a well-earned reputation as a conversant with the accomplishments, some of whom were of the same age as Keshab, helped him cause energetically. But there is no doubt that Keshab's enthusiasm and genius drew all the youth and intelligence of the community, and his important reforms attracted the sympathy of influential outsiders.' The new organization won to itself many earnest men hitherto unattached to the Samaj, including a number of outstanding personalities whom Keshab had influenced during his tour in Bombay and Madras. Consequently, this, however, things went fairly well; in this system, as given above, a selection of texts from the Hindu, Buddhist, Jewish, Christian, Muhammadan, and Chinese Scriptures was made and published, in 1866, under the title Stūkasangraha, i.e. 'A Collection of Verses,' for use in the service of the Samaj.

As Keshab's party did not yet possess a building of its own, weekly services were held in his house in Colotula Street. The closer relation which the new body sustained to Christianity was indicated in these services being now regularly held on Wednesdays. The missionaries, who visited sympathetically with the old Samaj, the leaders still attended the weekly service there on Wednesday.

One of Keshab's chief cares was to form the Mission Department. His young comrades, who had been members of the Sāgīt Sabā (see above), became at this time the first members of the Mission Department, who at this time seven or eight, the chief others being Pratap Chandra Mozoomdar, Gaur Babinda Ray, Mahendra Nath Bose, Bejay Krishna Goswami, and Agrah Nath Gupta. They were each and all of them attached by the closest personal ties to Keshab, for he had been the means through which they had entered into the joy of the new life. His enthusiasm and self-sacrifice laid hold of them. They gave up all worldly prospects, and accepted a life of poverty, strenuous work, and persecution. But there was practically no organization. Consequently, while each man's relation to the leader was all that could be desired, their relations with each other were governed neither by regular rule nor by personal attachment. In spite of this, however, things went fairly well at first.

The missionaries went preaching and teaching in the city and the country, and many individuals were won for the cause, while here and there a new Samaj was formed. But there were frequent quarrels among the missionaries, personal animosities, and division between the orthodox and the new. Their leader was powerless to overcome them. He pleaded and waited patiently for peace and bond each man to himself, but could not compose differences.

The great breach with the original Samaj depressed Keshab. He was very lonely in his separation from his friend and benefactor, Debendranath. This sadness and loneliness threw him back on God. In prayer and fervent adoration he found solace. He drew the missionaries and many others into his devotions, and with them held long daily services in his house. Here the heart of the new Samaj was formed; here the members were united by common prayer and consecration into a working body. Keshab himself passed into an experience of religious feeling such as he had never had before—not even at his conversion. He had always prayed, but prayer now became to him one of his chief joys and necessities. In this new experience Keshab freely drew from, as well as to, his family, and from Christianity. The old Hindu word bharati, which includes both love to God and faith in Him, became one of the watchwords of the movement. Vaisnava modes of worship were also introduced, musical instruments, originally used in Chaitanya's propaganda, being employed by them. The Vaisnava nagarkirtan, i.e. 'town-praise,' or procession through the streets with flags flying and drums beating, with chorus-singing and dancing, was taken over and used with success. In the midst of this tempest of devotion, Keshab drew up a Liturgy for the services of the Samaj, which is still very widely used. Another most useful feature, first elaborated at this time, is the holding of annual festivals, when the whole day is spent in fervid prayer and worship. The Bhratmrtavara ('A Festival of the Gods'), to which Keshab himself, in the Lord, was first held on 2nd November 1867. So the anniversary of the opening of Ram Mohan's building, which is regularly celebrated by all Brāhmas, became the Māgḥātava (festival of the month Ṁāgha); and the opening of Keshab's building later led to the keeping of a third annual day in August, the Bhradhrātava (festival of the month Bhradra). Nor did this satisfy Keshab's longing for fellowship with God: a little house was found about twelve miles from the city, where he and his followers were enabled regularly to spend the time in reading, prayer, and meditation, under rigorous rules of self-denial.

In 1867, Keshab delivered a lecture in Calcutta on 'Great Men.' It seems to have been meant partly to correct the misapprehensions created by his lectures in the Sofia and partly to give expression to his latest convictions on the subjects of Inspiration and Revelation. His utterances on this occasion again caused a great deal of questioning and excitement. Debendranath recognized two sources of knowledge of God—Nature and Intuition; Keshab added a third—God in history, speaking through great men. It was surmised that he regarded himself as one of the great men he had spoken of, one sent by God on a special mission, and therefore to be followed, honored, and obeyed. Early in 1868 he left Calcutta on a wide tour, accompanied by a number of his young helpers. The first place visited was Monghyr. His eloquence, his fervid piety, and his new Vaisnava methods took the place by storm, and there was a general outburst of religious emotion. Here some of his followers began, in accordance with the supposed ideas of his lecture on 'Great Men,' to prostrate themselves before him and treat him with special honour. Others protested vigorously against this 'guru-worship;' and a serious division became evident; and the leader said he did not wish for these demonstrations; yet he did not rebuke those who practised them. As a result two of the missionaries left him. From Monghyr he passed on to Simla, where Lord Lawrence, drawn to him by his lecture on Jesus Christ, received him with great kindness, and discussed with him the details of a law which he proposed to pass with regard to Brāhma marriages. On the 22nd of August 1869, Keshab's building, styled the Mandir (Temple), in Machuna Bazaar Street, was opened for public worship with great rejoicings. Several noteworthy men, destined to be leaders, joined the Samaj at this time. Shortly after the opening of the Mandir, suddenly, without any warning, Keshab announced that he intended to proceed to England. His friends were considerably astonished at his proposal, for, as there was no organization, the whole work of the Samaj depended on him personally, and no one knew how things would get on without him. Keshab's proposal was met with great enthusiasm in his family, and also from Christianity. The old Hindu word bhakti, which includes both love to God and faith in Him, became one of the watchwords of the movement. Vaisnava modes of
He was received with the utmost cordiality, and addressed large audiences all over the country. The Queen gave him an audience, and it appeared that impression of fame which he saw in Britain was the
Christian home.

On his return to Calcutta in Nov. 1870, Keshab set himself to advance social reform in several directions. A new society was started, 'The Indian Reform Association,' and five departments of effort were resolved on: Cheap Literature, Charity, Female Improvement, Education, Temperance. Work along several of these lines was started under the Samaj, especially a Normal School for girls, the Victoria Institute for women, and the Bhabat Aryan (Indian Refuge), a sort of club-home, in which family life was cultivated, and women and children educated. A Bengali paper, the Sambalh Samajchur ('Cheap News'), was published weekly at one farthing, and did a great deal to stimulate native journalism. In connexion with all this social activity, we must note the passing of the Brahma Marriage Act in 1872, largely as a result of Keshab's advice and agitation.

Keshab and his friends had meanwhile been steadily growing in experience and strength. In 1873 he published his most noteworthy book, The Oriental Christ, which shows great spiritual insight, and also demonstrates how completely the author's own religious life depended on Christ. There was but one visit to England, and was very well received.

In 1873, Keshab further defined his position with regard to Revelation and his own place in the Samaj by a public lecture on Inspiration. In

suggestions, he declared, is the other side of prayer. Man asks; God gives. Inspiration is not God speaking by fits and starts, but a perpetual breathing of His spirit.

He felt very distinctly that opposition was developing against him within the Samaj. There were three main causes: his autocracy, his doctrine of adish (adisans), and his attitude towards the emancipation of women. He ruled the whole Samaj as sole authority, and many believed that his lecture on 'Great Men' was meant to suggest that he had a right to demand obedience; the party opposed to him was democratic, and wished to establish a constitutional government in the Samaj. By adish Keshab meant the direct command of God laid upon him by special revelation at certain definite moments in his career. To his opponents revealed truth were both chimeras and dangerous. They were also eager to give their women more liberty, and to allow them to participate in university education; while Keshab was opposed to both ideas. He feared that such freemasonry was in Europe would be most dangerous in India, and desired to secure for young girls a very quiet training, to fit them for the life of the home, rather than the same education as their brothers were receiving.

Keshab was only too conscious of all that was going on, and in consequence fell once more, in 1875, into his old melancholy. Once again, however, he fought his way to light through prayer and consecration. He called his followers around him, and, declaring that the Samaj was becoming immersed in the world, called for vairagya. This is an old Vaiśeņa word meaning 'separation,' separation from the world. He called for new asceticism, for fresh vows of poverty, and himself led a life which admirably suited him. This new Keshab, now became longer than ever, and a settled habit in Keshab's life. His followers responded to his leadership as loyally as ever, ready to do all that he was ready to lead them into. A little later he arranged them in four groups, calling them devotees of yoga, bhakti, jñāna, swa, according as their chief mother of devotion was yoga, union with God, knowledge, self. The first three are genuine Hindu ideas; the last he took from Christianity.

But the self-consecration of the central party failed to draw the opposition back to allegiance; and soon an act of Keshab not only convinced them that all their surmises were justified, but led to an open schism. The young Maharājā of Kuch Bihār, a Native State in North Bengal, had been carefully trained as a minor under English officials and had become most anxious that he should marry a girl who would be a help and not a hindrance to him; and the proposal was made that he should marry Keshab's daughter.

The Maharājā and the girl were both under age, and the Maharājā and his family were Hindus. Now Keshab had been fighting against child-marriage and heathen-marriage, and had even seen his convictions worked into the Brahma Marriage Act of 1872. Consequently, as soon as the proposal was made public, Brahma opinion made itself felt, and Keshab distinctly heard them. Keshab believed that God had told him to go on with the wedding; and having, as he believed, received satisfactory guarantees that the wedding would really be only a betrothal, so that the parties would not live together until they came of age, and that the marriage could not contain nothing idolatrous, he gave his consent. But whether through misunderstanding or through deceit, what Keshab expected was not carried out. He allowed himself to be hustled in the matter, and idolatrous ceremonies were introduced in defiance of his wishes. Keshab returned to Calcutta covered with shame. There could be only one result. He flouted public opinion and had dishonoured his own principles. The opposition now became insistent that he should be deposed from his position in the Samaj. A meeting was held, but no business could be transacted. Attempts were made to seize the Mandir, but failed. So the protesters, a large body of intelligent influential men, left the Samaj.

The Adi Samaj from 1865 to 1878.—There is very little to say with regard to the Adi Samaj; for it was left with only a small group of supporters at the time of the secession, and the lost ground was never recovered. Just about the time when Keshab left, ladies were present for the first time at the Annual Assembly, and they have since attended the services. In 1872, Debendra gave up the active management of the Samaj, and betook himself to religious retirement, his son Dwijendra (Dwijendra-maltha Thakur) being appointed acharya in his place; yet until the day of his death he kept in close touch with the work of the Samaj.

Statistics.—In 1878 there were already 124 samajies in existence, most of them connected with the Brahma Samaj of India. When the second schism took place, a majority of the provincial samajies sympathized with the protesters.

6. Fourth period, 1878–1884: three Samajies: Keshab's ritualistic theism. Those who left Keshab in 1878 were, as we have seen, a numerous body of men, most of them of men of character and influence. Nearly all the missionaries, a number of the other leaders, and a section of the rank and file remained with him; but a large part of the church went out. It was decided to establish a new Samaj. All the provincial samajies were consulted; and with the withdrawal of the Keshabists, a meeting was held in the Town Hall, and the following resolution was passed:

That this meeting deeply deplores the want of a constitutional organization in the Brahama Samaj, and does hereby
establish a Samaj to be called the Sadhuran Brahmana Samaj, with a view to remove the serious and manifold evils resulting from this state of things, and to secure the representation of the views and opinions of the co-operative general and the general Brahman community, in all that affects the progress and well-being of the Theistic cause and Theistic work in India.

An organization was sketched, consisting of four offi- cials and a committee containing representa- tives of the provincial samajies as well as of the Calcutta society. Services were begun in tem- porary rooms, and arrangements were soon com- menced for the erection of a building. The name sahiron is general, and was probably intended to suggest the cosmic and democratic nature of the new Samaj. An English and a Bengali magazine were started to represent the views of the society. Only those who were willing to sever themselves so definitely from idolatry as to give up caste and adopt Brahman rites at their domestic ceremonies were counted as members of the Samaj.

One fact of great importance remains to be noted. The Samaj had many able men, but no single man of religious genius like Ram Mohan, Debendranath, or Keshab. Pandit Siva Nath Sastri was the most prominent man, but he did not dwarf the others. While the Samaj may not have grown so rapidly as it would have done had it been under a great leader, this circumstance has made the evolution of a workable free govern- ment of the Brahman community a problem. Pandit Siva Nath Sastri being the leader, were set apart for the work of the Samaj; and a large number of educational and religious activities were commenced. A great deal of attention was given to female education. On 2nd Jan. 1881 the new Mandir in Cornwallis Street was opened.

The creed of the Sadhuran Samaj is the same as the creed of the original Samaj (given above under 4), with the addition of the following articles:

(7) God is the Father of men, and all men are brothers.

(8) The soul is immortal and its progress eternal.

(9) God rewards virtue and punishes sin. His punishments are remedial and not eternal.

Keshab's Samaj.—During the first two years after the division there is not much to note in the history of Keshab's church except his lectures. He first of all discussed publicly the question, 'Is there a supreme and all-wise prophet?' He gave a negative answer, but declared himself in the same breath to be a 'singular man,' with special rela- tions with heaven. 'The Lord said I was to have no doctrine, no creed, but a perennial and per- petual relation of theocraticism. Whoever followed his lecture he dealt again with Christ, definitely saying, 'There is such a thing as divinity in Christ,' but explaining his words by the doctrine of Divine humanity. The most important pronouncement, however, of this time was a proclamation, issued as a direct message from India's Mother. He thus announced for the first time his adhesion to the doctrine of the Motherhood of God. It was that most eccentric yet most interesting ascetic, Ram Krishna Paramhansa, who brought Keshab to this decision.

But if these first two years were quiet and uneventful, 1881 opened in a different way. At the Anniversary in January, Keshab appeared, with twelve of his missionaries around him, under a new red banner, on which were inscribed the words, Naba Bidhan (Nana Vishdhan, 'New Dispensa- tion'). On a table lay the four great Scriptures of the world: the Hindu, the Buddhist, the Chris- tian, and the Muhammadan. He proclaimed the Brahman Samaj to be God's latest dispensation, His new gospel sent to this new world to harmonize all existing religions, and himself and the twelve around him to be the God-appointed apostles of the movement. Henceforth Keshab's Samaj was known as the Church of the New Dispensation.

At a later meeting the Twelve were solemnly ordained for their duties. They were now Keshab's twelve apostles; and they met regularly under his presidency as the Apostolic Durbur. Strict vows were laid upon them. Four of the apostles were selected, to each of whom was entrusted the study of the Scriptures of one of the four great religions. Orders were soon arranged for women and girls, for men and for boys. Each Order was a conse- crated Brotherhood or Sisterhood, and was under strict vows.

But the most striking innovation was the intro- duction of a number of picturesque ceremonies from Hinduism and Christianity. The purpose was to adapt them to the comprehension and imagination of the common people. Several well- known Hindu sacrifices were performed in the Mandir, and by means of mystic explanation were harmonized with Brahman belief. Baptism and the Lord's Supper were introduced, and became integral parts of New Dispensation ritual, their symbolism being explained in accordance with Keshab's ideas. Fantastic pilgrimages to various prophets and emperors were imagined and acted, and belief in the possibility of communion with these saints of former days was encouraged. A sort of Calendar of the Saints was arranged, so that at fixed times all the faithful might concen- trate their thoughts and meditations. Next year a Mystic Dance was introduced; and, a little later still, Keshab appeared before his people as a juggler, performing magical feats with tree-leaves, beads, stones, with the Cross, the Crescent, the Trident, and other symbols, illustrating the equally marvellous jugglery of New Dispensation theology. All this eclectic- ism and ritualistic show naturally widened and deepened the gulf between Keshab and the large party who had left his church.

In 1882 his doctrine underwent a further ex- tension, or at least an unfolding. Christ had been declared 'divine' in his lecture on 'India asks, Who is Christ?' He now taught the Christian doctrine of the Trinity, declaring that the one God existed as the Father, the Son, and the Blessed Spirit.

In this plane figure of three lines you have the solution of a vast problem. The Father, the Son, the Holy Ghost; the Creator, the Exemplar, the Sanctuary of Light; the Still God, the Living God, the Returning God; Force, Wisdom, Holiness; the True, the Good, the Beautiful; Sat, Chit, Ananda; Truth, Intelligences.

He signified that he had adopted Hindu polytheism to Brahman belief, speaking of the analytic process by which the idolator selects an attribute or attributes of the Eternal for his particular use, and the synthetic process whereby the theist reaches the One God of the whole earth.

The great leader passed away on 8th Jan. 1884. He was a man of great natural gifts. He had imagination, intellect, eloquence; and he had in a very high degree the electric personality, the piercing speech, and the dramatic action which make the best leader. But was not without those things that most impressed his followers. What conquered them was his devotional life, his religious fire, the depth and sincerity of his moral and religious nature. It was this that made them follow him through everything, despite all his faults. For Keshab, having won them by moral forces, led them by the passion and strength of his religious feeling, not by any intelligible move- ment of reason. He had enough insight and imagination to enable him to present a case with great force; but he was no convincing thinker, far less a system-builder. His teaching, especially during the last period, is a collection of powerful but disjointed ideas, a heap of sparkling stones instead of a building. He had singularly
little organizing power. In all the work he controlled, every activity depended upon his personal relationship to the worker. Hence, as soon as the personality was withdrawn, the whole combination fell in pieces. In spite of the simplicity and generosity of his nature, there was a strain of deep reserve not to be broken through, in his character, which caused him trouble with those who loved him most; he did not realize the wisdom of sharing his mind with his colleagues. This trait partly explains the confidence with which he uttered some of his later declarations of belief, and in consequence, with which they were received. They had probably been a long time in his mind before he gave utterance to them.

The late Registrar of Calcutta University, Mr. K. C. Banerji, always maintained that Keshab died a Christian. Whether this was true or not, the spirit of his life has not changed. Mr. Banerji was very intimate with Keshab, and he was not the man to speak without serious evidence; his confident affirmation must therefore not be abruptly dismissed as untrue. On the other hand, Keshab maintained such a consistent attitude to Christ throughout his life, and, despite his reserve, was so little likely to change on a point of such importance and not tell his friends, that it is difficult to believe that Mr. Banerji was not mistaken.

With this a comprehensive account is given on his second tour in the West, visiting Europe and America, when Keshab died—a circumstance which complicated the situation in Calcutta seriously. In order to complete the creed of the New Dispensation Church, three articles require to be added to the nine of the Sadharan Samaj—

19 (10) God is a Trinity in Unity—Father, Son, and Spirit. God is Mother as well as Father.

19 (11) Brahman is not a new religion, but the essence of all religions, the one universal faith; the Brahman Samaj is God's latest Dispensation; and the missionaries of the New Gospel.

19 (12) Knowledge of God comes through Inspired Men as well as through Nature and Intuition. He crucially this will occasion to His servants by command, Alakh.

Statistics.—When Keshab passed away, the number of samajis all told was 173. There were said to be about 1500 covenanted members, and about 8000 adherents.

7. Fifth period, 1884-1900: progress of the Sadharan Samaj.—During this period both the Adi Samaj and the New Dispensation Church have declined. Indeed, the old Samaj is now almost a purely family assemblage, and hold bravely on, but they have a comparatively small following in Calcutta, and their relationships with samajis outside are not very definite. With Keshab's death the New Dispensation at once became a static body, with an unchanging theology, like the other two branches: the contrast between this period and Keshab's last quinquennium is very marked. When he passed away, the development of Brahman doctrine ceased. Indeed, a blight seems to have fallen on all three, and in the last century no theological work of any importance has appeared, although hymn-writing still flourishes.

The Sadharan Samaj.—This has gone forward, not changing much in matters of faith or of practice, but slowly growing in numbers and in influence. The absence of a great leader robs their annals of great events; and we need not linger over the various difficulties they have had to encounter in working out and maintaining a constitutional government. We shall therefore merely sketch the position of the Samaj of to-day.

The affairs of the Samaj are controlled by the General Committee, which consists of 63 members, representing Calcutta and the rest of India in about equal proportions. The officers are a president, a secretary, three assistant secretaries, and a treasurer. These, with 13 others, chosen by the General Committee, form the Executive. The general work of the Samaj throughout India as well as in Calcutta is conducted by the missionaries, with their two auxiliaries, the Sadhan Asram (Sadhana Ashrama) and the Sebak Mandali (Sadhana Mandal). The Sevak Mandali, though now well advanced in years, is still their chief missionary. He represents the Hindu side of the Samaj. Beside him there stands a young man of considerable promise, Hem Chandra Sircar, who was trained in Manchester New College, Oxford, and now represents the Christian element. There are nine other missionaries. Sita Nath Tattvabushan, a well known Vedantist, is their chief educationalist and philosopher. The Brahma Vedangya, or Brahman School, is a Theological Institution for training young missionaries. The Sadhan Asram, or 'Work Refuge,' is a hostel attached to the Mandir; but the phrase is now more frequently used of the group of students and other workers residing in the Asram who form a society for practical service. Their work ranks next in importance after that of the missionaries. Similar societies have been formed in a few places outside Calcutta. Several notable laymen render the Samaj large assistance in the Sebak Mandali, or 'Lay-workers' Union.' The Samaj possesses a large printing establishment. The Indian Messenger and the Tatva Kramanti, i.e. 'Moonlight of Truth,' being the two journals. There are 43 provincial samajis formally affiliated with the central organization, and as many more in fellowship, although not affiliated. There are 1944 initiated members in all; but large numbers of men and women are practically members, though they have not been initiated. The activities of the Calcutta congregation, besides the Sunday services, are the Sunday School; the Sadhad Sabha, a group of religious questions; the Theological Society; the Students' Weekly Service, which, though not organically connected with the Samaj, is conducted in the Mandir every Saturday evening, and draws many students to thrice; the Brahma Girls' School; and the City College.

The New Dispensation Samaj.—After Keshab's death, those members of the Apostolic Durlar who were in Calcutta met and declared that Keshab was still their leader, and that no one could ever take his place. The role of the missionary body who happened to be absent, notably Pratap Chandra Mozoomdar, seriously objected to this decision, and the mass of the members stood with them. Keshab's family, on the other hand, wished to treat the Mandir and Keshab's pulpit as a sort of family preserve. Pratap, who was by far the best known of the missionaries, and the only one at all fitted for being the leader of the Samaj, wished to be elected to take Keshab's place. But the Apostolic Durlar would not agree to do this, or anything else. On the one side, there stood the quarrelling missionaries; on the other, the members, begging them to be reconciled and to make arrangements for the work and the worship of the Samaj; and so affairs have continued ever since. The old personal quarrels which Keshab was unable to put down, and which were prevented from breaking up the Samaj only by his personal influence, came uppermost, and ruined everything. For a time the latter took the Mandir into their own care, and conducted the services, excluding the missionaries from control, because they would not agree. There have been many attempts at reorganization and as many failures. Once at least the police had to be called in. There has been no open schism, but there has been constant dis-
union; and to-day three competing services are conducted under the name of the New Dispensation every Sunday; and even so there are some members who refuse to attend any one of the three.

The active work of the Samaj was thus brought almost to a complete standstill, and growth became impossible. The New Dispensation counts for less and less in the life of India.

Pratap Chandra Mozoomdar, who was often spoken of as the leader of the Brahma Samaj, never became the acknowledged leader even of the New Dispensation Church. His name and influence were far greater in England and America than they ever were in Calcutta and India. Failing to obtain Keshab's position, he went into semi-retirement, editing his paper, The Interpreter, and writing elsewhere occasionally, but seldom doing any missionary work for the Samaj except when he appeared to deliver the annual address in the Town Hall. His appearance at the Parliament of Religions in Chicago in 1893 still further widened his reputation, and he was always a welcome speaker on Calcutta platforms, but he was scarcely a religious force in the city. He passed away in 1905. His funeral demonstrated in a very remarkable manner, to one observer at least, what a large number of fine intellectual men were still interested in the Dispensation Church. Every one seemed fit to be a leader.

Since Keshab's death the fantastic elements of his later teaching and practice have not been obtruded on the public. The tendency is towards simplicity except on one point: the death of Keshab is celebrated annually as the day of the "Ascension of the Master."

To-day there are still a number of the old missionaries connected with the Samaj, notably Gaur Gabinda Ray, Mahendra Nath Bose, Pyari Mohan Chatterjee, and Gabriel Bana, especially Gabriel Bana, who is one of several causes of division among them. There are a number of younger men who take a prominent place, especially Prof. Benoyendra Nath Sen, who is a very finished speaker, and Pramatha Lal Sen, who is an acceptable preacher, and does a good deal of work among young men.

Besides the Sunday services, the publishing work of the Samaj and the educational activities are still kept up. There is a hostel for students. The missionaries do a good deal of visiting, keeping the flame burning in families.

The Adi Samaj.—The history of the original Samaj during the last quarter of a century is very little more than the doings of Debendra Nath Tagore and his circle of disciples. Yet there are a few societies outside Calcutta which retain their connexion with the Adi Samaj. The theology of the Samaj has remained stationary since the secession of 1863. Debendra gave up his position after more than thirty years of service. For thirty-three years more he lived the life of a religious recluse; for he survived until 1905. He was almost exclusively under Hindu influence, his master being Ramannuja. To him ancient India was the cradle of all that was pure in morals and religion. So powerful was Hindu thought in his life, that up to the very end he never definitely told his disciples that he had given up the doctrine of transmigration, as practically all Brahmans have done. He never dared to quote his Bible, and in his printed sermons no reference to the teaching of Christ is to be found. The direct communion of the human soul with the Supreme Spirit was the most salient point in his teaching. His public life proved him to be a man not only of religious capacity, but of a particularly noble and generous character. His long retire-

ment added to the spell he had thrown over the minds of his fellow-townsmen. By common consent he was called the Maharshi, i.e. the great San. The bleached complexion and massive architecture of his face still revealed, a few months after his death, at the age of eighty-seven, the lofty spiritual nature and the sensitive heart which had done so much in the far-away years.

The provincial samajes.—These continue to grow slowly in number and influence. A few are still in closer sympathy with the Adi Samaj than is the New Dispensation Church; while a number belong in doctrine and worship to the New Dispensation order, but a great and increasing majority have their closest connexion with the Sadhāran Samaj. These distinctions, however, count for far less in the country than they do in the metropolis; and a missionary is certain to receive a warm welcome almost anywhere, no matter to which of the branches he belongs. The Prarthāna samajes in Western India, though not organically connected with the Brahma Samaj, are on terms of close friendship and fellowship.

These societies vary largely both in size and vitality. A number have a considerable membership, own their own building, and do a good deal of work. Their activities follow the lines laid down in the original "Dispensation. They have their weekly religious service, usually on Sunday, and sometimes a prayer-meeting besides. Keshab's original Sanāgat Sabāha ("Friendly Society") was copied in the Sadhāran Samaj in Calcutta, and the example has been very generally followed elsewhere. It is a sort of Wesleyan class-meeting. The annual festivals are celebrated with enthusiasm. A library and some simple missionary work complete their religious activities. But they consider their work incomplete, if they do not advance education, especially the form of philanthropic work is usually attempted also.

It will probably cleanse to clearness if we represent the theological affinities of the three samajes graphically:

(1) God is a personal being, with sublime moral attributes.
(2) God has never become incarnate.
(3) God hears and answers prayer.
(4) God is to be worshipped only by the initiated. Men of all castes and races may worship God acceptably.
(5) Repentance and cessation from sin is the only way to forgiveness and salvation.
(6) Nature and Intuition are the sources of knowledge of God. No book is authoritative.
(7) God is the Father of men, and all men are brothers.
(8) The soul is immortal and its progress eternal.
(9) God rewards virtue and punishes sin. His punishments are remedial and not eternal.
(10) God is a Trinity in Unity—Father, Son, and Holy Spirit. God is Mother as well as Father.
(11) Brahmanism is the universal religion; the Brahma Samaj is God's latest Dispensation; and the Brahmanas are His aposteriors.
(12) Knowledge of God comes through inspired men as well as through Nature and Intuition. He reveals His will on occasion to His servants by command, Adeth.

—The Bráhma Samaj, while claiming to be a world-wide movement, and actually making its voice heard in Europe and America, has not succeeded in developing its effective service beyond India, has made no deep impression outside the province of its birth, and even where it is strongest it has touched only the educated class. There is a Bráhma Mission to hill tribes in Bengal, and a Práthama Samaj Mission to the depressed classes in Bombay; but nowhere has the movement taken a serious hold of the common people. It is a remarkable fact that in 1901, when the Samaj was already seventy-three years old, only 4000 inhabitants of India were returned as Bráhmanas in the Census papers. This, in the case of a really indigenous movement, which has had three men of high religious genius amongst its leaders, is very noteworthy.

(b) Influence on India.—The Samaj has exercised a great void on religious opinion all over India. The work of the Samaj has also had a good deal of weight, especially in Bengal, in the matter of social reform. But the number of those who have been induced to become real theists by the Samaj is curiously disappointingly small. The great success of the revival within Hinduism has operated powerfully to check the drift to Bráhmamism; for men are now inclined to believe that they can get as much spiritual religion in Hinduism as in Bráhmamism, and that social reform is almost as possible within as without the camp.

(c) Debt to Christianity.—Bráhmamism owes a large debt to Christianity. The primal impulse came largely from Christianity; Bráhma methods are borrowed from the Christ, and the criticism of Hindu social wrongs is simply Christian criticism; and large masses of Keshab’s religious and moral teaching were taken direct from Christ, and still fertilize Bráhma thought and conduct in the Sádháran as well as in the New Dispensation Samaj.

But the Church in India also owes a considerable debt to Bráhmamism. The latter has done much to open the Hindu mind to serious mono¬theism; has helped to break down prejudice against Christianity; has prepared the way for Christianity in more than one centre; and has drawn out of Hinduism into spiritual religion many an individual who has finally found peace in the Christian Church.

Brahma’s Deity.—The official doctrine of the Samaj puts Hinduism and Christianity in the general catalogue of particular religions as opposed to Bráhmamism, which is regarded as the absolute and universal religion. But in actual fact these two religions hold an altogether different position. They are the sources of Bráhmamism. A careful survey of the doctrines that have been professed in the Samaj will show that there is not one which has not been drawn either from Hinduism or from Christianity. The Bráhma span of the Samaj shows that Bráhmamism is the essence of all religions is without any basis in fact. The Bráhma system is drawn from Hinduism and Christianity.

The next point to note is how these twin sources are related to each other in the Samaj. The most cursory glance will convince any one that the Hindu and the Christian elements stand side by side, neither controlling the other. Indeed, the controlling principle throughout has not been revelation, whether Hindu or Christian, but reason. *

* This became explicit in 1890, when the author of the Vedas was abandoned.

Hinduism and Christianity have been selected as being in harmony with the dominant rationalistic idea. The only complicating circumstance is this, that the rationalism has not remained constant, but has altered in the course of history; under Mahavira, it was discoloured from Deism, under Debendranath from Ramâyana, under Keshab from Unitarianism in the earlier period, from Christianity in the later. Hence the clear distinction between the samajés to-day.

The way in which all this came about is also clear. There were two points on which Ram Mohan and Keshab, the two creative leaders, were thoroughly convinced: (1) that Christ would yet be supreme in India;1 (2) that the future religion of India would be, and loyal to Hinduism. On both these points, we may be certain, history will justify them. It was in the inference they drew that they went wrong. Believing that the future religion of India would be loyal both to Christ and to Hinduism, they imagined that they had only to bring the two together and the result would be the future religion of India. They both failed to see that essential Hinduism and essential Christianity can no more mingle than oil and water. Had they lived later, they would have been convinced that the men were men of open mind; and the science of religions would have revealed the truth to them.

Hinduism is ancient not only in age, but in character. It enshrines a very early conception of the universe—a conception which men’s minds have now outgrown. This is to say that our time and matter and souls are as eternal as God; the world is a never-ending series of meaningless, self-repeating changes; matter is the seat of all evil, and nature does not reveal God; men in the world are spirits in prison, and their only hope is release from its toils.

Christianity, on the other hand, brings us a conception of the universe which modern men can believe; and which stimulates and invigorates man’s life in every direction: God is the loving Father; men are His children; the world is God’s good world, prepared for the disciplining of His children; progress, not repetition, is the inner secret of the world-process.

These two conceptions cannot be reconciled or brought to rest; one exults in the one excludes the other. The history of the Samaj supplies a clear illustration of the truth. Ram Mohan and Debendra endeavoured to keep the Samaj within the limits of the old religion, but the outcome of the history has shown that it is impossible to divorce Bráhmamism from the caste system altogether and to avoid most scrupulously the touch of Hindu sacerdotalism and worship. In no other way can the health and strength of the community be secured. The Adi Samaj has withered, because it has attempted to remain within the caste system—has attempted to graft Bráhmamism upon Hinduism. The Christian elements in the Bráhma faith are hopelessly antagonistic to the Hindu system. So Bráhmas to-day are as completely outside Hinduism as Christians are.

Thus Ram Mohan and Keshab were wrong in thinking that a new, vigorous, modern religion could be created merely by placing a few of the leading ideas of Christianity alongside of a few of the leading ideas of Hinduism and allowing the two to come together on equal terms. It is neither to reach the end in view, two things are indispensably necessary: (1) The supremacy of Christ must be frankly and ungrudgingly accepted. Only...
in this way can a system be secured which modern men can accept, and which will produce a healthy modern nation. Rationalism is sterile in India as elsewhere. (2) Christ must be set forth as coming not to destroy Hinduism, but to fulfil it; nothing can be destroyed by which the true God can be worshipped. For, while the basal conceptions of the Hindu system are utterly opposed to Christianity, all the highest and holiest things in it—all that the modern thinking Hindu feels he cannot turn his back on, all that Ram Mohan, Debendranath, and Krishna Bharataav had the courage and the conviction that has vitality and growth in it—all this arose in reforming movements, eager spiritual struggles to transcend the traditional Hindu system. Within the pale of Hinduism these lofty spiritual aims have never had a chance to realize themselves. It is only in Christianity that a free open field for their development is found. Hinduism must die into Christianity, in order that the best that her philosophers, saints, and ascetics have longed and prayed for may live. Thus the truth with regard to the life and the soul, the humanibre and the Christian is that the missionaries were right in insisting on the supremacy of Christ, and the Brahmas were right in insisting that Hinduism should not be treated as a weed.

LITERATURE.—The best brief outline of Brahman history is found in H. S. Olcott, Brahmanism, Its origin and growth, London, 1887, pp. 475-508. There are four longer narratives: Leonard, A History of the Brahmo Samaj, Calcutta, 1879; M. G. Ghose, Brahmoism and Progress, Calcutta, 1882; F. Lillingston, The Brahmo Samaj and Arya Samaj, London, 1903; and Slater, Keshab Chandra Sen and the Brahmo Samaj, Madras, 1884 (the first two interesting but inaccurate, the last two reliable, and the last containing numerous extracts from the writings of Keshab Chandra Sen). His further detail consult the following biographies: Collett, The Life and Letters of Raja Ram Mohan Roy, London, 1900; The Adventures of a Brahman (a translation from the original Bengali), with an introduction by Satyendranath Tagore, Calcutta, 1909; Moshoomdar, The Life and Teaching of Raja Ram, London, 1907; Spurzheim's and Henri-Auguste's Beats by F. C. Mocander with a Biographical Sketch by S. J. Barrows, Boston, 1894; the monograph, Sastri, The New Dispensation and the Southern Brahmo Samaj, Madras, 1881; the works of the leaders: The English Works of Raja Ram Mohan Roy, edited by J. C. Ghose, 2 vols., Calcutta, 1855-57; The Complete Works of Raja Ram Mohan Roy, Sukshim and Bevika, Calcutta, 1880; Keshab Chandra Sen, Lectures on Brahmoism, Calcutta, 1901; and biographies later, the Year Books, the Annual Reports, and the periodicals.

BRAIN AND MIND.—1. Historical. That the brain of man is that part of his bodily organism which is in immediate connection with his mind—whatever the intimate nature of that connection may be—is to-day an accepted fact. That it has not always been so may be seen from the number of words in our own and in other languages which appear to connect mental and moral qualities with the heart, with the stomach, and even with the kidneys and bowels. In early Greek speculation, Alcmeon of Crotona (beginning of 5th cent. B.C.), a reputed pupil of Pythagoras, is referred to as holding that sense-impressions are combined together in the brain, which receives them through certain avenues (the nerves), and construct out of them 'memory, opinion, and science'; and that the controlling centre (ὃ τῷ γρηγορεῖ) of the body resides in the brain, Frig. d. Vorsokratiker 2, i. 101 f). Hippocrates also and Democritus were credited with a similar belief. It was partially adopted by Plato, who placed the reasoning portion of the soul in the head, passion in the heart, and desire in the lower part of the body (Timaeus 29-72). According to Locke, the true soul, as the entelechy of the body, was correlated with its every part; while the brain was an inert mass, the function of which was to cool the blood for the heart (de Part. An. i. 7).* Galen (2nd cent. A.D.) recognized the dominant part played by the brain as the centre of the nervous system, and the whole system by which the body is controlled. For, while the anatomy of the brain began to be clearly understood through the work of Varolius and others. From this date the tendency was to subdivide the brain, and to ascribe to separate centres the different mental functions; the most comprehensive attempt of this kind being the plastic system of Grec and Spurzheim (1810). Their system was deficient, however, both in psychological analysis and in scientific proof: they referred different moral and intellectual characters to different areas of the surface—and underlying parts—of the brain, and assumed that the skull with its 'humps' followed closely the outline of the brain. Causality, Com- bativeness, the Philoprogenitiveness, the Sense of Language, and Calculation are a few out of their thirty-eight promiscuously grouped faculties. A collection following Fournier (his Recherches experimentales)† that the whole brain is the organ of mind, that loss of or injury to any part of it weakens its general function, i.e. lessens the degree of mental activity, but does not remove any special function. It was not until 1891, when Broca published his paper Sur le Sige de la Faculte du Langage articule, that the theory of special localization began to take a new and more adequate form. The researches of Hitzig, Munk, Meynert, Fleischig, and many others in Germany, and of Ferrier, Horsley, Schloëter, etc., in England use literature and the Monograph of C. and G. 1870, gone far to establish the doctrine on a sound basis, although its interpretation is still disputed.

2. General relationship. —The general correlation between brain and mind is established partly by comparative, partly by pathological, data. (a) In closely allied animal species, it is found that the relative weight of the brain or corresponding ganglia increases with the complexity of the life of the animal, with its adaptability to new surroundings—correlated with all the terms of the vague term 'intelligence.' A striking instance is the ant's brain (the corpora pedunculata), which in the worker ant is very large, in the queen ant much smaller, and in the male ant almost absent; while activity and 'intelligence' are proportionately distributed (Fovel). The correlation is closer still if, instead of weight, the surface-area of the brain is taken. In higher animals the nerve-elements are massed in the grey matter, the cortex, of the brain; and by means of fissures and sulci—divisions and foldings of the outer 'bark' into the substance of the brain—the surface may be enormously extended without a proportional increase in volume or weight. In the main, also, if animals of different species, but of approximately the same size and of similar habitat, are compared, the brain increases in relative weight (or surface-area) as the rank of the animal in the scale of evolution is higher. Nearest (but longo intervallo) to man in this respect come the anthropoid apes.

In the development of the brain with age in the human individual a similar comparison is found to hold. As the mental capacities improve, the brain

BRAIN AND MIND

825

grows in volume until about the age of fifteen, when it reaches a certain maximum relative weight. Beyond this point, in the functional aspect of life, the place of growth, the brain-entering into more and more complex relation with each other, but without much increase in size or number. From the age of fifteen there is a gradual decline in relative weight, also, a loss of matter has been found for the average female than for the average male brain, alike in weight, in surface-area, and in thickness of cortex. This is true even when allowance is made for the differences in relative size of body. Various interpretations of the facts may, however, be suggested. All these strains will show, on the average, lower standards of brain-weight. Individual men of markedly superior intellectual powers have in many cases been found to possess brains in which there was more than average development of the brain surface, the sulci being cut deeper, and having more numerous ramifications than in the normal man. The brains of Gauss and Helmholz are well-known examples. On the average, ‘eminent men’ tend to have higher than the normal brain-weight; at the same time, however, the men who show the highest skills of relatively small brain-capacity for their race; and vice versa, it has been remarked, many persons of large brain capacity have been inmates of our poorhouses and prisons. The factors making for the development of brain-weight are especially determinative elements with the initial growth-capacity itself. The actual development attained in adult life is a resultant of many diverse factors. It is to be noted especially that, apart from its correlation with mind, the brain has important functions that are purely physiological; it regulates the movements of the body and of its different members, and especially it regulates the nutrition, and other processes of metabolism, which take place in the particular organs of the body. Accordingly, such factors as body-weight, stature, mobility, rate of metabolism or vitality, and plasticity stand in intimate relation to the brain-capacity of the organism. Biologically considered, intelligence falls under ‘plasticity’; it is a function by which the organism adapts itself respectively to new surroundings or situations, and by which it carries over the experience of the past into the present, to the advantage of itself or of its species.

3. Elements of the central nervous system.—The morphological element in the cortex or grey outer layer of the brain is the neuron. It consists of (1) the cell-body, (2) the dendrites or short branched processes, (3) the axon or nerve-fibre, and (4) the terminal expansions, or terminal branches. There are numerous different forms of cell. Thus, as many as five different kinds of dendrites may be present in the different parts of the cortex from without inwards, each marked by the presence of a characteristic form of cell. The largest are the pyramidal cells, which are found especially in the upper layers of the hemispheres, and have been found without any mental defect having been remarked during the subject’s lifetime. While this is admitted, however, it only alters our interpretation of the correlation between the convolutions of the brain and such a mental process as the thought of a person dying in perfect sanity, according to the judgment of his neighbours, may show marked signs of organic defect. Numerous cases are recorded in which very extensive degenerations of the nerve-cells, that is to say, of the parenchyma of the hemispheres, have been found without any mental defect having been remarked during the subject’s lifetime.

While this is admitted, however, it only alters our interpretation of the correlation between the convolutions of the brain and such a mental process as the thought of a person dying in perfect sanity, according to the judgment of his neighbours, may show marked signs of organic defect. Numerous cases are recorded in which very extensive degenerations of the nerve-cells, that is to say, of the parenchyma of the hemispheres, have been found without any mental defect having been remarked during the subject’s lifetime.
would give rise to its proper sensation, or would contract its given group of muscles, or cause secretion in its given gland, whatever its particular function might be, and that this specificity is fixed for it in the fibre itself. Later, it may be thought to depend upon the brain-centre in which the fibre ended; but there can be little doubt that Wundt is right in his view that it is the perception, however limited, that determines in the first instance the character of the reaction, and that the perception in its turn has been developed through adaptation to the physical stimuli acting upon the organism, which in their sum make up its environment. This is true at least as far as the reflex paths. The current in an electric cord sent through any part of the optic nerve gives rise to a sensation of light, this being the excitation first runs into the retina and there sets in the changes which are normal conditions of visual sensation.

The neurones, like all other living cells, are subject to conditions of growth and decay: its growth and development are determined by moderate use, its decay and degeneration by excessive use. Stimulated, it is the first of an increase in volume, and a change of internal structure; later the cell branches out in various directions, until a fairly active cell may have inconceivable ramifications—prolongations, collaterals, and brush-like terminals; in this development may be found the physical basis of psychic, of memory, of mental growth generally. The effect of drugs or poisons (with which fatigue must be classed) is to cause a diminution of volume, and withdrawal of the processes, followed, if prolonged, by other more radical changes. As we see the determination of reflexly an increased flow of blood to the parts involved—probably the result of an increased activity of the parts if that is excessive activity, however, the continued flow of blood may cause permanent injury of various kinds according to the tissue affected. The immediate impediment to the renewed blood supply—reflexly produces diminished flow of blood to the parts involved: the neurones contract in volume and withdraw their processes, all of which are requisite conditions which look is the expression. It is noticeable that unconsciousness or insensitiveness is due to extreme diminution of blood flow to the brain (anemia), and from excessive flow of blood to the brain (hyperemia), the result of which is probably a check to the blood flow to the neurones. The immediate cause of many mental diseases also is said to be the morbid accumulation of blood in special parts of the brain (Lays, after Forbes Winslow).

4. The special centres: localization of functions.—The complexity of the grey matter of the brain, its numberless cells, the endless tracery of interlacing fibres being understood, the question arises: With what specific functions are these neurones of the mental function? Does the activity of the neurone determine consciousness, and have different neurones different parts to play in giving rise to different mental contents or ideas?

Since 1861, as has been said already a mass of evidence has been collected which goes to show that not merely does the general health and capacity of the mind depend upon the integrity and healthy functioning of the brain, but that also special mental functions or capacities are dependent on certain parts of the brain and upper brain. In particular, it has been shown that the capacities to receive and co-ordinate impressions from the different sense-organs—the impressions which are the physical correlates of sensations and perceptions—are connected with definite brain 'centres', as are also the powers of effecting or voluntarily carrying out movements of the different parts of the body. In the year mentioned, Broca published the paper whose title is given above (p. 824); he claimed to have found that in certain cases of aphasia, in purper form, by loss of the power of articulate speech, without any defect in the general intelligence, or any paralysis of the vocal muscles—a small portion of the third frontal convolution of the left hemisphere is destroyed afterwards added that in left-handed persons, if aphasia occurs, the injury will be found in the corresponding part of the right hemisphere. Since then, many other forms of partial loss of mental powers have been studied both as to their symptoms during life, and causes of the death of the brain in death. Again, evidence has been collected since 1870 (Hitzig) from various experiments upon animals. The methods have been (1) the extirpation of smaller or larger portions of the brain, with observation of the animal's behaviour after recovery; (2) the stimulation of the naked brain at different points, with observation of the movements caused; (3) the study of the degeneration of tracts running between the brain and the sense-organs or muscles, after a given portion of the brain has been excised. More recently, our knowledge of the part played by the nerve centres in the different parts of the brain and spinal cord has been greatly extended by newer methods of section-making and of staining. As a result we obtain a scheme like the following:—

The centres for consciousness, intelligence, and will, as distinction of the neurones for reflex and automatic movements and co-ordinations, are located in the cortex or outer grey mantle of the hemispheres; they are usually classified as (1) sensory centres, (2) motor centres, and (3) association centres.

(1) Of the sensory centres, that for Sight is placed in the occipital or hindmost lobe, more especially in the parts lying under the calcarine fissure; that for Hearing in the first and second convolutions of the temporo-sphenoidal lobe; that for Smell in some part or all of the olfactory bulb or lobe, &c. On the inferior aspects of the hemisphere; that for Taste perhaps in the lower part of the temporal lobe (but on this there is no agreement among anatomists); that for Cutaneous Sensations—including under this title what is called the 'cutaneous sensations'—in the somatic sensory, muscular sensitivity, sensibility to touch, to temperature, to pain, &c. is, as might be expected, the most extensive and least definable of all the centres: the tentative conclusion of Bianchi is that its centre is the wide area lying about (and below) the Rolandic zone, but that within this there are various centres of 'greater functional intensity'; these vary greatly, both in position and in development, in different individuals (Text-Book of Psychiatry, 5). (2) The so-called motor centres, the stimulation of which gives rise to limited movements of different limbs according to the part stimulated, and injury or disease of which is in man connected with limited paralysis of different parts of the body, lie within the area described above as that of common sensibility; but there are also one or two similar centres in other parts of the cortex. The principal motor zone is that which lies close to the fissure of Rolando; according to most recent views (Sherrington, etc.), just in front of and in the fissure itself, but more especially in the part of the hemisphere, lying frontal convolution, and parts of the first, second, and third frontal convolutions; also, on the inner side of the hemisphere, parts of the marginal convolution, and of the Gyrus fimbriatus. It is from these parts of the cortex that the great hand of white pyramidal fibres issues, passing inwards and downwards between the grey masses of the mid brain (the Optic Thalamus and the Lenticular Nucleus) to the lower brain, where the greater part of those fibres which 'serve the purpose of the brain's control of voluntary movement' (the cortical or pyramidal fibres) to the side opposite to that from which they set out. Probably all the true motor or efferent fibres, except possibly those of the trunk of the body, cross over at some point in their course, whether through the various commissures or connecting bands between the hemispheres themselves, or in the Pons and Medulla Oblongata of the lower brain, or in the spinal cord. Thus injury to the motor zone of the right hemisphere is followed by the total or partial paralysis of some of the muscles on the left side of the body, and vice versa.

The motor zone, like the band of pyramidal fibres passing through the internal capsule, has been subdivided into smaller centres. From the front of the brain backwards to the fissure of Rolando, lie

* Gyrus fimbriatus and G. hippocampi.
the centres for movements of head, trunk, and leg, in that order; from the top, downwards towards the fissure of Sylvius, the centres for movements of trunk and leg, of shoulder, arm, hand, and face. In a cross-section of the internal capsule the efficient fibres lie in a similar order—those for the legs below the shoulder, those for the arms below the legs; and finally, those for thigh, knee, foot, and toes.

In what sense are these 'psychical' centres, i.e. points at which physical stimulation gives rise to mental impression, or at which mental activity initiates physical action? The first scientific view, held in the last century by Murdock, was that the single functional unit in the organism was the individual cell was the seed of the sensation or mental image; images were, so to speak, stored up in the cells, much as electric energy may be stored up in an accumulator, and were touched off by stimulation coming either from the periphery (sensation proper) or from other centres of the brain (the memory-image). The destruction of the cell wholly removed the power alike of sensation, of recognition, and of recall in memory; the cutting of the path from the sense-organ to the cell removed the power of sensation, but left the memory intact; and the disconnecting of the cell with other regions of the brain made the memory-recall (recall by association of ideas) impossible, although the power of sensation remained. Some cells were sensory, i.e. end in a special faculty of awareness into conscious sensation; others were motor, i.e. starting-points at which conscious volition was transformed into nerve-process. This simple 'corpuscular' theory has no longer many supporters.

(i) The distinction between sensory and motor centres is questioned. The motor centres were held to be those at which movement might be initiated voluntarily or spontaneously, their destruction involving the loss of such power, while the movements could still be reflexly excited, though the process lay farther back. To the idea of such special motor centres objections are urged, both from the physiological and from the psychological sides. It is now known that innumerable sensory fibres lead from the muscles and joints to the brain, and that the muscular sensations derived from these—sensations of the extent, duration, complexity, resistance, etc., of the movements carried out, or being carried out—play a very important part in the formation and development of our ideas of space, of the activities of the general and particular self, and of personal identity. If from any cause we cease to feel a movement that is in course of completion, the co-ordination becomes imperfect, and indeed absolute paralysis may occur. Quick, emotional speakers frequently show this in a slight degree: both the 'thick' speech and the imperfect control of the limbs in drunkenness must be largely attributed to the same cause. Locomotor ataxia springs mainly from disease of the posterior columns of the spinal cord, i.e. the sensory nerve-columns; the power of movement is not lost, but the muscular movements are disorganized, as though the eyes were open, but collapse when they close; he has no longer any sensory consciousness of the position of his limbs, and therefore his movements are paralyzed. The paralysis that occurs in dreams, the failure of actual movement during them, is largely due to a similar cause; not being conscious of the position of our limbs, we have no basis for movement. Accordingly, the motor zone may be really a sensory zone, as Goltz, Schiff, Munk, and others have shown; Motor neurones, as Layes, Lucas, and Horsley maintain. The sensation that appears after injury may spring not from inability to innerve the muscles, i.e. to originate and co-ordinate the various contractions or extensions required, but from inability to feel the muscles in play, or to form an image of their position—

a necessary antecedent to their voluntary control. It may be said, then, that the whole of the cortex is sensory in its functions; there is no doubt that in development it is closely connected with the posterior, i.e. the sensory, portion of the spinal cord; the strictly motor centres for the coordination of the actions of the antecedent parts were the cerebellum and lower brain. On the other hand, neither psychology nor histology offers grounds for any fundamental division between sensory and motor processes. (a) Every sensation is at the same time a feeling and an effort, every idea is an emotion and a desire, the cerebral system is functionally accompanied by changes occurring in the muscular system, in the glands or viscera, as well as in the external muscular system. Every change of consciousness reverberates through the body, and issues outwardly in action, i.e. every idea is ideomotor. (b) There is no break or change apparent in the structure or prolongation of the cells as we pass from a 'motor' to a 'sensory' zone; the large pyramidal cells may be more frequent in the former, but they are not absent in the latter; the fibres are alike throughout, as Horsley, Apathy and Bethe hold, that the fine fibrils which make up the fibres are continuous throughout their course in the whole central system. If so, there is no real centre anywhere—no seal either of the soul generally, or of its personal faculty of immortality, or of identity. There is no end-point at which nerve-process comes to a stop and sensation begins; no starting-point at which volition is transformed into motion. Consciousness must be a correlate not of the functioning of this or of that part of the brain, but of its functioning as a whole. The action of the brain is equivalent to that of a higher and more complex reflex-centre, like the centres of the spinal cord. It performs similar functions also, viz. (a) it isolates the excitations, rendering them both more rapid and more effective; (b) it co-ordinates movements with greater delicacy of adjustment to different sense-impressions; (c) it co-ordinates movements with more effective adjustment (a) to the condition of the organism as a whole (fatigue, hunger, satiety, etc.) and (b) to the results of the immediate or of the past experience of the individual and of the race. This is the view which, though in a less extreme and materialistic form, is becoming generally accepted. The 'centre,' on this theory, would merely be an important junction, not a terminus, of the nerve-processes which disorganizes the system, and does so in a definite way for each centre, just as the break-up of the railway lines at Perth would cause a different kind of disturbance and affect different systems from the break-up of the lines at Carstairs.

(ii) A second point of dispute is whether there are different 'centres' for sensation and for imagery, respectively, within the same field of experience. Certain facts of mental pathology, and results of experiments on animals, suggest that the sensory cell or group is not a whole, but is divided in two, one from that which underlies the memory-image. In the case of vision, for example, two forms of blindness arise from disease or injury to the visual zone: in the one the subject is completely blind (cortical blindness); in the other he is able to see, but fails to recognize the most familiar objects (psychic or soul-blindness): thus a dog no longer recognizes its master, its food-dish, or its kennel, except by smell. The failure to recognize might arise from one of two causes, either (a) the connection had become less effective between the centres and the regions correlated with other sensations and memories, hence the sense-impression could not

* Cf. Donaldson, p. 500.
† See Ward's 'Assimilation and Association,' Mind (N.S.), vol. ii. and iii.
arouses its associate ideas—in other words, it could not be understood; or (b) the memory-image cells of the given objects had been destroyed, and hence the earlier experiences were no longer capable of revival; or, finally, both might have occurred. In man, the failure to recognize scenes and persons from recent memory or to recall visual images and other memories was unaffected. Hence three pure forms of mental defect may occur in connexion with injury to the occipital lobe: (a) sensory or cortical blindness, (b) perceptual or psychic blindness, and (c) blind anaesthesia, loss of memory for visual images (while the power of recognition remains intact). Corresponding defects are found in connexion with hearing also, and with touch and muscular impressions. Finally, either of the two last forms may be partial or limited; the most important case of such limited blindness is that called verbal blindness—loss of the power to recognize, i.e. to read and understand, written or printed words in one's own language. The part of the brain usually affected in such cases is termed the 'memory-centre', or the 'extent of marginal convolution'. This, accordingly, is described as the visual word-centre. There are four such centres, two 'sensory,' and two 'motor.' Of the former, the second is the auditory word-area (Broca's centre, referred to above), the first a pure convolution; with it is connected the recognition and understanding of heard speech, of spoken words. The other two are the articulo-motor area (Broca's centre, referred to above), at the foot of the third frontal convolution; and the grapho-motor area in the second frontal convolution. Injury to these centres gives rise, in the one case, to loss of the power to utter speech, in the other, to loss of the power to write, in one who has already acquired it. All four centres are located on one side of the brain only—the left side (except it is said, in left-handed people, with whom the speech-centres are on the right side of the brain). Pure or mixed forms of any of the mental diseases referred to as aphasia rarely occur, but when they do they are sufficiently striking. Thus a patient may be able to speak, to write and to read, intelligently, and to hear sounds of all kinds, but cannot understand words spoken to him in his own language. This is pure acoustic (sensory) aphasia. It is obvious that persons, blind deaf-mutes, for example, who have learned to read, write, and speak, but with the latter only, will have different centres from the normal ones, viz., a sensory centre for tactical word-images, and a 'digitomotor' centre for posture and word-making. The language-centres, as is clear from their position, are merely extensions of the ordinary centres for (a) visual, auditory and tactical impressions; and (b) the kinesthetic impressions of mouth and throat and hand movements. It has been supposed, however, that the different horizontal layers of the cortex may have diverse functions corresponding to sensation, perception, and memory. Both the psychological analysis and pathological evidence prove that the image is not simply a fainter copy of the sensation; it is not even a 'composite' picture derived from a number of successive sensations of the same kind. Thus, the idea that the image corresponds to a weaker excitation of the same nerve-cell or group of nerve-cells as that with which the sensory-impression was connected is no longer seriously held. There is, however, a special sensation of memory is of a percept, and therefore of a sensation

Thus in Huenber's case the subject could repeat any word spoken to him, but could not understand its meaning. It was a pure hearing of the sound, and not his hearing center had to be isolated by a lesion, i.e. its connexion with other centres had been destroyed.

only so far as it forms part of a percept, that is, part of a complex total group or series of impressions. Again, the simplest perception involves elements belonging to more than one sense-region, taste plus olour sensations, visual plus muscular impressions, and the like; on the other hand, the more complex sensations given in the absence of sensations with others, both of its own and of other kinds. A memory image differs from its corresponding percept not only in content, i.e. in containing fewer of the characters of the real objects than were perceived in the direct experience, but also in its connexion with other parts of the brain, in that those factors which give 'reality' to the percept, the bodily sensations from the accommodating muscles of the sense-organs, and from the limbs, which have reflex tendencies to action in the presence of every 'real' experience. It is true that what is 'real' to me may not be real to my neighbours, in which case my supposed perception is in fact an imagination: it is for me, however, indistinguishable from a perception, and is acted upon as one, simply because it has all the marks of one.

Thus, the differences in brain structure and function which might be supposed to correspond to the differences of sensation, perception, and memory are the following:—(a) Complexity: the sensation and perception of pure sensory elements, confined to a small more or less definitely localized area; the perception with a larger number, belonging to different areas; the memory-image with a still larger number. The connections with motor centres in the lower brain are probably equally diverse, and have the same rising scale of complexity. (b) A result of these factors is the functional difference, that sensation, perception, memory correspond to cortical processes which are increasingly difficult to excite, which offer a greater resistance to a new and increasing strong stimulus, unless where hallucination has taken place, and their resistance-force; which are more unstable, more dependent upon the condition of the body, or of the brain, as a whole, therefore more uncertain; the reaction or response taking a longer time, being more complex and modifiable according to a wider range of conditions, as we pass from sensation to perception, and from perception to imagery. Being the most unstable, the physical basis of the memory-image is also the most likely to suffer, and thus chemical or blood-supply to the brain (as in fatigue, illness, senile decay, etc.), and also from any physical shock to the cerebral system. So in an electrical system, the more numerous the 'connections' the more likely is a derangement to occur, and the more serious is it when it does occur.

(3) Some writers have gone farther still in their localization, and have determined centres of association (Flechsig), of attention, of intelligence, or of apperception (Wundt). Certain regions of the human cortex are more active in the sense of touch, and especially the greater part of the frontal lobes, have no special functions that are determinable either by stimulation or by excision in animals, or by the comparison in man of mental symptoms during life with post-mortem examination of the brain after death. If defect is obvious at all, it appears to be general: the animal is stupid, irresponsible, mentally sluggish; it lacks spontaneity, and liveliness in its actions. In man, the onset of dementia in old age, or after some severe shock, is frequently sensed in connection with extensive degeneration of the frontal lobes. Again, it is here in the main that the wide difference between the human and the lower animal brain is most marked, while Flechsig has shown that in a child's brain the connexions of the sensory areas
with the sense-organs and with the lower motor centres are complete a considerable time before the connexions between the frontal lobe cortex and other parts of the brain are perfectly formed. Microscopic examination also shows that these connexions are formed for experience in the single different sensory areas, as well as with the opposite hemisphere and with the lower centres; the former connexions are the so-called 'association fibres.'

The power of abstraction or generalizing, which is the basis of intelligence, consists in (a) the summarizing of similar experiences, (b) the combination of diverse experiences, (c) the bringing of these results to bear upon new experiences (adaptation). The main process by which this is achieved is the formation of a type-idea, a representative idea of some kind, of which the name is the concrete symbol or counter. Whether the name be a spoken, written, or printed word, or a mere gesture, is immaterial; its relation to the type-idea, and to the many experiences from which the type-idea has been derived, is the same. The name may not be essential to the type-idea, but it is necessary to its communication and to its development; it gives it the necessary fixity and stability. The simplest assumption, accordingly, for the understanding of the whole system, is that of a hierarchy of cell-groups: group V (visual, in the occipital lobe) is connected with group A (auditory, in the temporal lobe) through an intermediate group I (in the intervening or some other area); the excitation of the whole system, VI-A, gives a combination of the visual and auditory images. Thus, when I see a bell, the excitation of the cortical area V, on which the perception directly depends, passes on to I and A, and thus gives rise to the thought of the sound of the bell. There can be no doubt that the great difference between human and animal intelligence depends upon the greater readiness with which these 'associations' are formed, and the rapidity with which they can be called up. It may readily be granted that in the synthesis of diverse sensations and memories into ideas and thoughts, an increasing number of connexions are laid down between different groups of neurones; and central stations will come into existence between the different regions and even between each other and with the outer parts. In this sense, and in this sense only, the frontal lobes may be regarded as the centre for intelligence; they form the largest or most extensive of these intermediary regions.

Lesions and defects of the frontal lobes are frequently accompanied by defective power of attention or concentration (cf. Ribot, *Psych. de l'Attention*), suggesting that this region is the 'centre of Attention.' It is said, however (Schiller, *Text-book of Physiology*), that only 20 per cent. in a large collection of cases of injuries, involving the frontal lobes alone, showed evidence of intellectual deficiency accompanying the physical defect. In Goltz's dogs, loss of intelligence was apparent whether the front or the hind parts of both hemispheres were removed. In the former case, however, the animal became savage and ill-tempered; in the latter, it became gentle and good-natured. What is lost, according to Flechsig (1896), by degeneration of the frontal lobes, is the power of self as center of interest in outer or inner events, the power of volition, of directing the attention upon this or that. In other words, the frontal lobes, as Wundt implies in calling them the apperception-centres, represent central stations by which new connexions between the various particular centres, by which impressions are grouped and correlated, not according to their kind, but according to their bearing on the purposes and aims of the individual. An animal deprived of the frontal lobes can no longer make use of its acquired skill and memory, although it can still give forth a distinctive action and perceptual consciousness. A human being in whom the frontal lobes are undeveloped remains at the level of the infant in intelligence, although he may, should he live, show the instincts and passions of the man.

We may conclude: (i) that so far as consciousness is concerned the brain areas are primitively indifferent. In the nature of things there is nothing to prevent cases occurring in which the so-called visual area is found to be in the service of the auditory consciousness as a matter of fact, relatively wide variations do occur in the positions of the different centres. (ii) In the course of development, a centre is formed not as a terminus a quo or as a terminus ad quem, but as a connecting station, by which, e.g., different and efficient fibres may be brought into relation with each other, according to the needs of the organism.* The evolution of the brain as the great locus of these connecting points has brought it about that the principal station, and not the secondary, is different from different individuals. Organic selection also has determined that the right side of the body should be 'served' by the left side of the brain, perhaps because a right limb is more frequently and extensively exercised than a left limb, while the blood is more rapidly and effectively circulated through the left hemisphere (as Wundt suggests): the right limb requires more frequent renewal of its material, etc., which the left brain is more able to supply. Hence functions which are not bilaterally developed, such as those involved in speech, the appreciation and production of music, mathematical calculation, etc., are also relegated to the left side of the brain. (Language was primitively gesture, involving chiefly actions of the right hand.) (iii) The localization is not fixed, however, even for the individual. (a) Some peculiarity of training may lead to the adoption of the right hemisphere as the field with which the functions of speech, etc., are correlated, or may cause a dislocation of particular functions to the left hemisphere, or even the right. (b) The localizaticm is not fixed by any anatomical constants; it may be shifted by training or by alteration of the general mental state. (c) The centre of a single function may be defined in terms of a single area, or on the contrary, the function may be distributed through neighbouring areas or through the symmetrical opposite region in the other hemisphere taking over the function. (d) It must be added that in man this compensation is limited in range: if a sensory area is completely destroyed, no recovery of the corresponding sensibility takes place; but the patient may learn to use other sensations to replace those he has lost, as guides for action. Thus a person who has become blind in one half of the field of vision (hemianopia) cannot after a short time be distinguished in his actions from a normal individual. (e) In the case of higher functions, as thought and speech, the patient may re-build his knowledge upon new material: a 'visualist,' whose visual memory has been lost, may acquire the skill to read; a person who has lost the ability to read, may re-acquire it.

* Cf. Foster, p. 1000, on the cortical motor area and pyramidal tract: 'We are driven to regard them rather as links, important links, it is true, but still links, in a complex chain.'

† Cf. Bateman, on the variation of the term 'centre' for language; Foster, p. 1065: 'The passage of nervous impulses is not rigidly and regularly fixed by the anatomical distribution of the tract of fibres.'
by using the sensations of movement as his materials, and correlating these with the optical impressions. (d) In comparing different animals in regard to the effect of exciting portions of the brain, it is found that the lower the animal stands in development, the more complete is the recovery from loss of any particular brain-organ likely to be; in other words, the remaining parts more rapidly take up the functions of those removed, and in this case the lower brain-centres appear to have a more rapid innate energy than their higher neighbours and symmetrically opposite centres. Even the apparently complete loss of the cerebral lobes from both hemispheres may not permanently destroy the sensibility or general capacity of the dog. Substitution and compensation are rarer in the recent than in the dog, rarer and less complete in the dog than in the rabbit, in the rabbit than in the pigeon, etc.

(iv.) When new impressions are received, or new ideas formed, it may be supposed that some new portion of the cerebral cortex becomes functionally active; this probably occurs through its entering into contact with other cell-groups. The undeveloped portions of a child's or of an unacclimated person's brain cannot, of course, be wholly in-active, but they remain simple in structure and function, and are impressions, as it were, waiting to enter into touch with others, while at the same time they become more highly differentiated within themselves; with deficient exercise of a developed cell, the opposite processes of contraction and degeneration set in. It may be added that exercise appears to increase the vitality of the brain, and hence the vitality of the body as a whole (Donaldson, chs. 16 and 17). Capacity for work or exercise depends on its turn on interest, and finally on the will of the subject. Hence the remarkable sagacity of infants which some men have shown even in extreme old age (Thomson, p. 274).

This leads to the final question, Which is primary, the brain or the mind? Does the brain with which he is born determine the character and capacity of each individual, or do his character and capacity, plus the environment in which he is set, mould and form the brain into an efficient instrument for themselves? There can be no doubt that, as in all such cases, both questions may be answered in the affirmative. The child's mind and perfect brain can never achieve a rational mind, and the man with the most perfect brain will tend to be foremost in his occupation (which may be that of a philanthropist or that of a 'sharp') and neurotic—i.e., the greatest weight in individual life, and the whole weight in evolution, must be laid on the two factors of opportunity and use. That is to say, the mind itself and the environment determine between them the structure of their intermediary—the brain. Consciousness is correlated not with any definite section of the brain, but with the whole brain, indeed with the whole nervous system. We may go further and say that consciousness is a response to the functioning of the whole living organism; and that the mind, through the feeling and the will, is 'dynamic' to the whole organism; in other words, that the action and reaction we have postulated between body and mind are between body as a living whole and mind as a unity, as an unextended system of qualitative determinations and tendencies. As dieu et mon det has said, an 'idea cannot be the uniform and invariable product of a pyramidal cell (the psychic cell of Cajal): it exists only at the moment of its appearance, and for the appearance there is required the synchronism of action of the elementary activities of the brain, i.e., the functioning of manifold systems of all kinds of neurones' (Fenomeni del Contrast, pp. 75, 76 note). Cf. Loeb, ch. 17: 'The cerebral hemispheres act as a whole and not as a mosaic of a number of independent parts.' The anatomical localization of thalami is not yet psychical localization of functions.' This is especially true of the higher ideas, abstract and general ideas, ideas of relations, etc. The formation, the use and the adaptation of a general idea involve not a single group of cells in the frontal lobe, or elsewhere; but systems in different parts of the cortex, some acting with greater intensity, some with less, and so in a gradually decreasing scale, all parts of the nervous organism being more or less affected. The localization of functions means that certain parts of the cortex have by their intimate connexions with sense-organs or muscles or both, and by their use in the life of the individual, become centres more readily excitable by particular forms of stimulation. The destruction of such a centre renders the corresponding process impossible, until a new area has been educated, i.e., has become in connexion with the same sensory or muscular organs as the original area. In many cases this may no longer be possible. A large part of the brain may, however, be destroyed without any gap in the mental field of observations, as long as the capacity being observable. A case is reported in which the whole of the right hemisphere was affected, the front portion being entirely void of grey matter, and the remainder degenerate; yet the only symptom manifesting itself was a paralysis of the left side: this had begun ten years before death (Bailey, 1889 [reported by Thomson, p. 63 f.]).

In general, the degree of consciousness appears to be correlated with the amount of resistance which is overcome. But resistance is never accompanied by intense consciousness, as shown by the concentrated attention it involves, while it also involves a large expenditure of energy, as shown by the readiness with which fatigue occurs. The more familiar the action becomes, the less the intensity of consciousness, until the latter may be wholly latent, as in many of the automatic actions the civilized man goes through in the course of a day. This does not mean that the nerve-process has been 'short-circuited,' that it takes place through less circuits; on the contrary, the shorter paths it means rather that with the same path the resistance is less, and therefore the current flows more rapidly. On the other hand, whatever increases the resistance increases the intensity of consciousness involved in the action. Many poisons, whether of external or internal origin, have this effect. In some forms of insanity, the simplest actions—speaking, walking, or dressing—are accompanied by vivid and painful consciousness, and at the same time by such extreme physical exhaustion that they are performed by less than one-fifth of their normal power. In such cases a very strong stimulus may occasionally overcome the great resistance, and the normal reaction takes place. Thus an overpowering emotion has been known to do so.

In verbal amnesia, a parallel instance is that known as Wolff's case (cf. Loeb, p. 251)." The patient in this case could not tell the names of objects or their qualities except when some actual sensation was present, and then could not tell whether his memory was clear unless he tested it, or whether snow was white or black, unless he could see it. Moreover, it was argued by Loeb that the memory was most effective; but in general the most vivid or most striking sensation was that which was required to arouse the idea or memory. For instance, a calendar, for example, could be mastered only when it was seen open.

We may conclude, then, that the brain-connexions vary in the greater or less resistance they offer to excitation; that consciousness is but a correlate of another case see Bateman, p. 102.
high resistance; habituation, automatic action, of low resistance; and the higher the resistance, the stronger the impression that is impressed on the 'toung' of a whole in any given case. In amnesia of all kinds, the most complex mental achievements or the most recent memories are the first to fail: thus a Bohemian peasant learnt German when he entered the army; after some time at sword practice, his brain was accidentally pierced; his German failed him, but he retained the power of speech in his native tongue (Adamkiewicz; for other cases see Bateman p. 185). In such cases the brain-associations which are used (either through their recentness or because of their complexity), i.e., those which offer greatest resistance to excitation, are those which first fail in their functions; and in recovery from the disease or injury the order is the reverse, the last memories to return being those of the events immediately preceding thereof, etc. These are only a few of the phenomena which make it certain that the relation between mind and brain is functional, not structural, except so far as structure follows and is determined by it. The suggested theory, that the upper brain is to correlate the results of past individual experience, as the lower brain correlates those of race-experience, with present and immediate needs and situations, i.e., retention and co-ordination; but that individual mental activity is the essence of what is by a boy with his gestures and co-ordination; that, accordingly, the brain is mainly the instrument, the means, rather than the cause or condition, of mental development.

J. M. IN'T YRE.

BRANCHES AND TWIGS.—Branches and twigs are used in a variety of rites and ceremonies, and their use is generally conditioned by the sacred nature of the trees from which they are taken, though this is not always the case.

1. Ritual.—In the ritual of primitive peoples, other objects being fore in number, branches and twigs have a prominent part. Thus, among the Australian tribes, they are used in a great variety of rites. In the fire ceremony of the Warramunga tribe, huge torches are prepared, made of saplings 15 feet long, thickly encased in a number of rugs, which form the primary part, the ceremony consists in the creation of a long pole to which gum-tree twigs are attached. The men of the tribe at this rite enter a wemery made of boughs, and sing there for hours. Bunches of sacred twigs are also attached to the horizontal parts of the body (Spencer-Gillern, p. 380 ff.). At wedding ceremonies, widows of the dead man mourn under the shelter of a bough weury (ib. p. 521). In these tribes the dead are often left on a platform of boughs erected on a tree (ib. p. 517). Further, at the totem ceremonies of the Kingi tribe, each performer wears on either thigh what is known as a tontelli. These twigs as a ceremonial bundle are 1 yard long, to which are attached a number of leafy green gum-twig (ib. p. 108). A bamboo, to which is tied a leaf of the sagu-palm, is used by some tribes in New Guinea to indicate tabooed articles (Haddow, Head-Hunters, London, 1901, p. 270). But at higher levels, branches and twigs are variously employed. Thus in Japan, at the festival of first-fruits, a place for the inami-dono, or rice fruit hall, is chosen by divination and marked out at the four corners by twigs of the sacred evergreen tree, which forms the setting apart of a portion of rice field, two sukoki twigs are planted (Aston, Shinto, London, 1905, p. 269). In the Hindu village ritual-marriage of Siva and Parvati, clay images of the deities are attached to the ends of furred branches, the prongs of which are stuck into heaps of grass and flowers (IA xi., 1882, p. 227 ff.). The pious Hindu also uses for the ceremony of teeth-cleaning a twig or small stick, which is cut fresh every day (Monier Wise, Hinduism, in Ind. London, 1883, pt. i. p. 376). Again, Pliny says the Celts that they used oak branches in nearly all their ceremonies (H.N xvi. 44). At the Greek Olympic games the victors' crowns were made of branches of sacred olive, cut with a golden sickle by a boy with a spade and a sickle-ordena- tion, that, accordingly, the brain is mainly the instrument, the means, rather than the cause or condition, of mental development.

2. Lustration.—In lustration, branches and twigs form a natural, and therefore a primitive, form of asperger for sprinkling water or blood over the worshippers, or over sacred objects. In such a ceremony their use is doubtless wider than can now be ascertained, as the method of sprinkling is not always clearly reported. At the native baptismal ceremony in Polynesia, the priest asperguson the child with a bough of a sacred tree dipped in water, to the accompaniment of archaic hymns (Tylor, ii. 430 ; Baptism [Ethan], §7). Lustration ceremonies among the Romans were frequently performed by means of branches of laurel or olive. Ovid speaks of the moistened laurel bough sending forth the sacred fume over the worshippers (Met. iv. 721 ff.), and describes the rites at the fountain of Mercury, where traders sprinkled themselves and their goods with a dripping laurel branch dipped in its waters (ib. v. 603 ff.). Among the Semites, branches and other parts of sacred trees were used for lustrations (W. R. Smith, p. 175). Certain of the sprinklings in the rites of purification used by the Hebrews were performed by a bunch of hyssop. Thus, water was sprinkled with hyssop by a ceremonially clean person over the persons and things which had come in contact with a corpse (Nu 19); Hyssop and cedar wood, the latter probably in the form of a twig, were also used in the ritual of cleansing the leper or the leprous house (Lv 14); and, in the account of the origin of the Passover, a bunch of hyssop is ordered to be dipped in the blood of the lamb, and used to strike the lintel and doorposts (Ex 12; cf. also He 9, Ps 51). In Scandinavia the blood of sacrificial animals was collected in bowls and sprinkled to attach the cultar, temple walls, and people by means of blattins, or so-called twigs (Vigfusson and Powell, Corpus Poet. Boreale, Oxford, 1883, i. 405 ff. ; Simrock, Handb. der deutschen Myth., Bonn, 1887, p. 599 ; de la Sauysay, Rel. of...
the Tentents, Boston, 1902, p. 376). Sometimes sacred twigs were placed in water which was to be used ritually, as in the Lapp ceremony of baptism, in which sacred elder twigs were used in this way (Pyle, B. 457; cf. Baptism [Edinie], § 7 [5] and [8]). In other cases, a branch is used by itself as a means of purification. In the New Hebrites, it suffices to draw a branch down the body to remove the contagion or delitement (J.A.F. xxi. 12), or, as in Japan, at the new moon ceremony the branch of sakaki is waved in token of the purification of sins (Aston, p. 292). Scourging or beating with branches, whose sacred or magical virtues are supposed to drive away evil influences, is not uncommon (see AUSTERTIES, § 5; de la Saussaye, p. 376; Frazer, GB vii. 1905, p. 744 ff.).

3. Sacrifice.—In sacrifice, branches and twigs are frequently used. In the more primitive forms of sacrifice by fire, the fire is naturally fed with branches. But occasionally branches and twigs of sacred sacred tree are thrown upon (Wi 362). Or again, they are burned for purposes of purification or to bring good luck. Instances are found in the burning of cedar and hyssop in the Hebrew sacrifice of the red heifer (Nu 19), the Roman custom of throwing laurel on the sacrificial fire or on the hearth (Granger, III. 252, 281; cf. Grinn, p. 599). Ovid, Fasti, iv. 741), the Hindu feeding of the sacred hearth fire every morning with pieces of consecrated wood generally taken from the Patala-trees (Monier Williams, pt. i. p. 566, etc. Reference may also be made to the images, made of osiers, within which human victims were consumed by fire among the Gains (Cesar, de Bell. Gall. vi. 16). For probable late survivals of this custom, see Frazer, GB iv. 320 ff. Branches or twigs of sacred trees sometimes accompany offerings; thus, in Scandinavia, twigs were cut from special kinds of trees, and these, interwoven with flowers, were afterwards fastened to the tails of animals intended for sacrifice (de la Saussaye, p. 376). A Hindu instance is that of the balls of rice used in the funeral ceremonies, in which sprigs of the Tukri plant are inserted (Wi 362). Or again, they are offered as sacrifice, as in the case of the Japanese kozurikake, wands of elder or willow, whittled at the top into a mass of shavings, which are also symbols of deity and fetishes (Aston, p. 151). In Japan, the twigs of willow or hiba, called ina, are both sacrifices and fetishes (Batchelor, The Ainu of Japan, London, 1892, p. 87 ff., The Ainu and their Folklore, London, 1901, p. 92 ff.; see also AINUS, § 23 ff.).

4. Divination.—In certain processes of divination the use of branches and twigs occurs. Tacitus says of the ancient Germans that, in order to consult lots, they cut off the twig of a fruit-bearing tree and made it into little wands. Upon these they put distinguishing marks and scattered them at random upon a white garment (Germania, ch. 10). These twigs, whether or not the marks on them were runes, are probably connected with the Norse sortilege twigs, or consecrated chips used in divination, and the Frisian teun, or twigs, used for casting lots in judicial procedure (de la Saussaye, p. 294; Vigfusson and Powell, p. 411; Snorræ, p. 531). For a similar Celtic instance see CELTS, § xiii. (4). Here, too, may be noted the widespread use of the divining rod, a forked twig, usually of hazel. The forks of the twig are held, one in each hand, and the twig twirled in his grasp when he arrives at the spot under which what he seeks is concealed (Barrett, 'The so-called Divining Rod,' in Proc. Soc. Psych. Research, 1897; Lang, Making of Religion, London, 1898, p. 164 ff.; Frazer, GB vii. 1905, p. 222).

5. Vegetation-cults.—Many folk survivals show the uses of branches and twigs in connexion with vegetation-cults. Under various names (Jack-in-the-Green, etc.) and at various times puppets are made of green stuff, twigs, and branches; or selected persons are clad in green boughs, leaves, and flowers, and undergo various ceremonies. These represent the old tree-spirit, or spirit of vegetation, though now no longer regarded in that light by the folk. At such times, also, especially for the commemoration of 'carrying death,' boughs are cut and brought home to the village, and these have also some connexion with the spirit of vegetation. Many instances of these are collected by Frazer (GB iv. 214 ff., ii. 82 ff.), and by Grinn (Tent. Myth., pp. 769, 775, 776, 824 ff.). The practice of the Maypole is also connected to the fertility of the fields and staple industries, and to the deities of the fields and men. There is supposed to be a great plenty of milk during the summer (Brand, i. 131). Branches or twigs from trees regarded as sacred, the rowan, the elder, etc., were placed on houses, stables, shoepools, and barns as a protection against evil spirits, witches, and other evil influences. They were also placed in boats, or carried on the person as a talisman. These practices occur very widely in modern European folk custom (GB ii. 132, 201, 265; Elworthy, p. 347; Brand, i. 151; MacCulloch, The Misty Isle of Skye, Edinburgh, 1895, p. 257). But that it is derived from ancient paganism is shown by similar practices among pagan peoples (Ovid, Fasti, iv. 721 ff., vi. 151 ff.; de la Saussaye, p. 376 ff.; [Scandinavians]; Monier Williams, p. 296 [Hindus]; for the Parsi custom see BARSÖN). The Midsummer and Samhain fires were kept up, and, as a protection against evil spirits, the staves of fire, were fed by branches, twigs, and leaves of oak, especially in Celtic and Teutonic districts (Grinn, p. 605); in the case of need fires, nine sorts of wood were used in Sweden and elsewhere (Grinn, p. 607; GB iii. 270, and passion). Through these fires cattle were driven, and burning brands or branches were carried through the fields or villages, and set up in the fields (GB ii. 313; Brand, i. 215; Grinn, p. 621; de la Saussaye, p. 375 ff.). New fires were lit on the hearth with blazing brands from these fires or with branches lit at their flames (GB iii. 245). Brands were also taken from the bonfires and kept in houses or in cattle-sheds, as preservatives against thunder and lightning, fire, and other evils, or were carried about for luck (ib. p. 221 ff.). In some cases wattle-branches are carried by the people in procession round the fire or passed over it, and then placed on the cattle-sheds, or the backs of people are with hazel-twig lit at the fire, or birch boughs are thrown into the fire, in Russia, to cause the flux to grow to its full height. (Brand, i. 217.)

Connected with the cult of sacred trees was the practice of hanging sacrificial offerings upon their
branches. This practice has occurred whenever tree-worship is found, or where worship took place in sacred groves (see art. TREES); and, for particular instances from South America, New Zealand, and among the Dayaks, cf. Tyloor, ii. 223 f.; for the Senates, cf. W. K. Smith, p. 109; for the Cuna, cf. the same, p. 110; and for the Celts, Jullian, *Recherches sur la Religion gauloise*, Bordeaux, 1903, p. 55. Among the Japanese, presents to a superior were delivered attached to the branch of a tree (Aston, p. 215).

In the ritual of blessing at sacred wells, a rag which has been in contact with the patient, or part of his clothing, is hung on the branches of a sacred tree near the well, either as an offering or as a magical means of conveying the disease to the tree or of bringing the sufferer within the healing influence of the tree-spirit (see Tyloor, ii. 150; Brand, iii. 10). Sacred wells are also decked with green boughs on certain occasions, e.g. Holy Thursday and the day of the saint to whom the well is dedicated (Brand, iii. 9).

Where sacred trees are venerated, either in actual cult or in late folk survivals, it is considered sacrilegious to break even a twig from them. To do so will be followed by a punishment, misfortune, or ill-luck. The same is true of trees growing on graves (Tyloor, ii. 115 (Malagasy); cf. R. Smith, p. 252).—*Edenworthy, p. 36 (unnumbered). Brand, iii. 13 (Celts); Mackenzie, *Ten Years North of the Orange River*, Edinburgh, 1871 (Dechnanans).*

Branches are also used in rain magic in a variety of ways, probably because the tree-spirit was once believed to have influence over the weather. Thus, among the Congo people, mounds are covered with branches of trees and fetish-ornaments. Round these mounds a priest walks, muttering incantations (Reade, *Savage Africa*, London, 1863).—*Bouglis, p. 225 (Congo).* An oak tree on Mt. Lycoming, whose priest had power to produce rain by throwing an oak branch into a fountain (viii. 38). In Gaul, a naked virgin standing up to her knees in the river was aspered by her companions with branches dipped in the water, as a charm to produce rain (Grimm, p. 506).

The ceremonial cutting of the mistletoe from the oak by the druids, and its use in magico-medical rites, are described by Pliney (H.N. xvi. 44). Fraser connects this rite with the Scandina-vian legend of Balder and his death (see the plucking of a bough from a tree in the sacred grove by the skyer and successor of the priest of Nemi. The mistletoe was regarded as the soul of the oak, and had to be plucked before the tree, in which dwelt the spirit of vegetation, could be destroyed. The same spirit is linked with the oak because it could be slain (cf. §§ 448, 449; *Festivals* (Celtic). Mistletoe is also ceremconically plucked in modern folk-custom in Scandinavia, and Connemara, *J.R.S.,* vol. xii. p. 543). For the mistletoe thus to be plucked by Knesse, before his descent to the under-world, see Virgil, *Aenid*, vi. 503 f.; and for the magic silver boughs of Celtic myth with their precious fruits, see BLUNT, ABOVE ON THE (Celtic).

See also BARSON.

BRAWLING.—The word 'brawling' is technically used in English Law for the offence of quarrelling or creating a disturbance in a place of worship, churchyard, or burial-ground. The word is derived from the French *brailler*, 'to be noisy,' which gives the main idea of the term, viz. the disturbing of people at their devotions.

i. Legal.—Brawling is a branch of sacrilege, though the word sacrilege is now usually confined to the robbery of churches. The punishment for sacrilege in most countries up to the date of the French Revolution, and later, was death. In England, sacrilege involving the taking of goods from a church or chapel remained a capital offence till 1835, being abolished by 5 & 6 Will. iv. c. 81. Brawling, however, had always been treated more leniently. The most vindictive of the English 'brawling' statutes requires merely that the offender shall be adjudged to have one of his ears cut off, or (what a comment on the customs of the period!) if he have no ears, to be marked and burned in the cheek with a hot iron having the letter F; and for the selfsame act of such a grey-farer and fighter; in addition, of course, to the usual excommunication.

With reference to this law, it must be said that the Act was passed in 1553, at a period when religion was at its lowest ebb, and the change of religion was taking place in England, and that there had been a good deal of open fighting with weapons, even in churches; so that it is to be understood that this Act was also meant to be a hint to those who murdered persons with weapons, or only 'clad,' received much lighter punishment.

This Act (5 & 6 Edw. vi. c. 4) remained on the statute-book till 1829, in company with many other statutes of our Draconian code. The principle, however, still exists that disturbances in sacred places deserve greater punishment than those occurring elsewhere; in fact, some acts of disturbance which are condonable if done in another place are criminal if performed in church; for example, arrests by virtue of legal process. This principle seems to be recognized in all countries, and France, having the Revolution protection was extended to religious services of all kinds.

In England, at present, brawling by a layman, which by the Act of 1800 (23 & 24 Vict. c. 32) is defined as being riotous, violent, or indecent behaviour in a place of worship (as also disturbance of a minister while celebrating any divine service in church), is no longer punishable by the ecclesiastical courts, but as a civil offence it is a misdemeanour under several statutes. The penalty under 52 Geo. iii. c. 155 is £40 under 23 & 24 Vict. c. 32, £5. The statute 24 & 25 Vict. c. 100 §§ 36 and annexed as follows:

'W hosesoever shall, by threats or force, obstruct or prevent, or endanger to obstruct or prevent, any clergyman or other minister in or from celebrating any divine service or otherwise officiating in any church, chapel, meeting-house, or other place of divine worship, or in or from the performance of his duty in the lawful burial of the dead in any churchyard or other burial-place, or shall strike or offer any violence to, or shall, upon any civil process, or for the purpose of the prevention of the civil process, arrest any clergyman or other minister who is engaged in, or to the knowledge of the person in whose behalf he is engaged in, any of the rites, or duties aforesaid; or who, to the knowledge of the offender, shall be performing the same or returning from the same, or being engaged, in any of the rites or duties aforesaid, is liable to two years' imprisonment with or without hard labour.'

The offender may also be fined and required to give sureties (ib. § 71).

Also, by the Burial Law Amendment Act, 1880, provision is made to prevent improper conduct at burials. Under 23 & 24 Vict. c. 32, any constable or churchwarden of the parish has power to apprehend the offender and take him before a justice. There is an appeal to Quarter Sessions from a conviction under this Act.

A man may be convicted for brawling, although acting in the bona fide assertion of a claim of right, and that independently of the question whether the claim is a good one or not (Asher v. Catefart [1857], 15 Q.B.D. 607).

It was held, by London Quarter Sessions, that under this Act the behaviour immediately before riotous or indecent; mere protests in words are not sufficient.

In a case where in a Church of England church a crucifix was placed on the altar, Steps and the congregation clawed up, two by two, to kiss it, and a person present took up the crucifix and said (holding it above his head in a loud voice): 'In the name of God I protest against this idolatry,' he held that violent conduct or brawling was not proved (Kenas v. Rose [1858], 6 T.P. 489).

But, on the other hand, in a case which went to the Divisional Court, where, in answer to the invitation in the ordination service a statement was read in a perfectly orderly manner, this
was nevertheless held to be brawling (Kensit v. St. Paul's Chapter [1905], 2 R.B. 249).

A minister of religion can commit the offence of brawling as well as a layman (Fallacynce v. Fletcher [1897], 1 Q.B. 260), and may, if a minister of the Church should be guilty of the punishment inflicted in the ecclesiastical instead of in the civil court (Girt v. Filling-ham [1901], P. 176). This is obvious if he indulges in an open quarrel or wordy warfare in the sacred place; but he also commits the offence if he uses violent and contemptible language in a worship service, either in the course of his sermon or at any other part of the service, or 'improves the occasion' against individual members of the congregation in a violent or scolding manner.

It became the custom of the courts in the case of clergymen of the Church of England, who are strictly bound (during prayers), by the Acts of Uniformity, to the words prescribed for use. Thus in one case a clergymen was punished when reading the lesson, the following: 'I have been accused by some ill-natured neighbour of making alterations in the service; I have done so now and shall do so again, so mark.' In another case the clergymen paused in the service to deliver a long address in a chiding, quarrelsome, and brawling manner, in which manner the following was heard: 'You were perhaps surprised at the pause I made at the end of the prayer just now, when I mentioned the money. Some of the congregation has had the audacity to write to the archdeacon. 'Who has had the audacity to do this?' 'Some one has,' said the bishop. 'Against me.' 'In my opinion, he has written a letter to the bishop full of falsehoods.' Such conduct is punishable.

The laws of England are well put by Sir John Nicholl in the case of Palmer v. Raffey, 2 Addams 144. It is to protect the sanctity of those places and their appurtenances set apart for the worship of the Supreme Being and for the repose of the dead, in which nothing but religious awe and Christian good will between men should prevail, and to prevent them from being converted with impunity into scenes of human passion and malice, of disturbance and violence. The sacredness of the place being thus the object of this protecting law, it is no part of a legal inquiry, when more than one person is implicated in the transaction, which of the two persons so implicated is more to blame or which of them began the quarrel. Each who engages in it violates the law; each is bound to abstain from quarrelling, chiding, or brawling. This was as stated by Blackstone (Commentaries, iv. 145) says, 'nec quarrelsome words, which are neither an affray nor an offence in any other place, are penal here."

Churchwardens, however, and also constables, may, for the purpose of maintaining order during Divine service, eject disturbers; and churchwardens may take off a person's hat if, on being asked, he refuses to remove it; and, it has been said, may whip boys who play in church during or immediately before service. But such action might be attended with awkward consequences in these days (Burton v. Henson [1842], 10 M. & W. 108; Worth v. Terrington [1845], 13 M. & W. 781; the Church of England canons of 1604, Nos. 19, 83, and 111, before which the law has, by the way, decided that a churchwarden has no right forcibly to prevent an inhabitant from entering the church for the purpose of attending service, on the ground that in his opinion there is no room (Taylor v. Tinsley [1888], 25 R.B. 671).

2. Ecclesiastical.—From the ethical point of view there may be considerable difference of opinion on the question, Is brawling, that is, the disturbance of other people's worship, under any circumstances justifiable? The answer will depend largely on the state of the ethical standard of right and wrong. Those who think that the law of the particular country is the only standard, and must be obeyed, can easily answer this question. The laws of many civilized countries now protect all public worship from disturbance and all ministers of religion from molestation, and the answer in those countries would be—No.

Those who find the will of the Deity expressed in the Bible, and regard this as the ultimate standard, have a more difficult task. It is not doubted that many instances of 'brawling' are commended in Holy Writ. For example, in the case of Moses, who at 'a quarrel to the Lord' (Ex. 32) took the golden calf which the Israelites had made, and hurst it in the fire, and ground it to powder and strewed it upon the water, and made the children of Israel to drink of it (v.2). Further OT examples are numerous—the destruction of the high places and the altars of the priests of Baal at various times; and of the brazen serpent by King Hezekiah. It is true these cases raise points as to the rights of heads of States. But from the abstract point of view they involve questions of sacrilege and brawling.

To come to the NT, we may mention (with all reverence) the action of Jesus Christ, who went into the temple of God and cast out all them that sold and bought there, overthrowing the tables of money-changers and driving them that sold doves. These people were in the house of God by lawful authority; the doves were no doubt required for sacrifice. Our Lord's reason was founded on the law: 'It is written,' He said, 'my house shall be called a house of prayer; but you have made it a den of thieves.' Such a plea would not be admitted in a modern court of justice. It is a clear case of 'brawling' according to modern ideas.

The third point of view is that people who think that the law of their particular Church or sect is the ultimate test. The Church of Rome has undoubtedly taught, and its adherents have acted on the opinion, that it is proper not only to disturb devotions which are contrary to its tenets, but also to molest and even to put to death ministers of religion and others who teach doctrines inconsistent with theirs. Members of religious bodies of this type would undoubtedly hold that 'brawling' at the command of their religious superiors is not only justifiable, but virtuous. Their sense of duty is of that kind which would burn the body to save the soul.

Lastly, there is the point of view of those who think that the ethical standard is a certain fitness, suitability, or propriety in actions as determined by our understanding or reason (Bain, Mental and Moral Science [1830]) or, if you like, the people should act in such a way that their conduct might be a law to all beings. It is conceived that all those who hold this view would approve of the laws of England practically as they now stand; that is, that, although a person may be constrained by an overpowering sense of duty to put down false religion, illegality, and wrong, he must not take the law into his own hands, and act so as to disturb, annoy, or injure his fellow-men. Sic utere tuo ut alienum non laedas.

Laws which in the long books deal with brawling, but not completely: amongst others, B. Whitehead, Church Law, London 1899, and Lord Halsbury, Laws of England, 1909. For of the precepts of Stephen's Canon Law, "According to the Canonists," etc. v. 'Brawling and Smiting,' is the fullest, but its date precludes the new statutes and cases. Archbold, Criminal Law, 1905, gives statute and cases to that date. The encyclopedias have short articles, the best being Larousse, Grand Dict. Univ. Paris, 1875, s.v. 'Sacrilege.' The ethical view is almost always ignored.

JENNIAM WHITEHEAD.

BRAZIL.—The area enclosed by the confines of the present Republic of Brazil contains four principal geographical divisions: the Amazon, the Carib, the Tapui-Guarani, and the Tapuya. But many of the sub-sections of these races overlap into territory outside the boundaries of Brazil proper, so that the information in this article must be taken as referring to the religious con-
exceptions of those four families as a whole, and not to those of them who are strictly confined to the territories of the Republic.

The above conception among the native tribes of Brazil is not very far advanced in the scale of belief. It consists mainly of a crude anthropomorphism. Indeed, it may be said that the distinction between the natural and supernatural has not yet been realized by them. Many of the agencies by which they believe the universe to be ordered are of a human or quasi-human character. They appear to be, for the most part, incapable of the abstract thought required to conceive of an eternal spirit, and their ideas of creation are purely empirical. The general theogony of the Tupi, for example, though extremely hazy, appears to consist in the primal idea of a universal maternal agent. Fetish and animistic beliefs are also widely prevalent; and, as in nearly every religion of the lower cultures, the explicit (or comparatively explicit) belief is accompanied by an extraneous and confused body of semi-legendary superstition, such as a belief in demons and evil spirits of the forest, river, and mountain. In the primitive groups, belief may vary with locality, and in the course of generations several may have attained the distinction of godhead, if the name may be applied to entities few of whose attributes appear to be truly supernatural. It may be said that the religious traits, and the ready manner in which they have intermingled with other stocks, have caused marked differentiation between the various tribes belonging to the family. At the present day most of them have ceased to be nomads, and are engaged mainly in hunting and fishing; certain of them, however, exist on an agricultural basis. Their principal divisions are: Northern group—Maypures, Atoars, Wapisanas, and other insignificant confederacies; Southern and Northern—Minanhas of the Juru River, Cananomis of the Purus River, Manaos of the Rio Negro, Catananas, Vauras, Melinakus, Yualapiti (all of the River Xingu territory), and Guanas, dwelling on the left bank of the Upper Paraguay.

1. The Arawaks. — The Arawak tribes are widely distributed over an area extending from the River Paraguay to the extreme north of the South American continent, and they have contributed largely to the formation of the existing stocks inhabiting the Antilles and Bahamas groups. It is generally admitted that they originated in the northern part of the continent; but their nomadic traits, and the ready manner in which they have intermingled with other stocks, have caused marked differentiation between the various tribes belonging to the family. At the present day most of them have ceased to be nomads, and are engaged mainly in hunting and fishing; certain of them, however, exist on an agricultural basis. Their principal divisions are: Northern group—Maypures, Atoars, Wapisanas, and other insignificant confederacies; Southern and Northern—Minanhas of the Juru River, Cananomis of the Purus River, Manaos of the Rio Negro, Catananas, Vauras, Melinakus, Yualapiti (all of the River Xingu territory), and Guanas, dwelling on the left bank of the Upper Paraguay.

(2) Cosmogony and ritual. — The theogony of many of the Brazilian tribes clusters round the cult of the god Jurupari, which is best exemplified by that practised by the Upper Purus. This god is invested with the utmost secrecy, and has been fully examined by Condreau and Stradelli. The name Jurupari (Juru-pari) signifies 'Issue from the mouth of a river,' and the myth of his birth states that he was the mere remembrance who possessed no sexual parts. She, however, conceived through swallowing a draught of cachiri, or fermented liquor, but could not be relieved of her offspring until, when bathing, she was bitten severely by a fish called 'Tarite,' which Jurupari took upon himself. The fish, however, incurred his enmity through eating the fruit of the :paxiuba tree, which Jurupari regarded as sacred; and for this offence he devoured them. Enraged at the loss of their children, the men of the tribe went to the beach of a great bowl of cachiri; but the women refused their assistance in its manufacture, and thus gained his ill-will. Their children likewise incurred his enmity through eating the fruit of the -paxiuba tree, and three days after his arrival, the men cut down this tree, and fashioned it into sacred instruments, which it is ordained the women of the tribe must never see. Should a woman of the Uapes set eyes upon any of the sacred symbols of Jurupari, she is at once poisoned.

This exclusion of women from the secret rites of the worship of Jurupari seems to point to some remote totemic origin; of which all but the mere remembrance who possessed no sexual parts. It would appear to have been an ancient apprenticeship among the Uapes which Jurupari, who was regarded by them as more of a demiurge than a god proper, might exercise upon the women of the tribe 'le droit d'un dieu.' Indeed, a myth exists which relates how one woman who had in her possession the sacred symbols was visited by Jurupari, and the burning exclusion of the women from his worship dates from that event.

On the days upon which the worship of Jurupari is to be celebrated, the men proceed from the place of his adoption, and come to the district, playing loudly upon pipes and flutes. Upon hearing the 'Jurupari music' the women shut themselves up in their houses, and do not emerge again until they are certain that all risk of their beholding the procession is over. The men then return to their headquarters of the priests, where the sacred symbols are exposed to view. These are the macaruarana and the paxiuba. The former is a black cloath without arms, descending to the middle of the body, and made of monkeys' hair interwoven with hair cut from the heads of virgins immediately after their arrival at puberty. The paxiuba is a portion of the palm-tree of that species, about the height of a man, and some ten centimetres in diameter. By a device consisting of holes bored in the part of the tree beneath the foliage, its leaves are made to tremble by the breath of the priest who evokes it.

The principal religious ceremony in the worship of Jurupari is the Danbeuriri, or initiation of the young men. This occurs six times a year and follows: the first on Jan. 1; the ucopo on Feb. 2; the mirits on March 3; the patunu on May 4; the uran on July 5; and the way on Nov. 6. Of all these indigenous fruits the Indians make intoxicating beverages. These are freely

the upper air; but multitudes are still believed to exist in bliss far below. Another Arawak version of the Creation asserts that the Great Spirit, existing in the heavens, placed Himself on a huge silk-cotton tree by a river side, and cut off pieces of its bark, which He cast all around. Those which touched the water became fish, those which touched the air, birds; and those which alighted upon the earth became animals and men. The Arawaks of Guiana are almost wholly in a condition of totemism.
partaken of in the accompanying revels, which are of the most riotous description. On the day of the festival those who have arrived at manhood are painted in black and red. They chant mournful melodies, whilst the pagés, or priests, join them in marriage to women of the tribe, who are then sent into the forest. Three men in barbaric costumes that closely resemble the Japanese samurai cloaks, disguised as Jurupari dress in the macacoura and symbolize the god's myth. The pagousto horn is then sounded, and the women return. Mutual flagellations commence, and the proceedings degenerate into a saturnalia. Jurupari is invited, but refused, to take his seat with the priests. It is significant that the vote be not present, as, if he were to have relations with a woman, he would be changed into a serpent.

The demiurgical nature of Jurupari is indicated by his relative position to Tukan, a primitive deity common to many Brazilian tribes. The Tukan of the Indians of the period immediately subsequent to the discovery of Brazil was by no means a beneficent deity, but typified the thunder, or any agency terrible or majestic. The first missionaries in this region were Cipriano de Castelo Branco, with God the Father, and the Christian reminiscences which we discover in the Jurupari cult doubtless had their origin in the old missionary idea of Tukan. The pagóstoes differ regarding the identity of Jurupari. Some say he is the son of All-father, whilst others construct a vague hierarchy from Jurupari the Terrible, the Tukan of the Indians ("the Good"), and the Tukan of the Whites ("the Mighty"). Jurupari is not at strife with Tukan, but rather supplementary to him; for whereas the former has a local and precise significance, that of Tukan is vague and general. Tukan, it is said, created Jurupari "for evil." When he visits the earth, Jurupari is always his guide. Jurupari dwells with Tukan in heaven; and if in life the men of the Uapes have honored the cult of Jurupari, they go to dwell with him after death. If they have not done so, they perish on the long road from earth to heaven. The women who behold the sacred symbols go to Bichiú, a place inhabited by inferior spirits—a species of purgatory; but if they have not the offended deity to go to the heaven of Jurupari. Tribes akin to the Uapes believe that those women who see the symbols are changed at death into serpents or crocodiles. In the heaven of Jurupari the dead hunt, fish, drink contra, and are honored with the usual symbols. Grief and envy are unknown. Those men who have transgressed on the route finally arrive at a hell, a badly-defined, shadowy extension of earth, where they continue the terrestrial life.

The Arawaks have a wholesome dread of evil spirits and forest-giants, which they designate conchenua. They have also a Jurupari of the Forest, an evil and malignant being, who, however, appears to bear no relation to the demiurge of the same name.

Enchantedness.—Among the Uapes the sacred, dotal caste of the pagés, or priests, is strongly organized in a hierarchy, and is subdivided into the urucu, or adepts, the assu, or arch-priests, and the mirim, or neophytes, who are very numerous. The secret of their organization is little known and well guarded. It is, in fact, a number of species of freemasonry, and candidates are initiated into the several degrees by similar processes. The pagés are also doctors, but, above all, exorcists. They possess magical formulae, which vary with each region, which the pagés act as mediums to demons whom they profess to have in their service, and others undertake invocation of the dead. The thoroughness with which they carry out their purely religious duties is remarkable. Even the children are examined and interrogated by them in secret regarding the cult of Jurupari. In fact, the initiation of the student into that cult lasts during the entire period of his life. Although the pagés resort to symbolism, they are not fetish-worshippers, and distinguish strongly between the symbol and the being it symbolizes. The macacoura is not merely another name for Jurupari (pangua). The Guaycurus of Paraguay possess a similar religious order, whom they call Vinagemeté, and who act principally as exorcists of the evil in man, which they designate naniga gigi. They believe that the goat-sucker bird and the screaming vulture, species of the genus pagis, who claim Jurupari, and in whose great sea-canoes they are sometimes presented to the tribe there is frequent communication. They also practise exorcism by fumigation. The dualism which the pagés of the Paris professed was in all probability communicated to them by European missionaries (Spix and Martin).  

2. The Caribs.—The Caribs, one of the first American races to come under the notice of the European discoverers, were until recently supposed to be confined to Venezuela, Guiana, and the Antilles; but since the time of Humboldt, they have been identified as the Carib and were consequently recognized as one of the races of America. Their names cognate to them in speech and physical characteristics in the very heart of Brazil—the Bakairi and Nahuas of the Upper Xingu, which they regarded as the Carib cradle-land. They were, however, the most warlike of the tribes, and in their great sea-canoes extended their piratical voyages to Cuba and Haiti, and permanently occupied some of the Lesser Antilles. On the mainland they were in possession of the shore west of the mouth of the Orinoco, nearly to the Coroadillas. From their name is derived that of the "cannibals," owing to their custom of eating human flesh. Most of the present-day Caribs are nominally Christians.

(1) Mythology.—The Caribs of the Antilles regarded the earth, which they called Mama Nono, as "the good mother from which all things come." Their mythological ideas corresponded with their degree of civilization, which was extremely primitive. The first ancestor of the Caribs created his offspring by sowing the soil with stones or with the fruit of the trumpet palm, which sprouted forth into men and women. They believed that a multiplicity of souls inhabited one body, and that, wherever they might detect a pulsation, a soul was present. All diseases, however, were regarded as spiritual or psychological, and there were no specific cures. When a man died, his soul entered the heart, which alone would be transported to the skies at death (anom. Voyage à la Louisiane fait en 1720). The seat of the deceased was named by them Huey Kú, the Mansion of the Sun, where, as in the Mexican paradise, the barbaric idea of bliss was to be obtained. With the Caribs of the mainland, some shadowy belief in resurrection seems to have obtained, as they were most punctilious in preserving the bones of their ancestors, which, after having cleansed, bleached, and painted them, they kept in a wicker basket full of spices suspended from the doors of their dwellings.

They possessed a culture-hero, Tammu (Grandfather), who was also known as 'Old Man of the Sky.' He appears to have been almost identical with the Nalusbalac Quetzalcoatl, the Quiché Gucumatz, and the Mayan Cuculcan, in that he was of light complexion, came from the east, and, after having instructed the Caribs in agriculture and the primitive arts, disappeared in the direction whence he came. His tribe belonged to the Caribs and was identical with one of the Guaraní (the Guaraní of Paraguay, and Ehrenreich with the Kañu of the Arawaks (a culture-hero), and the Kaboi of the Karayas. In the legend of the latter he dwelt
with their ancestors in the under world until a bird, the *Dicholophos cristatus*, by its call, led them to life and light in the upper world. With the Caribs the sun and moon shared sovereignty with the earth as the supreme beings of the Universe. It is almost certain that the god Hurakan (Hurquran, Hurcan, Hurcugar, 'hurricane'), who figures in the Quiché *Popol Vuh* as 'the Heart of Heaven,' the supreme god, was of Carib origin, although it is possible that he may have been borrowed by the Caribs from the indigenous tribes of the Antilles; but von den Steinen gives the Carib form as ye'lo', 'thunder,' whence Island-Carib *tqatloq*.

(2) Priesthood.—Although the Carib religion was of an extremely primitive type, it was well organized by a hereditary class of shamans called *piaye*, similar to the *pajés* of the Arawaks, to whom the Caribs were probably ethnologically related. This class exercised unlimited power, and, besides performing the elaborate religious rites appertaining to their worship, were, as with the Arawaks, exorcists.

3. The Tupi-Guarani.—This stock, so called to show the ethnic affinity existing between the Tupi of Brazil and the Guarani of Paraguay, originally advanced in a northerly direction from the River Plate region toward the coastlands, which it thenceforth occupied as a maritime people. It is now represented by tribes occupying various belts of country in a territory so vast as that between the rivers Maroni in French Guiana, to the north, and the Plate, to the south. In Guiana the principal divisions are the Oyampi and the Emerillos, in Brazil proper the various tribes of the Central Plateau, and in Paraguay the Guarani. These various tribes were at one time addicted to cannibalism, but large numbers have become Christianized and have retained their ancient beliefs. They speak a dialect of the ancient Tupi language, called the Lingoa Geral, which was standardized by the early Portuguese missionaries for their own use, and gradually became the general tongue of the Amazonian tribes. Tupi branches are also found in Argentina and Uruguay.

(1) Cosmogony.—A certain magician, Irin Magé, is credited by the Eastern Tupi with the creation of seas and rivers, and at his intervention Monan, the Sire, son of his wife Talé, ignites the Divine fire, with which he had resolved to destroy the world. An early account (Hans Staden, 1550) states their belief in a destruction of their ancestors by a powerful supernatural enemy called Maia, who sent upon them an inundation, from which only a few were saved, by climbing trees and hiding in caves—a variant of the *Popol Vuh* legend. The same authority gives the names of three brothers—Krinem, Hormittan, and Coem—from whom they claimed descent; and the Guarani speak of four brothers, and give two of their names as Tupi and Guarani, parents of the tribes called after them respectively. These four brothers are identical with similar quadrettes in other American mythologies, and typify the cardinal points of the compass.

(2) Theogony.—The theogony of the Tupi is a simple natu-ro-worship, although much confusion exists among authors as to its constituents. The Viconte d'Itabavyana sees in Tupi belief the quality of dualism (a rare occurrence in American religions). De la Rocheboeuf says that Tupa, the sun, stands for their principle of good, and Toru-guenket, the moon, for their evil principle. The latter is supposed to fall periodically and wreck the earth; and all baneful influences, such as storms and floods, proceed from her. Mangahães (*O Selvagem*) is of opinion that Tupi theology rests on the primal idea that all created things have a mother or maker, who is responsible for the general scheme of animate and inanimate matter. There are, further, three superior deities, to whom are ascribed the making of the various natural families. These deities are: the Carib god of nature and animals; Jacy, the moon, creator of plants; and Peradá or Rudá, the god of love, who promotes the reproduction of human beings. Each of these is assisted by inferior beings. Subordinate to the sun are the Carib god of nature and animals; Anhanga, who protects the field game; Cavá-pora, who protects the forest game; Uayanará, who guards the fishes. Under Jacy are Saci Cerénc (in South Brazil) Mhoitatá, the fire-snake, who protects the country from fire; Uruná, the phantom-bird; and Curupirá, the guardian of the forests. Subject to Rudá are Cáiré, the full moon, and Catití, the new moon. Each of these, in turn, has as many inferior assistants as the Indians admit classes; and these are served by as many beings as the Indians admit species, and so on, until every lake and river and kind of animal or plant has its protective genius or 'mother.' Brinton describes this polytheism as 'simple animistic nature-worship.' Though this may be said to apply to the Tupi race at large, yet it is not probable that the tribes vary with locality; and this fact accounts for the seemingly widely differing accounts of Tupi theogony furnished by its several investigators.

With the Guarani, the southern branch of the Tupi, belief and worship appear largely to cluster round the figure of the god Zumé, a culture-hero, probably identical with the Carib Tamm. He, like other American culture-heroes, 'came from the East'; but the Guarani, according to the myth, were more impressed by the native divinity than attempted to contrive him away with arrows. These, however, he caught, and hurled back upon his tormentors, and, dividing the waters of a neighbouring river by his Divine power, he walked to the other bank dryshod, and disappeared from view. He indicated to the Guarani his intention of returning in order to gather them into towns, and rule them in peace. Zumé is, of course, like the Mexican Quetzalcoatl, the Man of the Sun, the civilizing agent. He has been identified with Cemi, an Antillean divinity who is supposed to have passed under various guises throughout South America.

A less mild personage is Tupan or Tuppen,* the god-in-chief of the Tupi proper of Brazil. The earliest notice of this god is that of the missionary Père d'Evreux, who directly conversed with him under the name of God the Father. He alone of the four brothers survived the Flood, and became the highest divinity of the Tupi, ruler of the lightning and the storm, whose voice is the thunder. He is, indeed, the Tupan of the Arawaks, who, although of Arawak stock, have been deeply impressed by Tupi beliefs. Anhanga, protector of field game, is sometimes opposed to him as an evil principle; but it is vain to affect to discern dualism where the notion of divinity is so slight, and that of anthropomorphism so strong. In any case, it cannot be an ethical dualism, but merely the opportunistic invention of the priestly caste (see remarks on American dualism in Brinton's *Myths of the New World* and Spence's *Popol Vuh*). There is not wanting evidence, however, that Tupans, or, rather, their divinity, have been assimilated to other Carib beliefs. Anhanga, the protector of field game, is sometimes opposed to him as an evil principle; but it is vain to attempt to discern dualism where the notion of divinity is so slight, and that of anthropomorphism so strong. In any case, it cannot be an ethical dualism, but merely the opportunistic invention of the priestly caste.

(3) Inferior spirits.—Many of the Amazonian

---

*The name is derived by Tatinin (*Anthropos* II. 209.) from *tuba upayen*, 'Father of All.'
traces of the Tupi have an elaborate system of myths clustering round the toborize—a favourite figure in South American folklore. In these many inferior spirits are the principal actors, the most important being Tapuyas, Karaparos, the wood-buffalos, and Oiri, the water-sprite. Paiitama, the 'wonder-monkey,' is no simian, but the son of a woman belonging to a tribe of females with only one husband. He possesses miraculous powers, which he uses to discomfit his enemies in an amazing manner.

4. The Tapuyas.—The Tapuyas or Ges tribe are the oldest of the Brazilian races. They are best known perhaps by their name of Boctudos, from a lip-peg (botoque) which they wear. They are Siouan, and profess a passage over the Andes from the peninsula of Goajira in the north to the borders of Chili, and in large numbers in Eastern Bolivia. Their principal divisions are the Karayas, the Kayapos, and the Suyas of the rivers Xinga and Arunyaya. They have not as yet realized the distinction between the natural and the supernatural. The universe is kept together or disturbed, as the case may be, by human or quasi-human agencies.

The Karaya Flood-myth relates that the hostile demon Amatina originated the Deluge, and sent fallen stones and birds to smother those who had taken flight to the hill Topirapé. The Ges attributed the building of the earth to the water-hen Sarcacra, which fetched earth to the hills, where those saved from the Flood congregated, so that the area of safety might be enlarged. The Karaya ancestral god, Kabo, led his people from the under to the upper world by the cry of a bird. All these myths, though in circulation among the various tribes of the Tapuy tribe family, have their counterparts in many other American mythologies. It cannot be discovered, however, whether the Tapuy tribes worship those 'deities' to whom they give the credit of creating the cosmos. Indeed, there is good reason to believe that they do not. 'They have,' says Britton, 'no definite religious rites, but are careful to bury the dead, and have a belief that the spirit of the departed survives and wanders about at night (Amer. Race, p. 144). They are firm believers in metempsychosis, and the appeasement by mimicking of those vague powers which cause natural phenomena. Thus they make a burning brand and shoot it into the wind so as to cool the furies raging in the storm. Semi-religious dances are common among them. They are, in fact, on the borderland between totemic practice and the anthropomorphosis which generally succeeds it, as is proved by the circumstance that a sub-stock, the Tucanos, take their name from the toucan bird which they adopted as the totem of their tribe.
frequent in occurrence and more obscure in significance. They seem to have done with the function of breath in connexion with digestion. Deussen's renderings are 'up-breathing' (Aufatmung) and 'all-breathing' (Allatmung); see his Philos. of the Upahnads, 279-280. Ewing's various allusions to this subject are derived from the prāṇa-series (op. cit. 260-287) should be compared.

In modern times the Hindu yogi-aesthetics and certain of the advanced native thinkers of India still look upon breathing as a science to be cultivated not only by ascetics. The practice of appropriately regulated breathing, they maintain, affects not only the vital activity, but also the mental activity, and produces corresponding psychic results. The complete control of the vital breaths, even to suspending the breath for a considerable length of time, brings with it a mastery over all the forces that govern both mind and body. For some of the claims still made by living exponents of these views, reference may be made to the writings of Rāma Prasad and the Śwami Abhijñānandā, cited below.

LITERATURE.—The full titles of the chief works alluded to in this art. are: Ewing, 'The Hindu Conception of the Functions of Breath—A Study in the Greek Origin of Hindu Philosophy'; Ewing, 'The Veda' (vol. xxii. 431-433, New Haven, 1901; Deussen, Allgem. Geschichte der Philosophie, i. (3 parts), Leipzig, 1894-1905, his Sachz. Upaniṣad-das des Veda, Göttingen, 1894, 289-328, New Haven, 1901; Deussen, Allgem. Gesch. der Philosophie, i. (3 parts), Leipzig, 1894-1905, his Sachz. Upaniṣad-das des Veda, Göttingen, 1894, 289-328, New Haven, 1901; Ewing, 'Breath', 'Inhalation, 'expiration,' 'expiration,' and Ewing, in the works alluded to already, and quoted with full titles at the end of this article. So painstaking and exhaustive an examination as that made by Ewing (op. cit. 250-275, 305) proves that the first member of the series, prāṇa, breath in general, designates either the double process of respiration or, more particularly, 'in-breathing,' 'inhalation,' as contrasted with 'out-breathing,' which is designated more especially by apāna, 'exhalation,' 'expiration.' These two series are generally united in a triduva-compound, and are used to denote the composite act of respiration. This very frequent occurrence of compound has caused their common long a (which is etymologically correct in connexion with prāṇa)呼吸, and is to be assumed analogically by the other three members of the group (in which the long a is not authorized by composition of the consonantal prefixes vy, ud, san, with an). As to the meanings assigned, it should be noted, however, that Deussen maintains that prāṇa only signifies 'expiration' (Ausatmung); and apāna, 'inspiration' (Einatmung); see his Allgem. Gesch. d. Philosoph. i. i. 294-303, i. 248-252, i. 69-72, 441, 492, 605, 627, 649, and his Das System der Védánta, 339-364. Ewing (op. cit. 260) strongly combats the point. His own investigations, moreover (op. cit. 275-276), tend to show that apāna denotes not only 'out-breathing,' but also the physiological breath-functions of that part of the body below the navel. The 'breathing apart,' appears to denote a ceasing or suspension of the common process of breathing, which forms a sort of connecting link between prāṇa and apāna, though separate from them, and occupies also the interval between respirations (see Ewing, op. cit. 277-283). Deussen's rendering of the word is 'all-breathing' (Allatmung). The other two terms, udāna and samāna, are less

BRETHREN OF THE COMMON LIFE.—1. Founders.—The Brethren of the Common Life represent one of the most successful of the many attempts made in the Middle Ages to establish a monastic rule based on the simple life of piety. Some of their external arrangements were similar to those of the Beghards and Beguines, but their organization was more closely connected with the system and discipline of the Church, as was intended by their founders, Gerard Groot and his chief disciple, Floriën. Gerard (1340-1384) was the son of Werner Groot, a wealthy citizen and magistrate of Deventer. He took his degree at the University of Paris, acquiring a considerable reputation for talent and attainments, and then went as a missionary to Cologne, which had long been a centre of learning, and subsequently became a university town. Here he combined the pursuit of study with worldly amusements, and became very popular among his associates. Converted by the efforts of a member of his native town, he joined a Carthusian monastery, he completely changed his mode of life. Throwing off his elegant clothes, he assumed the simplest and humblest dress, while for his inward improvement he withdrew for three years into a Carthusian monastery, where he spent his time in meditation and self-discipline. He also visited the saintly Ruysbroeck, prior of the monastery of Grünthal, to whose spiritual influence he owed much of the progress of his soul. After five years he came forth as an evangelizing preacher of great force and persuasiveness, full of zeal for the revival of truly spiritual religion among the people at large, and anxious for the reform of the monks and clergy. He was ordained deacon, but never regarded himself as worthy of the priesthood. For three years and a half he lived as an itinerant preacher in Holland and the Netherlands, with the result that he drew many souls out of worldliness and sin and led them to holiness of life. His success, and his severe condemnation of the laxity of the clergy, however distressing, led many of his hearers to a reading; and the Bishop of Utrecht was persuaded to

silence him, by withdrawing licences to preach from deacons. An appeal was made to the Pope, but it is uncertain whether this was successful, for Groot died soon after, in his 44th year. He was prematurely cut off by the plague, caught while visiting a sick friend. But he had had time, with the co-operation of some faithful citizens, to plan arrangements for confirming his converts in Christian ways. These two good men sought to establish Brotherhoods and Sisterhoods, in which those who had been rescued from worldliness might find refuge, and they decided on the foundation of some monasteries which would supply and means of guidance to the inmates of the Houses, and might also offer a model of monastic reformation. The movement received the name of the 'moderna devotio.' Groot had some years before his death given over his own spacious house to the town authorities of Deventer at an abode for widows and maidens who should live together in piety and good works. The Brotherhoods were also begun at Deventer, while the first monastery was established at Wintershein. It was Augustinian, and was the first reformed monastic house in Europe, and many reformed monasteries. The next was founded on Mount St. Agnes, near Zwolle. A brother of Thomas a Kempis was the first prior of the latter, and Thomas himself, after his education at Deventer, was its first Abbot.

2. Regulations. — In common with all pious persons in the medieval Church, Groot regarded the career of the monastic regulars as the highest; but his societies were intended as a link between the monks and the people, and his Brotherhoods and Sisterhoods formed a kind of modified monasticism without any vows. Their members, living a common life in their respective houses, were to work for their maintenance, to give what they could save to the poor and sick, and to interest themselves in the schooling of the young. The members of a Brotherhood were drawn from various classes. The educated copied books, as was done in monasteries, and, later on, attended to printing them, while those who had been brought up to handicrafts practised these for the benefit of the House. The hours of prayer and of attendance at Mass were diligently observed. There were several priests in each house, besides the lay members. The head of the community was called 'rector,' and implicit obedience to him was required of all, as of the 'procurator,' who was the general manager. Various officers were chosen, as those of librarian, sacristan, warden of the infirmary, down to the humbler ones of tailor, baker, and cook, were distributed among the Brethren. Besides being called Fratres vitae communis, the brothers acquired several other appellations, such as Fratres bone voluntatis, from their benevolence, and Fratres cucullati from their cap or head-dress, and they were often called Lollards by their enemies, though they had no real connexion with the Hussites or their creed. In later years, they also acquired the designation of Fratres Hieronymiti, 'Brothers of St. Jerome,' who was regarded as a patron of learning. The dress of the Brothers was black or grey; for priests and clerics it went down to the feet, for lay brethren to the knee; and a black cap was worn on the head. The under garment was washed every month in summer, every two months in winter. On entrance into the society each man could deal with his property as he liked; but if he once gave it over to the House, it was to pass, until his death or his leaving. The Brothers rose at half-past three in the morning, and went to bed at nine in the evening. During the day an interval was allowed for repose. Dinner was at ten o'clock, supper at five. At meals the Scriptures or the Lives of the Saints were read, the Brothers taking a week each, from the seniors downwards. Meat might be eaten on Sundays, and other days except Fridays and fast days. Their drink was one little mug of beer of the small size out of which wine was usually drunk (Dumbar, Analecta, i. 14). Many of them indulged in the horrible and excessive fasting, in a degree not required by the rules. Constant industry, according to the previous training of each man, was inculcated; and where there was a farm or garden, outdoor labour was required. All these activities of the Brothers contrasted strongly with the beggary habits of the friars, who were mostly living in idleness, and became in consequence the bitter enemies of the Brothers; while the domestic work of the Sisterhoods and their instruction of girls made them appear to great advantage as compared with the degenerate nuns. It might well be supposed that these hard-working and devout societies would have been commended of all men, but the friars succeeded in raising much opposition against them, while among the people at large the reverence which was felt for the regulars and monastic orders, bound by lifelong vows, was not bestowed upon the more secular system of the new society, till eventually they were known by their fruits and became respected for their good deeds.

It was doubtless the power for the common man, in so much, at any rate at first, as they were thereby guarded from the temptation to pride which beset the old religious orders. The opposition, however, was carried to the verge of persecution, for at the Council of Constance a Dominican named Grabow accused the Brethren of the Common Life, and maintained that it was a mortal sin to form a community without the vows of poverty, obedience, and chastity. They were, however, defended by their friends and supporters, the Wintershein monks, and also by German council condemned Grabow, and offered him the choice of retraction or the stake. Several Popes also had the good sense to support the Brotherhoods and Sisterhoods by their rescripts.

3. Influence on education. — The eventual estimation of the Brothers among the people at large was mainly promoted by their devoted efforts on behalf of the religious education of boys. At their first centre, Deventer, they boarded many of the scholars who attended the noted school already existing there, and taught the boys Latin and Greek. In 1418, a group of former soldiers, members of one of the houses called the Friars of St. Augustin, founded at Wintershein a house of deaconesses, and appointed Thomas a Kempis their first superior. In 1419 they opened a school for boys, and in 1425 the Brethren from Wintershein were allowed to open a school for girls orphans. In 1422 a Brethren's school was opened at Heerenveen, and in 1423 at Nijmegen. In 1425 a school for girls was opened at Zwolle. The Brethren and the friars frequently invited the help of the Brothers, and induced members of their Society to settle in their midst, providing houses for them. In some places they were entrusted with the reorganization of the schools. Distinguished and pious schoolmasters, such as Heclius at Deventer, Onser and John Cele at Zwolle, were in close touch with the Brothers, and there can be no doubt that not a few of the latter became teachers of classics as well as of religion. When the culture brought in by the Brethren had already spread throughout Holland and Frisia, it was extended to Germany, through the energy of Rudolph Agricola and others, it gradually won over many of the Members of the Brotherhoods, and added thereby to the effectiveness of their educational labours. In some of the schools there were more
than a thousand scholars, and the spectacle of devoted men giving their lives for the rising godhead in true religion and sound learning gave new hope to all who had the good of their country at heart. At the same time it must be admitted that it was the aim of the Brothers not only to produce good laymen and priests, but also to have maintained their formation novices; and Erasmus complains that they unduly pressed their youths to enter monastic life. This was certainly not the case with Florentius, but it may have been so later on; and we must remember that the monasteries were the last of the guardians to become a monk, because they had wasted his patrimony, so that he was somewhat prejudiced.

It has been sometimes stated that the Brothers founded schools of their own, but this is a mistaken notion; for the monasteries were not establishments in schools belonging to them, as has been usually alleged. He attended the public schools, while boarding with the Brothers and receiving religious teaching from them. Their educational labours continued for about a hundred and fifty years, and the schools in which they had taught came under the influence of the Jesuits. The Lutheran Reformation occasioned the Roman Catholic movement which has been called the Counter-Reformation, and the Brothers, being not less devoted to their pushing and aggressive methods, even opposed the most moderate and quiet work that the societies founded by Groot and Florentius had carried on.

In connexion with the name of Florentius Radewin (1520-1600), we have to notice the boyhood of Thomas à Kempis (1400-1471) before his entrance upon the life of a monk in the Augustinian convent of Mount St. Agnes. His life was spent in the school of Deventer, and was brought into connexion with the saintly Florentius, who had, for the sake of being near Gerard Groot, given up higher ecclesiastical emoluments to become one of the Vizars of the collegiate Church of St. Leuven. He was, after Groot's death, the recognized leader of the societies that Groot and he were establishing, but he did not become at first the Rector of the House at Deventer. He had in fact that office for two terms only, was appointed as an missionary to England, and his winning and gracious manners and a natural dignity of bearing had given him a predominant influence for good. He befriended the youthful à Kempis and placed him with a devout widow, receiving him for a part of the time into his own house. It is not too much to say that we owe the splendid edition of the Imitatio Christi, which was so generally used by a Kempis, and even the entire text of the life of the saint, to the efforts of this saintly character of Florentius. Among many such writings the Imitatio Christi is usually included; and, if we fully believe what the father of that book of devotion is usually ascribed to the debt we owe to the reverend abbot Martinus,' another disciple of the same name. Thomas himself has commemorated Groot and Florentius and some of the early Brethren in a remarkable work, which has long been considered as his own; the Imitatio Christi. In this he gives most interesting details of his spiritual Father and Rector, as well as of other members of the House. A short sketch of a youth of his own age, named Arnold of Schoonhoven, who was his model of piety, closes these valuable memoirs. They are also interesting as affording one among many evidences of the Imitatio having been composed by a Kempis. Dr. Hirsch, in his Kritisch-exegetische Einleitung, brings forward a number of questions to show the similarity of many expressions in these biographies to those in the Imitatio. It may be added that the lives of the founders and brothers so recorded afford an impressive illustration of the precepts of that manual of devotion, and exhibit a spirit of devotion and the same degree of religious thought. It is scarcely too much to say that the Imitatio cannot be fully understood without a perusal of these records.

4. Doctrines.—The remarks just made bring us to the question as to the doctrinal limitations of the Brothers and their kindred monks. Groot was a firm adherent of all the dogmas of the Roman Church, and had even been called matheus harethorum, 'the hammer of heretics.' When the saintly Baysbroek expressed himself, as Groot thought, as a mystic, and defended the spiritual devotion of mysticism, he opposed his sentiments. Yet if we take the word 'mysticism,' which may be used in many senses, as meaning the personal and inward realization of spiritual truth imparted by the Holy Ghost as contrasted with a mere outward and formal religion, we shall find it present in the teaching of Groot and Florentius and in that of Thomas à Kempis; and some of the Windesheim monks were even more definitely mystics. Yet none of the earlier Brothers would have allowed himself to question any belief that was a part of the Papal system. And those writers are wrong who have maintained that the Brothers of the Common Life were 'Reformers before the Reformation.' In one respect, indeed, they were reformers, but they never intended to be so in the sense that we associate with Protestantism. This point was their spur, as in the true mystic's love of reading the Scriptures in the vulgar tongue; but they did so without any doubt regarding them to as the Bible being fully consonant with Roman doctrine. They wished laymen to study Holy Scripture for their personal improvement, and frequently gave unfavourable addresses to them in their houses on those that bore on practical duty. Among the Brothers at Deventer, Gerard Zerbolt, one of the librarians, was the strongest advocate of translations of Holy Scriptures being supplied in the vernacular; and his arguments are well worthy of study in the treatises that he put forth, and which still exist.

When, later on, the Lutheran Reformation began to make progress among the Brethren of the Common Life were found, as was natural, on the side of the Papacy; yet in time the new doctrines made their way into some of the houses, and individual members were won over by them. After a while several of the Brother-houses went over entirely to the Reformed faith, and that at Wesel received the warm approbation of Luther himself.

The welcome given in many towns to the greater freedom of doctrine promised by the Reformers damaged the continuance of Brother-houses in which the Roman teaching was still maintained; but a few here and there survived for a long time: and while the educational work passed either to the Protestants or to the Jesuits, some Brother-houses lingered on till suppressed by Napoleon Bonaparte. The Sister-houses, begun in the first instance by Groot himself at Deventer, became widely extended, and accomplished good work in the training of girls, as well as in copying books, in miniature painting, and in the humbler offices of household duty. The Superior was usually called Master Willem, or Willem de Busch, and the name of the society which has given the treatises of Thomas à Kempis an encomium on the duties and influence of a woman who thus cares in practical matters for the welfare of the devout. There was usually a priest attached to the Sister-houses who acted as ruler and confessor. Among the most remarkable of the latter was Brinckerkens, who ruled Groot's house for women at Deventer. Some of his addresses to the Sisters still exist, and are full of helpful words of encouragement for the spiritual life. A good many of the Sisters eventually joined the German and regular houses.

It has been stated that the monasteries of Windesheim and St. Agnes, and others afterwards established, were a part of Groot's scheme, and remained in close sympathy with the Brothers. A code of regulations, by Busch, a contemporary of a Kempis, contains many references to Groot and Florentius, and extracts from their letters, which show that the spiritual teaching in both these parts of Groot's system was identical, and that Florentius, when Rector of the House at Deventer, exerted himself as to encourage the mendicant Brothers to take the vows at Windesheim, or elsewhere, fully knowing the danger it had been to monasteries to receive persons who had no adequate vocation for lifelong devotion. The Chronicle of Mount St. Agnes was written during
his life by à Kempis, and a touching notice of his death is added at the close by another hand.

LITERATURE.—I. ORIGINAL SOURCES.—The most readily available of these are the Brethren of the Free Spirit, the work of Gerard, Firmin, and others. Thomas à Kempis, in the edition by Sonnemans, in the 17th cent., has been the text of a number of Brethren's editions: Opera et littera (1621); Opera et littera, edita in Brethren's edition, 1774; Eng. tr. The Founders of the New Devotion, by J. P. Arthur, London, 1871; Opera et littera, edita in Brethren's edition, 1774; Eng. tr. A Kempis, The Imitation of Christ, tr. by F. W. H. Myers, London, 1881; Grube, with the Liber de reformatione monasteriorum, Halle, 1886 (an indispensable source for the study of Gerard Groot, and the only source influenced by his work); and a number of Gerhard Zerboi's Beatus vir and Hono quisdem, by J. P. Arthur, London, 1869.

II. MODERN LITERATURE.—Delprat, Verhandeling over de Broederschap van G. Oost en over ten inwend der Fraterskaten, Utrecht, 1830 (revised ed. Arnhem, 1856); Acquoy, Het Klooster te Windesheim en zijn inlaat, 1873-1889; Hirsche, Kritisch-exegetische Einleitung in die Werke des Thomas van Kempen, Berlin, 1857; tr. on 'Gerard,' 'Firminus,' and others in PRE 3 (editions); tr. on 'Brother des gemeinsamen Lebens' in PRE 4 (Ullmann), in PRE 5 (Hirsche), and in PRE 6 (Schultze). Of course, the articles by Hirsche give the development chiefly of the outward development. See also K. Grube, Grote Broederschap, Cologne, 1883. One of the most valuable treatises on the characteristics and work of the Brotherhood is that by E. Möbius, Leipzig, 1847. Bonet-Maury, Gérard de Groot et du Groot, 1875, contains much of Gerard's writings, and extracts from them. Kottewell, Thomas à Kempis and the Brethren of the Common Life (abridged), London, 1845; tr. by G. A. E. Groot, 1875. There is no better more recent criticism and information. An interesting sketch of the Brethren of the Common Life is contained in Leech's History of the Jews in the Netherlands, London, 1893; Hants and C. Crisp, Thomas à Kempis: a Visit to the Sources in which his Life was written, is of a very valuable account of the bibliography and literature of the whole subject. A further list of original sources is given in S. Harvey Gem, Hidden Saints, the Brethren of the Common Life, London, 1894.

S. HARVEY GEM.

BRETHREN OF THE FREE SPIRIT.—This name has been given to mystic-pantheists who emerged in the 13th cent., were associated with the heretical Beguines and Beghards, and continued generation after generation down to the 16th century. Mosheim found, as he thought, their characteristic doctrines in writings of the 11th cent.; but it is safer to connect the origin of the Brethren with a speculative movement of the 13th century. At the beginning of that century there was a philosophical revival, which was quickened by Aristotelianism mixed with Neo-Platonism and introduced to the West in an Arabic dress. Under its influence David of Dinant introduced the speculative philosophy of Aristotle; at the same time Almaric of Bonne, also affected by the Oriental Aristotelianism, set forth mystical doctrines which were accounted pantheistic and therefore dangerous to religion. At Paris in 1204, Almaric was charged with teaching 'quod quidlibet Christianus tenetur credere, esse membro Christi, nec aliquem posse salvari, qui hoc non crederet.' On an appeal to Rome he was condemned; and it is evident, therefore, that his teaching must have had some meaning other than the literal. A doctrine of the holiness of all, held with Christ, since it was judged to be heretical.

Thomas Aquinas, enumerating three errors regarding the being of God, distinguished between David of Dinant and Almaric:

'Alius habet, quod omnes indissolubilem formam unius rerum, et se habet dicetur quae ipsum Almaricarius. Sed tertius error est David de Dinando, qui sibi ponit posse esse membro Christi, nec aliquem posse salvari.'

Though the men were both dead, a Council in Paris in 1209 condemned their works; and it was asserted that Almaric had inspired the dangerous doctrines of the Almaricians, as they were called. Arnauld of Paris declared this was 'imperturbably true.'

'Pater in Abraham incarnatus, Filius in Maria, Spiritus Sanctus in nobis quodque incarnatur—omnia unum, quia quidem unum est.'

Further, the Almaricians were accused of teaching that now, in the time of the Spirit, salvation in no way depends on the sacraments of the Church, and that what are accounted sins of the flesh are not sins if done through love. It was not likely that these men would escape the censure and punishment of the Church, and a persecution directed against these heretics was begun in Paris in 1210, and in 1212 was raging in Strassburg. Among those who perished at Strassburg were Orlichens, a name derived from Orlib, whose teaching marked him as a follower of Almaric.

These men were hardly entitled to be considered speculative thinkers, but none the less they were elements of pantheism and mysticism in their principles. They maintained that the uncreated universe is eternal, and that, while there is no resurrection of the body, immortality is for all. The Trinity was represented in some mystic fashion by three members of their community. They were not charged with carnal practices, but they roused ecclesiastical opposition by repudiating the sacraments and ordinances of the Church as unnecessary for men united with God. In 1215, at the fourth Lateran Council, the theories of Almaric were one more condemned, and condemned with the full authority of the Church. The mystic-pantheistic doctrines set forth by the Almaricians were not crushed, however, by the persecution of 1210, by the Lateran Conclave of 1215, or by more recent ecclesiastical condemnation; for they made a strong place in 1216, as they were wide-spread, and had reached even the Waldenses, in the middle of the century, when they were attacked by Albertus Magnus. The opposition of Albertus did not stay the progress of these doctrines, and they began to affect the Beguines and Beghards, who, though they had long enjoyed the blessing of the Church, were exciting suspicion by their fanatical landation of poverty. In these communities, prophets or teachers appeared who taught that God could best be served in freedom of spirit, and they and their converts were known as 'Brethren of the Free Spirit.' The orthodox Beghards and Beguines suffered from the evil reputation of the heretics, and the Franciscan spiritalists, often confused with the Beghards, suffered in the same way.

It is difficult to determine the circumstances under which the name of 'Brethren of the Free Spirit' was adopted or applied, and also to discover the author of the phrase. Lea in his History of the Inquisition (ii. 521) says:

'Even the writers of Heisterbach (died c. 1240) argues that much is permitted to the saints which is forbidden to sinners: where is the spirit of God, there is liberty—have charity and do what ye please. The word had once been spoken, it could not be hushed to silence.'

In an episcopal letter of 1317, quoted by Gieseler (Lehrbuc., viii. 90), the writer enumerated the errors of those who:

'quos vulgus Beghardos et Schwestrosos nominat, ipsa vero et ipsae se de secta liberis spiritus et voluntariae paupertatis partos fraternos vel eorum vocant.'

The name, whatever its origin, was directly associated neither with pantheism nor mysticism, but with the liberty of which Conarins of Heisterbach wrote, and for which Pauline authority was claimed. Yet this liberty was asserted not as mere licence, but as the natural right of men with the Divine Spirit.

The logic of the doctrines of the Brethren is intelligible. God is what is, and men, being of Him, come from and return to Him. There is therefore neither purgatory nor hell, and the sacraments are the result of the goodness of God needed. As man is essentially Divine and is able through contemplation and withdrawal from things of sense to know himself united with God, he can in his freedom do what God does, and must act as God would act if he were not separate from Him. The free man neither virtue nor vice. God is all, and all is God, and all is His; and men are therefore free to take or beg their bread, so that they
BRETHREN (Plymouth)—In the 2nd quarter of the 19th century the State Churches in Great Britain were worldly and dead; the Dissenters were orthodox and cold; the great Evangelical Revival was on the wane. Edward Irving had translated Ben Ezra's *Breviary*, the *Commentary on the Messiah* and *Majesty*. He had been greatly movedby it, and was preaching that the Lord was coming. This had stirred people of all classes, and it seemed like the midnight cry: "Behold the Bridegroom cometh; go ye forth to meet him." It was in the light of things that the movement of Brethrenism originated (1827). The first 'Brethren' was Edward Cronin, a doctor, who felt that true Christians, being one body in Christ, ought to be welcomed to the Lord's Table, wherever His Table was spread. But the movement received it with cold and direction from men far exalcing Cronin in gifts and power. Anthony Norris Groves, a missionary to Syria and India, suggested to John Gifford Bellett, a lawyer: 'This, I doubt not, is the mind of God concerning us, that we should confess in all simplicity as disciples, not waiting on any pulpit or ministry, but trusting the Lord will edify us together by ministering to us, as He sees good, from ourselves.' This idea got hold of Bellett's mind, and was the germ of the movement. With Francis Hutchinson, John V. Parnell (afterwards Lord Congleton), and others, he organized a meeting in Hutchinson's house, to which Cronin came. In 1830, at Parnell's suggestion, they removed to a large room in Angrier Street, Dublin, where the Brethren of that name, meeting on the 2nd of each month, were known as the Society of Jesus. "The first Brethren's meeting was the wonder of his day and the admiration of his friends. The way in which he controlled the Brethren for fifty years exemplifies this.

Groves asserted that ordination to preach was not needed by a spirit-gifted minister; Cronin, that there was only one church-membership, viz., the body of Christ; while Darby, in a pamphlet written in 1828 (while he was a clergyman in the Irish Church), entitled 'The Nature and Unity of the Church of Christ,' set forth the principles of gathering to the Lord's name and the Church's union with Christ. Thus, Cronin, Groves, Bellett, Parnell, and Darby were the founders of the movement. It would be difficult to determine the relative influence of the first four, but, undoubtedly, Darby was the great leader and teacher.

To the company in Angrier Street many were brought under rule. Even then, however, the doctrines were not altogether suppressed, for in 1492, Friar John of Moravia was burning Husseits and Beggars; and in the Libertines of the Netherlands, France, Germany, and Switzerland who were their forerunners, were found doctrines and practices associating them with the Brethren of the Free Spirit.

J. HERKLES.
added between 1830 and 1832. At first they did not think of separating from the Churches around. This came as the result of their principles and practice, and when they increased in power and numbers. Darby visited Oxford in July 1830, where he met, amongst others, B. W. Newton and G. W. Miller, and became aware of the influence and power. A meeting was formed at Plymouth. Newton and other able men ministered there for years. From it the name ‘Plymouth Brethren’ was derived, while from Darby the name ‘Darbyites’ was received. Newton had a special commission of prayer, and from the outset, and became the most prominent leader at Plymouth. George Miller, brother-in-law to Groves, was the co-pastor with Henry Craik at Bethesda Chapel, Bristol. Both these and their congregation, in a measure, adopted the principles of the Brethren. A few brethren joined them, and one meeting was formed, but most Brethren now think this was a mistake. A gathering was formed at Rawstone Street, London, and meetings sprang up both in England and Ireland. Between 1832 and 1838 meetings were held in London at Powercourt’s mansion, Co. Wicklow. They were attended by eminent clergymen, and Darby, Bellett, and Wigram went to them, and took part in them.

Darby 1830 to 1835 the movement swept on. J. L. Harris, a clergyman, joined the ranks of the Brethren. He edited their first magazine, The Christian Witness, to which Darby, Bellett, Newton, S. P. Tregelles and other writers contributed. It set forth the doctrines of Brethrenism with vigour and freshness (1834-40). A tract depot was begun, from which issued a steady stream of tracts. The clergy became alarmed as several of their order joined the movement, which was at first, undoubtedly, a ‘better-class’ movement, containing lords, ladies, and officers in a few. The people were evangelized with great zeal; lay preaching was held to be the duty of all who had received grace and gift, and in the open air and in meeting-rooms the doctrines of Brethrenism were expounded. Separateness from the Church was, however, the sword with which it was to be wielded, and every one must be ready to meet Him.

Groves went on a mission to Baghdad, and then laboured in India, with the result that many Anglo-Indians became disciples of the new faith. On returning to England, however, he found a strong party of the Brethren were withdrawn from him. He left. He wrote to Darby protesting against this, but it was too late, for his own words to Bellett had raised a force which he could not now control.

Darby evangelized in Ireland, and visited Switzerland, where his success was phenomenal. The Evangelical Revival had taken place. He preached the Atonement of Christ, His Resurrection, Intercession, and Second Coming. He engaged in controversy with the Wesleyans and with Church leaders. Seventy companies of Brethren were gathered in Switzerland. He also visited France and Germany, where he gained many disciples. His labours extended, with intervals of visitations to England, several years. A reference to the first vol. of his Letters will show his great activity. Later, he devoted his attention to Germany, and translated the New Testament, and afterwards the Old, into German. G. Müller visited Germany in 1843. Ministering amongst the Baptists, he spread the tenets of the Brethren in the Fatherland.

Meanwhile, Newton remained at Plymouth, but, unlike Darby and others, never heartily adopted the doctrine of the Spirit’s presence in the assembly, but set up what Tregelles called ‘a modified Presbyterianism,’ which was self-elected, and confined the services of prayer, praise, teaching, and rule to himself and those associated with him at Plymouth.

This was to be the model for all meetings, and an effort was made to carry it out. He denied the immediate presence of the Holy Spirit, and certain events must take place before He did come. He discouraged brethren who held opposite views from ministering. His lectures, copied in manuscript, were circulated widely amongst a select few. J. L. Harris and others, helpless to combat this, withdrew in 1838; and, at this time (1845) that Darby returned. He had borne with Newton’s views on the Second Coming, but would not tolerate the setting aside of the Spirit’s presence in the Church, for that Darby viewed as the re-establishment of the clerical system that the Brethren had left in the Churches around. Darby maintained that by Newton’s clerical control the Spirit was displaced in the assembly. He protested against this, but Newton and his supporters would not yield. Darby and his associates withdrew in London, and, after waiting from March till December, they broke bread apart from the Newton party at Raleigh Street, Plymouth. Indignation against Darby was intense. He had broken the unity of the Brethren, for his views, which were now in disunion. Darby’s contention was that he ‘could not maintain union to support evil,’ and that ‘truth was more to him than friends, religious reputation, or unity.’ Two years’ controversy followed, in which the leaders took part. Charges against Newton’s writings and his rule in the Plymouth assembly were interwoven with the main issue, viz. the Spirit’s freedom to whomsoever He pleased in the assembly while gathered to the Lord’s name for worship and ministry. This was what Darby and his followers contended for, and it was this that Newton and his associates resisted. Round this same question of clericalism many later disputes arose and caused divisions.

In 1847, Newton’s opinions on the sufferings of Christ came to light. He had taught, amongst a select body of adherents, that our Lord, being both a man and an Israelite, was born relatively under the curse of God, which rested on the human race generally, and on Israel specially, on account of their having broken the Law and rejected their Messiah; and that, from childhood to His baptism, he was oblivious to the wrath of God, but escaped much on account of His prayer and piety. When Newton’s views became known, they were rejected by the mass of the Brethren, and many of his former supporters, such as Soltau, Batten, Dyer, and Clulow, abandoned their errors, and confessed they had been under the delusion of Satan as to their doctrines, and in supporting Newton. Newton made a confession, which was considered insufficient, and withdrew his tracts, which he never re-issued, for retraction. The self-elected, undeniably infallible, was wrong, and that in one particular he had erred, viz. in contending that our Lord was under Adam’s federal headship. The meeting at Ebrighton Street, Plymouth, was broken up. Newton removed to London, modified his views considerably, and formed a church of which he became minister, having no fellowship with any other religious body. He wrote largely on Prophecy, and in his writings there are passages of great literary beauty. He died in 1890, aged 92, having outlived all his contemporaries.

It was Newton’s teachings that caused the first division amongst Brethren, which took place at Bethesda in 1849. Müller and Craik refused to allow a congregational judgment on Newton's
tracts. Several who had sympathized with Newton's views, and two Brethren who had imbibed his teachings, were received by the Bethesda congregation. Müller and Craik knew of the views of those disciples of Newton who did not openly proclaim them. Their reception called forth from G. Alexander and sixty others a vigorous protest. Müller and Craik would not allow the congregation to judge and expel Newton's Brethren until it adopted a paper called 'The Letter of the Ten,' signed by themselves and eight other leaders, and to which some of Newton's sympathizers adjoined their names. This paper committed the Church to a neutrality between the parties, and took the ecclesiastical position of those afterwards called 'Open' Brethren. It became a document of discord, and a barrier to fellowship between the two great sections of the Brethren. Bethesda assembly adopted the paper, and retained the ministry of their pastors, who had threatened to resign unless this was done. To Darby, Wigram, Dorman, and others the position thus taken up was wrong, and they would not tolerate it. Darby was branded as a schismatic, and severely attacked. The result was that the assemblies of all the meetings throughout the land, Bethesda assembly, with its pastors, now took up the question. Seven meetings were held before the end of the year, as a result of which some of those who had supported Newton withdrew from fellowship, in order to relieve the Church from its dilemma. Two of these, on retiring, in a paper read to the congregation, declared that Newton was fundamentally sound. With some others they attempted to form a congregation, but failed, and were afterwards re-admitted to Bethesda on their confessing that they had erred in leaving. By Darby and those who agreed with him this was not considered a proper judgment of the evil doctrines. Müller and Craik both condemned Newton's doctrines, and declared that, if Newton's teachings were right, then Christ would require a Saviour Himself. But their judgment came too late, as what might have prevented a schism in July could not heal the division in December.

When Bethesda had judged the question in this fast and furious way Müllcr again took up a view to reconciliation; but the accounts of the interview differ essentially, as can be seen by comparing Darby's letter to J. S. Oliphant with Müller's letter to an unknown correspondent in 1833. Darby issued a letter to all the Brethren condemning Bethesda, and calling upon all assemblies to reject her principles. He denounced as evil 'The Letter of the Ten,' which, he said, permitted association with a heretical congregation by allowing persons coming from it to have fellowship, provided they had not traded in the evil doctrines. And this the Exclusive Brethren hold with inflexible strictness to this day. Fellowship with meetings where evil doctrines are held is repudiated, and no one is allowed fellowship unless he is sound doctrinally, and leads a godly life.

Henceforward Müller devoted himself to evangelical and philanthropic labours. He continued to be co-pastor at Bethesda. During the later years of his life he went on evangelical tours, and died on 16th March 1859, greatly honoured.

Müller's activity took a definite stand against Darby, and the division became permanent. The Müller party was in the majority at first. J. L. Harris, W. H. Soltan, Lord Congleton, and other leaders sided with Müller, and stood for 'Openness,' desiring to be the 'exclusive' views of the Brethren. The Open Brethren devoted themselves to gospel work. Spurgeon called them a 'simple evangelical race.' They made converts in large numbers. They have had a number of earnest teachers and evangelists. Their books and tracts have been circulated in millions during the past fifty years.

Several attempts have been made to effect reconciliation with their Exclusive friends, one especially by Henry Bewley in 1870-71, but all have been unsuccessful. As late as 1902, the Exclusive Brethren in Grant's fellowship in America were approached with a view to reunion. In 1906, however, Bethesda adopted a declaration which had been drawn up in 1894 by fourteen leaders on their own responsibility, and was now signed on behalf of the Assembly by eleven Brethren. It explained and qualified some of the objections stated in the 'Letter of the Ten,' and had as its object a union with G. W. Heath and his associates who sought the reunion of all sections of Brethren. This movement is still in progress.

Amongst the Open Brethren disputes have been few. Their principal dispute, which took place in 1892, was over what is called the 'Needed Truth' question. The majority rejected the 'Needed Truth' principles, which were: (1) complete separation from the church of their own fellowship; (2) only those baptized and re-admitted as members of the church allowed to break bread; (3) elders in the oversight to be recognized in the place of rule over the assemblies. The movement has not been a success, as many of the 'Needed Truth' party have returned to the 'Open' fold, and in 1904 a dispute arose causing division amongst that party. The 'Open' Brethren are active and earnest, fraternize freely with other Christians, and do not evoke the same opposition as the 'Exclusive.' Their meetings are numerous, being established in nearly all large towns. It is generally admitted that in writers they are poorer than the Exclusives; still they have had some able writers, such as Thomas Newbery, editor of a valuable edition of the Bible, J. Denham Smith, W. Lincoln, Arthur Pridham, W. H. Soltan, etc.

From 1849 to 1879 the Exclusive Brethren had a period of prosperity. In 1849, G. V. Wigram commenced their chief organ, which extended to 18 vols. (1849-81), the Present Testimony. To it Darby and other open Brethren contributed, wrote a year's 'Open' papers, and for the last six years were printed in it. It was issued in Dublin, and took up the editorship of the Bible, which he conducted for fifty years. In 1849, after the death of Darby, other open writers gave their best. It was in 1845 that William Kelly, the son of an Ulster squire, and a graduate with highest honours in Classics at Dublin, joined the movement. After having edited the Prospect (1845-46), he, in 1856, took up the editorship of the Bible, which he conducted for thirty years. To it Darby, Stoney, Mackintosh, Denny, Grant, Bellett, and others contributed, and, though its editor has passed away, it is still issued, and is the oldest organ of the Open Brethren. All their chief doctrines and controversies have been discussed in its pages. It is in it that Kelly's 'Commentaries' first appeared. W. H. Dorman edited the Girdle of Truth, 10 vols. (1853-66); J. B. Stoney conducted A Voice to the Faithful for thirty years; and C. H. Mackintosh, who had been engaged in scholastic work, and had given it up (1853), wrote Notes on the Pentateuch, which has had a wide circulation, and has greatly popularized Darby's views. There were many other publications during this period of Openism, but none of them had the Exclusive movement and a ceaseless circulation of books and tracts went on. The Revivals of 1857-60 and 1870 got a considerable impetus and colouring from the Brethren, and, ultimately, many of the leading members of the band of young officers resigned their commissions, devoting themselves to evangelizing and teaching. England, Ireland, Scotland, Canada, and the
United States came under their labours, and to this day some of these continue teaching the tenets of the Brethren, such as E. Cross and J. W. Smith.

Darby and Wigram visited foreign parts again and again. Though small at first, Darby’s successes in America was considerable. He influenced two men, viz. F. W. Grant and Dwight L. Moody. Grant joined the Exclusive Brethren’s fellowship, and became their foremost author and leader in America, and meetings were established in most of the great American centres. In 1864, Dr. W. Wolston came to Scotland. Then there were meetings only in Edinburgh, Glasgow, and Aberdeen, but, chiefly through his labours and those of others, gatherings sprang up all round, though many have died out since. Another man, William Reid, a Scottish clergyman, helped the movement greatly. He edited the British Herald, which had a wide circulation, and in it were inserted the choicest writings of the Brethren. In 1864, Bellott died. His witty and writings (which have been called prose-poems) left a deep impression on the Brethren, and greatly moulded their theology. It is worthy of note that, amid all the bitter controversies of those days, he was beloved by all parties. In 1872, Wigram visited Australia, where he converted many converts, and where, to this day, the tenets of the Brethren are taught and believed in.

From 1849–79 might be termed the flowing tide of the Exclusive movement. Though attacked and assailed on all hands, they steadily increased in numbers. Between 1858–66 controversy arose regarding some articles on the ‘Sufferings of Christ’ contributed by Darby to the Bible Treasury. W. H. Dorman and F. H. Hall charged him with holding views similar to Newton’s. He other the exclusive view to that of the majority of the Brethren refused to regard him as a heretic. The controversy was bitter. Dorman, Hall, and others retired from communion, but formed no party. A host of writers attacked the Brethren. Darby, Kelly, and others replied vigorously. Darby’s views were eventually adopted, and the controversy died down. Two other small disputes of no consequence occurred, one at Jersey, the other at Sheffield. Then in 1876, at Ryde, Isle of Wight, a dispute arose regarding marriage within the Church. Francis Johnson, a Brethren named Finch, who had left the English Church, and had broken bread in London, would not, on his return to Ryde, identify himself with the Ryde meeting because of its state, but, with some others, broke bread apart. In 1878 the aged Dr. Cronin, while on a visit to Ryde, broke bread with the Finch party. This brought the matter to a climax. On returning to London, Cronin was challenged for his action. As he affirmed that he was right, his act became a question for judgment. The majority of the Brethren condemned his act, and on 31st August 1879 he was excluded from fellowship. It is generally conceded that serious blunders were committed during this dispute, with which the question of baptism mingled; and, as a result of it, the Ramsgate meeting divided into two parties, called after the names of the places at which they met, viz. Guildford Hall and Abbotshill. Finally, a letter commending a person from Guildford Hall was excluded at a London Exclusive Brethren meeting, after considering the case, decided to receive that person. This entailed the rejection of Abbotshill. Kelly, with others, maintained that this judgment was wrong, and would not accept it, even though his old leader Darby was the adviser. The result was that Blackheath, where Kelly resided, with other meetings, rejected the Park Street judgment, upon the plea that it was not the voice of all the London meetings, which hitherto had always acted in union. A new section of Brethren was formed, led by Kelly, and marked a very exclusive party. They have not increased in numbers, and in 1899 a revolt, led by W. W. Feraday, took place on the question of freedom in preaching the gospel; but he has since joined the Open communion, and the movement is dissolved.

Kelly died at Exeter on 27th March 1906. Next to Darby he was perhaps the greatest amongst the Brethren. As a scholar, an expositor, and a controversialist, he stood high, and had a clear and convincing style of expression. When he died, the Times, many religious magazines proclaimed him the ‘Nestor’ of the Brethren. His works are highly spoken of by such scholars as Ewald, Westcott, and Sanday. In the British Museum catalogue his works fill ten pages. On the suggestion of the Archishop of York, he presented his university with a ship weighing 17 tons, to the town of Middlesborough.

Darby died on 20th April 1882. He felt keenly the Kelly division, as can be seen from one of his last letters to the Brethren, in which he requested them not to attack Kelly. His writings extend to 50 volumes of prose and verse, and translated the Bible into English, German, and French.

A small division, occasionally by S. O’Malley Cluff, took place in 1881, but the party is now nearly extinct.

In 1882, after fifty-five years spent amongst the Brethren, the aged Dr. Cronin died. He was marked for his piety and fervour. Previous (in 1879) Darby’s trusted friend, G. V. Wigram, had passed away. He was the editor of the Englishman’s Hebrew and Greek Concordances to the Old Testament, and New Testament and Concordance to the English Bible, and scholarship on which he spent a fortune, and in the production of which he received invaluable help from the learned Tregelles, who had been identified with the Brethren in their early days, but had disagreed with their judgment in the Newton case.

When Darby died, J. B. Stoney, whose religious ideas and teaching were said to be High Church, became leader in Britain; while, in America, P. W. Grant, who had put forth, while Darby was alive, something on the Old Testament, ‘having life in the Son,’ had affirmed that ‘the man in the seventh of Romans was sealed by the Holy Spirit,’ became leader. Darby had borne with Grant’s views, but now that Darby was gone, fault was found with them, especially by Lord A. P. Cecil. Grant published his views in a pamphlet, which was severely criticized by W. J. Lowe and A. C. Ord. In 1884, Cecil and Alfred Mace, the evangelist, visited Montreal, where they condemned Grant’s views, and, with a Montreal meeting, pronounced him a heretic, and excluded him from communion. This action affected only America and the few followers of C. E. Stuart in England. Most of the American meetings sided with Grant, and the Grant company prospered greatly. Mace in 1905 tendered a confession to the Grant Brethren for his rash act, lamenting that the man he had chiefly wronged was dead. Grant’s death in 1903 prevented his completing his Numerical Bible, a work of considerable merit. He was belted and honoured by those amongst whom he had laboured for forty years.

In 1885 a dispute took place at Reading. C. E. Stuart, a learned Brother, published a pamphlet on ‘Christian Standing and Condition.’ This provoked a controversy mingled with a petty local quarrel, and brought about the separation of
Stuart, with a small body of followers in England and some in the north of Scotland. The party has not grown, and Stuart died in January 1692. It is now generally thought that, if the pamphlet had been left alone, it would have passed into oblivion, and this division might have been averted. The Graut section in America and the followers of Stuart are now joined in fellowship.

During the last ten years of Stoney's leadership there was associated with him P. E. Raven, who went even beyond Stoney in pressing the subjective side of truth. About 1890, Raven expressed views such as that 'eternal life is not imparted to the saint; it is a sphere in which he lives in the love of God,' and is distinct from the new birth; Christ did not manifest eternal life to the world, but only to His own; 'Eternal Life' is not a title of Christ prior to incarnation, and the righteousness of God in 2 Co 5th is future. Irrelevant expressions concerning Christ's infancy were used by some of Raven's followers. These were condemned, but, nevertheless, a separation took place from Raven. The church was suspended from Greenwich a person commended in the usual way, and cut off Raven and his meeting from fellowship. The Bexhill decision was upheld by W. L. Lowe, H. H. MacArthy, C. Stanley, and others, but A. B. Rule and others in America; while, on the Continent, C. Brockhaus and many Dutch, French, and Swiss Brethren refused Raven's views. In England the division was serious. In France, Germany, and Switzerland the Brethren practically as a whole rejected Raven's doctrines.

At a conference in 1895, Raven questioned the ancient formula, 'the unity of His Person,' when applied to Christ's being God and man in one Person. His definition of Christ's Person was 'a Divine Person, human, consubstantial to God's Son.' He affirmed that the Incarnation did not change or add to the Person of the Son. These and other assertions caused trouble. W. T. Turpin, a gifted Brother, who had long been in fellowship, retired from the Brethren; and many of their best men, though still remaining in communion, did so with much misgiving. Raven's teaching was severely criticized by Brethren outside his own communion, such as E. A. Thomas (Australia), F. W. Grant (America), and W. Kelly (England). Raven did not welcome others, but his fellowship was broken; his visit to America in 1898 caused a division at Minneapolis. The extremists pressed his views too much, and some English Brethren supported E. Acomb, who opposed Raven; but most of the London leaders upheld Acomb's opponents. A small number were recognized as being in fellowship by the London Brethren in July 1905. These had accepted Raven's views. J. S. Oliphant and Maca protested against the reception of this party, and would not withdraw their protest; so they were excluded from fellowship by the London leaders. It was at this time that Maca joined G. W. Heath in his attempt to amalgamate the different companies of Open and Exclusive Brethren.

A further storm burst after Raven's death. Several evangelists were preaching with considerable freedom, claiming the right to act on their own responsibility in their work. This was pronounced 'looseness and independency.' J. Taylor, of New York, set forth the view that 'we are saved by Christ and what He has established down here to the Church or House of God.' A brother named James Boyd visited Taylor, and thereafter judged Taylor's views to be semi-Romanism. He wrote criticizing Taylor's errors. A controversy grew, but Boyd was called upon to withdraw his letter, or retire from fellowship. He would do neither, and in this he was supported by a great many Brethren in the north of England.

In 1905-7 a local dispute arose at Alnwick, Northumberland. That meeting was 'broken to pieces,' it was said, 'by its own folly.' Efforts were made to effect a reconciliation, but those who objected to Glanton's action in so doing pronounced this an infringement of the principle of 'local responsibility' and an interference with the Lord's rights. A few withdrew from fellowship at Newcastle and South Shields, and so forced on a crisis. An effort was made to suspend fellowship with the Northumberland meetings, as they were said to be 'in confusion.' This principle of 'suspending fellowship' was resented in many places; and, finally, when a sister from Whitley Bay presented a letter and note of protest to some Brethren in Alnwick, the Brethren there refused this principle of 'suspended fellowship,' and received her. There was a secession in consequence, and those opposed to Glanton formed a new meeting. The London leaders took a lead in their presentation of rival claims of the two companies in Edinburgh, when a sister presented a letter to a London meeting, and most of the London meetings decided that Glanton infringed the principle of 'local responsibility,' extinguished the Alnwick assembly, and usurped the Lord's functions in so doing. This decision, carried into effect 31st August 1908, cut off Glanton, Edinburgh, and all other meetings associated with them. W. T. P. Wolston's pamphlet, 'Hear the Right,' gives the history of this later phase, and, though the common ground which all the contributory causes that led to it.

Such is a very brief outline of the history of the Brethren. Forty years ago their early dissolution was prophesied; but they are still, though divided, a living force. Their religion is a simple one. The Bible to them is an infallible and living book; Christ is an all-sufficient and living Saviour; God is a loving Father revealed in the Son of His bosom; salvation is a reality, and can be known now; Heaven with its glories, and the everlasting King and Father: His word, and all that He commands, are proclaimed, and believed in; the Lord's Coming is the great object of hope; the world is under the judgment of the Cross, and men must be saved from impending doom; Hell and eternal punishment are realities; the world's politics, philosophy, and mere social reform advocated for the betterment of the world are but the white-washing of a house built on sand; or the attempted renovation of a system morally corrupt; their mission is not to save the world but to save people for it, and while passing through it the Christian is to live soberly, righteously, and godly; his business is to get right and keep right in his soul with God; it is his duty to obey the powers that be, save only when the civil government interferes with his conscience in obedience to God's command. The Brethren all take the place of the Christian priesthood, and gather to the Lord's name. They look for His Holy Spirit to guide some brother to break the bread, pray, or minister, in subjection to the Lord in the midst. Women are allowed to sit in the assembly. Their teachers minister by lecture or Bible-reading; their pastors care for and tend the flock, while their evangelists preach the gospel. In the present condition of the Church they do not believe in a conventional style of worship. Each meeting is held a fragment of the body of true
Christians resident in their own locality, and some who might be elders are in the churches around. If, however, in their meetings there be men possessing the requisite qualifications, these are thankfully owned and honoured, though not officially vested. Status is not even then correctly ascertained, but they form a good proportion of the Christian community in Britain and America and on the Continent.

Literature.—The clearest statement of the general views of the Brethren is Wm. Darby's The Truth Taken from Scripture, which was revised by Wm. Kelly in his Bible Treasury, and is published by Morrish, London, as a tract. The following is a selection of hundreds of other statements, pamphlets, and books, and gives both sides of the disputes, and what is written against them.—For the general history of the Brethren: W. F. Needy, History of the Plymouth Brethren, 1891; J. S. Teulon, History and Teaching of the Plymouth Brethren, 1883; A. Miller, The Brethren: their Rise, Progress, and Testimony, 6th ed., 1877. For the Plymouth Question: W. F. Needy, Narrative of Facts, Proceedings at Reading, 

1. The primitive conception that each stream had its resident divinity or river-spirit.—It is beyond the scope of this article to marshal the evidence in support of this first notion. The conception that each stream had its protecting divinity, whose majesty must not be trifled with, was a very common one in Greek and Roman mythology. The customary emblematic representation of the idea in Greek art was that of a figure of an old man with a long beard, clothed in blue garments, and crowned with a chaplet of reeds. He is usually depicted reclining upon an urn from which water continually flows, and, as the river-god, he was supposed to dwell by preference in the cave, or deep, at the rising of the river, near its bed. His care of the river extended to its pollution, and Homer (Iliad, xxi. 130 ff.) has described the resentment of the two rivers of Troy, the Scamander and Simos, against Achilles, when he preoccupatiocly obstructed them. A very striking illustration of the hostility of a river-spirit if his majesty be insulted and his quiet disturbed, see J. Rhys, Celtic Folklore, ii. 425–430; W. Gregor, Folklore of the North-East of Scotland, pp. 66, 67; Trans. Asiatic Soc. of Japan for Ainu river-gods and goddesses; J. Abercorn, 'Beliefs and Religious Ceremonies of the Mordvinas,' in FLJ vii. 72; also Annales Archéol. tom. ix. pp. 107–108; and for the idea of the impurity of disturbing natural boundaries, cf. Horace, Carm. i. 5. 21; * Nequeqneur descrit, Prudens Oceani, disociabili Terras, si tamen impius Non tangeat, quae transtuent vada.*

2. The Appealing of the Offended River-spirit.—I. Was this observed in connexion with the Pons Sublicius?—The necessity of some expiatory sacrifice to the river-god, when a bridge was built across the stream, defying his supremacy, seems to have been recognized at a very early period. The early history of Rome shows traces of it. Probably not more than three bridges were erected over the Tiber from the time of Romulus to that of Agrippa. Of these the most ancient and by far the most famous was the Pons Sublicius. Erected by Ancus Martius to unite Rome to his new fortification on the Janiculum, it was probably situated at the Forum Boarium, not far from the broken arches of the Ponte de Rotto (Livy, i. 38; Dionys. ii. 45, ix. 68; Plut. Munus, 9). Down to its latest days, the entire structure, including every bolt and fastening, was constructed of timber (for the reason for this see p. 855). On the Ide of May (Ovid says at the day before), an annual procession of Pontifices, Praetors, and Vestal Virgins marched to this bridge. On the way they visited the so-called 24 Siculae Argoorum (chapels), and from them carried away a corresponding number of Argoi. These Argoi were emblems or effigies made of bulrushes, and stuffed so as to represent bodies of old men bound hand and foot. The Flaminian Dialis, the priestess of Jupiter, was present, dressed, not in her customary bridal attire, but in mourning garb. To the accompaniment of the chanting of a prescribed hymn and a kind of life, the puppets were lifted by the Vestal Virgins and flung into the river from the parapet of the bridge (Dionys. i. 38; Ovid, Fasti, v. 621 ff.; Plutarch, Quest. Rom. 32 and 86). Of a custom so peculiar, * From the sublicius, or piles, on which it was built. Dionysus gives 80 as the number.
the Roman antiquarians suggested various explanations:

(a) The Suella were reported to be the graves of the Greeks who came to Italy with Hercules, and that his followers, having settled in fair Italy, they entertained tender memories of sweet Argos; and, as each hero died, he beckoned to his friends the sacred duty of throwing his body into the Tiber that it might be transported by the waves to the far-off shore of his fatherland. The rush-made image was the later substitute for the dead body of the early Greek (Ovid, Fasti, v. 656).

The ancient etymology of Argei from 'Argile' is supported by Mommsen (Staatsrecht, i. 123).

(b) The second explanation of the practice was that states that it was surmised by an earlier and ruder epoch, when old men, above the age of sixty, being considered useless for military service, were cast into the stream and drowned. Though Ovid acknowledges that this traditional explanation was an old one, he nevertheless indignant repudiates it as a slander on the humanity of his ancestors. Such practices, however, were not unknown in the ancient world. That these last, and afflicted with the increasing infirmities of age, should thus be put to death, was not considered in the primitive piety, but rather in the line of kindness, and even of patriotic duty to the State (Caesar, de Bell. Gall. vi. 16; Tac. Germ. 9 and 39; cf. also art. OLD AGE).

In later days there arose a belief that the ponts from which these effigies were cast was a more innocent structure than the Pons Sublucus. On the day of the Comitia, a number of polling-booths were erected in the forum, or wherever the voting was to take place. These booths or seats, were entered by a narrow passage or plank termed pont or pontinctus; and, when the voter had received his tabella, or voting-ticket, out of one of these booths on either side of a seat in the bridge (see Cerem. pro Prono Attico, ii. 35, 109; Vite. Ponticul. a Pons, and emerged from the booth by a corresponding 'behind port. As the (ceremonies, and the bridge was a very one, it would seem after that all the bridge referred to was not the plank of the Comitia polling-booth, but the more fatal Pons Sublucus. The bridge, however, that parti-cularly always looked on with horror by the Romans, and it is hard to see how the practice should have passed into a yearly ceremony.

(c) By others the rite was regarded as a relic of the time when human sacrifices were general. Ovid (Fasti, v. 654) states that the youth actually threw the old men over the bridge (see Cerem. pro Rossio Attico, ii. 35, 109; Vite. Ponticul. a Pons,) argued that, though the aged men were free from the burden of active service, they may jealousy retained their right to vote. The younger men accordingly were annoyed, and, as their seniors went up the ponts to record their vote, they raised the cry, which became proverbial, that the old men should be thrown from the bridge ('sexagenarii de ponte'). Ovid (Fasti, v. 654) states that the youth actually threw the old men over the bridge (see Cerem. pro Rossio Attico, ii. 35, 109; Vite. Ponticul. a Pons). The bridge, however, that particularly always looked on with horror by the Romans, and it is hard to see how the practice should have passed into a yearly ceremony.

- 2. This root-idea of the necessity of a sacrifice traced to modern times. —The wide-spread nature of this custom will be recognized from the following instances. Herodotus (ii. 90) states that the priests of the Nile-god claimed the right to bury with high honours all bodies drowned in the river, as being more sacred than those above another person, and that those who had claimed them, and they were their property. Maspero (Dawn of Civilization, p. 39) describes the sacrifice to the river at Sisleh on the rising of the Nile. See also Lane (Mod. Egyptians, ch. xxvi.) for the 'aroseh (bride)—the virgin thrown into the river as a sacrifice to obtain a plentiful inundation. Picart (Cercum. and Relig. Curr. of the World, 1733, iii. 87) refers to the practice of the savages on the Mississippi of sacrificing prisoners to the god who preside over the waters, comparable to the yearly sacrifice of a girl to the spirit of Niagar.

When a man is drowning in a river, it is a common saying in Germany that 'the spirit of the stream is getting his yearly victim' (Grinn, Deutsche Mythol. p. 490). There is a legend of the spirit of the River Ribble, in York-

In Silesia, as late as the 16th century, according to Grinn (Sarmatiae Europae description, fol. 160), on March 17 of each year, being the anniversary of the destruction of the pagan idols by the Serbs (963-1992), there was a more recepto simulacrum quod simuladibus mulieris confundit, opprobrium tarnum ex seque canticum et eorum, quod legiones illud de proprie invidia. This would seem, however, to be merely a sort of Gay Fawkes Day, being the recollection of the former. In connexion it should be noted that Grinn (Griechische Mythol. und Religionsgeschichte, p. 551) holds that such cere- monies as those associated with the Argei were originally rain-chants.

VOL. II.—54
BRIDGE

shire (known as Peg o’ Nell), demanded a victim every seven years (W. Henderson, Folklore of the Northern Counties, p. 265); and the American Indians have a tradition that the Falls of Niagara must have two human victims annually. The notion, however, is very prominently brought out in the following connexions:

(a) Sacrifices necessary at the foundation of bridges.—A legend is current about London Bridge that, in order to render the structure secure, the stones were besprinkled with the blood of little children. When the broken dam of the Nogat was repaired in A.D. 1463, the peasants were advised to throw in a living man. They seized a beggar, made him drunk, and buried him (Tylor, *Parenthesis*, p. 104). In 1843, on the erection of a new bridge at Halle, it was widely believed that the structure ought to have had a child built into it (Grimm, *op. cit.*, p. 936). The builder of the ‘Loh-Family Bridge’ at Shanghai experienced some difficulty in laying the foundation. He vowed that 2000 children if the bridge spirit would allow the stones to be laid properly. The divinity (she was a goddess on this occasion) replied that she would not require their lives, but that the number named would be attacked by smallpox and half would die. Half the number died. It is a Chinese belief that a bridge built without attention to these religious observances will bring about a visitation of smallpox. In Tibet, when smallpox is raging, the inhabitants destroy millet stalks as yet reddish by the disease try to stay its progress by placing thorns on the bridges to terrify away the evil spirits who bring the plague. Those who die of the disease are thrown into the rivers (Annie W. Marion, *The Great Closed Land* [Tibet], p. 41). A similar history is reported for a place on the river Tsien-tang as a sacrifice to the spirit of the dykows which were constantly being washed away (Moncure D. Conway, *Demonology and Devil-lore*, 1879, i. 204). In 1572 there was a scare at Calcutta when the Hooghly Bridge was built. The Hindus imagined that the spirit of the river would consent to have its majesty invaded only on condition that each pier of the structure was founded on a layer of children’s heads (A. B. Gomme, *Traditional Games of England*, p. 29). It is reported that a similar practice is performed by Gomme, *Folklore Relies of Early Village Life*, p. 29). In 1890 the Public Department of Public Works in order that they might be built into the foundations of the piers of a number of new bridges that were in course of erection. It was stated that such was the terror of the coals that for no money could they be induced to carry fares to the suburbs at night. (For a similar story see *Nature*, April 30, 1896, under title ‘Megathitic Folklore,’ by S. E. Peal, Sibassar, Assam, March 27.) Among the popular traditions of Albania, there is one to the effect that human beings were formerly buried under the foundations of important bridges. Throughout the Greek East there is a current belief that every building has a resident spirit, and everywhere a resident genie, which goes by the name of the σακυσιος. It is believed that the man whose shadow falls on the first-laid stone of a new bridge will die within the year, and his shadow remaining in the building, becomes its σακυσιος; hence the practice of sacrificing fowls and sheep at the beginning of any important construction to avert danger from the workmen. ‘But sometimes as if it was the custom that the builder entices a man to the foundation-stone, secretly measures his body, or a part of it, or his shadow, and buries the measure under the foundation-stone; or he lays the foundation-stone upon the man’s shadow. It is believed that the man will die within the year’ (B. Schmidt, *Das Volkstheben der Neupriechen*, p. 1961, quoted by J. G. Frazer, *Golden Bough*, i. 291). Until a sacrifice has been offered to this spirit, no bridge will be allowed to stand secure. A bridge so secured is termed ‘stoicheion-built’ (στοιχειοσελεμευθερημενης), and legends regarding such bridges are everywhere met with. Some of the Greek folk-songs are famous, e.g. *The Bridge of Adana in Kappadocia*: ‘All day long they built the piers: by night they fell in ruins.’ The builders are at their wits’ end. They know that the bridge will not stand until a living spirit is given to it in sacrifice. But what is willing to be thus offered? The engineer entices his wife to the edge of the excavation for one of the piers. He drops his ring into it, and induces his wife to fetch it up:

‘Then down goes she, and down goes she, steps forty-two—
And fall upon her as she goes of stones a thousand stones,
And throw down upon her, too, of earth a thousand spadefuls.’

As she dies, she calls out:

‘Hear thou my words, Yanniaki mine, let not the world neglect me.
Three only sisters once we were, we were three sisters only;
The one did build the Danube’s bridge, the second the Euphrates.
And I, too, the murdered one, the bridge build of Adana’ (Lacy M. J. Garrett and J. S. Stuart-Glennie, *Greek Folk Poems*, 1896, § 71).

The same legend is current in Italy as regards the Bridge of Arta, which collapsed till the master-builder walled in his wife. With her dying curse, however, she prophesied that the bridge would always tremble (ib. p. 81). The same story is told of the ‘Long Bridge’ at Constance: ‘It and the ‘Trembling Bridge’ near Canea in Crete. So engrained is the belief in the necessity of such sacrifices, that it is alleged that in Zæcynthus the inhabitants would still kill a human victim if they were not deterred by fear of the law’s vengeance (B. Schmidt, *op. cit.*, p. 197 f.). The idea that underlay the old Roman substitution of rush-men for human victims is still observable occasionally in different parts of the world; and to this day sacrifices of a less dreadful character than that of a human being are made. The spirits of Austria and Germany (Th. Vermaelen, *Mythen u. Bräuche des Volkes in Oesterreich*, 1859, p. 163; A. D. Wuttke, *Deutscher Volksberglebde*, 1900, § 420).

(b) The bridge-sacrifice, a part of the widespread belief in the necessity of a foundation-sacrifice for all structures.—This placating of the river-spirit is thus in strict harmony with the almost universal belief in the necessity of a sacrifice as a rite preliminary to the erection of all buildings. Thus the Picts are said to have bathed their pre-historic foundation-stones with human blood to propitiate the spirit of the soil (Forbes Leslie, *Early Races of Scotland*, i. 149). Mackinnon (*Culture in Early Scotland*, p. 53) asserts that ‘even after the humanizing doctrines of Jesus had become the popular creed, the power of this grim rite occasionally asserted itself in the practice of slaying or burying a victim, before or during the erection of a building, in the belief that only thus could it be made secure’ (see also Galloz, *Melanie*, iv. 16). A Shudderian legend is extant that, to make the castle of Liebeen secure and impregnable, a child was bought from its mother for hard cash, and walled into the foundations. The wall of Copenhagen sank during its erection as fast as it was built, and the builder, a small innocent little girl, set her on a chair at a table with toys and catables, and then twelve master-
masons closed a vault over her. The wall therefore upon was completed and stood firm (Tyler, Primitive Culture?, i. 104 f.). There is a Sercian legend that three brothers combated with the demons of the cave until they were baffled by the demons, which roused by night what it had taken 300 masons to erect by day. At last the fiends were appeased by the immolation of the wife of the youngest of the three, who happened to be the first to come with food for the workmen (ib.). When Vortigern was erecting a strong fort in Snowdon, what the workmen built in one day was always swallowed up in earth the next night. The king consulted Merlin, who advised that the stones and mortar should be sprinkled with the blood of a child born to a father (Nennius, Mon. Hist. Brit. p. 67); also Selden's note to Drayton's Poly-Olbion, p. 158). In Adam's Man's Life of St. Columba (Reeve's tr. 1857, p. 263) there is the following naive yet significant statement:—

"Columcille said to his people, "It would be well for us that our roots should pass into the earth here."

And he said to them, "It is permitted to you that some of you may go under the earth, and if the consecrated ground afford to comfort" (Oduran, according to the Welsh) quickly, and then spoke. "If you accept me," he said, "I am ready to propitiate them." Oduran, says, "you said you would receive the reward of this; no request shall be granted to any one at my tomb unless he first ask of thee." Oduran then went to the gate-posts (aisle) then found under the church of Icty."

Thus the spirits of the soil of Iona were propitiated, whereas till then they had overthrown by night what had been erected by day (see Scott's Minstrelsy of the Scott, Border, note to "The Court of Keelings" and "Glenfiddies"; Innes, Eccle. Hist.; Pennant, Voyage to Scotland, i. 286 f.; Joyce, Social History of Ancient Ireland, i. 234 ff.).

Human skeletons have been found under foundations of the round towers in Ireland (FLJ i. 23). At Tintern, in Ireland, there is a tradition that the workmen had assembled to lay the foundation of Tigh-an-Torr, in Western Ross-shire, they caught the laying of the first person who chanced to pass, and buried him under the foundation-stone. At the laying of the foundation of Redcastle, a red-haired girl was buried alive under the stone (Haddon, The Study of Man, 1898, p. 354; see also MacBain, Celtic Mythology and Religion, pp. 45, 46; Stokes, Revue Celtique, ii. 200, 201; Windisch, Irish Grammar, p. 153). Fitzstephen, in his account of London in 1136, says that the foundations of the Temple Church, when it was built, the mortar was tempered with the blood of beasts (A. B. Conne, Tradit. Games, p. 346 f.). Formerly in Siam, when a new city gate was being erected, it was customary for a number of officers to lie in wait and seize the firstborn or two eldest who happened to pass by. These were then buried alive under the gate-posts to serve as guardian-angels. The Ceylon Observer of Jan. 27th, 1887, had a paragraph in which it was stated that the schools in Colombo were empty, many children were missing, and parents were afraid to let their offspring venture out of doors, because the report had got abroad that 350 boys under the age of 12 were required as sacrifices to propitiate the deity who was responsible for the break in the great Maligankada reservoir (FLJ v. 250). For further illustrations of this "foundation-sacrifice" see Gerard, The Land beyond the Forest (Transylvania), ii. 17; H. Clay Trumbull, The Threshold Covenant, p. 47; Macalister in PEFS, 1894, p. 16, where a plate shows a bull being killed as a foundation-sacrifice in the temple of Dendur. As a foundation-sacrifice in a pre-Israelitish Pales- tine town; Rodd, Customs and Lore of Modern Greeks, p. 168; F.E.R, vol. iii. pp. 282-283, vol. iv. pp. 124, 130; FLJ, vol. i. pp. 23-24, 92; Bowring, A Romance of Modern Greece, p. 226; Mythologie, pp. 972, 1085; St. John, Far East, i. 46. See also art. FOUNDATION.

(c) The primitive heathen 'river-spirit' becomes the 'devil' of Christian times.—In the Christian centuries the heathen idea of a water-spirit, or genius of the river, gave place to the conception that the devil was the guardian-spirit over all streams. And yet there was a widely spread belief that the jurisdiction of the devil extended no further than the middle of a running stream (cf. Burns, "Tom o' Shanter"). He has accordingly a special antipathy to bridges, as was the case with his ancient prototype. Numerous, therefore, are the legends to be found over all Europe attached to so-called 'Devils' Bridges,' narrating how the Evil One would not allow the bridge to be erected until he had received payment of an offering like that of Ishigami, in the School of Magic. Men regard the office of a civil engineer with pains horror, and curse a new bridge when they pass it. It is to them the symbol of the devil's presence, and the token of an unholy compact between the Evil One and the architect (A. J. Evans, Through Basutoland and Hesse-Guttgart, p. 314). Like his predecessor the river-spirit, the devil, however, was sometimes cheated of his due. Many of the more ancient bridges of Germany and Switzerland have legends attached to them narrating how the hard conditions of a contract resulted in the death of victims by drowning as the first but short by the erection of a bridge) were successfully evaded.

The Montafon bridge in the Tyrol and the bridge at Batis- ton are illustrations. In the case of the latter, the architect was apprehended as the devil by the master who was supposed to have been consulted. He laid a wager that he would bridge the Danube before his superior in the world and the bridge was). After many failures, the apprentice entered into a compact with the devil, who appeared to him in the garb of a friar. The devil undertook to build fifty bridges, but the bridge, on the understanding that he would get the first three living creatures that crossed the bridge. The work was completed in time. The wily apprentice sent a cat and a dog and a bull to cross, but the work was not completed. The devil in wrath tore the animals to pieces and disappeared. A pro- cess of holy monks passed over the bridge and rendered it safe, and then the reality of the story the master. No three animals are still triumphantly shown, carved upon the bridge (Moncreiff D. Conyngham, op. cit. vol. i. p. 294; Tyrol, op. cit. i. 156; for other instances in Germany, see Grüm, op. cit. p. 533). Froehner (Flau, ii, Hayward's tr.) makes Mephistopheles say—

"My wanderer on faith's crutches hobble on Towards the Devil's Bridge and Devil's Stone."

A French chemical 'Diable a quatre mètres' ('Devil the stature of a man') describes how an apple was thrown through a newly-finished bridge, and a cat allowed to pass over it. The devil appeared to him in his usual form and said, 'You have left me out of the bargain.' Principal Rays has kindly favoured the writer with a similar legend from Wales. 'The devil bargains with an old woman who wants a bridge built, to have a whitewash that crosses the bridge, and expect the devil to get the old woman herself. But she takes her dog with her, and throws a piece of bread before it, and the dog rushes after it. The devil does not score in the end.' Cf. Longfellow (The Golden Legend, Canto iv), who describes the Devil's Bridge at Pilatos, near Lucerne:

"And the Devil promised to let it stand.
Under compact and condition
That the first living thing which crossed
Should be surrendered into his hand,
And he beyond redemption lost.
At length the bridge being all completed,
The Abbot, standing at its head,
Throw across it a loaf of bread.
Which a hungry dog sprang after,
And hence in re-echoed claque of laughter.
To see the Devil thus defeated!'"

It is the same idea which appears in the practice of building empty bridges and laying them in the river instead of a child under an altar in Denmark to ensure the stability of the church; in the killing of 12 sheep, and placing their heads under the foundations of the pillars of a new bridge over the Arcin in Albania (J. G. von Hahn, Albanesische Studien, 1854, i. 104); in the use of a chair of iron as a foundation-sacri- fie in Bosnia (Haddon, op. cit. p. 353). For further illustrations see Garnett, Women of Turkey, ii. 295; Alexandre, Ballades Turques et orientales, at Geve, Transylvania, p. 188; Tyler, op. cit. i. 1006; with references to the custom in Ghana in Africa, in Polynesia, in South Asia, in Japan, and in Tenasserim. It is clear from these myths that the idea of regarding the devil as the actual architect of the bridge is an old one. It is also the evidence for the belief that the devil merely allowed the erection of the structure on payment of a solatium passed into the idea that the devil himself was the builder,
and must have his payment accordingly. A still more developed form of the notion of diabolical or infernal power being invoked in the rearing of a bridge is seen in the Kelpie's Bridge (Riihling), who tells how, in A.D. 1381, when the Duke of Anjou was besieging a strong castle on the coast of Naples, a necromancer (doubtless with the help of the devil) built a bridge which carried ten soldiers abreast, until one that passed over the bridge 'made the sign of the cross on hym, then all went to nought, and they that were on the bridge fell into the sea.' A companion tale is told of the rearing and the destruction of the 'Kelpie's Bridge,' or Dreoish-da-Vouha, at the mouth of the Dornoch Firth (see Miss Denham's 'Folklore of Sutherlandshire' in FLJ vi. 172 [1888]), where the exclamation of an admiring countryman, 'God bless the workmen and the work,' caused the infernal labourers to vanish, and the magnificent golden bridge to sink into the waves.

(d) Survival of the idea of sacrifice to the river-spirit in modern children's games.—One of the most curious survivals of the ancient custom is seen in many modern children's games. The singing game known as 'London Bridge' has many variants in the places where it is played, but fundamentally the theme is the same:

'Song London bridge is broken down,
London bridge is broken down,
My fair lady.'

Mrs. Gomme, in her Traditional Games of England, Scotland, and Ireland, has analyzed this rhyme very thoroughly. She shows that the song describes the difficulty encountered in building the bridge by ordinary means, and that it asks many questions how the structure is to be reared. At last the children seize a 'poor prisoner,' to whom they say, 'Off to prison you must go, if the prisoner in the river is actually 'caught,' and is 'released' on payment of a forfeit. The game is thus a curious survival of the old-world notion that a bridge could stand secure only by the death of a 'prisoner,' or, if need be, of his substitute. It is thus allied to the *sroigos* folksongs of the Greek Orient. Prof. Léon Pisseau has suggested in regard to another children's game, a very popular French 'roules,' which commences:

'Sur le pont de Nantes,
Sur le pont de Nantes,
Un bal est affiché . . . .

that this game relates to 'a ritual dance on the occasion of a human sacrifice to the deities of the water' (quoted in Haddon, op. cit. p. 330).

(e) Transference of the dread associations of bridges to the 'Bridge of Judgment' in the wider world of spirits.—So firmly lodged in men's minds was the conviction that the erection of a bridge implied some kind of preliminary transaction with supernatural powers by way of satisfying their animosity, that, in view of the life beyond the grave, similar conceptions were held regarding the river of death. In the lower world of Shades will there not be a bridge to be crossed, a bridge spanning the dark stream of death, nay, it may be, the very mouth of hell itself? The idea became a fixed belief in nations far sundered geographically. The river-spirit, who in the upper world demanded an adequate satisfaction in the event of his stream being crossed by a bridge, was represented in the lower world as desiring a payment from the passing over the bridge. The primitive conception of human sacrifices as an offering to the river-god developed in later ages into the belief that the devil received as his prize all who could not successfully pass the only bridge across the river of death.

Sale (Koran, 1825, Prel. Disc. §iv. p. 121) describes how integral a part of Muhammadan theology this is. The Muslims hold that those who are to be admitted into Paradise will take the right hand way, and those who are destined to hell-fire will take the left; but both of them must first pass the bridge (called an Arable, *al-Sirāt*) which is laid over the midst of hell, and is finer than a hair, and sharper than the edge of a sword. It seems very difficult to conceive how any one can stand upon it. The bridge, moreover, is beset on each side with brinks and looked thorns, which will, however, be no impediment to the good, who will pass with wonderful ease and swiftness, like lightning on the wind, Muhammad and the Muslims leading the way. The wicked, what with the slipperiness and extreme narrowness of the path, the entanglement of the body, and the law of the bridge, which directed the faithful to Paradise, will soon miss their footing, and fall down headlong into hell, which is gaping beneath them (Pocock, Specim. Hist. Arab., pp. 282-288). Other Muhammadan legends affirm that this awful bridge stretches between the Temple of Jerusalem on the W. and the Mount of Olives on the E., while between lies the Valley of Hell (the Valley of Jehoshaphat). The pious will be upheld, as they cross, by an angel who will hold them by a single lock of the hair, so that they may not fall into the Valley of Jehennam beneath. Although the bridge of *al-Sirāt* is not mentioned in the Qur'ān, it is much elaborated in later Muhammadan eschatology, where it is described, in addition to the two rails already given, as having a length of a journey of 3000 years, 1000 ascending, 1000 level, and 1000 descending, while fire shoots up about it a journey of 40 years. While, as already noted, the righteous pass over it like a flash of lightning, less perfect Muslims take longer periods in proportion to their guilt, some requiring 25,000 years to complete the journey. Yet other sources make the bridge to consist of seven arches, each a journey of 3000 years, and during the passage all but the most righteous suffer agonies from the fire of hell (cf. Wolff, Muhammadische Eschatologie, pp. 109, 114 f.; al-Ghazālī, Perle von Fehlsätzen, ed. and tr. Gautier, pp. 43, 69-70, 72-73; Rühl, Beiträge zur Eschatologie des Islam, pp. 27, 58, 63).

The Muhammadan bridge of *al-Sirāt* was Borrowed from the Parsi Chinmopetres, or 'Bridge of the Decider,' who is believed repeatedly both in the Avesta and in Fahlavi literature (Bartholomae, Altiran. Wörterb.-kol. ch. 699 f.; Gray, Musâon, new series, iii. 100 f., 163-165; Mod., JIEEE xo. 49-65; Scherman, Materialien zur Geschichte der indischen Visionsschrift, p. 104 f.; Scherblom, Vie futuré d'après le mazdéisme, pp. 92-96). This bridge, which stretches from the 'Peak of Judgment' (Châkōāt-i Dâ'îth), in Airân-Vêj, to Alburz, is described as follows (Dââtân-t-i Dâng, xxi. 1-7): 'As it were, that bridge is like a beam of many sides, of whose edges there are some which are broad, and there are some which are thin and sharp; its broad edges are so large that its width is twenty-seven reeds, and its sharp sides are so contracted that in thinness it is just like the edge of a razor. And when the souls of the righteous and wicked arrive, it turns to that side which is suitable to their necessities, through the great glory of the creator and the command of him who takes the just account.' The Parsi concept of the 'Bridge of the Decider' has also been borrowed by the Jews (cf. *Manddische Religion*, p. 105), but also in the Vedas to Isiah (§ 359) (Kohut, Jüdische Angologie und Deutonomologie in ihrer Abhängigkeit vom Persism, 1886, p. 70), and perhaps, as Böken (Vereinigung der Gesellschaft der Freunde des germanischen and jüdischen Eschatologen, 1902, p. 37 f.) suggests, in 2 Es 7-9.

It is not impossible that the bridge of the dead is found in Indian literature as early as the
Upaniṣads (Scherman, pp. 117-119), and it is certain that the belief in such a bridge occurs in China, and among the Jews of Media, and among the Cacans of Canevas, the Transylvanian Gypsies, the modern Greeks, the Bagada of the Nigirī Hills, the Solomon Islanders, the Gold Coast Negroes, etc. (ib. pp. 99, 102-110), as well as in New California (cf. above, vol. i. p. 4598). The belief thus found in Zoroastrian, Jewish, Moslem, Chinese, and Indian circles, as well as in other parts of the world (see also below), would seem to be a later and modified analogue of that primitive conception of the trial of the soul after death, which is seen in many religions. We recognize the same underlying features in the Egyptian myth of the weighing of the scales before the bar of Osiris, and in the Greek fable of the judgment of the soul by Minos, Eacus, and Rhadamanthus in the under world. Cf. Dante, Hell, Canto v. 4 ff. (Cary's tr.).

"There Minos stands, Grinning with ghastly feature; he, of all Who enter strict examining the crimes. Given sentence, and dismisses them beneath, According as he foldeth him around: In his turn Each one to judgment passing, speaks, and hears His fate, thence downward to his dwelling hurled." In 5. 118 (Bindrūn. 1719) there is a curious and grotesque plate of the Hades of the Greek imagination, with Charon ferrying his fiores across the Styx, Cerberus the three-headed dog guarding the passage, while in the distance there is a bridge with three individuals on it, who pass, thence from the flames of hell to the pleasant woods of Elysium. So also in ancient Celtic mythology there was cast over hell a bridge of exceeding narrowness (sometimes a mere cord), which souls were obliged to traverse if they hoped to reach the mansion of light beyond. This was the Bran dro Dred, na bradher than a thread (Baring-Gould, Curious Myths of the Middle Ages, p. 238; Rhys, Hibbert Lect. on Celtic Heathendom, p. 450).

There is a Hindu analogue to this belief in the Indian Baitaran (q.v.), or swift River of Hell, flowing with blood and filth, which can be crossed only by holding a cow's tail. Aynsley (Indian Antiq., May 1886) learned that the Hindos of Chamba, in the Panjab, have a bridge over which every corpse must pass on its way to the burning ghūṭ beside the river Beas. There is a stone path by which the procession may travel, the corpse is invariably carried over a perilous causeway, only 18 inches wide, without a protecting balustrade. In the Solomon Islands there is a kindred belief. At Great Gau there is a passage for souls by which it is believed the dead may pass across the ocean to the gulf. In Friesland, the name given to the Milky Way, which was reckoned the Way of Souls, was the Cowpath ("Koaput") (see Mannhardt, Die Göttlerwelt der Deutschen u. Nordischen Völker, 1869, p. 31). Hence of yore the Inland custom arose in Sweden, Denmark, Upper and Lower Germany, and England, that a cow should follow the coffin to the graveyard. 'Till recent times this custom was continued on the Continent, being accounted for on the ground that the cow was a gift to the priest for saying masses for the dead man's soul, or for preaching his funeral sermon (Kelly, Curiosities of Indo-Europa. Tradit. and Folklore, 1893, p. 320). In England, when pagan sacrifices had been abolished, the cow was similarly devoted to pious uses, under the name 'soul-shot' (= soul-shot), or mortuary payment.

But, having passed Gjallar Bridge, and entered Hel (one of the nine Scandinavian under worlds which stood under Yggdrasil, the mystic ash), there was no longer even a path to walk by, but only a more precarious bridge. This was the famous Bifrost, the Rainbow Bridge of the Asars, connecting earth with Asgard, the home of the gods (Bifrost, from Icelandic bifa= trembling, and rest= path, the tremulous or aerial bridge, the rainbow; Mallet, op. cit. p. 545; Brewer, Dict. of Nors. Mythol. Landknecht, 1. p. 431). Of the Eddas (§ 27), by this rainbow bridge from heaven to earth the gods daily descended, passing on horseback over it to sit in judgment in the under world on the souls of men brought before them. The red of the rainbow is the burning fire which keeps back the frost and mountain giants from entering Asgard. But, lest other giants should attempt to scale the heights of heaven by this bridge, at the foot, on Hrimmungsjörg ("heaven-mountain"), sits Heimdall, the watchman of the gods, with his terrible dog Gar. (Cf. the 'Great Dog' of the North Amer. Ind. legends, and the fact that the baying of a dog is currently held throughout northern lands to be coincident with, or prophetic of, death.) Heimdall needs less sleep than a bird; he can see equally by day and by night, and can detect a thing far away; he hears the grass growing and the wool on the sheep's back. But there will come a day when all his watchfulness will be in vain. Strong though the bridge be, and 'constructed with more art than any other work of man or beast' will be staked between the city of Muspell. These giants, led by Surtr (the 'black'), with a sword brighter than flame, will advance against heaven with irresistible might. In vain will Heimdall blow his Gjallar-
horn, the sound of which will be heard throughout all worlds. The wild hordes will swarm up Bifrost on horseback, and attempt to break into Asgard. In the avenging wrath of the tremendous bridge will break into a thousand pieces, and the end of the world will have come (Mallet, op. cit. pp. 95, 408-452; Crichton and Wheaton, Scandinavian Ancient and Modern, 1838, l. 91-95).

The conception of the rainbow as a bridge between earth and heaven, over which the gods descend and ascend, is found also among the South Sea Islands (see the adventures of Oro in Ellis, Polynesian Researches, 1829, i. 313). Perhaps also the 'Floating Bridge of Heaven' in Japanese legends is derived from it. W. G. Aston, Shinto, the Way of the Gods, 1905, p. 87; and Sir E. J. Reed, Japan: its History, Traditions, and Religions, 1880, p. 30).

This notion of a bridge in the unseen world over which the soul at death must pass was imported into medieval Christianity from paganism, and became an essential part of its stock of beliefs. In St. Patrick's Purgatory (Wright's ed. 1844, ch. iii.) it is told how the pilgrim made a tour through hell in person, how he crossed the narrow bridge that spans the mouth of hell, how he turned about on a great wheel of fire, how he passed the devil's mouth over the awful bridge, and thus at last reached Paradise (Tylor, op. cit. ii. 55; Baring-Gould, op. cit. p. 257). A bridge is likewise a prominent feature of the Indian visions of Alberic, St. Paul, Tundale, and Thurell; and the same idea is met with in the 'Lyke-Wake Dirge' (a dirge which continued to be sung in Yorkshire till A.D. 1624), the funeral chant of the North Country, which tells of the passage over the dreadfull bridge of death.

1 From Whinny-moore when thou may passe,
Every night and alle;
And Christe receive thy soul.
From Briq o' Death when thou art paste,
Every night and alle;
And Purgatory fire thou comes at last,
And Christe receive the soules.

(J. C. Atkinson, Glossary of Cleveland Dialect, p. 606; cf. Scott, Minstrelsy of the Scottish Border, ii. 357; Tylor, op. cit. i. 606; Kelly, Indo-European Folklore, p. 125, who quotes the dirge in full; Becker, Contribution to the Comparative Study of the Medieval Visions of Heaven and Hell, pp. 44, 76, 83, 90, 97.)

The earliest known American Indians, either as one of their primitive myths or as a distorted belief derived from their early intercourse with Roman Catholic peoples. The Hurons and Iroquois tell of some whose spirits, travelling in dreams, have returned to earth to tell what they have encountered in the world of ghosts—the river of the dead with its snake-bride, or swinging log, at the far end of the bridge the Great Dog, and in the distance the villages of the dead (Tylor, op. cit. ii. 50). Brebeuf, an early Jesuit missionary, tells of the Indian belief in the tree-trunk which bridges the river of death, and how some of the dead, as they cross it, are attacked by the Dog that guards it, and made to fall into the abyss (ib. p. 94). Yet the myth underwent the same natural modification as it had experienced in the Old World. The passage of the bridge came to signify the ordeal whereby the good and the evil were sifted. Catlin (North Amer. Ind. i. 127) refers to the Chocotaw idea that souls at death travel far westwards to where the long, slippery, bark-covered bridge, stretching from hill to hill, bridges over the deep and dreadful river: the good pass safely to a beauteous Indian Paradise; the wicked fall into the abyss of waters, and go to dwell in a dark, hungry, wretched land (for further American Indian legends see P. H. Newell, Early Hist. of Mankind, p. 435; for similar beliefs among the Ojibwas and the Menomites of North America, see Tylor, Early Hist. of Mankind, p. 360; and on the ideas of the Aztecs and the Euruks of N. California, as well as the Indians of South America, see Brinton, Myths of the New World, 1876, pp. 108, 247 ff.)

In presence, therefore, of a wide-spread and deeply rooted in the medieval mind, that there existed a bridge in the under world over which every soul must pass, it is not surprising that men should have formed the theory that at this bridge there takes place a conflict between the devils on the one hand and the good angels on the other for the possession of each man's soul. This was an integral part of the Parsi faith. When a soul arrives at Chinvat Bridge the gods and the unclean spirits fight for possession of it. If it be one of the good ones, then the devils are defeated by the pure souls, and the dog that guards the bridge (Fargard v. 52). A curious reminiscence of this is seen in a children's game, which is played all over Europe and America, and is everywhere fundamentally the same. Newell has described it as it is played in America (Games and Songs of American Children, New York, 1884, p. 204), and shows how it is a variant of the game described above (p. 852) as 'London Bridge.' Haddon (op. cit. p. 357) points out that in Swabia of the 12th and 13th centuries there were called respectively the 'Devil' and the 'Angel'; in France the game is known as 'Heaven and Hell'; in Italy the name of the sport is 'Open the Gates.' The gates are those of the Holy Sepulchre, and the keeper of the one, St. Paul the other. 'When the destiny of the last child is decided, the two girls who represent the keepers of the bridge break their arch of lifted hands and move in different directions, followed by their subjects, while the cries and shrieks of the players condemn to the Inferno contrast with the pathetic songs and sweet cadences of those destined to the happiness of Paradise.' He further points out that the game is mentioned by Rabelais (c. A.D. 1539) under the name of the 'Fallen Bridge.' In German versions the keepers are called 'Devil and Angel,' 'King and Emperor,' or 'Sun and Moon.' In this latter form the game has been one of the few kept up by the Germans of Pennsylvania, who call it 'The Bridge of Holland' (Die hollandische Brücke). The three players are the two girls to dress as angels, while one personates the devil. The bridge, which is actually constructed of sticks and boards, is made to fall repeatedly, and this is ascribed to the devil. At last a victim is caught, and is made to undergo a test whether he will be the devil's captive or not, by being obliged to walk on a straight line drawn on the ground. And thus we find the idea of the necessity of a tribute to the river-spirit in the case of the erection of a bridge—an idea current in the very earliest ages of the world—perpetuated to-day amongst ourselves in the games which our children play.

iii. The semi-sacred character of the bridge, subsequent to the placing of the river-spirit. — This is the third stage in the growth of opinion. Once the sacrifice has been offered, and the river-spirit or devil been placated, the bridge itself takes on an air of sanctity. Can it be some kindred idea which lies at the root of the Japanese custom of bridge-divinization (hashi-utsu)? The placing of a bridge is in Japan, i.e. a male pillar or phallus, and, as persons pass over the bridge and engage in conversation, stray words overheard from their talk are interpreted by the inquirer, who sits beside the post, as an indication of future events which is supposed to be learned. The bridge is a place where it is believed 'sacred' influences are felt (see W. G. Aston, Shinto, the Way of the Gods, p. 341).
It is probably for this sacrosanctity of bridges that we may find:

1. The origin of the name ‘Pontifex’ as the primitive ‘priest-engineer.’—It stands to reason that the appeasing of an offended river-spirit could be accomplished only by one who was cognizant of the right method of propitiating the divinity. The title must be conferred on him who was most deeply instructed on these profound subjects, in other words, by the priest. He alone could interpret to his fellow-men the demands of the river-god, and he alone could prescribe the proper ritual for appeasing him. But in primitive times not only religious but also almost all technical and scientific knowledge was the exclusive possession of the priestly cult. Public works requiring skill in mathematics, engineering, and mechanical contrivances, were therefore nearly all the product of priestly brains and priestly hands. What more natural, then, than that the name ‘Pontifex,’ ‘bridge-builder’ (from ponte and facio; see Smith’s Gr. and Rom. Ant. 939 f.), should arise, suggesting in itself the twin functions of a servant of the river-god and the working out of a simple explanation of a word round which much mystery has gathered is probably the true one. The priest whose business it was to placate the river-divinity was originally also the architect of the bridge; and in later periods when these two functions were separated, and there came to be civil engineers who were not priests, the name still clung to the original possessor of the word, and hence we have ‘Pontifex,’ ‘Pontificlal,’ ‘Pontiff,’ all of priestly significance (cf. Milton for the old connotation of the word).

Now had they brought the work by wondrous art
Pontifex, a ridge of pontid far
Over the vexed abyss.

(Paradise Lost, x. 312 f.)

2. This furnishes a reason why the Pons Sublicius was always of wood.—The priestly title is essentially conservative, and the first form of the bridge was jealously preserved through all succeeding ages. We have every reason to believe that this bridge was the first which spanned the Tiber. It was the erection of this wooden structure by some pontifex, or a sort of priest-engineer (tradition assigns it to the reign of Ancus Martius [Livy, i. 33]), who defied and appeased the river-spirit, which originated the title ‘Pontifex.’ But no sooner was the bridge successfully reared, and Father Laplace asserted his existence, than the structure acquired a semi-sacred character, and was ever afterwards regarded as holy (see Dionys. ii. 73, iii. 45; Plut. Numa, 9; Serv. ad Virg. Aen. ii. 160). The idea of its holiness was perpetuated through succeeding centuries by the fact that its upkeep and repair were undertaken solely by the College of Pontifices, of whom the head was the Pontifex Maximus; while its sanctity is further attested in that neither bolt nor bar nor nail of iron entered into its construction, which was entirely of oak and poplar. In Jorrens’ Topographie der Stadt Rom im Alterthum, 1885, p. 190; Varrt, Ling. Lat. v. 83; Pliny,HN xxxvi. 15; Tac. Hist. i. 86; Seneca, De Vita Beata, 25). The conservative priestly mind could tolerate no change. ‘In the history of man iron is a modern innovation as compared to bronze and still more to wood and stone; therefore, like every innovation, it is offensive to the gods’ (so Frazer, JPh xxv. 1855 p. 157 note, who adduces many examples of the prejudice and hatred with which iron was regarded by the old inhabitants of Europe far sundered as Scotland and Korea, Cappadocia and Morocco; he refers also to the Hebrew practice, Dt 27). It was therefore a religious notion, traceable to the innate conservatism of the priestly mind, which maintained the practice of allowing no iron to invade the virgin purity of this old wooden bridge.

If this way of accounting for the sacred character of the Pons Sublicius be the correct one, a number of competing theories are ruled out at once. Mommsen supposed that it was owing to the political exigencies of the Republic, long before the bridge was always kept in its primitive wooden condition, that it was brought about by the exasperation of the approach of an enemy. Undoubtedly the legend of how Rome was saved by Horatius Cooles keeping back the Etruscan enemy upon the Tiber, while the bridge was wooden, was most probably the result of the wooden structure behind him, lends countenance to this view (Livy, ii. 10; a fine bronze monochrom of Cooles and the Sublician bridge of 15 B.C., in the Coll. Antonius von Szott, Studien zur Tit. Med. de l’Empire Rom. 1878, p. 60). J. H. Middleton (Ancient Rome in its Popular History and Ceremonies of Etruria, i. 14) adopts similar views, the latter asserting that when the Tiber was the natural rampart of Rome, the Pons Sublicius was kept as a wooden drawbridge until all fear of invasion was removed by the conquest of Etruria and by the downfall of Hannibal. Thenceforward, stone bridges were erected, as the principle of the arch had been known for centuries before, and had been applied in the construction of the Cloaca Maxima (see also Marion Crawford, Art Roma Imperialis, i. 6, 127). But this theory fails to account for the perpetuation of the practice of retaining the bridge in its primitive wooden form and avoiding the use of iron. It is therefore the religious, rather than the political, reason, to which we are confined, as the true explanation.

3. The transference of the name ‘Pontifex’ to the pagan and Christian Emperors and latterly to the Popes.—With the passing of the Republic into the Empire, the office of Pontifex Maximus was conferred on Augustus (13 B.C.) by the vote of the Senate; and thus the supreme sanction of religion was given to that use of the word. It was held that under no circumstances could there be more than one Pontifex Maximus, and this rule was never violated until Pupienus Maximus and Balbinus were named joint-Emperors by the Senate (A.D. 238). The rule having been broken, it was never afterwards observed. Frequently the junior colleague of an Emperor was styled Pontifex Maximus equally with his senior, and the legend occurs on their medals and coins. When Christianity became the official religion of the Roman State, the Christian Emperors carried over the title into their adopted religion. Seven Christian Emperors assumed the name, ensigns, and prerogatives of Sovereign Pontiff, until finally Gratian refused to wear the Pontifical robe (see Gibbon, Hist. Rom., ed. 7, p. 244 of Caley’s ed.); and note on the testimony of Zosimus.

The next step was the transference of the title to him who claimed to be spiritual head of the Christian Church, though the exact date at which the title first applied to the Bishop of Rome cannot now be ascertained. (The formula of affirmation in Tuker and Malleson, Handbook to Christian and Eccles. Rome, iv. 334, that the title was first given to Pope Leo i. [A.D. 440-461] is incorrect.) The first prominent application of the title is from the pen of Tertullian (de Paullaticia, c. i.) in an ironical sentence addressed to the Roman Pontiff: ‘Audito etiam edictum esse propositionem, et quidem peremptorium. Pontifex seclavit Maximus, quod est episcopus episcoporum, edictum.’ The corresponding passage of Cyprian shows no trace of the recognition by the African Church of the exclusive right of the Bishop of Rome to the title. Indeed, in a petition to Boniface, Bishop of Carthage, A.D. 325, the monks there address him as ‘Christi venerandus Pontifex’ (Thomassin, ed. Bourassé, ii. 569), to which Cyprian replies, ‘Eucharum Christi magni Maximus Pontifex’ by Eucherius, Bishop of Lyons (Migne, Patr. Lat. i. 773). The term is first applied directly to a bishop of Rome, when Anastasius, on the ordination of Pelagius i. to that dignity, exclaims: ‘Ecce sanctum pontificem pontificem pontificem’ (Migne, op. cit. xxxvii. 611). There is abundant evidence (adduced in Smith’s Diet. Christ. Ant. ii. art. ‘Pontifex’) to show that in all the succeeding centuries down to the 11th, many prelates in different countries of Europe
were styled 'Pontifex,' and that 'Maximus' was added where the see was more important and distinguished. But gradually, with the growth of the Papacy in power and worldliness, the title was centred in the Pope; and from the 11th cent. to the present day the name which was originated, perhaps by Anesius Martinus in the early ages of the world's history, to designate the engineer- ters of the bridge orders, the thing attached. The busy, offended river-spirit, has been limited to the Pontiff who to-day sits in the Vatican, and overlooks the spot where the Pons Sublacii once stood.

4. The Church assuming control of bridges.— Bridges finally became sacred objects. The Church took them over when Cheshire, and the third bridge became surrounded with many religious associations. The German Emperors of the Holy Roman Empire had to reiterate thrice a royal oath to maintain the liberties of Rome, 'at the bridge, the gate, and on the stairs of the Vatican' (Gibbon, vii. 211 [Dury's ed.]; Gregorovius, Geschichte der Stadt Rom im Mittelalter [Eng. tr.], iv. 59).

Bridge-building became a part of religion, a pious and meritorious work before God. In 1189 a regular Order of Hospitaliters was founded in Scotland for the building of bridges by St. Benezet, under the name of the 'Bridge-Builders' (Frères Pontifes, Fratres Pontifices). The object of the Order was the building of hospices and bridges at points where pilgrims crossed the large rivers, and for the ferrying of pilgrims over the streams. A hospital of this Order at Avignon was planned at an early period built the celebrated bridge of which four arches still survive. As a badge they wore a pick upon their breast. Their constitution was modelled upon that of the Knights of St. John; and as the association in its early stages in the 13th cent., most of their number found their way into that Order (Kurtz, Church Hist. [Eng. tr.] ii. 76; Grégoire, Recherches historiques sur les con- gégations hospitalières des frères pontifices, Paris, 1819).

To leave money to build a bridge came to be reckoned an act of great piety. In many cases the funds bequeathed were administered by priest-engineers, whose names have been permanently associated with the structures which they erected or repaired, and with the dedication of many of St. Mary Overie from money dedicated by the daughter of a ferryman [Allen, Hist. and Ant. of London, ii. 454 ff.]). Sometimes, however, the bridges of the Middle Ages were erected from the sale of indulgences. Hutchinson (Hist. of Cumberland, i. 283) reports: 'In the year 1369 a bridge at Great Salkeld was taken away by floods; for the repairing and re- edifying of which Bishop Welton published an indulgence of 40 days. The Bishop of Durham (1311–1316) was fond of the practice, as the registry of his episcopal chancery shows. There are frequent entries such as the following: 'His lordship grants 40 days' indulgence to all who will draw from the treasure that God has given them valuable and charitable alms towards the building and repair of Bytton Bridge' (Regestra Palatium Danes- mense, ed. Hardy, in Rolls Series, 1875, i. 615, 641 [quoted in Jusserand, English Wayfaring Life in the Middle Ages, p. 41]). Similar cases might be cited from Devonshire and other records (see Walford, Historical Collections in T&HIS new series, 1884, p. 364). Prof. Hume Brown gives the facts for Scotland (Scotland in the Time of Queen Mary, 1904, p. 60).

Most of the bridges erected by priests had a chapel attached, or were finally part of a monastery. Nearly all the early bridges in the Continent of Britain were adorned with these chapels, e.g. that at Wakefield over the Calder in the time of Edward III.; that over the Wye at Monmouth, still extant; that over the Avon at Bath; and the first stone London Bridge erected in 1205, on which the chapel was dedicated to St. Thomas Becket (see Walford and Jusserand, opp. cit.). As a curious perpetuation of the ancient Roman idea that the duty of keeping the bridge intact was a religious obligation resting on the sacerdotal order of the bridge builders, the high nobility, as the heads of the church, and divided the congregation from the reading-desk and pulpit (Fosbrooke, Cyn. of Ant. p. 147; Nash, Worcestershire, i. 329). These bridge-chapels were not used exclusively for devotional purposes. The chapel of the old Norman bridge over the Aire at Leeds was utilized till the middle of the 18th cent. as a cloth market, and the traders were summoned to the spot by the ringing of the bell. In 1276 an ordinance of the Common Council of the City of London forbade the inmates of the Bridge Hospital in London to bring goods to market, and on the other hand, Philip the Fair of France in 1304 ordained that the Public Exchange of Paris should be held on the Great Bridge there, as it was anciently accustomed to be (see Gephyrologia [1754], the basis of Rees' Cyclopaedia; of Arts, Sciences, and Lit. 1810). As a still further development of this sacredness attaching to bridges, the ancient Danes are said to have erected bridges as a pious memorial of their deceased friends. Olaf Wornius in his Monumentorum Donorum, 1684, an account of the Danish bridges, built a bridge on the island of Tøessoe in Denmark, not only to preserve their own names to posterity, but also to commemorate that of Johnstein, who had converted them to Christianity. Others have erected bridges to express their gratitude for rescue from drowning.

Thus with the planting of the river-spirit, the defeat of the devil, and the hallowing of their structure by their association with the monastic orders, medieval bridges eventually became shrines, and their sanctity is taken as the basis on which the process of rehabilitation was completed. The illomened structure of antiquity grew into the holy and sacred sanctuary of the Middle Ages, and memories of their religious character have lingered to the present day. Bridges are no longer objects of portent, but symbols, and the question of their sanctity, and especially their holy spots, across which even material blessings may pass. It is over a golden bridge at Bingen that German tradition asserts that the spirit of Charle- magne annually crosses the Rhine, whenever a season of unusual plentiful betokens that the vineyards and cornfields of Germany have been super- naturally blessed. Thus Longfellow sings (Sonnet on Autumn): 'Thou standest, like Imperial Charle- magne, upon thy Bridge of Gold'; and again (The Golden Legend, Canto v.): 'God's blessing on the architects who built the bridges o'er swift rivers and abysses, Before impassable to human feet, No less than on the builders of cathedrals, Whose massive walls are bridges thrown across the dark abysses of habitation.'

Well has the name of Pontifex been given Unto the Church's head, as the chief builder And architect of the invisible bridge That leads from earth to heaven.'
BRIEFS.—See BULLS and BRIEFS.

BRINDÂBAN (Skri. brîndivana, ‘grove of the sacred bull-tree,’ oceana prana bhaiv.)—A town situated on the right bank of the river Jumna, in the Mathurâ District of the United Provinces, lat. 27° 33' 20" N.; long. 77° 42' 10" E. The place is held sacred as the scene of many adventures in the life of Krishna. It has been computed that there are as many as one thousand temples within the limits of the town, of which four of special interest,—those of Govindâ Deva and Gopâthinâ, dedicated to Krishna, as a god of cattle and companion of the Gopi milkmaids; Madan Mohan and Radha-Kishor, representing him in his youthful and erotic character. The temple of Govindâ Deva, built about A.D. 1500, is the most impressive building that Hindu religious art has ever produced, at least in Northern India. ‘The body of the building,’ says Growse (p. 241), ‘is in the form of a Greek cross, the nave being 100 ft. in length and the breadth across the transcepts the same. The central compartment is surmounted by a dome of singularly graceful proportions; and the four arms of the cross are roofed by a waggon vault, that presents, as usual in Hindu architecture, the summit, or apex, on the inner side of the temple, the only original feature surviving of the temple, and, as Growse remarks, there are earlier Hindu temples which display a similar design. Ferguson regards this as ‘one of the most interesting and elegant temples in India, and the only one, perhaps, from which an European might borrow a few hints.’ The temple of Madan Mohan is in a ruinous condition, and the idol has been removed to Karauli in Rajputâna. That in honour of Jugal Kishor was built in the reign of the Emperor Jahângir, about A.D. 1627. Among the modern temples, the most interesting is that assigned to planning a Hindu temple, and, as Growse remarks, there are earlier Hindu temples which display a similar design. Ferguson regards this as ‘one of the most interesting and elegant temples in India, and the only one, perhaps, from which an European might borrow a few hints.’

The literature of the sacred groves of India is a vast one, and the giving of names to temples and other buildings is considered an act of great sanctity. The temple of Krishna is the occasion of a local festival, of which Growse (ib. 267) enumerates forty-six.

LITERATURE.—Growse, Mathurâ, a District Memoir (1838), ch. viii., where illustrations of the more important sacred buildings of Mathura are given. The Groves of the Indians is described by Ferguson. History of Indian and Eastern Architecture (1854), p. 462 ff. W. CHOOKE.

BROTHERHOOD (Artificial).—See BULLS and BRIEFS.

1. ‘Relationship’ in ordinary acceptance means connexion by birth or marriage. Accordingly, it is usual to describe blood-brotherhood, adoption, and the ties formed by sponsorship, fosterage, and the like as artificial relationships, whereas these are described open to serious objection, provided that we do not leave two facts out of sight—the fact that, in the process of their evolution, artificial relationships do not always follow the same course as natural relationships, and the fact that what seems artificial to us may, and often does, seem perfectly natural to uncivilized man.

We propose to treat the subject under the following heads:

1. The ceremony establishing brotherhood.

(a) Where blood is employed (§§ 1–17).

(b) Where blood is not employed (§§ 18–29).

ii. Where the relation is due to force of circumstances (§§ 30–31).

iii. The institution among the Southern States (§§ 32–43).

iv. The institution in Roman and Byzantine law and in modern times (§§ 44–50).

v. Where the compact is entered into with women, dead or living (§§ 46–50).

vi. What persons are bound by the compact (§§ 51–55).

vii. What purposes are served by the compact (§§ 56–59).

viii. Where it is a commercial compact (§§ 60–65).

ix. General observations on the nature and history of the institution (§§ 53–59).

i. The ceremony.——(a) Where blood is employed.

2. Livingston (Missionary Travels and Researches in South Africa, London, 1857, p. 488) describes the rite as practised by the Balonda and shows us its most usual characteristics. ‘The hands of the parties are joined . . . small incisions are made on the clasped hands, on the pits of the stomachs of each, and on the right cheeks and foreheads. A small quantity of blood is taken off from these points in both parties by means of a stalk of grass. The blood from one person is put into one pot of beer, and that of the second into another; each then drinks the other’s blood, and they are supposed to become perpetual friends or relations. During the drinking of the beer, some of the party continue beating the ground with short clubs, and utter sentences by way of ratifying the treaty. The men belonging to each then finish the drink, and the ascetics of “Kusendi” are henceforth considered blood-relations, and are bound to disclose to each other any impending evil.’ In some cases the parties drink one another’s blood undiluted. Thus, among the people of Balunga, the ‘brothers’ bent their heads, and sucked the blood from each other’s arms (Henry M. Stanley, Through the Dark Continent, London, 1878, ii. 296); and a like practice prevails among the Rokka of Flores (A. Bastian, Indoensien oder die Inseln a. indischen Archipel. p. 46: ‘Borgen n. Celebes, Berlin, 1880, p. 65), in Syria (H. C. Trumbull, The Blood Covenant, London, 1887, p. 5) and Madagascar (W. Ellis, History of Madagascar, London, 1858, i. 187–188), among the Kares of Buma (R. M. Luther, op. cit. 313), and among the Greeks with so far accommodating themselves to the manners of the barbarians, with whom they made alliances, as to drink their blood (ib. Diss. xxii.; and Tacitus (Ann. xii. 47 (Church and Brodrrib’s tr.) says of the Thracian and Illyrian tribes that it was the custom for their princes, whenever they joined alliance, to unite their right hands and bind the thumbs together in a tight knot; then, when
the blood had flowed into the extremities, they let it escape by a slight puncture and sucked it in turn. Further, Herodotus (i. 74 [Rawlinson's tr.]) tells us that the Scythians and Lydiaans made a slight flesh wound in their arms from which each sucked a portion of the other's blood. Among some of the Australian tribes the drawing and also the drinking of blood on certain special occasions is associated with the idea that those who take part in the ceremony are thereby "bound together in friendship and obliged to assist one another" (Spencer and Gillen, The Northern Tribes of Central Australia, London, 1904, p. 598; The Native Tribes of Central Australia, London, 1901, p. 161) to the rite drink one another's blood, or sprinkle one man's blood on the other (see below, § 49). So, too, in ancient Ireland, parties to a league are said to have ratified it by drinking each other's blood—a custom derived from the heathen, who were wont to seal their treaties with blood (Giraldo Cumbresius, Typogr. Hik. iii. 22).

3. Sometimes the blood of the 'brothers' is mixed with some other liquid—water, wine, beer, or spirits; and of this practice instances are supplied by Timothi, St. John Forth, Life Naturalist's Wanderings in the Eastern Archipelago, 1837-1838, London, 1835, p. 432) and of Bohol (M. de Zuluig, An Historical View of the Philippine Islands (tr. by Mayer), London, 1814, i. 67; see also Relation of Lloren: The Philippine Islands, ed. by Blair and Robertson, Cleveland, Ohio, 1803, v. 161-163), of Ambonua, of Leti, Moa, and Lakor, of the Babar Archipelago, of Wetar, of Ceram, and of Tanembar and Timor-laut (J. G. F. Kiel, De sjuk- en koerbrochtige gebruik van bloed in de Zuid-Aziatische Eilanden, Haarlem, 1886, pp. 41, 306, 342, 446, 128-129, 294), by the Bali of North Cameroon (Hutter, Der Abschluss von Blutverwandtschaft u. Verträgen bei d. Negern d. Grasslands in Nordkamerun' in Globus, 1889, lxv. 1), the Balonda (D. Livingstone, op. cit. p. 488; H. Wissman, etc., Im Innern Afrikas, Leipzig, 1888, p. 151), the Wanyamwezi (J. Kohler, 'Das Bantu- recht in Ostafrika' in Zeits. f. vergl. Rechtsw. xxv. 41), the Kimbunda (L. Magyar, Reisen in Süd- Afrika in d. Jahren 1839 bis 1857, tr. from the Hungarian by Henriksen, Budapest and Leipzig, 1859, i. 201-202), the Kayans (S. J. View, in The Forests of the Far East 2, London, 1863, i. 116), and the Seythiana (Herod. iv. 70).

4. The 'brothers' do not always drink each other's blood. Sometimes they sprinkle it over another (Spencer and Gillen, Northern Tribes, pp. 598, 572; see below, § 49). It is smeared by the Karens over their lips (Luther, op. cit. p. 313), while the Wachaga wipe it on a piece of flesh, which each of the parties thrusts several times into the mouth of the other (Kohler, op. cit. p. 49). A somewhat similar practice is found in Uhehe (J. Thomson, To the Central African Lakes and Back, London, 1881, i. 243-244). In Uganda and Bukoba each of the 'brothers' dips a coffee-bean from a pot containing two in his blood, and presents it on the palm of his hand to the other, who must take it up with his lips (J. Roscoe, 'Further Notes on the Manners and Customs of the Baganda' in JAI, 1902, xxxii. 68; Kohler, op. cit. pp. 46-41). And, among the Kayans of Borneo, the "Men Selobes et Pusuk (in the Kayanian); after drinking the other liquid and drunk, or is rolled up with a cigarette and inhaled with the smoke (S. St. John, op. cit. i. 116).

5. At Murli, a coffee bean (C. T. Wilson and R. W. Felkin, Uganda and the Egyptian Soudan, London, 1882, i. 100) and a pigeon feather are put in the fugen's liver (R. Niese, 'Die Personen- u. Familien- recht d. Suaheli' in Zeits. f. vergl. Rechtsw. xvii. 249); and among the Wazaramo, Waeggiesu, Waagara (R. F. Burton, The Lake Regions of Central Africa, London, 1860, i. 114), and Masai (M. Merker, Die Masai, Berlin, 1904, p. 101), a piece of fish or fowl is eaten with the 'brother's' blood. Among some of the tribes to the south of the Welle, a piece of sugar-cane, with which the blood of the parties has been wiped off, is chewed and the fibres are blown over the wound. At the same time the rite is performed, the 'brother' declares the motives which induce him to enter into a compact, and the obligations which he binds himself to perform, and imprecates evil on the breaker of the bond (W. Junker, Travels in Africa during the Years 1879-1883, London, 1891, p. 405; see below, § 56).

6. This last instance introduces us to the performance of the rite by way of inoculation, which in many cases takes the place of blood-drinking. Grant (op. cit. p. 108 f.) gives the following description of this form as practised by the Wanyamwezi: 'The process is as follows: to the Sultan's son, Keren- enga, may be mentioned. My consent having been given, a mat is spread, and a confidential party or surgeon attends on it. All have to pass if they have not already done so. If the two are clean, a little grease, and a spear-head; a drop of blood is made under the hand of each party, a drop of blood put on a leaf and exchanged by each. The elders who rub it with butter twice into the wound with the leaf, which is now joined in pieces over the wound; after the obsequies have taken place. The solemn address is made by the older of the attendants, and they conclude the ceremony by rubbing their own sides with the grease, shaking with a will a little bone, and wishing success to each other. The rounds of ammunition are then fired off, a compliment from each of the four drums is sounded, and they parade the village all the afternoon. An Ugandan lad, the magician of the Sultan, made brotherhood with Rehan, the cook, by cutting marks on his chest and rubbing in the fat of lions.'

Similar usages are said to prevail among the Wajiji (Burton, op. cit. i. 114), on the Congo, and in other parts of Africa (H. M. Stanley, The Congo, London, 1885, i. 355, ii. 24, 29, Through the Dark Continent, i. 493; H. Ward, Ethnographical Notes relating to the Congo Tribes, 1885; JAI xxiv. 291; V. L. Cameron, Across Africa, London, 1877, i. 333).

7. In Scandinavia, men made brotherhood by letting their blood flow together in a footprint and mingling where it fell ('The Long Lay of Brunnhild, The Name of the Corpse Poems, in British Barelles, by W. York Powell, Oxford, 1883, i. 308), or by 'going under the turf,' a ceremony of which an account is given in The Story of Gisli the Outlaw (from the Icelandic by G. W. Dasent, Edinburgh, 1896, p. 25). We are told that Gisli and the three men who were to be his brothers, 'cut up a sod of turf in such wise that both its ends were still fast to the earth, and propped it up by a spear, scored with runes, so tall that a man might lay his head on the socket of the spear-head. Under this yoke they were all four to pass. . . . Now they bleed each a vein, and let their blood fall together on the mould whence the turf had been cut up, and all touch it; and all afterwards fell on their knees, and were to take hands, and swear to avenge each the other as though he were his brother, and to become the gods to which the Sultan's son, Keren- enga, may be mentioned. My consent having been given, a mat is spread, and a confidential party or surgeon attends on it. All have to pass if they have not already done so. If the two are clean, a little grease, and a spear-head; a drop of blood is made under the hand of each party, a drop of blood put on a leaf and exchanged by each. The elders who rub it with butter twice into the wound with the leaf, which is now joined in pieces over the wound; after the obsequies have taken place. The solemn address is made by the older of the attendants, and they conclude the ceremony by rubbing their own sides with the grease, shaking with a will a little bone, and wishing success to each other. The rounds of ammunition are then fired off, a compliment from each of the four drums is sounded, and they parade the village all the afternoon. An Ugandan lad, the magician of the Sultan, made brotherhood with Rehan, the cook, by cutting marks on his chest and rubbing in the fat of lions.'

Several explanations of this curious ceremony have been suggested. In Jacob Grimm's opinion (Deutsche Rechtsetzethhönder, Götingen, 1881, p. 119), the 'brothers,' by placing themselves underneath the turf and falling on their knees, appear to indicate their abasement before the Higher Powers, and their solemn purification from the world. Konrad Maurer (Die Belchung d. norwegischen Stausmannes zum Christenthum, Munich, 1855-1856, ii. 293) holds that the ceremony is an ordeal of which the purpose was to secure the performance of the promises made. And this view seems to receive some support from the following passage:

'This was then the ordeal at that time, that men should pass under the earth together, that is a turn was cut out in the earth. The ends of the turf shall be fast in the field, and that man who was to undergo the ordeal should pass therethrough. . . . So was he cleansed who went under the earth-collar, if the turf fell not
upon him' (The Story of the Laxdalen, done into English by R. Proctor, London, 1900, ch. xviii.).

M. Papenhein (Die altdanischen Schutzgilden, Breslau, 1885, p. 18 ff.), however, points out that this ceremony was used not only in making love-pledges, but also in those cases where the offence had been committed and the offener was required to humble himself by going under the turf, as a condition precedent to the acceptance of a composition. He holds that one explanation will not suffice for all three cases, and he explains the use of the ceremony in making brothers — the mixing of the blood with the earth — as a symbolical of the common origin of the brothers. They are children of one womb — born of one mother, the earth (see also Vigfusson and Powell, op. cit. i. 243).

T. Makins, London, 1885, p. cxvi) tells us that, in a dispute among the Koraish, the men of one party solemnized their compact by dipping their hands in blood, while their opponents dipped their hands in perfume and rubbed them upon the Ka'a. Robertson Smith (Kinship and Marriage in Early Arabia, new ed. London, 1903, pp. 57-59) says that at Mecca in historical times a life and death covenant was solemnized by an oath, each of the parties to which dipped his hands in a pan of blood and tasted each other's hands, and he states that the view that these forms are variations of one and the same rite — the rite in which the contracting parties drank or tasted one another's blood. He shows (op. cit. p. 59, note 1) that in some instances water or fruit-juice was substituted for blood; and in this connexion it is interesting to notice Herodotus (iv. 172 [Rawlinson's tr.] statement regarding the Nasamonians that, 'when they pledge their faith to one another, each gives the other to drink out of his hand; if there be no liquid to be had, they dust their hands from a chariot, and put their tongues to it' (cf. W. Crooke, 'The Hill Tribes of the Central Indian Hills,' in JAI xxviii. 241). It may be that the practice of ratifying an agreement to take part in a common undertaking by shaking hands dipped in blood (Hector Booths, Scotorum Historiae, Paris, 1520, lib. ii. fol. xvii b; cf. § 15 below), and that of drinking human blood, attributed to conspirators at Rome (Sall. de Conj. Cat. 22; Phil. Vid. Publicoe iv. [both statements are regarded as un- reliable by Casselman, Römische Forschungen, Berlin, 1864, i. 332, n.1]), and in China (Trumbull, op. cit. p. 43), are truly adaptations of the primitive institution of 'making brothers' (see below, § 15).

With the form of the rite in which the hands are dipped in blood Jacob Grimm (op. cit. p. 194) compares the dipping of weapons in blood, mentioned by Herodotus (iv. 70 [Rawlinson's tr.]) in the following passage:

'Oaths among the Scythians are accompanied with the following ceremony: a large earthen bowl is filled with wine, and the parties to the oath, wrapping themselves slightly with a knife or an awl, drop some of their blood into the wine; then they place a sword, a scythe, a battle-axe, a bow, an arrow, and a javelin, all the while repeating prayers; lastly the two contracting parties drink from the bowl, as do also the children among their followers.'

So, too, the Benaus, in making alliances or in taking solemn vows, dip their weapons into a mixture of which blood forms the principal ingredient. ('Heads and Swords, Historical and Social Account of the British Settlements in the Straits of Malacca, London, 1839, ii. 395.) Lucian (Toxaris, 37), in his account of the Scythian form, gives the additional fact that the parties, having dipped the points of their swords in the blood, held them together and seeing that swords signified the union of the parties; and this view is corroborated by the curious practice of scraping the spear-shafts and musket-stocks of the 'brothers' on a banana-leaf, and dropping these scrapings, with a pinch of salt and a little dust from a grave, upon the wounds (Stanley, The Congo, ii. 24, 59, cf. Hutton, op. cit. p. 13, as to the Bali of North Cameroon, and see § 13 below). It seems that scrapings of wood from the stool of a chief add strength to an oath (A. B. Ellis, The Tshi-speaking Peoples of the Gold Coast of West Africa, London, 1887, p. 185). A similar observance appears to apply to the ceremony of sword-dipping practised by the Kunowit Dyaks. According to St. John (op. cit. i. 55), a pig was placed between representatives of two tribes, who, after cutting themselves, dipped their swords into water, and then broke the treaty, plunged their spears into the animal, and then exchanged them, each holding the other's sword; and the act of holding the other's sword is to be completed by an instance or touches upon the sword of the other, and so the act is completed.'

So, too, the Garos swear to observe peace by biting each other's sword, and seal the compact by putting food into each other's mouth and pouring beer down each other's throat (E. T. Dalton, Descriptive Ethnology of Bengal, London, 1872, p. 62). It is of interest to note in this connexion that the Norman lawyers explained the word 'wapentake' in reference to 'to the formal recognition of the Duke of Normandy by touching his arms' (W. Stubbs, The Constitutional History of England, 2, Oxford, 1885, i. 96). This ceremony is described in a law of Edward the Confessor (c. 33 as follows:

Apo vaece eteca lancea sa ub omnibus sectandus mortem feebus accepit; omnes enim quotque venissent cum lanceas ipsum hastam tangebant et sua confirmabant per contactum armarum, rore palam conseruarent.'

Du Cange (Glossarium mediceum et infima Latinitatis, ed. L. Favre, Niort, 1893, s.v. 'Arma' ['Arma mutare'] understands that it was thus that the subjects of the early kings of England made themselves 'the subjects of the King of Normandy, bound to cherish and protect one another and to join in preserving the kingdom from its enemies. G. Tamassia (L'Affrondamento, Turin, 1886, p. 32, note 2), however, cites authority to show that what is described is not a arma unius conjunctio, but a modus per stipulam commassorem armorum plebiscita continuo (see Grimm, op. cit. p. 7701; Tac. Germ. xi., Hist. v. 15).

10. Sometimes the parties to the compact hold the ends of a forked branch, while one of them cuts it in two, or while a medicine-man draws their blood from their foreheads (The Congo, ii. 82, 104). It is observed by C. A. L. M. Schwanner (Borneo, Beschrijving van het Stroomgebied van de Berito, Amsterdam, 1833, i. 214-215) that, in the district of Borneo with which he deals, a third party knocks the other branch held by the two last-named parties and at the same time pronounces imprecatory upon the oath-breaker. In view of the whole circumstances, it seems not improbable that the act of holding had a twofold significance. In the first place, it symbolized the union of the parties (it had the same meaning as the contact of swords in the Scythian ceremonial), and, in the second place, it was a ritual act similar to the act of holding an animal while it is being slaughtered for sacrifice. An instance of this sacrificial ceremony is also recorded by the Kumi of Chittagong. Among them, the parties to the covenant hold the ropes by which a goat is secured. One of their number stands over it, holding a fighting dâo. He takes a mouthful of liquor from a cup and blows it over the parties and the victim. Then he raises his dâo and invokes the posse civitatis, while he pulls some hairs from the goat and beats them to the winds. With one stroke the head is severed from the body, and the blood is smeared on the foreheads and feet of the 'brothers' (T. H. Huxley, The Wild Races of South-east Asia, London, 1870, p. 228). Among the Bali and the Dusuns, and in Shira (see below, §§ 13, 17, 21), the act of holding or touching the victim forms part of the ceremony.
11. Trumbull tells us of a curious Syrian form of the rite. The parties publicly announce their reasons for entering into the compact. These declarations are only spoken in duplicate; and each party, having smeared his copy with the other's blood, and having uttered the wish that the deceiver may be deceived by God, wears it suspended from his neck or bound to his arm 'in token of the indissoluble relation' (op. cit. p. 51; see below, § 21).

12. Probably Grimm (op. cit. p. 194; cf. Livy, i. 32) is justified in referring to the notion of union brought about by an exchange of blood both the 'hasta sanguinea praestae' of the Romans—the symbol of the declaration of peace and friendship—united, perhaps, with the Cross of the Scottish Highlanders—the half-burnt stake dipped in blood which called the clans to arms against a common foe.

13. A group of observances in which the introduction of weapons forms a prominent feature seems to be susceptible of a different interpretation. Forbes (op. cit. p. 452) tells us that at Timor the contracting parties slash their arms, and collect the blood in a bamboo, into which kerump (coarse gin) or tarum (palm-wine) is poured. Having put into the same fig-tree, they adjourn to some retired spot, taking with them the sword and spear from the Ludi chamber of their own houses, or from the Uma-Luli of their saku, if between large companies. Planting there the fig-tree, flanked by the sacred sword and spear, they hang on it a bamboo receptacle, into which—after pledging each other in the mixed blood and gin—the remainder is poured. Then each swear, 'If I be false, and be not a true friend, may my blood issue from my mouth, as it does from one of the Ludi houses, and enter into the bottom of the receptacle being pricked at the same moment to allow the blood and gin to escape. The tree remains and grows as a witness to the contract. With this tree of witness Trumbull (op. cit. p. 310 ff.) connect—erroneously, we venture to think—the blood-stained 'Fiery Cross' and a similar symbol made use of in Southern Arabia (see A. von Wrede, Reise in Hadhramaut, Brunswick, 1870, p. 197 ff.; see above, § 12). It is not uninteresting to note that the planting of a tree, which, in Timor, is a symbol of peace, is also used in Karon, Kayan, and Burma, in itself constitutive of the bond of brotherhood (Luther, op. cit. p. 313). Trumbull (op. cit. pp. 260 ff., 316) refers in this connexion to the planting of trees in ancient Israel; but the Israelitish practice cannot be susceptible of an altogether different explanation (see Robertson Smith, Rel. Sem., London, 1894, p. 155 ff.). What then was the purpose served by the introduction of weapons? It may be that it was the same as that of planting the tree; and, in support of this view, the instance of the Madagnears may be cited. W. Ellis (Hist. of Madag., p. 188 ff.), in describing the ceremony of the fatadre (a form of the blood-rite), says that 'to obtain the blood, a slight incision is made in the skin covering the arm, the blood is collected in the bosom, signifies the fatadre, "the mouth of the heart." . . . Some gourd-powder and a ball are brought, together with a small quantity of ginger, a spear, and two stones, and the knife, which is also used in each hand. Its handle is nearly cut off; and it is left in this state to continue bleeding during the whole ceremony.' The parties then join in pronouncing a long imprecation upon the oath-breaker, in which occur the following invocations: 'Oh the mouth of the heart! On the ball of the ginger-dense, the indelible foot, the unvanquishable foot, weting her in its blood!' and then follows the statement: 'If we keep and observe this covenant, let those things bear witness.'

Take again Hutter's (op. cit. p. 1 ff.) account of the ceremony among the Bali of North Cameroon: It seems to consist of two parts—the making of 'brothers' and the making of 'friends.' The former is performed by drinking kola and pepper in their open hands, interchange promises of mutual friendship and assistance. The kola and pepper were chewed and eaten, and the blood of the 'brothers' was mixed with palm-wine and drunk by each. Then followed the second part, the making of 'friends.' At this the blood, which in the former part being pronounced upon the oath-breaker, a trench was dug. Each 'brother' pricked his arm, and the bullets, some in twos, some in threes, some altogether, were thrown into the trench. It was filled up and a flat stone was placed upon it. Upon this stone a kiss was given, and the 'brothers,' while the others held it fast, its blood falling on the stone and trench. After the blood was thrown into the trench, the calabash into which bullets were dropped; and the contents of the calabash were emptied out on the trench. Then the 'brothers' poured the contents on the trench, the ground containing redwood on the stone, they rubbed one another's arms and breasts with the wood, while words of magic were repeating said. Later and less properly, as it seems, the wood was distributed among the followers and attendants.

The view that the articles thrown into the trench and the stone placed upon it afterwards is to be interpreted as an act of sacrifice, derives support from the practice of the Chûninhans in making oath, to dig a hole a hole, the place where it was which the one killed by another, and cover the stone with earth; and by these acts they signify that, like the stone in the ground, their word or oath remains unalterable (Kleek Taum. Die Ersforung d. Techinian-Gebiete auf Formosa durch die Japaner in Globen, 1896, Ixx. 22 ff.). A very similar form of oath is found among the Bendawus Dusuns. According to F. Hatton's account (North Borneo, London, 1885, p. 204, cf. pp. 305, 397), the ground having been cleared for a space of about twelve yards, a hole was dug, a foot in depth, a large water-lron was placed in it, the earth dug out was thrown into it, and the two chief men called upon their god. A stone was then placed near the fire, and the two men declared by fire, represented by a burning reed, would be held guiltless to their god. While they are eating, a large bowl of liquor is prepared. The elders add some drops of pigs' or clickers' blood; and the chiefs wound each other and let their blood flow into the liquor. The elders stir the potion with a sword, a spear, arrows, and, in later times, with the muzzle of a musket. Then one of them comes forward and imprecates evil upon the oath-breaker, the other feasters show their concurrence by signs, the chiefs of the two parties begin to drink the liquid, and the rest of the company follow. On a set day a feast is given in the other village, and the bond is then regarded as inviolable. This solemnity is called peta (Riedel, op. cit. p. 125 ff.). Riedel does not give the terms of the imprecation, nor does he state the purpose for which the weapons are introduced. It is, however, instructive to observe that, in the Ceramese procedure, by way of oath for the discovery of crime, a parang and a little arrow-rust are introduced along with other symbols, and that an imprecation is pronounced upon the oath-breaker, with the effect, inter alia, that his throat shall be cut with a parang and his body pierced with arrows (ib. p. 116). Further, in the Tamlembi and Timor-Laut Islands, in making brothers, sea-water, palm-wine, and other ingredients, are added. Then a bunch of sea-water is poured into a bowl and mixed with the blood of the contracting parties. Dududua is invoked as witness to the covenant, and evils are imprecated upon the breaker of the bond. He shall be unstable as the sea, and his life shall be like the tides. Then the parties drink the liquor, and the stone or tooth is broken in two and preserved as a memorial or 'witness' (ib. p. 284). It is thought that these practices throw some light upon the symbolic meaning of weapons in the hela ceremony, which includes, according to Riedel (ib. p. 336, as to brother-making at Leti), and that a similar explanation applies to the two instances which
follow. Among the Wazarano, Waagaruro, and Wasagara, the candidate for the brotherhood seat then puts upon another, his bows and arrows being placed across their thighs, 'whilst a third person waving a sword over their heads vociferates curses against any that may break the brotherhood' (Burton, op. cit. i. 114); and to the woman who has performed the act the triple fusion of blood by inoculation had been completed, one of the proxies held a sword resting on his shoulder, while the other went through the motions of sharpening a knife upon it, both joining in pronouncing imprecations against the oath-breaker (cf. Höhnel, 'Anleitung zur Ethnologie der maleisischen Völker,' Leipzig, 1891, p. 147).

15. It is, of course, plain, from some of the examples of the ceremony with which we have been dealing, that the blood employed is not always that of the eaten animal, but sometimes that of one which has been killed by the agent of the harvest (see C. Höhnel, 'Die Religionsverhältnisse zwischen Men und Animals in Sarawak,' in JAI, 1901, xxxi. 209; cf. p. 185). In very many cases it is that of their proxies (Livingstone, op. cit. p. 488; J. Thomson, 'Through Masui Land, new ed., London, 1887, p. 587; cf. Schalburg, op. cit. p. 239; Macnaghten, 'Through the Dark Continent,' i. 146, 332). Sometimes the 'brothers' shake hands, after having dipped them in the blood of a slaughtered animal (J. M. Schuster, 'Reisen im oberen Nilgebiet, Ergänzungsteil, No. 75, zu Petermanns Mittheil.,' p. 50), or they are marked with his blood—the blood of a pig among the Kinials (St. John, op. cit. i. 117, 75), of a goat among the Knui of Chittagong (Lewin, op. cit. p. 285), of a goat or a heifer among the Shendos (ib. pp. 315, 322). Sometimes they smear their lips with blood drawn from a bull's eye (Le Tchou-Li, ou Rites des Tcheou, tr. from the Chinese by E. Biot, Paris, 1851, i. 126, ii. 247 f.). Or the blood may be that of a human victim, either stoned with drink, as among the wild tribes of Mexico (H. H. Bancroft, 'The History of the Indian Tribes of the Pacific States,' London, 1875, i. 636, 637; see below, § 48), or slain, as among the Danons of Borneo (Schwaner, op. cit. ii. 77).

16. Some of these ceremonies are plainly sacrificial, and recall to us Herodotus' account of the fat being divided among fixing the Arabs (iii. 8 [Rawlinson's tr.]). He tells us that,'when two men would swear a friendship, they stand on each side of a third: he with a sharp stone makes a cut on the inside of the hand of each near the middle joint, and, taking a piece from their dress, dips it in the blood of each, and moistens therewith seven stones lying in the midst, calling the while on Bacchus and Uranis.'

Robertson Smith identifies these diversities with Orotai and Allah (Rel. Sem., p. 310), and observes that at Mecca, within historical times, 'the form of the oath was that each proxy dipped their hands in a pan of blood and tasted the contents. . . The later Arabs had substituted the blood of a victim for human blood, but the custom with which Herodotus is conversant, they licked the blood as well as smeared it on the sacred stones. . . The seven stones in Herodotus are, of course, sacred stones, the Arabic mumsh, Hebrew masbath, which, like the sacred stones at the Ka'Ba, were originally Balyzed, Belzels or god-boxes.' He adds that the essence of the rite was that the parties 'consigned their blood, at the same time applying the blood to the god or fetish so as to make him a party to the covenant also.' (ib. 57, 59, 60.)

17. In some of these sacrificial rites an exchange of garments or weapons or gifts forms a part. Thus St. John (op. cit. i. 117), in speaking of the Kayans, says that 'they would exchange the sacred ceremony, though the variation may be confined to the Kinials, who live farther up the river, and are intermarried with the Kayans. The nose is brought at placed between the two who are to be joined in brotherhood. A chief addresses an invocation to the gods, and marks with a lighted brand the pig's shoulder. The beast is then killed, and, after an exchange of jackets, a sword is thrust into the wound and the two are marked with the blood of the pig.' So, too, in the Tschoukam exchange and re-exchange of clothing enter into the rite (Kohler, 'Das Bonntrecht,' p. 40). Among the Kanowit Dayaks, 'a pig was placed between the representatives of the two tribes, who, after calling down the vengeance of the Spirits on those who broke the rite, plunged their spears into the animal and then exchanged weapons' (St. John, op. cit. i. 55). Again, among the Dusuns, an exchange of weapons followed the ceremony, in which, having invoked his god, the chief and the traveller entered into the head and tail of the fowl with a third person almost severed its head. The movements of the dying fowl were then ordered to indicate the intentions of the parties. Lastly, guns were fired and presents were given (Hatton, op. cit. p. 155; see below, § 29).

(b) Where blood is not employed.

18. We shall now proceed to consider the cases in which the use of blood does not enter into the ceremony; and, first of all, we shall deal with instances where the exchange of food forms the essential part of the rite. When among the Mapuches the compact is made by an exchange of names, one of the parties at the same time presenting a lamb to the other to be eaten by him (E. R. Smith, 'The Araucanians, New York, 1855, p. 261; cf. Robertson Smith, 'Through Unknown African Countries,' London, 1870, p. 297; according to v. Höhnel, op. cit. p. 657, 690, they spit upon the sheep and pour milk upon it; see below, § 21); and of the Abors it is said that they 'hold as inviolate any engagement cemented by an interchange of meat as food. This is called semngung. Each party to the engagement must give to the other some animal to be killed and eaten; it is not necessary that they should eat together, or that the feast be held at the same time' (Dalton, op. cit. p. 462). In this same tribe, so this author tells us, the account of the Mapuches, given above, and that of the magua ceremony among the Khoi-Khoi. The parties to the rite last mentioned must be relatives. A man, for example, may enter into it with his sister's son or daughter's daughter, or with the son or daughter of his own wife, and even with a kinsman or with a brother or a sister, and with the son or daughter of his mother's or father's brother, or with the son or daughter of his own mother or father. The blood boiled with the kidney-fat forms the ceremonial food (cf. A. H. Howitt, 'The Native Tribes of South-east Australia,' London, 1904, p. 751), and of it only the parties and their nearest relatives partake, the rest of the family being apart. At the feast the meal the uncle gives the nephew his hand, promises to be a father to him, and asks him not to injure him in any way. Some days afterwards the uncle gives a feast in return. He slaughters an animal in the house of his sister—the mother of the man with whom he is entering into the magua—and afterwards gives him the best of his cows. The covenant draws the ties of relationship more closely together, but does not form a new bond (C. Waudre, 'Die Khoi-Khoi oder Naman,' in H. S. Schott's, 'Bildung und Kultur der Missionare in Afrikas und Ozeaniens,' Berlin, 1903, p. 315.) The Beni take the oath of friendship by 'chopping juju. A kola nut is placed on a brass tray with water poured on it. One of the parties touches himself with the
water and nut and eats part of it. Then the other party eats the remainder of it (R. H. Bacon, Benis, the City of Blood, London, 1897, p. 100). Again, among the Krenes of Burma, brotherhood is made by eating together, or by planting a tree, or by exchanging blood. Of those methods, the first is said to be of but little binding force, being a mere agreement to abstain from hostilities for a certain time. The Khamiyo of Bagds, Bagds, and Mahulis admit into their caste men of higher caste ranking than their own, on the candidate paying a small sum of money to the headman and giving a feast. He must taste a portion of the food left by each of the guests (H. H. Risley, The Tribes and Castes of Bengal: Ethnographic Glossary, Calcutta, 1891, ii. 41). Among the Mals, he must give a feast, and drink water into which the headman has dipped his toes (ib. p. 49). When a man of the Murni—a Mongolian caste in Nepal—wishes to make another man his brother, he intimates his feelings; and if these are reciprocated, presents are exchanged. A day is fixed for the ceremony, at which a Brahman officiates. The men face one another, each with a rupee at his feet. They exchange the rupees, and each dauls the other with his teeth. This mixture is called us in the marriage rite. The proceedings end with a feast. The tie thus formed is regarded as equivalent to that of actual kinship. 'The adopted brothers may not address or speak of one another by name, nor may they talk to each other's wives, even though these may have taken part in the ceremony. Their descendants, again, are supposed not to intermarry till seven generations have passed' (ib. p. 111). A somewhat similar account is given of the Limbas (ib. p. 10).

With the usages as to eating may be compared what Herodotus (iv. 172 [already quoted]) says of the Nasamoniens: 'When they pledge their faith to one another, each gives the other to drink out of his hand; if there be no liquid to be had, they take up dust from the ground, and put their tongues to it.' In making friendship with the Wawikju, the two parties threw water on their heads and caught and drank it as it fell (v. Hohnel, op. cit. p. 315 f.); and it is said of the wild tribes of the Naga Hills that, when peace is once established, the will, and, as in the proverbial practice of the austere, the chiefs meet face to face on opposite sides of a table raised on the roadside about eight feet from the ground, and approached on either side by a broad ascent, and exchange bamboo mugs of wine (H. G. Wood, op. cit.)

20. Not infrequently the bond is constituted by an exchange of garments or weapons. Thus, in Tahiti, the natives made friends by taking off a great part of their own clothes and putting them upon the voyagers (J. C. J. Hawkesworth, An Account of Voyage in the Southern Hemisphere, London, 1773, ii. 251). It is said of the villagers of the Gangotri valley in the country of the Teri Raja, that with them an exchange of caps is as certain a mark of friendship as an exchange of turbans between two chiefs in the plains (F. Markham, Shooting in the Himalayas, London, 1854, p. 108); and a similar statement is made regarding the khamit (H. B. Roweney, The Wild Tribes of India, London, 1882, pp. 102, 103); while the Anglo-Indian Hyderabad also made a point of the change of clothing (Merker, op. cit. p. 101). Edmund of England entered into an intimate alliance with king Caut by exchanging clothing and arms (du Cange, Glossarivm, ut. cit. supr.); and the same held true of the savvas (see H. G. Wood, op. cit. pp. 171, 172). In Jean sire de Joinville (ut. cit. supr., where many other instances will be found), it was the practice of the Saracens to make friendships by an exchange of arms. The case of Glaucus and Diomedes (Hom. II. vi. 235; see Tamassia, op. cit. p. 6 ff.) is, of course, familiar. Again, it is said of the Khamit that they make friendship by an exchange of weapons even the most deadly enemies become fast friends, and if one falls in fight, it is the duty of the other to avenge him (Roweney, op. cit.); and Dalton (op. cit. p. 20) gives a like account of the Midusins.

21. Sometimes the compact is formed by exchanging pieces of a slaughtered animal. Thus the Reschiat (see Donaldson Smith, op. cit. p. 297, referred to above, § 18) hang strips of its paunch on the necks of those with whom they are making friendship (F. Paulitschke, Ethnographische Notizen über Wakamba und ihre Nachbaren in ZE 1899, 5). Further, Trumbull (op. cit. p. 66) quotes an Indian authority (' Tod's Travels, Journal of the Indian Archipelago, Singapore, 1851, No. 32) to the effect that among the Rajput races of India women adopt a brother by the gift of a bracelet; and with this custom may be compared the Sla- vonic practice of tying the 'brothers' together (see below, § 37).

22. Sometimes the ceremony consists in the application of saliva (see above, §§ 18, 21). The Southern Somali spits on his right hand and rubs it on the foreheads of his friends; and if he is a fellow-tribesman; and among the Oroonó, a like ceremony seems to entitle the guest to tribal rights (Paulitschke, op. cit. p. 246). In the old days, the Masai spat at the man with whom they swore eternal friendship (S. L. and H. Hinde, The Last of the Masai, London, 1901, p. 17); and, among the Dyor, 'spitting betokens the most affectionate good-will;' it was a pledge of attachment, an oath of fidelity; it was to their mind the proper way of giving solemnity to a league of friendship' (G. Schweinfurth, The Heart of Africa, tr. by E. E. Frewer, London, 1873, i. 205). A similar practice is said to prevail in Guiana (Lawrence Keymis, Second Voyage to Guiana in the year 1596; R. Hakluyt, The Principal Navigations . . . of the English Nation . . ., London, 1588-1600, ii. 577). In the Maba, a friendly visit off Senegambie (E. S. Hartland, The Legend of Persua, London, 1894-1896, ii. 294); and Grium (op. cit. p. 194) observes that the old northern symbol of concluding peace was not blood but saliva (see H. G. Wood, op. cit. p. 172). A few instances in which saliva is employed are collected.

23. A remarkable form of the practice is spoken to by Taplin (in J. D. Wood's Native Tribes of
South Australia, Adelaide, 1879, p. 321ff.). He says in his account of the Narrinyeri that 'the latter suggested a sort of truce between the tribes on the Murray and those near the sea, and a curious sort of provision is made for it, the object of which may be the senet or game of war. The authority person to act the business of the tribes—agents who will not by collusion cheat their employers and enrich themselves. . . . When a man has a child before him and he makes its umbilical cord by tying it in the middle of a bunch of feathers. This is called a kalubu. He then gives this to the father of child or children belonging to another and to whom these children are thereafter nia-giagnampi to the child from whom the kalubu was procured, and that person who gives the child then. From this time none of the children of the man to whom the kalubu was given may speak to their iniala-giagnampi or even touch or go near him; neither must he speak to them.

We learn from the same authority (Taphlin, in E. M. Curr, The Australian Race, London, 1886, ii. 254) that, 'If one nia-giagnampi sees another in need of anything, he or she must send a supply of it if possible; but yet there must never be any direct personal intercourse between the persons. Sometimes the relation is entered into for a time only by dividing the kalubu and giving a part to each. When these parts are returned to the original owner, the relation ceases (Taphlin, in J. D. Wood, op. cit. p. 33).

24. Many names may be cited in which the compact is made by an exchange of names. This is the form observed by the Mapuches, one of the parties to the exchange at the same time presenting a lamb to the other, to be eaten by him.

25. Establishes between them nia-giagnampi a species of relationship which is considered almost as sacred as that of blood, and obliges them to render to each other certain services and that consideration which naturally belongs to relatives' (E. R. Smith, op. cit. p. 392; see also Foppig, op. cit. i. 384 f. as to the Fehmernese).

At Shupanga, on the Zambesi, the exchange of names with men of other tribes is not uncommon. The parties to the transaction regard themselves as close comrades, owing special duties to each other ever after; and each is entitled, if he visits the other, to food, lodging, and other friendly offices (D. and C. Livingstone, Narrative of an Expedition to the Zambesi and its Tributaries, 1858-1861, London, 1865, p. 149). In Ugoogo names are exchanged as a pledge of friendship (C. T. Wilson and K. W. Felkin, op. cit. i. 60), and the practice is common in Polynesia (Hawaii [J. Cook and King, Voyages, 2, iii. 251, in the years of 1777-1780, London, 1874, iii. 17], Huahine (J. Cook, in Hawkesworth, op. cit. ii. 251). It is said to be in use in the Marshall Islands (C. E. Meinicke, Die Inseln d. stillen Oceans, Leipzig, 1875-1876, ii. 342; A. von Chamisso, in O. von Kotzebue, A Voyage of Discovery into the Southern Sea and Beering's Straits, London, 1831, iii. p. 172, affirms that the friend is obliged to give his wife to his friend, but is not bound to avenge him); and it is found in the islands of Torres Straits (see Reports of the Cambridge Anthropological Expedition to Torres Straits, 1904, x. 125, 131 f.; see also J. B. Jukes, Narrative of the Surreying Voyage of H.M.S. 'Fly', London, 1847, i. 299 f., where it seems that the exchange forms a bar to marriage between one of the parties and the sisters of the other), and among the Caribs (Histoire naturelle et morale des Iles Antilles de l'Amérique, Rotterdam, 1861, p. 513), the Chapanish (M. Lewis and W. Clarke, Travels to the Source of the Missouri River . . . in the years 1837-1838, to have exorcised a sort of truce between the parties (Curr, op. cit. i. 251, note), the Shastika Indians (S. Powers, Tribes of California: Contributions to N. American Ethnology, Washington, 1877, i. 427), and the Chincaghmint of Alaska (J. Otto, A Tour around the World . . . in 1875-1878, London, 1878, p. 229; see also J. Menzies, Voyages made in the years 1788 and 1789, from China to the N.W. Coast of America, London, 1790, p. 365). It was at one time in use on the Lower Murray (G. F. Angas, Savage Life and Scenes in Australia and New Zealand, London, 1847, i. 254), and in New Zealand (J. C. F. de Sartorius, Manners and Customs of the New Zealanders, London, 1845, ii. 131). Of the natives at Wide Bay, Queensland, it is said (H. S. Russell, 'Exploring Excursion in Australia' in J.T.W., 1845, xx. 314) that 'they rub their noses with their fingers and mention their name, and you are then expected to follow the example by rubbing your nose and mentioning your name; then rub noses again with names exchanged.' The Kingsmill Islanders make friendship by rubbing noses and exchanging names (C. Wilkes, Geographical Results of the U.S. Exploring Expedition during the years 1838-1842, London, 1844, iv. 51); and de Sartorius gives a very similar account of the ceremony at Tonga (J. Dumont d'Urville, Voyage de la Corvette L'Astrolabe; Histoire du Voyage, Paris, 1839-1836, iv. 349). The Vanikors exchange names and presents (ib. v. 329); and the same usage prevails in some parts of New Guinea (W. W. Gill, Life in the Southern Isles, London, 1876, p. 238; J. Chalmers and W. W. Gill, Work and Adventures in New Guinea, 1877- 1878, London, 1878, pp. 42, 99). As to making 'brothers' with animals by exchange of names, see below, § 46.

26. Among the Yalgans of Cape Horn, artificial ties of friendship are constituted by an exchange of gifts; and by painting the face and body in a distinctive fashion. The friends assume the names of blood-relationship—uncle, brother, cousin, or nephew—and behave themselves as if they were really akin (T. Bridges, 'Mœurs et Coutumes des Fuegiens,' tr. by F. Hyades, Bulletin de la Soc. d'Anthrop., Paris, 1844, ser. iii. vol. vii. p. 182). And this practice is not confined to males; for women, unconnected by blood, often call themselves sisters, and act as such in all the conduct of life (P. Hyades and J. Deniker, Mission du Cap Horn, 1838-1839, Paris, 1891, vii. 298). So, too, among the Ovaherero, persons of the same sex are frequently united in a formal association (omapenga or ovapanga). The men have their wives in common, and are entitled to use each other in time of need; while married as well as unmarried persons have a specific office, the Die Eingeborenen Sud-Afrikas, Brosel, 1872, p. 227; G. Viehe, 'Die Ovaherero,' in S. R. Steinmetz, op. cit. p. 394; see also J. Kohler, 'Recht der Herero' in Zeits. f. vergl. Rechtsw. xiv. 298-299. An interesting parallel to these female associations is furnished by the Orinons. (W.) These two girls feel a particular penchant for each other, they swear eternal friendship and exchange necklaces, and the compact is witnessed by common friends. They do not name one another after this rafildation (D. in K. Zelti, but are 'my brother' or "my gino" or "my gino" or "my meet to smile" to each other to the end of their lives (Dalton, op. cit. p. 233). A like custom exists among some of the Papuan tribes on the north coast of New Guinea (J. Kohler, 'Recht der Papuas' in Zeits f. vergl. Rechtsw. xiv. p. 290), and in certain districts of the Alenuzi (E. S. Hartland, op. cit. ii. 218 f.). As to similar usages among the Southern Slavs see below, § 34.

27. Among the North American Indians, we find many examples of companionships in arms. Thus, on the eastern coast, 'the young men are generally coupled out as friends; the tie is very permanent, and continues oftentimes through life' (Edwin James, Account of an Expedition from Pittsburgh to the Rocky Mountains, London, 1814, esp. the notes of Major Lown . . . London, 1823, i. 117, 235; see also W. J. McGee, 'The Sioux Indians,' in Fifteenth Annual Report of the Bur-
BROTHELORD (Artificial)

ean of Ethnology to the . . . Smithsonian Inst. 1832-1834, Washington, 1897, p. 178); the existence of a similar institution has been noted among the Wyandot (First Annual Report . . . 1839-1840, Washington, 1891, p. 69), and the Iroquois (P. F. X. de Charlovoix, Histoire de la Nouvelle France, Paris, 1744, vi. 14); and J. Adair (The History of the American Indians, London, 1775, p. 190) says that the Cherokee reckoned a friend in the same rank with a brother both with regard to marriage and any other affair of social life.

In Fiji, 'instances of persons devoting themselves specially to arms are not uncommon. The manner in which they do this is singular, and appears to be an imitation of the practice of the Australians; and the two men entering into it are spoken of as man and wife, to indicate the close connection of their military union. By this mutual bond the two men pledge themselves to oneness of purpose and effort, to stand by each other in every danger, defending each other to the death, and, if needful, to die together. In the case of one of the parties wishing to become married in the ordinary style to one of the other sex, the former contract is forcibly declared void' (T. Williams and P. Koko, Fiji and the Fijians, ed. G. S. Rowe, London, 1890, i. 45-46).

Further, the custom of joining in companionships for mutual defence prevails among many of the African tribes. 'Individuals enter into engagements to support each other in specific enterprises, or in all cases that may arise. These alliances are either adoptions or bonds between a number of persons. The connexion between two persons in the same Goondie is reckoned stronger than that of blood. They are bound to do whatever may be given, and everyEngagement for each other. A Goondie between two chiefs is not dissolved even by a war between their tribes; they may even join in the battle, but as the chief is over his friend, so is his armour. Goondies also take place between tribes' (Al. Elphinstone, An Account of the Kingdom of Cambay . . . new ed. London, 1835, ii. 4).

With these brothers in arms we may compare the Celtic 'Soldiirii' and 'Ambethi,' whose name ('de Bell. Gall. iii. 22, vi. 15) mentions.

27. There exist fraternities in many tribes, which are composed of several subdivisions, or exist fraternities and extensive associations, the members of which are 'bound mutually to protect each other, and assist in paying the line of individuals who may commit manslaughter or other crimes.' In travelling, the members enter one another's houses 'as freely as if they were brothers in reality' (J. S. Bell, Journal of a Residence in Circassia during the years 1837-1839, London, 1840, i. 84). All the members of a fraternity are regarded as springing from the same stock; and not only they, but their heirs, are precluded from intermarriage (ib. p. 347).

28. J. Macgillivray (Narratives of the Voyage of H.M.S. Rattlesnake, London, 1852, i. 310) noted at Evans Bay, Cape York, the existence of an association, existing between certain whites and certain natives, by which the latter appeared to be bound to assist the former and care for their safety. The native was said to be the white man's kothaiga—"the term being derived from the Kowarega word for 'younger brother.' The Kowarega are an Australian tribe, altered by contact with the Papuans of the adjacent islands so as to resemble the latter in most of their physical, intellectual, and moral characteristics (Howitt, op. cit. pp. 3, 11). We are not told how this relation was entered into, or whether it is one of blood between natives, as well as between natives and whites. It may be that it is to be classed not with blood-brotherhood, but rather with those associations for the purpose of mutual assistance in trade of which an example is furnished by the Kwaarra Hotentots in their intercourse with the labors of the Khoi (J. Burchell, Travels in the Interior of South Africa, London, 1824, ii. 555; cf. R. F. Burton, op. cit. ii. 55; and J. Chapman, Travels in the Interior of S. Africa, London, 1888, i. 57, note). The Kowarega are said to be a Jacobinical and revolutionary tribe. The Algonquins may be mentioned. They regarded the mingling of the bones of deceased relatives and friends as constituting a bond of friendship between their descendants (S. de Champlain, Œuvres, ed. by C. H. Lavendière, Quebec, 1870, v. 303), and Adair (op. cit. pp. 183-184) seems to indicate that the same notion prevailed among the Chocotaws. He adds that they reckoned it irreligious to mix the bones of a relative with those of an enemy or even of a stranger (cf. Robertson Smith, Kinship, pp. 314, 315).

ii. Where the relation is due to force of circumstances.

30. Hitherto we have been considering artificial relations into which the parties enter by choice. We now turn to relations which are brought about by force of circumstances, and not by the volition of the parties. Livingstone (Missionary Travels and Researches, p. 526) tells us that he became blood-relation to a young woman by accident. As he was removing a tumour from her arm, he was spattered with blood from one of the small arteries. You were a friend before, he exclaimed, now you are a relation.' Some of the Papuan tribes on the north coast of New Guinea recognize the existence of a friendly bond between those who have been circumcised at the same time, especially between two youths who have occupied the spirit-world. 'We who are friends one another no longer by name, but as 'my man' (J. Kohler, 'Recht d. Papuas' in Zeits, f. vergl. Rechtswiss, xiv. 366; cf. Brooke, op. cit. ii. 224). Again, the rite of circumcision (chamene) is observed by the Bemahans and all the Kâris, south of the Zambesi. All the boys between ten and fourteen or fifteen are made the life-companions of one of the sons of the chief. The members of the band (uopato) recognize 'a sort of equality and partial communism ever afterwards, and address each other as brothers' (ib.)

When a fugitive comes to a tribe he is directed to the uopato analogous to that to which in his own tribe he belongs and does duty as a member' (Livingstone, op. cit. pp. 147-148; see E. Cassul, Études sur la langue bhaman, Paris, 1811, p. 70, as to the Basutos). Again, among the Kurnai, all the youths who have been initiated at the same time are brothers, and ever afterwards address each other's wife as 'wife,' and each other's children as 'child.' The tie thus formed is one of strong affection, arising together with the common bond of the times and the companionship of the various clans (L. Fison and A. W. Howitt, Koniaroi and Kurnai, Melbourne, etc., 1880, pp. 198-199).

With this tie may be compared the relation between lads and those who operate on them in the initiation ceremonies (Spencer-Gillen, pp. 249, 250). In some of the islands of Torres Straits, boys who are mates in the initiation ceremony may not marry each other's sisters (Rep. of Camb. Anthr. Exp. to Torres Straits, v. 211). It may be noted that at Nakaliva, professional tanners were bound, under sanction of a tabu, to support those of their fellows who came to be in need (G. H. von Langsdorff, Voyages and Travels in various parts of the World during the years 1830-1837, London, 1813, i. 121).

31. Among the Wakamba, the relation of protector and protegé is one of extraordinary intimacy. The fugitive who touches the penis of his enemy becomes thenceforth entitled to his protection and to that of his tribe; and so strong is the bond between them, that the protegé is made free of the house and the life of the protector (Heidelberg, loc. cit. p. 386 f.). A form of oath in use in ancient Israel (Gen 24v 47v; H. Ewald, Die Alterthumer d. Volkes Israels, Göttingen, 1866, p. 26) and the Kâirin mode of making a vow (H. Sommer, Archiv für Volkskunde, 1885, ii. 243) may be recalled in this connexion, as well as a practice of some Australian tribes in swearing
friendship (G. Grey, *Journals of Two Expositions of North-Western Australia, London, 1841*, ii. 342; cf. Spencer-Gillen's, *op. cit. supra*).

In the Ciszewski that passages, the exchanges, *op. cit.* p. 32, he says that the **exchange** is the ceremony of a marriage (Ciszewski, 1878, p. 541). Hildebrandt says further, that if a fugitive can succeed in putting his lips to a woman's breast, he thereby creates an indis- solute bond between himself and her, which is therefore bound to protect him (loc. cit. supra).

iii. The institution among the Southern Slavs.

32. We now propose to turn to a centre of the institution—the countries of the Southern Slavs, where it is a living force admitted within the walls of the Roman Church. Here we shall meet with many forms, of which some are familiar and some are novel; and we shall commence with an instance in which blood-drinking plays a part. According to a Bosnian authority quoted by F. S. Krauss (Sitten und Brauche d. Slaevnen, Vienna, 1885, p. 628), the priest offers up a prayer in which he dwells upon the reciprocal duties of the 'brothers.' He makes them kiss one another, and repeat after him the words of a solemn oath. Then the younger brother crosses his arm so as to touch the other's mouth with wine. The brothers drink the liquid and the compact is sealed. Krauss doubt the accuracy of this account, but S. Ciszewski (Künstliche Ver- wandtschaft bei den Slaevnen, Leipzig, 1897, p. 60) adds corroborative evidence from many other quarters. (See 30 below.)

33. We are told (M. Chopin et A. Ubicini, *Provinces d'Asie et Roumanie*, Paris, 1859, i. 197, cited by Ciszewski, *op. cit.* p. 32) of a brotherhood 'per arma,' known to Montenegro and Bulgaria. The two men who wish to enter into the compact go to a church, accompanied by several friends as witnesses. They lay their arms crosswise on the floor, and, after swearing that now they are united in life and death, take them up and exchange them. If one dies, his weapons pass to the survivor.

34. According to Medacović (cited by Ciszewski, *op. cit.* p. 33), the bond in Montenegro is one not of friendship only but of relationship—the parties to it are not brothers, but brothers-in-law. He distinguishes three grades, of which the first is called the 'little brotherhood.' It is constituted by a kiss thrice repeated. The 'brothers' exchange gifts; and he who first expressed the wish to perform the rite is the senior. The **brothers** in this first degree may determine to form a still more intimate relation, and in such a case the ceremony is one of greater solemnity. They call a priest to say a prayer while they stand under the stola, and, having drunk wine from the chalice to which they set their lips at the same time, they eat a crumb of the bread, receiving the Eucharist in both kinds according to the observance of the Eastern Church. Having kissed the cross, the evangel, and the holy pictures, they kiss one another thrice; and he who first expressed the wish to perform the ceremony is the senior. Presents are exchanged, and the men are brothers until death. So, too, women, married as well as single, enter into similar friendships by drinking wine together, kissing one another, and exchanging gifts. A. Pittis (Pittis, *Opuscoli in Dalmazia*, Venice, 1774, i. 188) to whom we are indebted for the present, describes the ceremony of a marriage. In the church of Perušić when a union between two young Morlak girls was solemnized on the steps of the altar. He observes that in his day friendships of this sort between persons of different sexes were less common. They had 'sisters,' who addressed one another as 'little sister,' 'my goll,' 'my little fawn.' No relationship could be more intimate or more affectionate (see § 35 below). Parallel instances are noted.

35. In some parts of Croatia the bond seems to be formed without wine-drinking or witnesses; while, in the Northern Slavs, the rites exhibit the characteristics of a family gathering, without the intervention of the Church. In some districts the ceremony resembles that of a marriage (Ciszewski, *op. cit.* pp. 35-36).

36. All the old ritual books prescribe the same, or nearly the same, formalities. The parties stand before the altar, the elder on the right, the younger on the left. They are dressed as Christians, and each lays his right hand on the Gospel, and holds a cross in his left. According to another form, they stand before the altar with crosses and candles in their hands. The priest utters a prayer, in which the importance of the act is emphasized, the reciprocal duties of the brothers are laid down, and God's blessing is invoked upon them. Then the priest exchanges the crosses and candles which the brothers are holding in their hands, and reads to them certain passages of Holy Writ; and the brothers kiss each other. This ceremony takes place at the end of Divine service, when the church is empty (ib. p. 38; see § 21 above, where parallel instances are noted).

37. It is customary in one of the districts of Bulgaria for the priest to tie the men together with a strip of cloth, which is crossed in front of the body. He then takes off his vestments, and lays them on their heads; and, after having said a prayer suitable to the occasion, he sprinkles them with holy water, and, untying the cord, bids them kiss hands, telling them that they are henceforth brothers in name as well as in spirit. This ceremony takes place at the end of Divine service, when the church is empty (ib. p. 38; see § 21 above, where parallel instances are noted).

38. Among the Bulgarians of Prilep, after the ceremony in church is over, one of the brothers entertains his relatives, with the other brother and his relatives, gifts being distributed among all who are present. A few days afterwards a similar meal is provided in the house of the other brother, and gifts are again distributed. All those who have received the gifts from the He is considered a beneficiary of the union, and may not intermarry; and this kind of **union** may be contracted by men with men, by men with women, or by women with women (ib. p. 39).

39. In Little Russia, brotherhoods and sisterhoods are formed by swearing eternal friendship upon a holy picture, by drinking wine, and by exchanging gifts. In some parts of Russia a meal, to which the whole company is invited, completes the ceremony; and the brothers make it the occasion of an exchange of presents—very often of their baptismal crosses. Their children may not intermarry (ib. pp. 54-59).

40. From Servia, Croatia, and Bulgaria we are supplied with notices of ceremonies by which temporary bonds of brotherhood and sisterhood are constituted. These bonds continue from year to year, and form an actual relationship and a bar to intermarriage (ib. pp. 41-47). Parallel instances have been observed in Italy and among the Poles and Czechs (ib. pp. 48-50). In Servia and Croatia the bond is formed on St. John Baptist's day by the exchange of willow crowns and gifts and kisses. In Southern Bulgaria, on the same holy day, the brothers exchange bunches of twigs, with needles like the pino, in procession. These events, as they have been described, are as follows:

According to Krauss (*op. cit.* p. 641), the 'sisters' are always together—in church, at work, and in amusement. They wear similar clothes and ornaments, and address one another as 'little sister,'

**BROTHEOLOGY (Artificial)**
feet upon it, the guests at the same time beginning the feast. Then the brothers embrace one another, kiss each other, and prolong the feast of twilight, drink out of the same bowl. They give one another presents, and visit their friends and relatives. Upon the corresponding day of the next year the compact is renewed—the elder brother, who on the previous occasion was the host, being now his host (ib. p. 41 f., and see § 32 above).

41. In Bulgaria, a bond of brotherhood subsists between children who have been christened in the same water. Brothers or sisters born in the corresponding month in different years, and also twin children, are invited to the occasion of tying a thread or twine round the neck of the child, or to clasp the hands, or to drink out of the same bowl. Thus, like sponsorship, it constituted a πεντευκατά δέλφινος, and created a marriage bar between the parties to it, and, according to some authorities, between their children (Bruns and Sachau, op. cit. pp. 255—256; Tammuz-Kölnische Kirchen- Kinds, p. 160). It played an important part in the Greek war of independence, and is said even now to survive in certain districts of Greece (J. Kohler, 'Studien über die künstliche Verwandtschaft in Zeits.f. vergl. Rechtsw. v. 438; Ciszewski, op. cit. p. 69).

v. Where the compact is entered into with women, dead persons, supernatural beings, or animals.

45. We have seen that the compact is not confined to males only, among the Syro-Roman, Syriac, Greeks, and other races. The women enter into it with men (Krauss, op. cit. pp. 619, 624, 634, 640), and with women (ib. p. 641); and female associations are likewise found among the Syriacs, the Orions, in certain districts of the Abruzzi, among the Papuans on the north coast of New Guinea, the Ovahero (see above, § 25), and the Swahili (Niese, op. cit. p. 240). Nor are these compacts always confined to mortals, if we may rely on the evidence of Bulgarian folktales and of the modes of address used by the fishermen and hairdressers (see above, §§ 44, 45).

46. This curious ceremony recalls to us the treatment of the bear by some of the Canadian Indians. According to Charlevoix (op. cit. v. 179), as soon as he has killed a bear, the hunter puts the mouthpiece of his lighted pipe between its teeth, blows into the bowl, and, having filled the animal’s jaws with snuff, adjoives its spirit not to go to some present whose life has been endangered, nor thwart him in his hunting expeditions. With this account that of the festival of the bear among the Ainu may be compared (I. L. Bird, Unbeaten Tracks in Japan, London, 1889, H. 97—98); and also that of Maerse (‘Account of the Kookies or Luncetas’ in Asiatic Researches, London, 1803, viii. 180) as to the revenge which the tribesmen take on the tiger, and even on the tree by which a relative has met his death (cf. E. B. Tylor, Primitive Culture, London, 1871, p. 190, i. 398). In a. minds of the Pygmies, didu in the case of a bad man who was blood-brother of certain beasts (F.L.J., London, 1883, i. 309); and in Sarawak a man sometimes dreams that he has become blood-brother of a crocodile by going through the regular ceremony and exchanging names. Thereafter he has always good fortune, and is accepted and protected by W. McDougall, op. cit. p. 190 f.; see above, § 42).

vi. What persons are bound by the compact.

47. In some cases the compact is obligatory only...
upon those who have personally become parties to it. In Timor and Borneo, and among the Wachagas, a chief may claim a fresh or new bond, if a single tribe or tribesman binds himself only (Forbes, op. cit. p. 452; Schwanev, op. cit. i. 214-215; Kohler, 'Das Banturecht,' loc. cit. xv. 40). Nor does the bond reach further in the factitria of Madagascar, in the other cases seen ceremony of giving under the fire in the compagnies in arms of the American Indians, the Fijians and the Africans, in the brotherhoods of the Syrians of the Lebanon (see above, §§ 13, 7, 26, 11) and of the Swahlil (Niese, op. cit. p. 240), in the friendships of the Polynesians, Yahoas, and the tribesmen of the Abruzzi and the Celts (see §§ 52, 25, 2, 8).

48. In many instances the participants in the rite bind not themselves only, but other persons on behalf of whom they act. Thus, among the Karens of Burma, 'the chief stands as the representative of the tribe, if it be a tribal agreement; or the father as the representative of the family, if it be a more limited covenant.' (Luther, op. cit. p. 313); and in Timor, the parties may be the representatives of families or tribes or kingdoms (Forbes, op. cit. iv. 281). The spirit of the wild peoples of the Naga hills (Woodthorpe, loc. cit. p. 211), the natives of the Bismarck Archipelago (E. Sorge, 'Nassan-Inseln in Bismarck-Archipel,' in Steinmetz, op. cit. p. 405), in Borneo (Schwanev, op. cit. p. 440) and the Balonda (Livingstone, Missionary Travels and Researches, p. 488 f.), Ceramese (Riedel, op. cit. pp. 123-129, and Bulgarians (see above, § 38). In other cases the tribe is represented by a certain number of tribesmen (Garos and Kanowit Dayaks [see above, § 9], Bali of N. Cameroon [Hutter, loc. cit. p. 1]). A very curios instance of the representation of a tribe by a single tribesman is given by Barcroft (op. cit. i. 636-657). He says of certain Mexican tribes, that if one of them wished to make 'a close connexion, friendship, alliance, family or blood relationship' with another, its members seized a man of the latter tribe, and, having made him intoxicated, pierced his ears with awls and smeared their blood over him.

It is, of course, sufficiently obvious that the blood-brother of a chief may, in the general case, at all events, rely upon the good offices of the subjects of his protector, e.g. among the Kimbundu (Mgany, op. cit. i. 445). Among the Arabs, 'the compact is primarily between two individuals, but the obligation contracted by the single clansman is binding on all his "friends," i.e. on the other members of the kin' (Rel. Sem.3 p. 315; see Herod. iii. 8, quoted above, § 16). By the Southern Slavs each partici- pate in the blood-feast, and among the Kinsmen of his chosen brother, the brotherhood being regarded as a true relationship (Krauss, op. cit. p. 624; Ciszewski, op. cit. pp. 90-101); and, among the Somali and Oromo, a stranger admitted to friendship becomes entitled to all the rights of a tribesmen (Paulitschke, op. cit. p. 246).

vii. What purposes are served by the compact.

49. It is clear from what has already been said that the rights and duties which spring from this relation are not the same in all cases. In some the bond amounts to little more than a formal declaration of mutual goodwill. Thus the friendships between girls among the Orions and in certain districts of the Abruzii are strong and intimate, but they create no new tie (see above, § 29). The magus ceremony is confined to relatives; it strengthens the natural bond, but does not form a fresh or new bond with a single tribe or tribesman binds himself only (Forbes, op. cit. p. 452; Schwanev, op. cit. i. 214-215; Kohler, 'Das Banturecht,' loc. cit. xv. 40). Nor does the bond reach further in the factitria of Madagascar, in the other cases seen ceremony of giving under the fire in the compagnies in arms of the American Indians, the Fijians and the Africans, in the brotherhoods of the Syrians of the Lebanon (see above, §§ 13, 7, 26, 11) and of the Swahlil (Niese, op. cit. p. 240). In other cases the brotherhood seems to effect a complete revision, or, in case of interests, as, for instance, in the case of the Polynesians, Yahoas, and the tribesmen of the Abruzzi and the Celts (see §§ 52, 25, 2, 8).

The same authorities say that the men taking part in the atnings avenging expedition of the Arunta tribe 'assembled together, and, after each one had been touched with the girdle made from the hair of the man whose death they were going out to avenge, they drew blood from their urethras and sprinkled it over one another' (Spencer and Gillen, op. cit. i. 453). An analogous act, by dint of the same purpose, blood is drawn from the arm and drunk, and on rare occasions a man, declining thus to pledge himself, will have his mouth forced open and the blood poured into it (6th p. 598).

Among the Hungarians of the 9th cent. the chief men, i.e. the representatives of the triple oath of fealty to the chief, signified, by shedding their blood in certain cases, that the blood of the oath-breaker should be shed as theirs had been (J. G. Schwaenther, Scriptores rerum Hungaricae, Vienna, 1746, i. 6). Again, it is said of the Karens that, when individuals, villages, or clans unite in confederacies, 'the contracting parties bind themselves by drinking spirits in which the blood of both has been mixed, and in which a number of gifts have been dipped. This mixture is supposed to live as an agent or ambassador in the blood of the other, and thus to prevent treachery. The weapons are likewise invoked to prevent treachery' (Smenton, op. cit. pp. 168-169). The same notion underlies the brotherhood between the king of Unyoro and his servants, especially his cooks (Emo Pasha in Central Africa, ed. G. Schweinfurth, Eng. tr., London, 1858, p. 78), the breaths of the fire of brotherhood, and the nga-agiampe relation of South Australians (see above, §§ 2, 8, 29). So, too, among the Melangs, the object of making brothers by exchange of gifts was to ensure that the Europeans should not cease to be friendly and injure the natives when at a distance from one (J. W. Fairbairn, 'Note on M. Kina Bahu, N. Borneo, London, 1893, p. 123).

50. The members of the companionships of the old Norsemen were bound to avenge one another as if they were truly brothers (see above, § 7), and a like obligation is imposed on those who have entered into brotherhood in Herzegovina, Montenegro, and Bosnia (Ciszewski, op. cit. p. 89). Among the Wyandots, the youthful bravés 'agree to be perpetual friends to each other, or more brothers. Each reveals to the other the secrets of his life, and protects him from the dangers of importance, and defends him from wrong and violence, and at his death is chief mourner' (1 RBEW., p. 68; see § 26 above, where references to similar statements regarding other tribes will be found). So, too, the Afghan tribesmen who join in 'goodness' for mutual defence and support are regarded as more than natural brothers (see above, § 26); and the Fijian brotherhood in arms wears the appearance of a marriage contract (ib.)—a characteristic which may be connected with that of the bond of the "nail," which can be dissolved only by the formula of triple divorce (R. F. Burton, First Footsteps in East Africa, London, 1856, p. 124). The parties to the blood-rite among the Balonda become 'perpetual friends and relations' (Livingstone, Missionary
BROTHERHOOD (Artificial)

Travels and Researches, p. 48); and it has been observed (Wilson, op. cit. 41; L. J. Jander, The Wild Tribes of the Soulems, p. 91) that, if an African be your blood-brother, you may really trust him. 'This contract is never broken.' Among the Somalis and Ormou, the saliva ceremony secures to the stranger a tribal right (Paulitschke, op. cit. p. 246), while, among the Karens, the blood-covenant 'is of the utmost force. It covers not merely an agreement of peace or truce, but also a promise of mutual assistance in peace and war.' Let us, however, turn to the ceremonies which muzzle tribal rights. If they are chiefs, the covenant embraces the entire tribes. If one is a private individual, the immediate family takes the part of the owner, and the abhorrence of incest and the abhorrence of the touch of blood is all of the agreement.' I never heard of the blood-covenant being broken. The blood-covenant of the Wanderer every day he has weared he would have it born a member of the tribe.' (Luther, op. cit. p. 514).

vii. What legal consequences flow from the compact.

In certain cases the relation of brotherhood operates as a bar to marriage. Thus it is said of the Cherokees (see above, § 56) that they 'reckon a friend in the same rank with a brother, both with regard to marriage and any other affair of social life.' So, too, 'Lory (Historia navigations in Bresiliam. cap. 19, in De Dry, Americae tardis pars, Frankfort, 1852) says the Indians and certain Brazilian tribes 'nemo eorum natem, sororem, vel filiam in uxorrem duci; reliquionario ratio nulta habitarum; patrum nepton duci; atque illi, qui casum in eorum nemo filiarum vel sui, Atene a tenerem matrimonio siis jungere potest. It autem Ateneam dicatur cujus tanta est cum quod necessitudo ut bona inter amicos atque consortes commutentur.

In some of the islands of Torres Straits a man may not marry the sister either of his particular friend or of his comrade in the ceremony of initiation (Haddon, JAF xii. 411-412, 315, 336); nor may these intermarry who take part in either of the ceremonies of Cemaran, or in the friendly associations of individuals or villages at Wetar (Riedel, op. cit. pp. 125-129, 446-447); see above, § 14). Among the Murut a similar bar subsists between the brothers (see above, § 18); it is said of the Kanakas of the Bismarck Archipelago, that if two chiefs enter into an artificial relationship, their peoples are precluded by the closeness of the connexion from intermarriage (Joachim Graf Feil, Studien u. Beobachtungen aus der Südsee, Brunswiek, 1859, p. 28); and a like prohibition is observed among those wild tribes who are aga-agamo to one another, and the brothers and even the serfs of a Circassian fraternity (see above, §§ 23, 27). Ciszewski, to whose work reference must be made for details, observers that, among the Batak, 'the most important of the tribal manners is giving way to the influence of modern ideas; and that, if we were to gather from the different districts the various notions held regarding its legal and social consequences, we should be able to construct a complete scheme of the stages through which it has passed. Thus, in some cases, the relationship does not constitute a bar to marriage; in some, it makes a marriage impossible not only between the parties to the rite, but between their children; while, in Prilep, it precludes marriage not only between the children of the relatives who are aga-agamo, but between those of their relatives who participated in the distribution of gifts at the time of the ceremony (Ciszewski, op. cit. pp. 88, 94, 99-100; see above, § 38). We have in the last case, as Ciszewski observes, an interesting example of a collective brotherhood. The rite is performed by the representatives of the two kindreds; but that the relatives are also included in the association by accepting presents from the principals is shown by the fact that they may not intermarry.

The brotherhood of the Timorese is another example of a Timorese brotherhood comes to the other brother's house, he 'is in every respect regarded as free, and as much at home as its owner. Nothing is withheld from him; even his friend's wife is not denied him, and a child born of such a union would be regarded as belonging to the family of the mother. By the terms of the compact of the fadaled the brothers enjoyed community of wives and property; although, in later times, and in the case of Europeans, those obligations may not have been treated as literally binding (Ellis, History of Macassar, 1899). So, too, the Wasa of the portage or of the Ofuhero, and, according to A. von Chamisso, 'brothers' in the Marshall Islands have their wives in common (see above, §§ 25, 24); and in the countries of the Kimbunda, and among the Wambara, the brothers exercised mutual privileges over wives and children (see ibid. p. 201-202; Hildbrandt, op. cit. p. 387). Ellis (Polynesian Researches, London, 1851, iii. 124) observes that the wife of every individual is the wife also of his tolo, or friend; and an earlier authority (W. Wilson, A Missionary Voyage to the S. Pacific Ocean in 1796-1798, in the ship 'Duff,' commanded by Capt. James Wilson, London, 1799, p. 339), in making a similar statement, adds that a tolo 'must indulge in no liberties with the sisters or the daughters, because they are considered as his own sisters, and incest is held in abhorrence.' For the same reasons certain Brazilian tribes 'nemo eorum natem, sororem, vel filiam in uxorrem duci; reliquionario ratio nulta habitarum; patrum nepton duci; atque illi, qui casum in eorum nemo filiarum vel sui, Atene a tenerem matrimonio siis jungere potest. It autem Ateneam dicatur cujus tanta est cum quod necessitudo ut bona inter amicos atque consortes commutentur.

ix. General observations on the nature and history of the institution.

We have seen in the preceding pages that the form of the rite by which the bond is constituted is not always one and the same. In some cases the use of blood is the only requisite; in some it is an essential element; in some it is a mere accessory; and in some it does not enter into the ceremony. And the question presents itself—Is the blood-rite the original type of which other forms are variations? Or is it possible that one of the forms in which the need of man for union with, and security against, his fellow found expression? It is, no doubt, true that, in many instances, the use of the blood, while it is of the essence of the ceremony, may have developed from some other ritual act or acts, such as an exchange of food or weapons or garments or other gifts; and it has been argued that a form in which the performance of such act or acts is sufficient without the use of blood for the completion of the rite is a maimed form, which has lost what was originally essential and retained only what was originally of secondary importance. Such an explanation, however, hardly meets the case: for it does not account for those modes of entering into the compact with an imaginary being or a dead god but one of the forms in which the need of man for union with, and security against, his fellow found expression? It suggests, of course, that even in those cases the use of blood at one time formed part of the ceremony; but there is no evidence to that effect.

Now, in the instances which we have adduced, we have found that the parties to the compact are brought together in a great number of different ways. They exchange blood or wine or food or names or garments or weapons or rings of the skins of sacrificial victims or gifts of some sort or kind. Or they dip their hands or their weapons in one another's blood. The victim is pierced, the blade smears with blood, or the blade slipped as it falls to the ground. Or they join in holding the victim during the sacrifice, or hold branches while an imprecation is being pronounced or blood
is being let. Or one of them rules the other with his saliva; or a father makes his child agiia-agiampa to another's child. Or, lastly, the union may be due to community of aim and interest, as in the case of companions in arms; or to circumstances beyond the power of the parties themselves to control. Those who are initiated together, or associated as operators and patient in the performance of the initiatory rite; or to the pressure of an overwhelming necessity, as in the case of the fugitive and his protector. It is to be observed that the bond thus formed is quite in accordance with primitive ideas to regard the 'nature of anything as inhering in all its parts' (H. Spencer, Principles of Sociology, London, 1879, ii. § 346), even when the parts are separated from each other (cf. E. Durkheim, La Prohibition de l'inceste et ses origines, L'annuelle sociologique, i. 51); and to treat as parts of a man's substance not only his blood, saliva, umbilical cord, sweat, and other excreta, hair, nail parings, and the like, but also his garments, weapons, and name. To our thinking, blood is, when associated not by way of metaphor with the man himself; but, to the mind of the savage, the connexion is of the same quality in either case. As an illustration of this mode of thought, it may not be out of place to indicate here a feature of primitivo 'giving' which sharply distinguishes it from the more modern kind of gift. The very notion of exaggeration to say generally of uncivilized man what has been said of the Western Eskimo—that 'a free and disinterested gift is wholly unknown to him.' The gift is regarded as an investment, and a return is expected (see P. J. H. Grierson, The Silent Trade, Edin., 1903, p. 18). But it seems probable that this conception has its origin elsewhere than in the desire to lose nothing by the transaction. It is rooted rather in the notion that, unless a return be made, the recipient obtains a power over the donor, from which he may use to the latter's injury. Payment,' says Hartland (op. cit. ii. 75; cf. Crawley, op. cit. pp. 236–245, 256–257), 'is always held to neutralize a witch's power over a person through something received from him'; and instances are not wanting in which savages have refused to touch the articles set out by traders for their acceptance, until the latter have taken what was offered to them (see Gifts). Accordingly, an exchange of weapons no less than of blood is regarded as an exchange of power, not of the parties themselves, but of the parties 'an actual community of nature' (H. Spencer, loc. cit.; see Hartland, op. cit. ii. 55–116, 442 and passim). This community is brought about not only by an interchange of externals, but by the devotion of the parties to a course of conduct which demands an absolute identity of aims and interests, or by outward circumstances which force them into an intimate contact. In other words, they enter voluntarily or involuntarily into a relation in which what is regarded not by way of metaphor or fiction, but in very truth, as the alter ego of the other. Now, it has been said that, according to primitive notions, blood-brotherhood 'is not a relationship personal to the two parties alone, but extends to the whole of each clan: my brother is, or becomes, the brother of all my brethren; the blood which flows in the veins of either party to the blood-covenant flows in the veins of all his kin' (F. B. Jevons, Introduction to the History of Religion, London, 1902, p. 99; cf. W. R. Smith, Religion in Form and Function, ii. 278). We seem, at first sight, at all events, to be in the presence of two conflicting theories. First of all, we have what we may call the 'identity-theory,' which regards the bond as personal to the parties, and therefore not as the typical form, but as one of many forms; and, secondly, we have what we may call the 'kinship-theory,' which regards the bond as a union of kins, and explains all forms, other than that of the blood-rite, as variations, or modifications, or deteriorations of it (see Hartland, op. cit. li. p. 249 ff.; esp. p. 257). It must be admitted, however, that the bond differs from the cases in which rivalry views is, in some respects, very imperfect. Not infrequently we are supplied with full details of the ceremonies performed, while we are left wholly in the dark as to the legal incidents of the bond. In other cases, we are told what is its operation, but not a word is said as to the ritual accompanying its formation. For example, we have no facts before us to show how the compact was constituted in the case of the Brazilian Alourossap, or in that of the Ovalheiro omongara (see above, §§ 51, 75). At the same time, facts are reported which seem to be hardly reconcilable with the 'kinship-theory' as stated. It is, for instance, clear that in many cases the obligations undertaken bind only those persons who are parties to the contract. This is quite the case in certain formal friendships by exchanging gifts, by painting themselves in a distinctive fashion, and by assuming one or other of the titles of blood-relationship (see above, § 25). There is no evidence to show that the reciprocal rights and duties attached to the bond are personal to the parties themselves, or that, by assuming such titles, they mean to do more than emphasize the intimacy of the relation between them. And that this is their meaning is made the more probable by a somewhat analogous instance from Fiji, where comrades in war are spoken of as man and wife, to indicate the closeness of their military union.' So, too, the compact which subsists between those who are companions in arms, or who have exchanged names, or who agree to share arms or to enter into the share of one another's beat, is, in the view of many, merely a declaration of a league, or of an Arunta punitive expedition (see above, § 2). In either instance, its purpose is to prevent treachery; in neither is it productive of a union of kins; and the same observations apply to those who join in 'going under the turf' (see above, § 7). In Timor and Borneo, and among the Wachaga, while a chief may represent his tribe, a simple tribesman binds himself only; and other examples of a like limitation have already been given (see above, § 47). In some of these cases the parties are excluded from share in another's most sacred rights (see above, § 52); and that these privileges are not necessarily connected with the use of blood in the constitution of the bond, appears from the instance of the Polynesian tiao and that of the Wakamba fugitive (see above §§ 59, 31). At the same time it is quite true that sometimes they are found as consequences of a pact solemnized with blood, as in the cases of the Kimbunda and of the natives of Timor and Madagascar (see above, §§ 3, 19, 32). Thus friend and blood-brother are to each other the same, and each has rights as to the other's wife and property; each must regard and treat the other's sisters and daughters as if they were his own. At the same time, the relation is, in its inception at all events, a union of individual individuals and not a union of Kins. The case of the Wakamba is peculiar. The fugitive, by a solemn act, acquires a right of participation in his pro-
BROTHERHOOD (Artificial) 

lector's wife and house, and a claim on the support and assistance of his protector's tribe (see above, § 31). Here the relation extends beyond the parties to it, and is at the same time accompanied by privileges; and it is based on the idea of co-heirs in the inheritance of wealth, in the absence of natural heirs. It may be thought that this instance presents to us the two theories in combination—the theory that the parties are made one, with the result that they, and they alone, enjoy certain intimate rights; and the theory that they are made kinsmen, with the result that the fugitive can rely on the protection and assistance of the tribe to which his protector belongs. This view receives some confirmation from a curious mode of peace-making practised by the Masai. One of their women proceeds with her infant to the border of the tribe, and, as they are about to enter, she takes up the child, and, keeping it to her breast, she places it in the palms of her opponent, with the result that the infant is handed over to the Masai, and the two parties are considered as united. The woman finally takes the infant back to her husband. This ceremony is supposed to have the effect of making the two parties united for the purpose of war or peace, and to have the benefit of the blessing of the god (Hasluck,录入op. cit. p. 110).

We have here a rite compounded of an adoption ceremony and a brotherhood ceremony; and this instance suggests an explanation of the fact that among the Mapuches, a father, by making a stranger his son's locr^, or namesake, adopts him into his family (E. R. Smith, op. cit. pp. 290—292; see above, § 24). The parties become relatives by virtue of an exchange of names, and of giving food and eating what is given; and it may be that, in such cases, the relation with 'accordance above mentioned has yielded to the second—that the 'kinship-theory' has displaced the 'identity-theory.' Further, it is not without significance that, so far as we know, the blood-rite, as productive of a relationship which extends to the whole clan, is not to be found among the rudest peoples, such as the Hjangons of Cape Horn, the Botocudos, the Andaman Islanders, the Sameng, and Aetas, the Kubus of Sumatra, the Veldas of Ceylon, the dwarf races of Central and Western Africa, the Hottentots and Bushmen, and the natives of Australia, while the use of blood is found among some of them in the formation of compacts creative of rights and duties which affect only the persons immediately concerned.

54. Plainly it is matter of no small difficulty to determine what is the relation of these two theories to one another; and, accordingly, we shall content ourselves with an attempt to indicate the direction in which the evidence points. Now, it seems to show that the relation with which we are dealt, having been cut by one of the witnesses, smears the blood from her wound on a piece of a bullock's heart and thrusts it into the other's mouth. During these proceedings the Masai representative and the Kahe headman make protestations of peace, which the evil-minded breaker of the compact (Merker, op. cit. p. 101). Here we have a rite compounded of an adoption ceremony and a brotherhood ceremony; and this instance suggests an explanation of the fact that among the Mapuches, a father, by making a stranger his son's locr^, or namesake, adopts him into his family (E. R. Smith, op. cit. pp. 290—292; see above, § 24). The parties become relatives by virtue of an exchange of names, and of giving food and eating what is given; and it may be that, in such cases, the relation with 'accordance above mentioned has yielded to the second—that the 'kinship-theory' has displaced the 'identity-theory.' Further, it is not without significance that, so far as we know, the blood-rite, as productive of a relationship which extends to the whole clan, is not to be found among the rudest peoples, such as the Hjangons of Cape Horn, the Botocudos, the Andaman Islanders, the Sameng, and Aetas, the Kubus of Sumatra, the Veldas of Ceylon, the dwarf races of Central and Western Africa, the Hottentots and Bushmen, and the natives of Australia, while the use of blood is found among some of them in the formation of compacts creative of rights and duties which affect only the persons immediately concerned.

55. What it may be asked, is the nature of the sanction which the oath is to be accompanied with? There are instances in which it seems to have escaped observation that, in many instances at all events, the institution with which we are dealing closely resembles an oath or an ordeal (see above, § 7). An oath consists in general of two parts—an asseveration that what is said is true, or that what is undertaken will be performed, and an imprecation of evil by the person taking the oath upon himself, if he prove forsworn. Sometimes a divinity is invoked not merely to bear witness to the oath, but to punish the oath-breaker. Such a divinity is introduced into the ceremony to symbolize the evil which will fall upon the perjured person—he will be cut down with a sword, or pierced with an arrow, or run through with a spear. What Polybius (ii. 25) says of the oath with which the treaties between Rome and Carthage were solemnized is very instructive. The Carthaginians swore by the gods of their country. The Romans swore 'in accordance with ancient custom' and in addition by Mars and Quirinus. He who made oath cast a stone to him, and held it in his hand and said— If I keep faith, I may fare well; but if I knowingly deceive, then may I, while all other men are assured of their right to their country, their laws, their gods, and their sepulchres, be alone cast out as I now cast out this stone'; and, with these words, he cast the stone away. It seems plain that we have here an account of two forms. In the later form the gods are invoked to be witnesses to the oath, and to punish the oath-breaker. In the earlier form the gods are not invoked, and the stone is thrown in order to show that the oath is forsworn. The same use is made of stones by the Andaman Islanders. H. A. A. Danz, Der sacrale Schutz, Jena, 1857, p. 13 f.; O. Schrader, Reallexikon d. indogerm. Alterthumskunde, Strassburg, 1901, p. 168; cf. Grimm, op. cit. p. 897; B. W. Leist, Graeco-Italische Rechtsgeschichte, Jena, 1884, pp. 226 f., 703 f.). In many instances an act of touching is an essential part of the ceremony. Thus, in the Indian form, the man who took the oath by touching himself drew down the powers of evil upon his head (Schrader, op. cit. p. 167); and, in old Germany, he must touch some object which he took for stone, and where, if he would enter it into his own free will. They might be kinsmen, as we count kinship, or they might be strangers in blood. But, whether akin or not, they must be so intimate that they become, in the eyes of their fellows, possessed of a common nature. The logical result of this community was that each of the parties became entitled to the rights and subject to the disabilities of the other. Each had a right to share the other's wife and property; each was precluded, wherever marriage of a sister by a brother or of a daughter by a father was prohibited, from marrying the other's sisters or daughters. These marriage bars, even if they did not owe their origin to a recognition of the principle of blood-relationship, certainly flavoured the title of being referred to, and accounted for it, when it came to be recognized; and this explanation would appear most natural when the use of blood entered into the formation of the bond. Accordingly it would hardly be matter of surprise that the blood-relationship of the parties flavoured the change, the 'kinship-theory' gradually encroached upon the 'identity-theory' and finally usurped its place.

56. When we turn to the bond of friendship, and
examine the cases in which blood is employed in its constitution, we find varieties in form, remarkably similar to those which have been discussing. Sometimes the gods are adjured to punish those who break the compact (see above, §§ 10, 11), or simply to be witnesses to it (see above, §§ 7, 13, 14, 16). Sometimes they are made parties to it (see above, §§ 5, 12, 13, 14, 53), or are invoked, while an animal is being slaughtered (see above, §§ 10, 17). In other cases, the parties touch the blood (see above, §§ 7, 8), or dip their weapons in it (see above, §§ 9, 14), or touch or hold an animal while one of them slays it (see above, §§ 10, 13). Where they do not actually introduce the victim into the ceremony either as a 'witness' of the compact (see above, § 13) or as a symbol of the punishment which awaits the breaker of it (see above, § 14, and cf. § 33); and imprecations are frequently pronounced without any direct appeal to a supernatural power (see above, §§ 9, 10, 13, 14, 53). In some cases, as among the Bali, the rite consists of two parts,—of a blood-rite effecting the formation of the bond, and of a blood-rite with the operation of an oath,—while, in other cases, as among the Balinese (see D. Berdine, 'The Bali monotheism' above, § 13), there are instances, however, in which the ceremony consists of drinking or sprinkling blood without invocations or imprecations (see above, §§ 2, 49). In this connexion, Junker's (op. cit. p. 495) account of the rite as practised by certain tribes south of the Wulon is very instructive. The parties sit opposite to one another. A scratch is made on the chest of each, and a drop of blood is squeezed out. Each wipes the blood off the other with a piece of sugar-cane, which lie chews, and the fibres of which he afterwards blows over his wound. At the same time, he repeats the points which have induced him to enter into the compact, and which are to be kept sacred; and at the end of each clause he adds the solemn words: 'If thou dost not hold to this, may my blood destroy thee' (cf. § 49). Here, then, we have an instance of a relation in which blood is the medium not only of formation, but of punishment (see Westermarck, MJ, London, 1908, ii. 206 ff., 566 ff.). We have, in other words, an example of the operation of the principle which underlies the oath, and the ordeal. That the same principle operates in cases in which the blood of the parties is not employed appears from such instances as that of the Léni, where the parties make friendship by eating portions of the same fruit or vegetable, and touching the tips of their fingers (see above, § 18); or as that of the natives of Shira, where the 'brothers' hold a goat while it is being slaughtered, and fit rings of its skin upon one another's fingers (see above, § 21). A further confirmation is furnished by the cases in which the formation of the compact is due not to the volition of the parties, but to the force of external circumstances. The bond between them is of so intimate a character—the union between them is so complete—that the bond which unites the parties cannot be productive of evil consequences to the man who breaks it; and thus the sanction has its origin not in the intention of the parties, but in the essential character of the relation. It may well be that, in many instances, the sole punishment which awaits the breaker is that which follows a breach of tribal custom or an outrage on public opinion. Still, it appears to be not improbable that, even in these instances, tribal custom and public opinion owe their force to a sanction of the nature indicated above.

BROTHERHOODS.—Brotherhood, in its literal sense, is the condition in which a male person is descended from the same father or mother as one or more other persons; full brotherhood, that in which he is descended from the same father and the same mother as one or more other persons. Thus the sons of the same father and one or more other men, or brothers, are termed full brothers. Sometimes a less inclusive relationship is signified by the expression of a few handsmaids together address their unknown brother Joseph: 'They servants are twelve brethren, the sons of one man in the land of Canaan' (Gen 42). In theology, the term is metaphorically applied in two senses: the general sense in which all men are brethren, sometimes limited to those who are of the same faith, as when St. Peter says, 'Honour all men; love the brotherhood' (1 Pet. 2:1); and the particular sense in which it signifies persons living together in artificial communities as natural or supplemental brothers, societies which are founded in the family home to establish families of their own. The ideal of brotherhood is one of the closest of all human relations—the only one that implies equality—there being no difference between brothers other than that arising from age.

The system of living in clerical communities with a religious object belongs to the Brāhman religion, and was adapted by Sakyamuni to the Buddhist religion, and has been largely imported into Christianity. Under it, men have retired from the world by hundreds and by thousands. The grand Buddhist monastery of Nālandā, consisting of six convents, had ten thousand monks. They employed themselves chiefly in the study of the books of their religion and of science, especially medicine and arithmetic. In Ceylon, the monks take upon them vows not to kill, to not to rob, to observe celibacy, not to lie, not to drink strong liquors, not to take food after noonday, not to dance or sing or make music; to use no perfumes, ungents, or ornaments; to have no luxurious bed or chair, and never to possess gold or silver. The general idea involved in these communities or brotherhoods is that of a simple and studious life, devoted mainly to the contemplation of religious subjects, and existing in circumstances of self-denial and asceticism—an ideal which has rarely been maintained without bringing in the elements of superstition. The Buddhist monastic system has been practised from ancient times in Tibet. The monastery is there termed gompa, or 'solitary place'. Lhasa, the centre of religion in Tibet, was till recently inaccessible to Europeans, although it had been visited by Sarat Chandra Das and other Hindus. One of the most ancient and famous of the monasteries in the neighbourhood is that of Samye, visited by Chandra Das in 1882. It contains a chief temple, with four outer temples, and eight lesser shrines, the dwellings of the monks being in a two-storied building near the chief temple. The grand monastery of Tashi-lhumpo is another, and a sketch of it has been published by the Royal Geographical Society. Here the monks are sum- moned for their evening meal at 3 a.m. At the lamasery of Yarlung Shetag live 40 monks and as many nuns, whose children are brought up to succeed them. This is allowed because of the loneliness of the situation of the lamasery. The monks are said to be 15,000 lamas, and in the province of Amo nearly 30,000 in 24 lamaseries; and it is estimated that one-seventh of the entire population belong to the priesthood. The lamasery of Kumbum has a
BROTHERLY LOVE (Christian)

Temple covered in with tiles of gold, in commemoration of Tsongkapa, a Tibetan saint.

In the British provinces of Little Tibet, monasteries exist, which are thus described: The monastery at Keen in Spiti has the appearance of a hillfort, created the uncertainty that Kyelang and Lhul in Lhul stands on the projecting spur of a mountain side, distant from all other habitations, at an elevation of more than 12,000 feet above the level of the sea, and is approached by a steep and difficult path, which at some seasons is dangerous. In the spring of 1874 a monk and a nun were buried in an avalanche while walking up this path. In the richer monasteries in Tibet proper are extensive wardrobe of great value. Along the walls of the galleries are arranged numerous praying wheels. On one side of the hall is a wheel 5 feet in diameter, on each revolution of which a bell is struck. Outside the main building are the cells of the brethren. Col. Paske witnessed the performance by the monks of Kyelang of what is termed by him a spirit dance. The abbot took his position flanked by a band of musicians, who played loudly, when a party of 30 or 40 monks entered attired in grotesque costumes and wearing masks; after an excited and noisy dance, they retired to change these costumes.

The brethren have the custom of taking off their hats when they pass a monastery and shuffle past it on their knees. In these circumstances, it is easy to understand that the monks have acquired great political power.

In Siam, the monasteries are recruited from every class of society, especially the higher classes, and every son of a respectable family spends a year in one of them—a system which reminds one of that of the lay brethren in several English orders.

The account given by Herodotus (ii. 37) of the Egyptian priests implies that they lived in communities. He says: 'They are of all men the most excessively attentive to the worship of the gods, and observe the following ceremonies. They drink from cups of brass, which they scour every day; nor is this custom practiced by any other nation, nor is it neglected by others, but all do it. They wear linen garments, constantly fresh washed, and they pay particular attention to this. They are circumcised for the sake of cleanliness, thinking it better than having hands and feet. The priests shave their whole body every third day, that neither lie nor any other impurity may be found upon them when engaged in the service of the gods. The priests wear linen only, and shoes of leather, and are permitted to wear any other garments or other shoes. They wash themselves in cold water twice every day and twice every night; and, in a word, they use a number of ceremonies. On the other hand, they enjoy no slight advantages, for they do not consume or expend any money; for the sacred food is cooked for them, and a great quantity of beef and grease is allowed each of them every day, and wine from the grape is given them; but they may not taste of fish. The service of each god is performed, not by one, but by many priests, for there is in every monastery one whom one is chief priest; and when any of them dies, his son is put in his place.'

It was in Egypt that the monastic movement in Christianity commenced. It is alleged that Frontonius established the first 'laura' in the year 151 at Nairta. In the early part of the 4th century, the movement had taken root. It is said that the sanctity of St. Anthony attracted so many monks to his neighbourhood that he had to undertake the direction of them. St. Pachomius also, who died in 348, was head of a community; and that under Apollonius consisted of 500 individuals. The name Dér el-Bahari signifies the convent of the North.'

From Egypt the practice speedily spread to Rome and to Gaul; and, when Augustine came to England, he found Celtic monks established there. Abbot Gaseel enumerates no fewer than 21 different orders.

They are distinguished into five classes as follows:—1) Four orders of monks: the Benedictines, established at Monte Cassino early in the 6th cent. A. D., and the Cistercians in the 11th cent.; the Cistercians and the Carthusians, from the 11th. (2) Three orders of Canons Regular: the Augustinian, the Premonstratensian, and the Gilbertine. [The last is the only order originating in England, and was established in 1119.] (3) Two military orders: those of the Knights of St. John and the Knights Templar. (4) Four orders of Friars: the Dominicans, or Black Friars; the Franciscans, or Grey Friars; the Carmelites, or White Friars; and the Austin Friars. [These were all introduced into England in the 13th cent., and are commemorated in London by the names of places where their houses formerly stood.] (5) Eight lesser orders of Friars: the Brethren de Penitentia; the Pind Friars at Norwich; the Brethren of St. Mary de Arens at Westminster; the Brethren de Domine; the Trinitarians; the Cistercians; the Bethlehemite Friars; the Boni homines. [These all date from the middle of the 13th century.]

The expression 'brotherhood' was also anciently applied to Gilds. The popular assemblies in the Cinque Ports are styled Court of Brotherhood and Guestling. Before the passing of the Judicature Act in 1873, the judges and serjeants-at-law together constituted the Society of Serjeants Inn, and the serjeants were always addressed by the judges in court as 'brother.' See CINQUE PORTS SOCIETIES, MONASTICISM.

BROTHERLY LOVE (Buddhist).—See LOVE (Buddhist).

BROTHERLY LOVE (Christian).—The principle of brotherly love was not first enunciated by Christianity. Exponents of earlier systems had given it notable expression, both among Gentiles and among Jews (see, e.g., Ex 23:4, Lk 19:18, Dt 22:9-4 24:10-1. To 4, etc.; cf. art. 'Brotherly Love' in JE). Even the 'Golden Rule' had been anticipated, at least in a negative form (see Allen on Mt 7:12), and the association of the Christian with the Jewish doctrine is openly declared both by our Lord (Mt 7:12-22) and by His Apostles (Ro 13:8-9, Ja 2). In the earlier dispensation, however, the conception of love was mediated by racial prejudice. For the practical realization of what was there implicit we must turn at once to the words of Jesus Himself.

1. The teaching of Jesus.—(a) The teaching of Jesus not only indicates the duty of brotherly love (Mt 5:39-42, 26-48 7:12, Mk 10:21, Lk 10:27 etc.), but assigns to it the utmost emphasis. From his doctrine of the Divine Fatherhood He leads us to infer the doctrine of human brotherhood (see the use of 45a from in 23:9-11, 25:39-41 etc., and cf. 2:23). The love of our neighbour is placed side by side with our love of God as the supreme obligation of religion (22:39); and so inseparable are the two, that in Christ's portrayal the heavenly love finds in the earthly love alike its true expression and its unerring criterion (25:29, Mk 10:21, Lk 10:27, cf. Jn 13:35 13:31, 32). No formal devotion grants
exemption from the claims of justice and mercy (Mt 20:15). To be wrong in one's relations with a brother is no less than to be wrong in one's relations with God (Gal 6:2). (b) There is a noble universalism in the love thus enjoined by our Lord. In His thought the term 'neighbor' loses all such limitations as in the earlier Jewish interpretation were imposed by national and material considerations. It embraces all men (77) irrediscernible of race (1K 10:42), of social status (14:21-23), of character (Mt 5:28-49), and of personal relationships (55, Lk 6:7). While the wider human-brotherhood itself includes an inner brotherhood of discipleship (Mk 3:17, Jn 15:15, 16), all Christians——men and women——have a place in the one great fraternity of love.

2. The Apostolic writings.—(a) The prominence assigned to brotherly love in our Lord's own teaching is re-asserted in that of His Apostles. Frequent exhortations are found in the Epistles reminding the early Christians of the obligations it involves (see, e.g., Ro 12:9, He 2:3-4, 1 P 1:2, 1 Jn 3:18). So well known, indeed, are these obligations, that in one place there is almost an apology for allusion to them (1 Th 4). Whether viewed from the standpoint of the early Church's own conception (chrztos), love is to be the inevitable outcome of religion (see Ja 2:1, 2 P 1), and that all is implicit in it St. Paul sets himself carefully to expound (1 Co 13). Its practical influence in the life of the Church is to be seen in its power to place master and slave upon equal terms (Philem 14), and in the adoption of 'brother' as an acknowledged term both of address (see 1 Th 14 etc.) and of reference (1 Co 8:3, Ja 1:3, 1 Jn 2:1). Even so specific an expression as 'the brotherhood' appears to have become the better word to signify the body of Christian believers (1 P 2:7). (b) The brotherly love thus required or assumed is regarded as essential to the Christian life. Its obligation is 'the royal law' (Ja 2:8). Its absence nullifies all other virtues (1 Co 13:1-2); its presence implies fulfilment of all duty (Ro 13:8-10, Gal 5:21). It is, in fact, the pledge of a life faith (Ja 2:14-18), and the criterion of true sonship (1 Jn 2:11 3:18 5:5). In all this the servants' doctrine is as their Lord's.

It has been disputed, however, to what extent the Apostles are also at one with Christ in their conception of the scope within which this law of love holds sway. In favor of a distinction between the two points of view, it may be argued: (a) that the prevalent sense of αδελφός in the NT is that of 'fellow-Christian'—a restricted meaning which is sometimes markedly imposed by the immediate context (see, e.g., 1 Co 5:10 6); (b) that the love required frequently refers to the brotherhood of believers only (Ro 12:9, 1 Th 4, He 13, 1 P 4:7 21); and (c) that, even in the report of our Lord's own teaching, the universalism of the Synoptic Gospels has, in the Fourth Gospel, been merged in the more limited conception (see Jn 13:18, 15). On the other hand, it is quite clear, from such injunctions as are found in Gal 6:20 and 1 Th 4, that the Apostolic love of love towards men possessed an application as broad as humanity itself, and the specific reference of Ro 12:9 appears to show that not even enemies were excluded from its operation. The teaching of Jesus, therefore, has not really been followed. Following this lead, it is necessary to distinguish these two degrees of fellowship (see Gal 6:20, 2 P 1). Yet, though there may be special stress upon the more limited love, the wider love is recognized as its natural outgrowth and its perfect fulfilment (see 2 P 1).

3. The practice of the Early Church.—Certain special practices in which the Christian love of Jesus' first Christians found expression, call for particular mention at this point. (a) The Love-feast and the Lord's Supper.—The early Christians used to share in a common meal, which was intended not only as a means of assisting the poorer brethren, but also as a manifestation of the Church's unity of spirit (see Ac 2:42 26 46 28, and Tertullian's famous passage, Apol. 39). At first these love-feasts were connected with the Lord's Supper (see 1 Co 11:26, and Ign. Supra. 8; and cf. art. AGAPE). But it was not long before the love-feast in the union of the Father with the Son and the other members of the Trinity (see 1 Co 11:23, Jude 12, 2 P 2:3)—a fact which, along with the Roman government's suspicion of all secret societies, led, in the 2nd cent., to their ultimate separation (see Phiny's Letter to Trajan, 96). Even after the separation, however, the Lord's Supper, as well as the Agape, would constitute an expression of the disciples' common brotherhood (see 1 Co 10:17). In the 15th cent. John Wesley made an interesting attempt to revive the love-feast in his own societies, and in an attempt to meet the suspicions of the state that their brotherly love was not merely of the 'bishop' (1 Ti 5.1), but also of the ordinary disciple. In various Scriptural injunctions its exercise is confined to the case of fellow-believers (1 P 4.7, 3 Jn 4); and the absence of restriction to a clear place shows in any case the broader conception of the duty was also appreciated (Ro 12:11, He 13:2, 1 Ti 5:16, Clem. Rom. 1). See HOSPITALITY.

(c) Charity.—The practice of liberality towards the poor was another expression of the Church's brotherhood. As was natural, this was directed mainly to relieving the necessities of fellow-disciples (Ro 12:13, He 6.1, 1 Jn 3.13, and probably Ac 4.32). A signal illustration of such charity is found in St. Paul's collection for the saints at Jerusalem (Ro 15:2, 2 Co 8:13 etc. See CHARITY)

(d) The 'communism' of the Early Church.—It was in connexion with such care for the poorer brethren that an experiment was undertaken which has sometimes been described as the 'communism' of the Early Church. 'And all that believed were together, and had all things common; and they sold their possessions and goods, and parted them to all, according as any man had need' (Ac 2:44; cf. also 4:32).

We must be careful, however, not to exaggerate the significance of this beautiful manifestation of brotherly love. 'There is,' in the words of Peabody (Jesus Christ and the Social Question, p. 24), 'no evidence that what is reported of the little community at Jerusalem became a practice, as taught by the teaching of Jesus. No other instance of communal ownership is cited in the book of Acts; but, on the other hand, the market of Mark continues to own her home in Jerusalem (Ac 12:2), and voluntary relief is sent from Antioch by "every man according to his ability" (11:21). The Apostles knew nothing of such communal regulations (2 Co 9, 1 Co 16). . . . In short, the communism of the days of Pentecost was the gift of tongues. The reception of one chapter, was a spontaneous, unique, and unrepeatable manifestation of that elevation and unity of spirit which possessed the little company at Jerusalem. It is not that the Apostle wrote of the fact that all this sharing of each other's possessions, which was thus for the moment a sign of their perfect brotherhood, was ever that to be final or formal or permanent. (See Ac 24; cf. further, art. COMMUNITY or COMMUNION.)

It is probable that the disappointment of the love of the apostle of Parousia, the rapid growth of the Church, and the presence of unworthy members in the Christian community, prevented the repetition or the expansion of this experiment (see J. H.

4. **Later development.** The history of the world's social progress, since the days of the Apostles, has been largely that of the unleashing of love. There is little to report to Mr. Greenham, for love is inherent in the Christian gospel. It is to its spirit that we owe the abolition of slavery, the cleansing of the prisons, the care of the sick poor, the suppression of infanticide, the exaltation of womanhood, the improvement in conditions of labour, and in general, the heart of the philanthropists concern for the down-trodden masses dwelling in our great cities. And, as men look forward to future progress, working towards a reformed society securely based upon truth, justice, and mercy, it is in the gospel of Christian brotherhood that the adequate motive-power is to be sought. Only when the universal brotherhood of man is acknowledged as an inevitable inference from the universal Fatherhood of God, only when the world's law of greed and hate is vanquished by the Christian law of service and love, will the principle of love have received its perfect fulfilment, and the City of God at length have been built upon earth.

BROTHERS OF THE COMMON LIFE, etc.—See BRETHREN of the COMMON LIFE, etc.

BROWNING.—See POETRY (Christian).

**BROWNISM.**—I. Life of founder. —Brownism derives its name from Robert Browne, third son of Anthony Browne of Tolethorpe, * Rutlandshire. Born about 1559, of his earlier years nothing is known, but he appears to have entered Corpus Christi College, Cambridge, in 1570, and to have graduated in 1572.† The college at that time was noted rather for licence than for learning or seriousness.§ The university, however, as a whole was a centre of Puritan influence; and Browne, yielding to this, became one of those known and counted forward in religion.‖ In other words, he was concerned about "the woeful and lamentable state of the Church," and its need of a further reformation. He debated these things "in himself and with others," and "suffered some trouble about them" ‧ from opponents. Then, at some indefinite time after 1572, he taught "schollers" for the space of three years‖—having a "special care to teach religion," and keeping them "in such wise and good order as all the townsmen who he taught gave him witness." Moreover, he still "bent himself to search and find out the matters of the Church"; he "laboured to put in practice all he found, both in his school and the town;‖ in consequence he "got himself much enmity of the preacher," and was frequently driven away. For a time, however, he continued to teach "with great good will and favour of the townsmen ‭‖ till an outbreak of the plague occasioned his recall home to Tolethorpe. Next, with his father's leave, he returned to Cambridge, not for study so much as with the hope of staying "his care" about the absorbing Church question. To this end he reported to Mr. Richard Greenham, rector of Drayton, "whom of all others he heard say was most forward.‖ Mr. Greenham allowed him—"with others"—to expound in his house "that part of Scripture which was used to be read after meals"; and, contrary to law, did not forbid him to teach "in the morning and evening, and on holy days" being "mov'd" by "certain in Cambridge," and also with consent of the Mayor and Vice-Chancellor, to his preaching in Cambridge. He was not unwilling, but was checked by his objection to receiving the Bishop's "license and authority.‖ He could go so far as to be 'tried' (i.e. examined) by the Bishops, and to 'suffer their power, though unlawful, if in anything it did not hinder the Truth.'‖ But he would not admit their right to authorize or ordain him; and when Archbishop Grindal's 'censure' was pronounced, he was "constrained"—apparently three times over—he lost the first, barred the second, and, though he kept the third by him,§ openly declared that they meant nothing to him. He preached to his Cambridge congregation for "about half a year," but refused to take charge of the town, and lived in such spiritual bondage that whosoever would take charge of them must also come into that bondage with them. This confirmed him in the principle which had gradually been growing clear to his mind, that "the Kingdom of God was not to be begun by whole parishes, but rather of the worthiest were they never so few;‖ and, failing to convert the people to a like view, he "sent back" the 'stipend' they had 'gathered' for him, and gave warning of his departure.‖ His next sphere was in Norfolk, where some very forward ‡‡ were to be said. He lodged with Robert Harrison,‖ master of an hospital in Norwich; but went out from that city on preaching tours which roused the whole neighbourhood, and soon embroiled him with the Bishop.‖ Another result, however, was the gathering of a "company" who agreed to join time after he 'conformed' in 1638. The statement (Styrye's *Parke*), bk. iv., that he entered his college at Cambridge with the Duke of Norfolk before 1571 is due to the confounding of him with another Robert Browne, the Duke's messenger, often mentioned in the Letters and Acts of the English and Scottish Immigrants in 1571 and 1591. Nor is there any proof of his identity with the Browne cited in connexion with 'Underdike's Plot' (bk. vi. iv., sub. 1574), nor with his death in 1638. See also (a) *The Family* (Christian)—"Browne's CP*; (b) *The Family* (Christian)—"Browne's CP in connexion with the Bishop.‖ Another result, however, was the gathering of a "company" who agreed to join

* The family is described as "ancient and worshipful." For full accounts of it, see *Transactions of the Congregational Historical Society*.† An inference from the fact that he was over 80 at the time of his death in 1633.‡ See *History of Corpus Christi College* (sub. 1548).|| See his own *True and Short Declaration* (unengraved). together, on the basis of his teaching, for Church fellowship, by means of a solemn covenant to the following effect:  

(1) That they would ‘keep and seek agreement’ one with another under Christ’s law.
(2) That they should “pray, and watch, and obey, certain to ‘teach them and warn the salvation of their souls’,—having had due ‘trial and testimony’ of their fitness.
(3) To hold regular meetings for prayer, thanksgiving, reading of the Scriptures, exhorting, and edifying—either by all men who had the gift, or by those who had the special charge before others.
(4) That they would allow any member of the Church to ‘protest, appeal, complain, even dispute, reprove’, etc., as he had power to do in the order.
(5) That they would ‘further the Kingdom of God in themselves, and in every other’, that they might ‘be any; or in their friends and companions, and whosoever was worthy.’

By that they would observe the rules agreed upon for gathering and testifying voices in debating matters; for an order of choosing teachers, guides, and rulers; for separating clean from unclean; for receiving any into the fellowship; for presenting the daily success of the Church and the work thereof; for seeking to other Churches to have their help bring better reformed, or to bring them to reformation; for taking an order that none contend openly, nor persecute, nor reproach the (the) Church, disdained to be his false doers, nor evil cause (into it)—after once or twice warning or rebuke.

This took place at Norwich,† probably early in the spring of 1581, and marks the formation of the first Church of its kind in England.‡ The covenant here described presents an outline of Bishops Church upon its positive or constructive side; its negative or aggressive side may be illustrated by Browne’s own report of a conversation which he had with his colleague Harrison some time before. From this it appears that Browne (showing himself extreme in some points than Harrison) maintained that ‘preachers who submit themselves to the popish power of the Bishops, or any way justify or tolerate it, cannot do duty as lawful pastors and preachers; that the Parishes guided either by such preachers or by the Bishops and their officers cannot be lawful and the Churches of God; that such preachers cannot really beget faith by their preaching, neither can they really call or win men to goodness, nor can any profit be got from their blind reading of chapters and the (Church) service.

With these convictions fierce invectives against the preachers came naturally. Here, e.g., is a specimen: ‘Therefore say no more ye wicked preachers that ye hold the foundation, or that ye preach. For what is it worth to set up unto Christ to found the Church and bring the knee before Him, when you cast your filthy disorders and popish government as dung on His face. You have not yet gathered the people from the popish parishes and wicked fellowship, neither have planted the Church by laying the foundation thereof. . . . Declaration in this strain made a sensation. The common people of Bury St. Edmunds and thereabout heard him gladly, and ‘assembled themselves to the number of a hundred at a time in private houses and conventicles to hear him.’ It also had the effect, not by the Bishop ‘upon complaint made by many godly preachers for delivering unto the people corrupt and contentious doctrine.’  

© Released at the instance of his kinsman Burghley, and straightway required by his ministry, he presently found himself a prisoner at London.’ * Harrison, too, was imprisoned† with others of the Church. So ‘at last, when divers of them were again imprisoned, and the rest in great trouble and bondage out of prison, they all agreed and were fully persuaded that the Lord did call them out of England.’‡ The place selected for this, because of ‘the. . . (cartwright’s congregation) there was Middelburg; § and thither the greater portion of the Norwich ‘company,’ including Browne and Harrison, transferred themselves—near the end of 1581. In Middelburg Browne’s ideal seems to have encountered little or no outward trouble, but it broke down woefully under the stress of inward difficulties.† Two years later, Browne, sore at heart but keeping a bold front, was on his way to Scotland—accompanied by just four or five men and their families.

The rest of his career need not be dwelt upon. Landing at Dundee, he reached Edinburgh by way of St. Andrews on Thursday, 9th January 1583–4, and was soon in trouble. On three successive Tuesdays he appeared before the Edinburgh Presbytery—maintaining that ‘his adversaries at this time were not a thing indifferent, but simply evil’; alleging (on the 21st) that ‘the whole discipline of Scotland was amiss’; and acknowledging (on the 28th) the authorship of certain books exhibited. Out of these Mr. James Lawson and Mr. Robert Gibson had made the charges which the articles deemed erroneous for presentation to the King—Browne, meanwhile, being, it would seem, held in custody. But His Majesty, assured rather to spine the Presbytery than to befriended Browne, let him go free.**

After some months he appears to have returned to Stamford; then to have gone abroad, leaving his wife behind; and then again to have come back to Stamford. This was about March 1585; and in the autumn of the same year, October 7th, he betrayed the crushing effect upon him of several months’ imprisonment by a promise of ‘conformity’ to the Established Church.†† Next day he set out for Tolethorpe, bearing a letter of intercession from Burghley to his father. Here he lived, under paternal surveillance, till February 1585–6, when his father, not having found him sufficiently docile, asked and obtained leave to remove him ‘to Stamford or some other place.’ Whether Browne actually removed is doubtful—since there is proof that later in the year (April 1586, Middelburg 25th) he was three times cited—on a charge of non-attendance at church—in the Bishop of Peterborough’s Court by the churchwardens of Little Casterton, the parish in which Tolethorpe Hall is situated.‡‡ The next certain fact is his appointment on November 21st, as schoolmaster in St. Olave’s Grammar School, Southwark—first between 1585 and 1588, when Burghley solicited Howland, Bishop of Peterborough, for his re-admission into ‘the ministry of that holy office. This was done under a cope, in the proviso that he ‘hath now a good time’ been an obedient son of the Church. III Two years later, on the

30th June 1591, Robert Browne, clerk, was admitted and instituted to the rectory of the ecclesiastical parish of Little Casterton in the county of Rutland and diocese of Peterborough—of which parish his father had been rector—by Peter, then occupant of Tolethorpe Hall, was the patron. * Finally, on September 2, 1591, he became 'rector' of the parish of Auchurc-chum-Thorpe, Waterville, in Northamptonshire; 'was admitted to the holy orders deacon and priest' by George Browne, then appointed of Tolethorpe that Peterborough and in the false Prince's companie. The Avas disciple true may admitted of passages removal astical uncle tional sphere was the Christian Equally concerned civil power, Fatliers. (3) Bronriism, (1) term demanded words, some period of 10 years) he lived out the remaining forty-two years of his existence. He died in Northampton gaol, and was buried at St. Giles' Church of that town on October 8th, 1582.‡

2. Browne had receded from some of his extreme views and taken office in the Church he had so bitterly condemned, there is proof § that he still held to the essentials of his Church theory; and if this be taken as evidence of conscious insincerity, it may be remembered as a plea for delay on the ground of a 'Prince's own words, he was 'broken ... much with former troubles,' that the influences brought to bear upon him in his weakness were of exceptional force, † and that the limited extent of his 'conformity' seems to have been general to the Leader—his sphere.

Some indication of the principles commended by the term Brownism has already been given. But a more systematic statement is desirable.

(1) First, then, it should be said that Brownism concerned itself merely with a doctrine of the Church. Theologically, Browne was even more orthodox in the current Calvinistic sense. Equally so were his successors. ‡ (2) With Protestants generally, of the consistent sort, he accepted the Scriptures as the sole rule of Church faith and practice—uninfluenced by the traditions of men, including those of the Early Fathers.

(3) Starting from this basis, he came to the conclusion that the Protestant Churches (particularly the English Church), while Scriptural as to their faith, were far from Scriptural as to their practices. Reformed up to a certain point, the English Church had stopped short of the full Reformation which was demanded if it would correspond to the NT model of a Church. Many even of the more 'famous' leaders of the Church, Browne thought, had set the civil power as a sufficient excuse that the needed reforms were not to be had without concurrence of the civil power, and that till such concurrence was forthcoming they could only 'tarry.' Here Browne took his stand. He thought the evils arising from an imperfect Reformation of the Church so great and pressing, that the very existence of Christianity called for the instant removal of them. Since, too, the will of Christ—made clear in the NT—necessitated their removal, to plead for delay on the ground of a 'Prince's unwilliness was intolerable disloyalty to Christ. The Prince is supreme in his own sphere, but his sphere is not the Church. He is 'to rule the commonwealth in all outward justice, to maintain the high welfare and honour thereof with outward power, bodily punishment, and civil forcing of men.' He is also to 'look to the Church so far as 'outward provision and outward justice' are concerned: for it is of his 'charge' 'because it is in a commonwealth.' But the Prince has no manner of right to compel the Church to be, or to remain, what Christ forbids. Nay, he has no right directly to 'compel religion' at all, i.e., to plant churches by power, and to force a submission to ecclesiastical government by laws and penalties. If a true Church is already established, the Prince either is or is not a member of it. If he is, then—as God is no respecter of persons—he is, like every other member, subject to its discipline. If he is not, and has no mind to further or favour its establishment, then those who are Christ's freemen must proceed without him; and even though he should oppose them to the uttermost, they must go on just the same. Thus it appears that separation from a false Church, or from one persistently corrupt, in order to set up and rescue the pure and true, is a right which the Prince dare not withhold, and a duty which the 'faithful' dare not decline.

Such is the pitch of Browne's Treatise of Instruction without tarrying for anise, which he wrote and printed at Middelburg in 1582. Not without reason has it been called * the first plea in English for the Church's independence of the State and essential autocracy. But on the Continent he has been more than a master to the Anabaptists † for, in one respect at least, his plea, as compared with theirs, presents a remarkable limitation, viz., that he seems to permit, if not to oblige, the Prince—after the example of the 'good kings of Juda'—not indeed to 'force the people by his power' to the practice of the Church government, † yet, when once they had received it, to keep them to it, and even to 'put them to death' if 'then they fall away.' How entirely subversive this might become of his whole position—supposing him serious—Browne did not pause to reflect.

(4) Published at the same date and place, and (in some copies) bound up with the Treatise, was a Catechism to which the Treatise was meant to serve as an introduction. Its title began, 'A booke oriad, 35 which shorte setth the orders of things in the Church and Christian ... ,' and if the Treatise urged the instant need of proceeding to establish the true Church, this sets forth the character of the Church to be established. In some points it obviously agrees with the Presbyterian ideal, as expounded, e.g., by his contemporary Cartwright. The conception of the sacrament is the same; its permanent officers are the same—Pastor, Teacher, Elders, Deacons, Widows—and also its description of their functions; and it makes the same demand for 'discipline.' But there are notable divergencies. Thus the definition of a Church is much more strict—'a company or number of believers which by a willing covenant made with their God as under the government of God and Christ, and keeps his laws in one holy communion,' and again, it was more democratic. From first to last the people of the Church, as just described, are accounted supreme. This appears (a) in the

* Burrow, op. cit., p. 65t. † 1b. † 1b. p. 72.

† In a MS of his recently found in the British Museum by Mr. Richard Bland, and edited for him by Mr. P. L. Eyre, of the Congregational Historical Society. It is in the form of a letter to his uncle Mr. Flower, dated 31st December, 1588, and contains the passages quoted Dr. Bencroft in his famous 'St. Paul's Cross' sermon of the following February.

‡ Burrow, ibid. MS, where he speaks of having been imprisoned 23 times.

§ e.g. the breakdown of his Church experiment at Middelburg had been due less to his leadership than to the treasures brought to bear upon him at home and by Burghley, etc.

Bredwell, e.g., assumes this in his Easing of the Foundations of Brownism, 2nd ed.

** Cf. Questions 2-35 of his Booke which sheweth the life and manners of all true Christians, 1591.

† † Cf. e.g., their Confession of Faith, 1596.

† † 1b. for the American edition; see § 35 of the (Mennonite) Confession quoted by Walker (p. 5). The latter's date is 1600, but it expresses their earliest views. See also pp. 15-17 for possible influence of Anabaptist views on 'Brownism,' and above, p. 9, nearest the truth that 'Brown owed nothing to Anabaptist influences, and that he was a disciple of no one' (Congregationalism as seen from Literature, p. 88).

† The first words are — 'Christians are a company, ...' Browne did not believe that Christians could be such and live apart from Church fellowship.
declared equality of all the members as regards spiritual privilege: 'Erever one of the church is meant to know that he is the protestant, the pater, the bondman, and Christ, to uphold and further the kingdom of God, and to breake and destroie the kingdome of Antichrist and Satan.' (6) In the mode of appointing and ordaining officers. These must first be tried by the whole Church as to their 'gifts and godlines.' If, indeed, a man has already given proof of his 'gifts and godliness' by the right gathering of a church, then those composing that church, or those who afterwards join it, must tacitly receive him 'by obedience' as their 'guide and officer.' Should, however, a church find in need of any officer, then the free and clear 'consent of the people,' gathered by the elders or guides, must proceed his appointment. (c) In the power of the Church as a whole to discipline and even depose unworthy officers. (d) In the right of the Church, through its own 'elders or worshippers,' to recognize its officers by ordination 'as called and authorized of God.' Usually this is done 'with prayer and imposition of hands'—but as to the latter it 'is no essential point of theirs calling,' and ought to be left, which it was turned into point of superition. (e) In the fact that, while the holding of 'synodcs or meetings of sundrie churches' may be expedient, it is voluntary. Their use is to enable the stronger churches to help the weaker in 'deciding or redressing of matters' when such help is sought or when it is evidently needed. (5) Brownism, as thus outlined, became the accepted platform of all the early Separatists. Younger leaders like Henry Barrow, John Greenwood, Francis Johnson, and Henry Ainsworth may have varied the emphasis, clarified away ambiguities, or given to this or that principle a more rigorous and detailed application; but, notwithstanding their vehement desire to repudiate all connexion with Browne or his name, it could not reasonably be denied that he was 'the shop of their store and the seed of their strength.' Proof of this lies hand in their writings, particularly in a series of authoritative documents which they issued for the chief Separatist Church during the first twenty years of its existence. § Only one point of importance seems to doubt, and here the difference between Browne's teaching and that of Barrow seemed great enough to warrant a description of the latter as 'Barrovism.' This point is the eldership and its relation to the Church. According to Deyter, the teaching of Barrow presents the Church as having power to elect the elders, but not to control them or 'seriously limit their action' or remove them from office for any cause whatever. Thus he practically destroyed the Church's self-government, and erected the eldership into 'a ruling oligarchy,' whereas Browne made it a pure democracy. But against this view may be set Barrow's explicit statement of the contrary. 'I never thought,' he says in one place, 'that the practice of Christ's government belonged only to those officers. I rather thought it had been their duty and office to have seen this government faithfully and orderly practised by all the members of the Church, . . . so that if those officers or any of them transgress, the Church must rebuke every member freely (according to the case), and to the end to prevent and reprove the whole, to cen- sure and excommunicate such officers so offending.' No less conclusive is the evidence of a document published in 1596 under the title, A true confession of the faith and humble acknowledgment of the gaps in Brown's Confession of 1592; called Brownistes doo hould towards God and yeild to hir Majestic.' It emanated from the Separatist Church formed in London, 1592, and soon afterwards exiled to Amsterdam. This Church had been set up by Francis Johnson, the learned lawyer, a steady, religious teacher—joint authors of the Confession, and both disciples of Barrow. Thus its words on the point in question may be taken as Barrow's own. But these say decidedly: 'That as every Christian Congregation hath power and commandement to elect and ordaine their own ministerie according to the rules prescribed, and whilst they shall faithfully execute their office to have them in superabundant love for their works sake—to provide for them, to honour them and reverence them, according to the dignitie of the office they have received, and to make them respectable; they also have power to discipline their ministrice in any such defect, either in their life, doctrine or administration: breaketh out, as by the rule of the Church, and from the practice of their ministrice, so to depriue them from, or deprive away or trim down their ministration in a worthy way, and cut them off by excommunication.' Johnson, it is true, drew off from this position and split the Church by urging a strictly Presbyterian view of the eldership. But a majority of the people adhered to Ainsworth in his more moderate defence of the confessional view—which he calls the Church's 'ancient faith'—and he had also the warm support of John Robinson § with his church at Leyden. A more plausible case of difference between Browne and Barrow seems to lie in their respective ways of speaking about the relation of the Civil Power to the Church. For, while Barrow declares it to be 'the office and duty of Princes and Rulers to suppress and root out of their dominions all religions, worship, and ministries other than the true, Browne's language is certainly more restrained. But here also the contrast is less in reality than in appearance. One drastic assumption of his has already been noted. And the following from his reply to Mr. Cartwright is not so very far short of Barrow's position: 'If the commonwealth (as it ought) had long ago taken from the ministry those tenths and popish livings, then Jericho being once desecrate, and the antichristian churches put down, had not so soon been built again. . . .'

NOL Diod he show himself (previous to his conformity) less extreme in a third point—his practical attitude towards the establishment. Barrow's attitude is perfectly explicit in the Confession of 1596 (Art. 32), which calls upon all who 'will be saved' to come forth with speed from this antichristian estate; upon all its ministers 'to remove and leave' their unlawful offices; and upon all people of what sort or condition soever to withhold their goods, lands, money or money worth. (See the present writer's Henry Barrow (p. 100) for this and other references. The only argument alleged to the contrary seems to be one drawn from the 'silence' of what is called the London Confession of 1589: 'A true description out of the record of the church of London.' The reference to the point may be explained by the ideal character of this document. It is a declaration rather than a Confession. § 1589.)

1. He defends it in his latest book, A Christian Plea (1673), p. 49. See Henry Barrow, 1596 (see present writer's Henry Barrow, pp. 254 ft. & 386 ft.).

2. See his Justification of Separation . . . against Mr. Richard Barnard, 1603, where, re the 8th error alleged by Mr. Barnard, he goes into the question with great thoroughness. Johnson defended in his Answer (1611), p. 27; and Robinson rejoined—at Ainsworth's instance (see the latter's Amenderadser to Mr. Cliffon's Advertisement (1613), p. 38.)

from the maintenance of its false ministry and worship. Brown's was the same. It is, e.g., the burden of his letter to Mr. Cartwright that you cannot be an Englishman (or a minister) (2a) without partaking in its pollution; and so neither the true Church as a whole nor any 'part' or 'member' of it ought to communicate. ♦ Perhaps the utmost which can be conceded to him is that he may not have forfeited his priesthood—'even of prelatic ministers or attendance at their services as did the authors of the Confession.'

Brownian of the strictest type—that which pushed its differences from the Church of England to the fore—found a temporary asylum in the semi-Separate or Dutch, and the single point of experience. In Leyden—under the leadership of John Robinson, who at first was as thorough-going as Barrow or Ainsworth, but became with time increasingly tolerant—it learnt to lay the stress upon constructive elements; and to develop these in a form of church-life which could bear translation to the shores of New England, and there plant the germs of a vigorous democratic Church-State. In England it ran a somewhat similar course. Stripped of its harshest features, it is found for centuries in the hands of Congregationalists,

by Henry Jacob (1633–1624), who 'gathered' at least some of the scattered 'remnants' of the London congregation of 1592 and organized (on a semi-Separatist basis) what has been called the first distinctively Independent Church in England. But the name 'Brownism' did not stick out. It lived on as a descriptive or abusive epithet of 'all and sundry' who, for whatever cause, broke away from the National Church. Nor did the extreme views originally suggested by the name cause much overt opposition. In 1658, for example, a petition was made to the Council by all the churches in England 'to provide for the order of public worship and the salvation of the church.' This appeal from time to time fared the 17th century. ♦

Indeed, such advocates have never been absent altogether from the ranks of English Nonconformity. But, on the whole, it may be said that Brownism has survived only on its milder side; and that its essential witness has been continued and fulfilled in the principles which give life and power to modern Congregationalism. See also art. CONGREGATIONALISM.

BRUNO. L. BRUNO'S WRITINGS.—A list of these so far as known to us is printed in the Historical Dictionary, The True Story of Robert Bruno (1906), p. 74f. The most important are those numbered: (3) A Book which sheweth the Fraud and Massacre of the Turks (1596); (4) A Treatise of Federation without tarrying for arms, Middelburg, 1552, reprinted by Congregational Historical Society, 1893; (5) A Treatise of the True Christian Faith, London, 1583, reprinted early in 1588 (a satisfactory account of these, with full titles, is given by Burrow, pp. 12–25); (6) A True and Short Declaration Touching the Birth of the Protestant Church and also of the Lamebed Branch and Division which fell not amongst them, Amsterdam, 1589 (alleged to be a facsimile of Cartwright's Letter for Joining with the English Churches, 1584–50 (?)(MS printed and published at London, before Oct. 7, 1600); (16) A Epistle written to Mr. Brown, Father of Congregationalism, London, 1587; (11) The Reticulation of Robert Brown, Father of Congregationalism.

The schismatical persons are taken to be Henry Barrow, John Greenwood, and their congregation. E. Brown is expressed on this point—or any as to its authenticity. But the present writer is not convinced of the latter, at least (27) A Letter written to Mr. Flower, Dec. 31, 1588–89 (MS in the B.M., under the title A New Year's Gifte; the printed copy contains a narrative of the finding of the MS by Burrow in 1901).

II. BRUNO'S LIFE LITERATURE.—The words of Robert Harrison (d. 1582), Henry Barrow (1550–1593), John Greenwood (d. 1593), John Penny (1550–1593), Henry Ainsworth (1571–1672), Francis Bunting (1580–1661), Henry Jacob (1563–1624), for which see Dexter, Congregationalism, 1576–1641 (pp. 8–30), and T. G. Crippen, 'Early Nonconformist Bibliography' in Transactions of Congregational Historical Society, vol. 1, 1, 1908, pp. 11–65.

FRED. J. POWICKE.

BRUNO.—I. Life.—Giordano Bruno was born in 1548 in the ancient township of Nola, not far from Naples. At the latter town he studied, and in 1563 he entered the monastery of the Dominican order there and lectured. It was about this time that he took the name of Giordano, his original name having been Filippo. In 1572 he became priest. Early in his monastic career charges of heresy had been brought against him, and these were renewed in 1576. Bruno escaped to Rome, and there, hearing of his excommunication, made his way to North Italy. Earning a livelihood by various means and in various cities, he finally crossed the Alps, and in 1579 reached Geneva. There he attended the Protestant services held by an Italian pastor, and thus became formally a member of the Protestant community, although he does not seem to have entered into full communion or to have adopted the Calvinist confession of faith. A violent dispute with a Professor of Philosophy at the Geneva Academy led to his departure from the city in the autumn of the same year. He passed to Lyons and thence to Toulouse, where for two years he lectured on Aristotle and other subjects, being elected (by vote of the students) to a chair at the University. We next find him at Paris, in one of whose colleges he was appointed (as extraordinary professor). Here he published two works on the Art of Memory (a subject concerning which he had been interviewed by the king, Henry III.), and a curious comedy, Il Condeletto. Appointed a lecturer in the University, and in 1583 he crossed the Channel and came to London. There, after a three months' stay in Oxford, where his reception was the re-
verse of cordial, he took up his abode in the house
of the French Ambassador, Mauvissière, probably
as a secretary, and remained till 1585, when the
Ambassador returned to Paris. During his stay
in London, Bruno had some acquaintance with Sir
Pauuer, with whom he discussed a number of his writings), Fulke Greville, Florio, and others of the
literary men and courtiers of the time.
Seven of his most important works, six being
written in Italian, were published in London at
this period, although false names are usually
given on the title-page for the place of publication.
These works included the dialogues La Cena
de le Cenerei (1554), De la Causa (1554), De
Infinito (1584), Spazio de la Bestia Transfante
(1554), and De glis Evocii furori (1585). At
the same time he had already begun the Latin work
through which they were completed in Germany, so that his
stay in England represents a period of extra-
ordinary productiveness. With Mauvissière he
returned to Paris in October 1585, but was com-
pelled to leave it again in the following summer.
For the next three years he lived (first at reza,
acclamation with the Church, his hope being that
he might be allowed to return without renewing his
monastic obligations. The negotiations were
broken off, however, and he made his way to
Protestant Germany, settling for another brief period in Leipzig, Wittenberg, and Würzburg.
Here was associated with the then dominant Lutheran or
Reformed Church party, was welcomed by the
University, lectured on such subjects as the
Organon of Aristotle and Lullism—avoiding dan-
gerous topics—and continued his philosophical
writings. With the overthrow of the Lutheran by the Calvinist party in 1588 he was compelled
once more 'to take to the road.' With varying fortunes he visited Prague, Helmstadt, Frankfort,
Zürich, and again Frankfort, where he remained from March 1591 till a fatal illness led him to
Italy in the autumn of the same year. During
this period he published various works: the 150
Theses adv. Peripateticus (Paris, and also Witten-
berg), the Oratio Valedictoria at Wittenberg, the
Oratio Consolatoria, or Funeral Address on Duke
Julius, at Helmstadt, and two mathematical writ-
ings at Prague. The Latin poems (with prose
commentaries), which contain the sum and final
statement of his philosophy, the De Minimo, De
Monade, and the De Immenso, were published at
Paris, 1588, and with other works, the De
Euenium Composition, in 1591. In response to an
invitation of the patrician Mencenigo, who wished to
learn his art of memory and his supposed magical
powers, Bruno re-entered Italy in August 1591.
He was again anxious to be reconciled to the
Roman Church, and to be allowed to live and
write at peace as a layman, being curiously un-
conscious of the reputation his writings had built
up for him. No doubt he trusted also to Mo-
cenigo's influence for protection. In May 1592,
Mencenigo obtained knowledge he expected, denounced him to the Inquisition at Venice. In the process that followed Bruno at one point made solemn abjuration of all
errors and heresies of which he had been guilty,
and later made entire submission, throwing him-
sel on the mercy of the court. Meantime, how-
ever, Rome had intervened, demanding that the
heretic be sent to the Papal court. For political
reasons Venice yielded, after considerable dispute
and under strong pressure; and in February of
1593, Bruno entered the prison of the Inquisition
at Rome. For some unknown reason no further
steps were taken till January 1599—a most un-
usual delay. The process was then renewed and
carried on to December of that year; but the
unfortunate man, refusing to recant any of his
philosophical opinions, or to acknowledge the right
of the Church to dictate in matters of philosophy,
was condemned to death in the usual cynicall
formula, and, on 17th Feb. 1599, was publicly burnt
alive in the Campo dei Fiori, where the statue by
Ferrari now stands. Bruno suffered not for the
Protestants, but for or rather in defense of every
form of religion, but for Science, and for the freedom of the scientific spirit from the Church.
2. Works.—Apart from the comedy of Il Can-
didato, and one or two occasional works such as
the Orations at Wittenberg and at Helmstadt,
Bruno's works fall into three groups, viz. (1) com-
mentaries and summaries; (2) works on the Art
of Memory and the Art of Knowledge; (3) philo-
sophical works.
(1) The first group includes expository and
critical accounts of Aristotle's Physics, the post-
humous collections De Magia, the Medicina Lulli-
ana, and perhaps a number of the accounts of
the LLullian Art of Knowing. (2) Such works as
the De Compensatio Architecture (1582), the
Languis Cartographiae (1587), the
Compozitione, the Laevas Triginta Statuum present in various forms a scheme, based on the writings of Raymond Lully (13th cent.), for the analysis of thought, and
its reduction to a few elementary concepts, from
which, with their combinations, all possible know-
ledge may be derived. Bruno attacked the several
universal philosophers, and Leibniz also, and others after him, devoted some attention to this idea of a Universal Art of know-
ning or discovering truth by thought alone, or, more
strictly, by the manipulation of words. Along
with these works may be placed the De Umbra
Idearum (1582), Cantus Corocen, Sigillus Sigil-
orum (1553), and other works on the Psychology
and supposed Art of Memory, upon which Bruno
laid great stress, but to which the familiar
criticism applies, that what is good is old, and
what is new is worthless. (3) The main philo-
sophical works, Italian and Latin, have been enumerated above under their short titles; there
remains to be added only the Summa Terminorum
Metaphysicorum (1609, the first part having been
previously published by itself in 1593). The
Cena introduces us to the Copernican theory of
the universe, and Bruno's extension of it; the
Cause gives the metaphysical basis; the Infinito
places the new cosmology in a fuller light, and criticizes the prevailing theory and its Aristotelian origins; the Speculum Philosophorum, the De
Magna Composition, and the Ethica, treat of the
law and religion of the common man; while the
Eroici furori give those of the speculative phil-
osopher, imbued with the true amor Dei intel-
lectualis. Finally, in the Latin poems the system
receives unity and finish; its relations with, and
its advantages over, previous theories are ex-
pressed in clear and dignified, if not inspired,
verse. There is no doubt that in these later works Bruno comes nearer to a spiritual Monad-
ism such as that of Leibniz, while in the earlier
deeply metaphysical writings, he is more of a
secret knowledge, and has a more Pantheistic
rather than a Neoplatonic type.
Bruno has been called the Philosopher of As-
tronomy (Kiehl, p. 28). What is new in his teach-
ing is his whole-hearted adoption of the theory of
the universe foreshadowed by Copernicus, and
already in Bruno's time being established by the
astronomical discoveries and calculations of Tycho
Brahe, Kepler, Galileo, and others. Early in his
studies he became dissatisfied with the prevailing
philosophy of the Church, —and turned with fresh interest to the cosmic specula-
tions of the pre-Aristotelian thinkers, and to the
mythical imaginations of the Neo-Platonists.
These, with the Scholastics, orthodox and un-
orthodox, the alchemists, the astrologers, and
finally Cardinal Nicholas of Cusa, last of the
Medieval, and first of the Moderns, were the chief influences that determined Bruno's thought, and gave his philosophy its strange confusion of old and new, of crisis superstition and daring speculation, of dull pedantry and vivacious originality, of ignorant folly and supreme insight.

(a) The physical universe.—The universe is infinite, without bounds, no where the same in nature or kind, everywhere diverse in its individual forms or modes. Its centre is at once everywhere and nowhere; it is all centre or all circumference; or again its centre is relative to the spectator; thus to us the earth appears the point about which the universe revolves, but precisely the same way, said Bruno, the inhabitant of the moon would regard the moon, and the inhabitant of the sun the sun, as the centre of his world. Each sun, each star, each planet is a world like our earth, with living beings in its air, on its soil, in its fire and its waters; but the worlds are of two kinds, each complementary to each, each necessary to the other's existence; the two kinds are the suns, including the fixed stars, and the earths or planets, including the comets. The suns and the earths are two unalterably distinct elements; Bruno thought of as a formless fluid, a passive, yielding, yet unchangeable, medium through which light, heat, and bodies pass without loss of force. Underlying all movement, small or great, is spirit or soul; all things have soul; the ether itself is a soul; sometimes identifies with the Soul of the Universe. Again, since Nature is everywhere the same, everything is implicitly or potentially the whole universe; and what it is implicitly it strives to become explicitly or in actuality. Thus every element passes, in the course of its history, through every portion of the universe, and every composite being becomes, by gradual change, every other nature or thing. Thus suns and earths, like all other beings, have had a beginning in time and will decay and perish in time. Nature never reproduces itself, it is not cyclic or periodic; yet it is in this moment of time two forms or things exactly alike, and nothing is ever for two successive moments the same: nowhere is there a perfectly straight line or a perfect circle or arc of a circle. There are three kinds of monads, i.e. of simple souls, forms or elements; the atom, the Supreme Unity, Monad of Monads; (2) the soul, the substance or spirit of the composite body; and (3) the atom, the simple element of body or matter. All are immortal, each soul passing, as has been said, through every type of body the universe contains. In this metamorphosis there is, however, a possibility of progress; the soul has in its power to rise gradually to higher and higher types of being, until it approaches unity with God and is absorbed into the eternal life of the Divine being.

(b) God and Nature.—Relatively to us God has two modes of existence and two ways of access. As a transcendent Being, outside of and prior to the universe, its Creator and Source, He is accessible to us through the Soul, of which the universe is the soul, or inner nature of the universe, which is His image or expression. He is knowable by sense, understanding, and reason. But as the universe He is in all and every part; all things are one, and the one is God. Indeed, in the earlier phase of Bruno's Pantheism the individual or finite being has no real existence at all; it is not a part or a division or even a special mode or expression of the Divine or of God, but simply the world-soul itself in a particular aspect. Again, in the infinite (sub specie aeternitatis, in Spinoza's phrase), there is neither less nor greater; a man is no higher, no nearer God than an ant, a star than a man; all values are relative to the finite standpoint of the Infinite, as Nicolas Cusa taught, all opposites, including good and evil, coincide; liberty and necessity, the possible and the actual, power and will, will and thought or idea, all these in God are one. Hence the universe that exists is the only possible universe, and because it is all and one, the universe as a whole as it is. But again Bruno's nature thought compelled him to recognize gradations in value, in spite of himself. In law, natural and moral, in the beauty and order of Nature, God is more fully, more adequately, expressed than in any single being or individual thing (Op. Lat. i. 2, p. 316).

(c) Ethics and religion.—The end and aim of a Church is the same as that of a State; it is social and practical—the security of the community, the prosperity and well-doing of its members. Dispersion and internal strife are dangerous, as the enemy about the sun, but the suns themselves are also in motion. Nowhere is there any permanence or fixity in Nature; all these worlds are alive, are living beings, and the condition of life is change. Peace and quiet are dangerous, as the calm of the sun, but the universe, or the solar system, is in motion. Thus the universe, like society, is immanent rather than dialectic or rational, and, indeed, the need of an authoritative doctrine, and the enforcement of its acceptance and of outward conformity with it; but the Church has no right to go further, to interfere with the pursuit of knowledge, of truth, or the exercise of philosophy or science. Thus the Bible teaches not science but morality, an ideal of conduct. No discovery therefore may be condemned because it conflicts with a supposed statement of fact in the Bible. God does not need the worship of men, He cares nothing for what they say or think of Himself, but only for what they do to each other, i.e. for their happiness. Thus all worship, all religion has a purely practical and human end. The ordinary man must be governed by authority, by fear of punishment, whether in this life or in the next; ignorance and bodily pleasures are his paradise. He must live by faith. But the wise or heroic soul is able to attain, through reason, and through the love with which it is inspired, to the knowledge of and to eternal union with the Divine. Thus Bruno thought that the end to the same conception as that with which Spinoza concluded his Ethics—the amor Dei intellectualis. His philosophy of religion is a rationalism, but limited always by a belief in the Transcendence of God, by which the idea of faith is separated from that of reason, and indeed remains, as Bruno sometimes saw, above it.

3. Influence.—Although his writings were placed upon the Index in 1603 and became very scarce, and although in his lifetime he aroused antagonism wherever he went, Bruno nevertheless had many followers in England, in France, and in Germany. No doubt his Lullian works formed the first attraction, but through them his philosophical ideas received an entrance into current thought. The influence was general rather than specific; the courage, independence, and enthusiasm with which he defended the new and lofty conception of the universe and of Nature in its relation to God made themselves felt and were imitated. Traces of his teaching may be found in Bacon, Descartes, and in the related works of many with both of whom he has many doctrines in common. Except, however, for the somewhat mistaken admiration of the English Deists, he was generally neglected until the German idealists rediscovered his work in the first half of the 19th century. Ample amends has now been made by his countrymen in the study of his writings, their careful editing, and complete publication; and a multitude of monographs upon his life and phil-
osophy have appeared during the last thirty years in various languages.

BRYANTES.—See Methodism.

BUDDHA, LIFE OF THE.—Gautama, the Buddha (*Pali Gotama*), the founder of the Buddhist faith, which at one time numbered in all probability more adherents than any other form of religion, belief, was born in or about the year 560 b.c., in the ancient kingdom of Kapilavastu, the ruins of which have been sought but not found by the British border in the dense tarai region of south Nepal, a few miles north of the Basti District of the United Provinces. The place of his birth, unknown and unidentified before, was determined by a curious discovery, in the year 1805, of a pillar erected there by the Buddhist Emperor Ashoka (*q.v.*) during a pilgrimage which he undertook for the purpose of visiting and worshipping at the chief sites made sacred by the presence and acts of Buddha while he lived upon earth. The route which he followed led him from his capital city of Pataliputra (Patna *q.v.*) to the Lumbini Grove and Kapilavastu, Bodh Gayâ, Sârnath, near Benares, Sâravasti, Kusânagarâ, and other sacred sites, the exact position of some of which is still uncertain; and at each place he appears to have set up a pillar or built a stûpa commemorative of his visit, and of the incident in the Buddha's life of which it had been the scene.

The inscription on the Lumbini Grove pillar is perfect, and the letters are clear and legible as on the day they were inscribed; of a few words, however, the meaning is uncertain:

"The king Devakarmiprā-buddhist, when he was twenty-year-old and prince, the honour of coming (buddha) in person. Because Buddha was born here on the Sakyā saint, he caused a stone surrounding and screening wall to be made, and a fence. Because the king was here, he made the village Lumbini free from rent and entitled to the (king's) eighth share of the grain."

The name *Gautama*, by which the future Buddha was known, is perhaps derived from that of Gotama, the ancient *țsii*, or seer, to whom are ascribed some of the hymns of the Rigveda. He becomes *buddha*, or the Buddha, the 'enlightened,' or 'wise,' only after his attainment of perfect wisdom under the Bod-tree. Other titles given to him are Sâkyamuni, 'the sage of the Sakyas'; Siddhârtha, 'he who has accomplished his aim'; and Tathâgata, 'he who has arrived at the truth.' His father was named Sudhdhodana, the chieffair or prince of a Sâkyan clan, who ruled from Kapilavastu over a small kingdom in the N.E. part of the United Provinces and the neighbouring District of southern Nepal; and his mother, Maya or Mahâmâyâ, is said to have conceived him after a dream in which she beheld the future Buddha descending from the heaven, and entering her womb in the form of a white elephant. Hence the elephant is sacred to all Buddhists. Maya herself, according to the tradition, died within seven days after the birth of her son, and was carried to the Trayasadhie heaven of Indra, whether the Buddha himself ascended later, to give her instruction in the Law.*

In the *Jâtaka* (*q.v.*) the story of the life and experiences of Buddha, as a child, in his earlier existences is narrated, and how the character and qualifications of a Buddha were exhibited by him in patience, self-sacrifice, and the other virtues. As the time drew nigh for him to enter the world in this the final birth, the gods themselves prepared the way before him with celestial portents and signs: 'Earthquakes and miracles of healing took place; flowers bloomed and gentle rains fell, although out of season; heavenly music was heard, delicious scents filled the air, and the very water of the ocean grew sweet and became sweet and refreshing.' Before his birth his mother was under concern, that he would become either a Universal Monarch (*chakravartin*), or, abandoning house and home, would assume the role of a monk, and become a Buddha, perfectly enlightened, and free from all sin. His mother was advised by the gods to get himself, in the *Tatasa* heaven, before consenting to undertake the office, makes the 'five great observances,' in order to determine the right family in which to be born, the right constellation, the appropriate district, the proper time, and the predestined mother of the Buddha. He is accordingly conceived in the womb of Queen Mâyâmaya, and she is delivered of a son in the Lumbini Grove, under the shade of a Sal-tree, a branch of which bends down to her, that she may grasp it with her hand. *The body of the child born at birth the thirty-two auspicious marks (mahâbhāvajñāna) which indicated his future greatness, besides secondary marks (*anuvyayajñāna*) in large numbers. The chief of the divinities, including Indra, were in attendance, and the boy was received by four Brahman angels. Immediately also he uttered the 'shout of victory,' taking seven steps forward, and finding in none of the ten directions a being equal to himself. At the same moment his future wife was born at the sacred Bo-tree, under which he was destined to establish religious truth.*

In many of the legends the young Gautama performs marvellous feats of strength. His father also, mindful of the prophecy that he would retire from the world, surrounded him with all manner of luxury and indulgence, in order to retain his affections, and prevent him from undertaking a vow of solitariness and poverty. In particular, he endeavoured to keep from him the 'four signs,' the sight of which, it had been announced, would move him to enter upon the ascetic life.

"Then said the king, 'What shall my son see to make him retire from the world?'"

"The four signs, what are they?"

"What four?"

* Beckhill, *Life of the Buddha*, p. 81; *Warren*, op. cit., p. 42 ff. The story of the virginity of Maya, the mother of the Buddha, is late, and owes its inspiration, it can hardly be doubted, to later sources. According to Pousin, the doctrine is asserted in the *Mahâbhâsita* (*q.v.*) but not elsewhere in the Sanskrit *Sūtras*, and in the references in *V. A. Smith*, op. cit. Not far from the Lumbini (Rummindei) pillar there was found, near the village of Nigâ-ri, a pillar of Ashoka, with an important inscription recording his visit to the stupa of Kosâgamas (Skr. *Kosâkâma*), one of the four Buddhists of the present age (Kosâkâman, Kosâgamas, and Gautama) in Kosâgamasimha, in the District of Warren, *Buddhism in Translations*, p. 52 et al.; *V. A. Smith*, op. cit. p. 145.

Other pillar-inscriptions are known; *see art. *Ashoka*.

**Vol. II.—50**
A decrepit old man, a diseased man, a dead man, and a monk are the so-called four signs in all the narratives of the Buddha's early years (cf. e.g. Buddha-Charita, bk. iii.). It would seem to be one of the best-attested cases of the Buddha's life. 1

1) The description of Hanuman's visit by night to the palace of Râvana in Ceylon, finding his wives asleep (Râmâyana, v. 145-149, 151), speaks of the noble Yasa (Mahâbhârata i. 15), who bore the title of dharma-ketu, 2 and of the tree (safigha) on which the great king was sitting (ibidem, v. 158). 3

2) Buddha-Charita, v. 80 ff., etc.

3) According to one form of the tradition, the horse died of grief on the spot, and was re-born as a god in the trayâsttridhâvan heaven.

The horse of the Buddha, following the four signs, however, issuing from the palace, he is confronted by the four signs the sight of which fills him with amazement and distress; and, realizing the impermanence of all earthly things, he determines to forsake his home and take refuge in the forest for solitariy meditations in order to find the road to his own deliverance. 4 His resolution is strengthened by the appearance of the attendant women of the palace, whom he finds asleep in all manner of uncomely attitudes; 5 and he pays a final visit to his wife and child in the inner chamber, checking himself in his desire to waken and bid them farewell, lest their entreaties and caresses should avail to turn him from his fixed purpose. He is said to have been twenty-nine years old when he thus made the 'Great Renunciation.' On his horse Kauhâka he left the city; by the side of the road he was accompanied by his father, in the same manner as when he had been born. The gods themselves silenced the neighing of his steed, lest the city and its widers should be aroused; and bore up the horse's hoofs, preventing them from touching the ground; while the city gates, heavy with bolts and bars, opened noislessly to his own accord. 6

And Mâra, the prince of evil, sought to win him back by the promise of universal dominion, which he should immediately obtain. 

Not far from the city of a broad stream Gautama dismissed his horse and attendant, the latter seeking permission, which was refused, to remain with him; 7 and the two returned to the city, to announce that their master had finally and for ever renounced the world. The prince himself proceeded alone and on foot to Râjâgriha (Râjgrî), whose king greeted him as the future Buddha, and obtained from him a promise that, after gaining enlightenment, he would re-visit his kingdom and give him instruction in the right knowledge. There he made his wife’s grove (Sukhavattika, or Urâlubhî, the great or wide-spreading Bel tree, the wood-apple), a village or grove near Gaya, and there in the company of five ascetics entered upon a course of extreme self-discipline, carrying his austeritys to such a length that his body became utterly emaciated and lost all its brightness and grace; finally, he fell down senseless and was believed to be dead. For six years the 'Great Struggle' continued, at the close of which, becoming convinced that the truth was not to be won by the way of asceticism, he resumed an ordinary course of life as a beggar living on alms. These six years are said to be 'like time spent in endeavouring to tie the air into knots.' His companions, however, the five ascetics, now deserted him, because they regarded his action as a proof of faithlessness to his principles, and departed to the Deer-Park at Benares.

There followed the assaults of Mâra, who with his hosts endeavoured by every means, first by dancing and drinking, and then by drift and argument, to distract his attention and turn him from his purpose. Seated under the Bo-tree on a platform of grass, on its eastern side and facing the east, Gautama remained steadfast and immovable, taking no notice of the showers of rocks and darts which, as soon as they reached him, turned into flowers. It is said that during this entire time he sat from this seat will I stir, until I have attained the supreme and absolute wisdom.' The period of the temptation closed with sunset, when the army of Mâra was finally driven off in utter defeat. During the following night, in deepest meditation, he attained the four noble truths and the holy order was thus attained, and Gautama became Buddha, 'the enlightened one,' to whom all the secrets of the universe were laid open—omniscient.

A legend relates that in the first night-watch he gained a knowledge of all his previous existences; in the second, of all present states of being; in the third, of the chain of causes and effects; and at the dawn of day he knew all things.

During the seven weeks spent under the Bo-tree, he is said to have been miraculously sustained on an offering of milk-rice, brought to him by a woman of Uruvelâ, named Sujâtâ, and neither to have moved from his place nor to have taken any further nourishment. Until then there had been more than twenty Bodhisattvas (g.v.), one who is destined to gain supreme wisdom, on the way to Buddhahood but not yet perfectly enlightened.

For a discussion of the doctrine or truth which the Buddha thus believed himself to have grasped, in which he made it his business henceforth to preach, see art. HIST. &c. All existence involves suffering; suffering is caused by desire, especially the desire for continuance of existence; to a suppression of desire therefore will lead to the extinction of suffering; this deliverance can only be effected by the Noble Eight-fold Path. These propositions are contained in the Sûtra called the Dharma-pa, whose four terms which are dhûkha, 'pain'; samudaya, 'cause'; sañcchicchay, 'remedy';灭, 'end'; are eternal. These four truths or axioms are propounded in the Sûkhyâ philosophy (Mahâbhârata, i. vi. 19; SBE xii. 95, etc.; see also J. Garbe, Sûkhyâ wûthitha 1895, 15, and art. Sûkhyâ).

With regard to the events immediately succeeding the Buddha's attainment of omniscience, the traditions are more than usually divergent. That which is perhaps the best attested, and most generally finds expression in Buddhist art, represents him as spending in succession seven days under the Bo-tree, in deep meditation, enjoying the bliss of emancipation; the same period under the 'Goat-herd's Banyan' (apâyâla), where a Brâhman is said to have approachd him with the request that he would do something to make it clear to the faithful Brâhman; the Buddha replied that he only could justly claim the name who was 'free from pride, free from impurity, self-restrained, wise, and who has fulfilled the requirements of holiness.' A third week was spent under the Muchalinda-tree, from which, as appearing in an open field, he is said to have been saved by the Buddha. Thus were completed four periods of seven days. During the last week, two merchants, moved by a divine suggestion, approached the Buddha, and with respectful salutations offered him food, rice-cakes, and honey. The gift was accepted, and received in a bowl (or four bowls of stone), presented to him at the moment by the four divinities that guard the four quarters of the globe. The merchants declared their faith in the Buddha and his Law, 9 and begged to be received as disciples. The Buddha henceforth fitted them so that they thus became the earliest lay-disciples in Buddhism.

After his return the Buddha is represented as

1) Monier-Williams, Buddhism, p. 34; cf. Warren, p. 82.
3) Employing the 'two-refuge' formula, because the sâkya, the order of monks, was not yet instituted.
deleting in his mind whether he should undertake the wearisome and thankless task of communicating to men the profound truths which he had thus perceived. Brahmapīta appeared to him, and with reverential obeisance recalled him to high office and duty, reminding him of the misery and ignorance of mankind, if they do not hear the doctrine preached, cannot attain to salvation. The Buddha assented; but a further doubt arose to whom he should first proclaim his doctrine with the assurance that they would understand. He decided that the five ascetics with whom he had previously traveled farthest in the mission were the one to receive the new teaching. He therefore sent them out in the Deer-Park, Isipatana, at Benares, and to them delivered his first sermon, or brief exposition of the doctrine, setting in motion the wheel of the Law, and founding "the highest kingdom of truth." The bhikkhus accepted the truth, and at their own request were duly ordained, becoming the first members of the Buddhist Order (sangha) of monks.

The number of the disciples rapidly increased; and within a short time the Buddha set forth his mission upon tours hither and thither, bidding them wander everywhere, preaching the doctrine (dharma) and teaching men to order their lives with self-restraint, simplicity, and chastity. Of these, his earliest converts were Assaji, the brother of Devadatta, and Mogallana (Mundagalyogana), members of an ascetic community resident at that time at Rajagriha, who received the truth from the lips of the monk Assaji, one of the five original disciples; he taught them the substance of Buddhist doctrine, explaining that he himself, being only a novice, was unable to expound it at length.

Of laws or principles that originate from a cause, the cause of these the Buddha hath declared, and also the destruction of them. The Buddha hath spoken.

The recitation of these words by the venerable monk Assaji is said to have aroused in the mind of the hearers a clear understanding of the fact that whatever is subject to origination is subject also to cessation or destruction. They were thereupon admitted into the Order by the Buddha himself. Both are recorded to have died before their Master. Other disciples, whose names and actions fill a large place in the early chronicles, were Uppali, who recited the text of the Vinaaya at the first Council after the Buddha's death; Kasaya (Kassapa) or Maha-Kasaya (Mahakassapa), who presided at the cremation of the body of the Buddha was delayed; and Ananda (q. v.), his cousin and favourite attendant, who seems to have watched over him during life with closest care, and to have been nearest to him at death. Others of high birth became lay-disciples. And there were also female followers, who, later, were permitted to form themselves into an Order of Buddhist nuns (see art. MONASTICISM [Buddhist]).

The Lord Buddha spent a life prolonged, according to tradition, over forty-five years. In his journeys from place to place, and preaching the doctrine to all who would listen. The details of his journeys, as recorded in the chronicles, are

* Dhamnachakra passports (Pali Dhamnachakkapassetana; see SBE xiii. 94 ff., and the references there given; Kern, Jidou Buddhisme, p. 25). The wheel is a continually recurring symbol in Buddhist art; the original intention probably was to represent the perfecting of the doctrine, the circle denoting all-round completeness, as its unceasing, unresting progression. The sermon itself, as given in the texts, is a manifesto of Buddhist doctrine, laying down the principles upon which the two extremes of a life of sensual pleasure or of ascetic self-mortification, and urging the pursuit of the 'Middle Path' which the Buddha specifies. (See Maudgalyya,ibid., pp. 390 ff.)

† Ye dhammaka ca prabhatam hetum tejan Tathahitakhatah by a monk, Ananda, expounded—The Buddhist creed or confession of faith. (See SBE xiii. 144 ff.; Kern, p. 25; Warren, pp. 87-91.)

‡ Maha. i. 22.; cf. Warren, p. 57 ff.

not of much interest; they seem to have been confined to the kingdom of the gods,* and especially the country around Rajagriha and Svaratva; but are traditionally said to have extended also far into the north-west of India and the Punjab. During the whole of this period he appears to have had no settled dwelling-place, although his residence was at times at Sarnath, near Benares, and at Varanasi, where he received gifts of gold pieces. Jeta retained a portion, and built thereon a vihara for the monks; whence the whole estate was known as Jetavana, the grove or park of Jeta. In the rainy season (Vassa [q. v.]) it was his wont to abstain from travelling, ostensibly lest the animal and insect life which then abounded should be inadvertently injured or destroyed; but partly also, no doubt, because of the physical difficulty which the heavy rains placed in the way of much movement. The doctrines which he brought only gradually received with approval, often with enthusiasm, although opposition was at times aroused. His chief rival was Devadatta, a cousin of the Buddha, who is represented as being jealous of his influence and personal power, and more fanatically seeking to compass his death. Devadatta then became the Order at the time of a visit which Gautama paid to Kapilavastu in the sixth year of his ministry, but had never been a sincere believer. The final attempt which he made to poison the Buddha was foiled, and he returned, as a false profession of faith, fell down into hell, where he was condemned to remain for an entire world-cycle.

At the age of over eighty years, according to the tradition, at the close of a long life devoted to teaching and preaching, Gautama Buddha realized that the time drew near for him to die, to leave his disciples and his work, and to attain perfect nirvana. The authentic account of the death of the Buddha, as related by Kassapa, the principal disciple of Buddhaghosha, is contained in the Mahavira Pitaka Vuttis of the Dipa-Nikaya, the Book of the Great Wheel, translated by T. W. Rhys Davids and R. H. Withers, vol. xi., Warne, pp. 95-110. See art. LITERATURE (Buddhist). The narrative from Tibetan sources is given by W. W. Roehl, in the life of the Bodhisattva and the Buddha, pp. 125-147. The text seems to have been discussed at great length, and by many scholars. The Sinhalese reckoning, representing the tradition of the South, places the event in 544 B.C. (cf. 543 B.C. or 542 B.C.); the one that this is too early. More than fifty years ago, Sir A. Cunningham. Eastern Maha-Parinirvana Sutta, p. 1644, from a Southeastern text, gave his decision for the year 477 B.C. Prof. Max Muller arrived at the same conclusion (SBE xvi. p. 93 ff.; History of Sanskrit Literature, p. 290 ff.; 329), which was endorsed by Dr. Bühler. Others, as Westergaard and Kern, bring the time of his death down to a considerably later period, c. 570 B.C. The most recent essay in favour of a yet earlier date is by the Indian scholar P. C. Mukherji, who argues for the early part of the 4th century (see review in JIAS, 1930, p. 565 ff.). There can be little doubt that Sir A. Cunningham's date is very near to the truth. Dr. Flett re-examines the whole question with great care in JRAI, 1934, in order to determine the precise day of the year on which the Buddha died, which he concludes to have been Oct. 13th, 483 B.C. (cf. also M. de Zepet. Wickremesinghe, in Fiteg. Religious, p. 142.)

Amma was accompanied by Ananda, the Buddha then came

* Real. Sibb., ii. 89 ff.; cf. art. MAHAPRATIKASA.

† Legge, Fa-hien, p. 65 ff.; Real. op. cit. ii. 1 ff. The site of Svaratva was identified by Cunningham and others as the site of Bandaragala, in the middle of the Western Ghat, where a large temple has been confirmed by recent discoveries (see JRAI, 1909, pp. 97-103; 1913, p. 100; 1911; 1917, 1919; 1920, 1921; 1923). There is no mention in the Pali texts of a cremation in Svaratva, or of the ashes being brought from Bandaragala to Sravasti. The site of Svaratva is shown on a map of Ceylon, compiled by D. Sinha-Hansen, Strassburg, 1913, p. 14 f.

† Yasava, the adhere to the Law, and in this respect apparently both sects followed the earlier practice of the Hindu monastic orders.

‡ Pali and Sanskrit, see art. NIVRAÑA; nirvana is a state of final and attained and attained during life, and was enjoyed by the Buddha himself and by many Buddhist saints; parinirvana is reached only at death, with the dissolution of the bodily frame.
to the Sāla-tree grove Upavartana at Kuśinagara,* where, by his direction, he sent for the Buddha to come to the grove, his body tree, with its head to the north, on which he lay down - on the right side after the manner of a lion, and placing foot on foot remained mindful and conscious.† The trees bloomed out of season, and scattered their flowers on him as he lay. His last hours were spent in giving counsels and directions to Ananda and the assembled monks. Subhadra also, a wandering ascetic, was admitted to his presence, listened to his teaching, and was converted, thus becoming the last disciple made by the Blessed One.† Finally, he invited his disciples to state any doubts or perplexities they had, and to let him with regard to the teaching of the Buddha or the rules of the Order, that he might remove it; and bade them regard his Doctrine and Discipline as their teacher after he was gone. Three times the question was repeated.

"It may be, brethren, that some brother has a doubt or perplexity respecting either the Buddha or the Doctrine or the Order or the Path or the course of conduct. In any question, brethren, and do not have to reproach yourselves afterwards with the thought, Our Teacher was present with us, but we failed to ask him questions."

And when he had thus spoken the brethren were silent.

"It may be, brethren, that it is out of respect to the Teacher that ye ask no questions. Then let each one speak to his friend."

And now, brethren, which of you spoke the brethren were silent.

Then the venerable Ananda spoke to the Blessed One:

"How wonderful a thing it is, Reverend Sir, and how marvellous are the words of the Lord Buddha. This whole assembly of the brethren there is not one brother who has any doubt or perplexity respecting the Buddha or the Doctrine or the Order or the Path or the course of conduct.

"With you, Ananda, it is a matter of faith, when you say that the Buddha, etc., Ananda, it is a matter of knowledge that in this whole assembly of the brethren there is not one brother who has any doubt or perplexity respecting either the Buddha or the Doctrine or the Order or the Path or the course of conduct. For of all these five hundred brethren, Ananda, even the most backward has become converted, and is no longer liable to be in a state of suffering, but is assured of final salvation."

Then the Blessed One addressed the brethren:

"And now, brethren, take care! And at the close of your life:

"And rising from the fourth trance, immediately the Blessed One passed into Nirvāṇa."

In the Mahāyāna school of Buddhism a mystical doctrine of three bodies (kāyāt) of the Tathāgata is taught—the dharmakāya, or body of the Law, sambhogakāya, or body of perfect bliss, nirvāṇakāya, the illusionary or apparitional body. The first is said to be discernible in the whole air of the Tathāgata, the second in the whole air of a Bodhisattva, the third in the air of different pious men. The underlying idea would seem to be that of completing the connexion, or chain of evolution, between the living earthly Buddha and his spiritual or celestial or heavenly Buddhas.†

A curious tradition, the origin of which it is not easy to trace, represents the death of the Buddha as due to over-indulgence in 'dried boar's flesh,'+ at a feast which Chunda, the blacksmith, had prepared for him and his disciples. Recognizing the danger of the dish, Gautama refused to allow the others to partake lest they should suffer injury, and gave orders that what was left over should be buried in the ground. In view of the Hindu aversion to a meat diet, or the taking of life in any form, it is hardly likely that the tradition is a mere invention in this case, and may betray the fact that the preparation consisted of some vegetable or root, perhaps truffles; a "boar's delicacy," or favourite food; or the name of some dish prepared for the feast may have been confused in course of time with 'boar's flesh' or 'pork.' The refusal to permit his disciples to share was then invented to exalt his magnanimity, and to account for the fact that he alone suffered after the meal. If this were really the case, his great age would itself be a sufficient explanation. It should be noticed also that in the Tibetan narratives no reference is made to the pork, although the last feast in the Buddha's honour is described as in the Pāli narratives.‡

The death of the Buddha, like his birth, was accompanied by signs and portents from heaven; and the spirit of the earth and sky united in lamentation with his disciples and the men of Kuśinagara.

The Mallas of the town paid due honour to the corpse, with processions and garlands and music, for a space of six days. On the seventh the body was carried by eight of their chieftains to a shrine outside the city, on the east, where a funeral pyre was raised of sweet-scented woods. The Mallas chiefs, however, were unable to set fire to the pile; and it was explained to them that the final ceremonial of cremation must await the arrival of Śākyapa, who with five hundred brethren was at that moment approaching Kuśinagara. When Śākyapa reached the shrine, he saluted with reverence the Buddha's corpse, and with his companions passed thrice round the funeral pile, bowed down in homage. The pyre then was lighted and the body consumed. After the flames had done their work, they were again miraculously extinguished.

The bones and relics that remained from the fire were claimed by the Mallas of Kuśinagara (Kusināra), on the theory that their territory was the last to be visited by the Buddha. The Mallas, however, refused to give them a share in the relics.+++†

† Saṅkarā (śākara) maddana, Parinibbāna, S. iv. 16 ff., SBE xi. 71 ff. J. F. Fleet (J. R. A. S., 1906, pp. 858, 851) suggests the "suncrowned parasol" (maddana, Skr. maddana, 'softness,' 'delicacy' (madda)."

‡ Rockhill, p. 136 f.

§ Probably represented, according to Dr. Vogel, by the ruins at Kasia; see JRAS, 1906, p. 933 ff.

The scene of the Buddha's death has not been certainly identified. According to Fa-Hien, ch. lxxvi, it lay on the nāgasāha east of Kapilavastu (cf. Beni, Sinhik, li. 21 ff.). Sir A. C. Maxon, however, and the village of Kasia, about 40 miles of Gorakhpur, in the United Provinces, where there are extensive Buddhist ruins; but doubt is thrown on the connexion between the village of Kasia, and the saha of the recent discoveries and investigations. See Y. A. Smith in JRAS, 1902, p. 130 ff.; J. F. Fleet, ib. 1906, p. 907 and note; J. H. Marshall, ib. 1907, p. 900 ff., with plate showing the supposed cave of the Buddha. The Kasia (Kasi) in the Saha, Ceylon, as it is mentioned in the Pāli texts is a place in Madras Presidency, not far from the famous temple of Madura, but there is no clear indication of the connexion of either branch of the Kasia with the Buddha."

The attitude and scene are represented from sculptures, e.g., in the Magadha-Buddhists Art in India, p. 149 ff. Maha-Parinibbana Sutta, vi. 1. 61 ff.; SBE xi. 112 ff.; Warren, p. 108 ff.; Kern, p. 44 f.

The attitude and scene are represented from sculptures, e.g., in the Magadha-Buddhist Art in India, p. 149 ff. Maha-Parinibbana Sutta, vi. 1. 61 ff.; SBE xi. 112 ff.; Warren, p. 108 ff.; Kern, p. 44 f.
Among the prophecies uttered by the Buddha was one concerning the future of the religion which he established, and its ultimate decline and disappearance from the earth. The declaration is contained in the Aṅguttara-βuddha (‘Narrative of the Buddha’ in the Aṅguttara Nikāya), and is repeated in response to a question by Sāriputta. The history of the future Buddha, Maitreya (Pāli Metteyya), is described; then at long intervals after his own death will occur the five disappearances: the attainment, when his disciples will rise to ever higher degrees of sanctity; of the method, when the knowledge of the precepts and the way of salvation shall be lost; of learning, when the sacred texts themselves shall be forgotten; of the symbols, the monastic robe, bowl, etc.; and at the last the religion will cease to exist. And then, failing of honour and worship, and will go wherever they can receive honour and worship. But as times go on they will not receive honour and worship in any place. Then ... the relics will come from every place ... and lying congregated together at the throne under the great Bo-tree ... will teach the Doctrine. Not a single human being will be found at that place; but all the gods from ten thousand worlds will come together and listen to the Doc-
tre, and many thousands of gods will attach to the Doctrine. Then the Deity will weep, saying, ‘From henceforth we shall be in darkness.’ Then the relics will put forth flames of fire and burn up ... without remainder.’

[The subject of Barlaam and Josaphat, which was referred to in the article by a cross-reference at Bar-
LAAM, it has been found more convenient to treat in a separate article under the title JOSAPAT.]

BUDDHAGHOSA.—This was the name of several members of the Buddhist Order. It will be sufficient here to deal with the best known among them, the celebrated author and scholar who flourished early in the 5th century A.D.

1. Life. The authorities regarding the life of Buddhaghosa the Great are as follows. In the first place, certain important portions of his works have already been published. The few details they contain as to the life of the author are the only contemporary records of the events of his life. Secondly, Dhammakittis, in the middle of the 13th cent. A.D., wrote a continuation of the Great Chronicle (tr. in Turnour’s Mahavamsa, p. 250 ff.) of Ceylon. In it he inserted an account, in thirty-three couplets on the life of the author.

It is not exactly known from what source this account was drawn; but it probably gives

† J.R.A.S., 1896, p. 150. Dr Fleet reads the text, and translates as follows: ‘Parinibba-sutta. Of the last words, the words cast in the form of a future optative made as a promise, ‘if I should live to see the meeting of the Kelsis together with children and wives, this is a deposit of relics; (namely) the kinship of the Buddha, the Bodhisattvas. Early interpreters understood the prepositional phrase to be a relic of the Buddha himself, set up by his own brethren. See Fleet’s article, loc. cit., in which he discusses the inscription: and for a description of the original discoveries, 1898, p. 574, etc.; Mukhjerji, Antiquities in the Nattapala Jaina, 1917; cit. Fleet in J.R.A.S. 1895, p. 679 ff.; and for the inscription at Kapilavastu, 1906, p. 555 ff.†

BUDDHAGHOŚA

the tradition as preserved at the Great Minster in Anurādhapura (q.v.) in written documents now no longer extant. Thirdly, we have a life of Buddhaghośa, written in Pāli, in the middle of the 16th cent., by a Burmese bhikkhu named Mahā Mahā-gala. It is of a legendary and edifying character, and of little independent value. The title is, Buddhaghośa-uppatti ('Advent of Buddhaghośa'); and the text has been edited and translated by James Gray. The results to be obtained from these sources will best be stated chronologically.

In the introductory verses to his commentary on the Vinaya, Buddaghosa says that he compiled it in accordance with the opinions of the Elders at the Great Minster; and that since he had already, in his Visuddhi Magga ('Path of Purity'), dealt with certain points, he would omit these in his commentary. Lastly, he says that the authorities on which he relied were in the Sinhalese language, and that he reproduces the contents of them in Pāli. In his commentary on the Vinaya (quoted J.R.A.S., 1871, p. 295) he gives the names of some of these authorities. In his commentary on the Pāli Commentary, the Raft Commentary (i.e. written on a raft), and the Kurundi Commentary (i.e. the one written at Kurunda Veju). In his commentary on the Piṭātāra, Buddaghosa states (testo Gray, p. 183) that he had written a commentary on the Buddha dhamma, and a commentary in the Sinhalese language, which he ascribed to Attha-sālinī (ed. Müller), Buddaghosa also quotes as his authorities these and other commentaries written in Sinhalese; refers frequently to his own Visuddhi Magga, and mentions otherwise (apart from the canonical works) only the Mīlinda and the Pāṭokapadda.† These meagre but important details show conclusively that Buddhaghośa worked at a date subsequent to that of the two books last mentioned, under the auspices of the scholars at the Great Minster in Ceylon, and on the basis of materials written in Sinhalese.

The authority next in point of date explains how this was supposed to have occurred. It tells us that, during the reign of Ceylon of Mahā-Nāma (who ascended the throne in 413), there was a young Brāhmaṇa born in India who wandered over the continent maintaining theses against all the world. In consequence of a discussion that took place between him and Revata, a Buddhist bhikkhu, he became convinced in Buddhist doctrine, and entered the Order that he might learn and spread it. It was not long before he became converted, and wrote a treatise entitled Jātānodaya ('Uprising of Knowledge'); and also an essay entitled Attha-sālinī ('Full of Meaning'), on the Abhidhamma manual included in the Canon under the title Dhamma-saṅgāṇi. On Revata observing that he contemplated a larger work, he urged him to go to Anurādhapura, where there were better materials and greater opportunities for study, and make himself acquainted there with the commentaries that had been written in Sinhalese at the Great Minster, with a view to re-casting them in Pāli. Buddhaghośa agreed to this, went to the Great Minster, studied there under Saṅghapāli, and when he had mastered all the subjects taught, and given full satisfaction to the masters, he completed the work which he had undertaken. The authorities of the School gave him two verses as the subject of a thesis, to test his ability. What he submitted as this thesis was the work afterwards to become so famous under the title of Visuddhi Magga. This was written in Sinhalese at the Great Minster, and a commentary was added on the subject of this work, which is, we may say, the commentary of the bhikkus, so satisfactory that his request was granted. Then, according to the chronicler, 'he translated the whole of the Sinhalese commentaries into Pāli.'

We need not take every word of this edifying story au pied de la lettre. We know, for instance, that it was not the whole, but only a part, though a very important part, of the Sinhalese commentaries that he reproduced in Pāli. Other scholars, some of whose names we know, while some are not yet known, reproduced other parts of it. The work was by no means a translation in the modern sense. It was a new work based on the older ones. And the intervention of the fairies (devatā) is only evidence of the curious literary taste of the time of the poet. But, in the main, the story bears the impress of reality.

The Buddhaghośa-uppatti takes over this story, telling it with many flowers of speech and at greater length. It adds a few details not found in Dhammakītā's couplets, giving, for instance, the names of Buddhaghośa's father and mother as Kesi and Kesini, and the name of the village they dwelt in as Ghosa. Both the authorities locate it at Gayā in Magadhā, near the Bo-tree. The Gandhāvānīka (J.P.T.S., 1896, p. 60) adds that Kesi was the family chaplain (puruhāta) of King Saṅgātāma. The Saṅdhammavānīka (J.P.T.S., 1898, p. 59) gives additional detail that Buddhaghośa worked at his translations in the Padhānagha, an apartment to the right of the Great Minster. The Sinhalese chronicler concludes his account with the simple statement that Wijayaghośa (i.e. the Buddhist) had accomplished, returned home to India, to worship at the Wisdom tree. The Burmese authorities (quoted by Gray in his introduction) all agree that he went to Burma. This is merely a confusion between our Buddhaghośa and another bhikkhu of the same name (called more accurately Buddaghoga the Less), who went from Ceylon to Burma towards the end of the 15th cent. (Forschhammer, p. 65).

2. Works. The extant book written by Buddhaghośa would fill many volumes. Of these only one, and that one of the shortest, has so far been edited in Europe. The most important is probably the Visuddhi Magga, a compendium of all Buddhism, in three books: on Conduct, Concentration (or mental training), and Wisdom respectively. Henry C. Treetsch has published an abstract of this work (J.P.T.S., 1891); and a complete edition, with translation, introductions, and notes, is in preparation for the Harvard Oriental Series. The rest are all commentaries. Those on the four books of the Vinaya, the Dhamma-saṅgāni, and on the Pītātāra, would each fill three or four volumes. A late authority, the Saṅdhanmā Saṅgāha (J.P.T.S., 1890, p. 56), gives 137,000 lines as the extent of these six works. Another late authority, the Gandhāvānīka (J.P.T.S., 1896, p. 59), in giving a complete list of Buddhaghośa's works, mentions in addition commentaries on the Pāṭimokkha, Dhammapada, Jātaka, Khuddaka Pāṭha, and Apanāvā, adding on p. 68 the Sutta Nipātā. This list probably errs both by excess and by defect. It does not, for instance, mention the Jātakas, which are now known, from the edition published by the Pāli Text Society, to have been written by him, and it does include the commentaries on the Dhammapada and the Jātakas. Now we have before us the text of the introductory verses to each of these works. In each case these verses are introductory, and contain the names of those under which, and names the scholars at whose instigation, he undertook and carried out the work. In neither case is any reference made to Buddaghosa. In both style and matter each of these books is the work of one author, though in such portions of the works of Buddaghosa as are accessible to us. In the similar cases of Nāgarjuna and Saṅkara, works not written by them have been ascribed to famous writers. The tradition of Buddhaghośa's authorship of either of

† See the references given in Mrs. Rhye Davia's 'Buddhist Psychology', pp. xx—xvii.
the books above named has not as yet been traced back earlier than the 16th cent. and, for the above reasons, it is at present very doubtful. A large number of short quotations from Buddhaghosa's commentaries have been printed by the editors of the various texts with which he deals; and sixty consecutive pages from the historical introduction to his commentary on the Vinaya have been edited by H. Oldenberg (Vinaya, vol. iii.). Rhys Davids and Carpenter have published one volume, out of three, of the Sarnagata Vilasini, his commentary on the Digha. And one complete work by him, the Abhac-sulisini above referred to, has been edited by E. Muller. This turns out to be, not the essay under that title said by Dhammakitti to have been composed in India, but another work written in Ceylon subsequently to the Visuddhi Magga and the six great commentaries. It is doubtless an enlarged edition of the essay, and the latter has therefore not been preserved. Manuscripts of the undoubted works of Buddhaghosa, containing the texts, sufficient to fill some twenty-five volumes more, are extant in European libraries; and the Pali Text Society, having completed its edition of the several useful works, is now engaged on the publication of these.

3. General conclusions.—Buddhaghosa's greatest value to the modern historian is due largely to the limitations of his mental powers. Of his talent there can be no doubt; it was equalled only by his extraordinary industry. But of originality of independent thought, there is at present no evidence. He had mastered so thoroughly and accepted so completely the Buddhist view of life, that there was no need for him to occupy time with any discussions on ultimate questions. In his "Path of Purity" he gives, with admirable judgment as to the general arrangement of his matter, and in lucid style, a summary of the Buddhism of his time. There is no argument or discussion. In his six great commentaries—those on each of the four Nikayas, containing the Doctrine; on the Vinaya, containing the Canon Law; and on the Abhidhamma, containing the advanced Psychology—he adheres to one simple plan. He first gives a general introduction—dealing mainly with literary history and the composition of the books; then, in the matter of the most important Dialogues, or Suttas, he gives a special introduction on the circumstances under which it was supposed, when he wrote, to have been originally spoken, and on the places and the persons mentioned in it. He quotes in the comment on the Sutta every word or phrase he considers doubtless or deserving of notice from a philological, exegetical, philosophical, or religious point of view. His philology is far in advance of the philology of the same date in Europe, and his notes on rare words are constantly of real value, and not seldom conclusive. He gives and discusses various readings he found in the texts before him; and these notes, together with his numerous quotations, go far to settle the text as it lay before him, and are of great service for the textual criticism of the originals. Of the higher criticism Buddhaghosa is entirely guiltless. To him there had been no development in doctrine, and all the texts were the words of the Master. He is fond of a story, and often relieves the earnestness of his commentary with anecdote, parable, or legend. In this way, without in the least intending it, he has preserved no little material for the history of social customs, commercial values, folklore, and belief in supernatural powers. His influence on the development of the literary faculty among Buddhists throughout the world has been very considerable. It is true, no doubt, that the material adopted in his commentaries followed very closely the method of the original ones preserved in the Canon; but the literary skill with which he uses it is a great advance, more especially in lucidity, over the older documents.

LITERATURE.—Abhac-sulisini, ed. E. Muller (PTS, 1897); Sarnagata Vilasini, ed. Rhys Davids and Carpenter (PTS, 1899); Mahadhatu, ed. G. Turner (Colombo, 1857); Buddhaghosa-aptattti (ed. J. Gray, London, 1893); Digha, ed. Rhys Davids and Carpenter (PTS, 1899, 1903); E. Porshammer, Juristic Prize Essay (Rangoon, 1885); Mrs. Rhys Davids, 'Buddhist Psychology' (LASS, 1900). T. W. RHYS DAVIDS.

Buddhism.—The character of Buddhism varies according to the country in which it prevails, so that a general sketch would be of very little value. The origin of Buddhism has been given in the article BUDDHA: its early developments will be described in two articles, one on the Hinayana, or Little Vehicle, the other on the Mahayana, or Great Vehicle. Then the Buddhism of each country will be separately treated under the name of the country. See BRUTX, buddha, Ceylon, China, India, Japan, Java, Korea, Siam, Tibet. See also Sects (Buddhist).

Bulgarians.—See Bogomils.
names of 'the two divine bulls' of Ea of Eridu are given (W. A. ii. 56, 59-60).

A bilingual hymn in Sumerian and Semitic (ib. iv. 98, 105-106), in the bull who is 'the offspring of Zu,' the storm-god, describes it as 'the great bull, the supreme bull which treads the holy pasturage . . . planting the corn and making the field luxuriant.' Between his ears, it is added, 'is the month of the deep; or 'sea,' a great basin of water which surrounds the bull.' It is his temple. As there is also a reference in the same hymn to 'the twelve gods of copper,' we are reminded of the 'sea' of Solomon's temple which 'stood upon twelve oxen' (1 K. 6:23).

Among the Phoenicians the bull symbolized strength, and hence was a synonym for 'hero'; it was probably on this account that the spirit which protected the gate was supposed to have a bull-like form. For the same reason Jahweh of Israel was compared to a wild bull (Nu 23:24 etc.), and it is possible that the abib of the OT should be rendered 'bull' rather than 'mighty one.'

According to the Epic of Gilgamesh, Ann, the god of heaven, created a bull to avenge the insults offered by Gilgamesh to his daughter Ishtar, and to destroy Tyre by means of it. The bull, therefore, is associated with the destruction of his countrymen. The bull is called an alâ (a word of Sumerian origin), and its horns are described as being of laqaz lазу, and of enormous size. The bull, however, was killed by Gilgamesh and his companion, in consequence of which, it would seem, Gilgamesh was afflicted with disease, while his companion suffered a premature death.

The bull was really the constellation Taurus or the star Gud-anna, 'the bull of heaven'—a name which goes back to the age when the vernal equinox coincided with the entrance of the sun into Taurus. Jenson believes that the bull was erected before being thus transplanted to the sky, and that a connexion was assumed between alâ, 'the bull' and alâ (Sumer. alâ), 'a storm-demon' (Asyry.-bab. Mythen und Epic, 1890, p. 425). The suggestion is supported by the fact that the bull is called the son of the storm-god (see above), and that it was a symbol of Hadad-Rimmon, the god of the air and the thunderbolt. Hadad is often depicted standing on the back of a bull. Hadad, however, was not known in Babylon as Amurru, 'the Amorite god,' and it is only in connexion with the bull that the divinity was derived from Northern Syria. A recollection of the bull as a malevolent storm-deity may survive in the Mithraic representation of the sun-god slaying a bull.

In Northern Syria, where Hadad, the Cilician Sandes, was specially worshipped, the bull was his sacred animal. When the worship of the god under the name of Jupiter Dolichenus (Jupiter Dolichenus) was transplanted to Rome, monuments were erected to him on which he is figured standing on a bull, with a double-headed battle-axe in one hand and a thunderbolt in the other. At Hierapolis (Memhî), the successor of Carchemish, he was worshipped upon bulls as his consort was upon lions (Lucian, de Dea Syria, 31), and bulls were among the sacred animals kept in the court of the temple. On the stele of Esarhaddon found at Zinjerî he also stands upon a bull, and the same is the case in the rock-sculpture of Maltaisy (Place, Pl. 45) to the N.W. of Mosul. The earliest known representation of the god in a similar position is upon Babylonian seal-cylinders of the age of Hammurâbi.

Further south the association of the bull with the supreme Baal can also be traced. Europa was carried from Phenicia by Zeus, i.e. Baal, under the form of a bull. A bull was even termed 'Asterius,' pointing to a belief in a connexion between the bull and the Phenician Ashethoth. Bulls of iron existed in the sanctuary of Zeus Atabyrius in Rhodes which may have owed their origin to Phenician influence; and Silius Italicus in P. 1045, etc. (Dea, ib.) says that the cornigera frons of Milichus or Melkarth. The name (Ashethoth-) Karmain seems to imply the existence of a cow-headed Ashethoth; and a cow is found on an early Bab. seal-cylinder as a symbol of Ishtar. A cow-goddess naturally presupposes a bull-god. Carchemish, in fact, makes it evident that there was a god whom Suchan identifies with Kazia or Kasios (PSBA, 1896, p. 1036).

According to Ex 32, a golden 'calf,' or more correctly a bull, was made by Aaron during the absence of Moses. The Hebrews were impressed with the idea that the Israelites were worshipped by the Israelites as a visible representation of the God who had brought them out of Egypt. At a later date, Jeroboam set up images of bulls in the sanctuaries of the Northern Kingdom, where they were adored as likenesses of Jahweh. This Israelitish worship of bulls has been thought to have been derived from Egypt. But against this it is urged that the Egyptians worshipped the living animal, and not the image of it. The objection, however, is not convincing, for the image-worship of the Egyptian bulls Apis and Mnevis are numerous, and the Semitic equivalent of Egyptian beast-worship would have been image-worship. But the bull-worship of the Northern Kingdom was unknown in Judah, and it is therefore probable that it was derived from Northern Syria, Jahweh being identified with Hadad.

The bull-worship even of the Semites in Northern Syria was probably of foreign origin. The divine bulls of Babylonia were originally Sumerian, and the names applied to them by the Assyro-Babylonians were borrowed from the Sumerian language.

On the other hand, Hititite influence was strong in Northern Syria, and 'the bull-god' was one of the chief Hititite deities in whose honour images of bulls were dedicated. At Eyyuk, near Boghaz Koi, a bull, mounted on a pedestal, is represented as being worshipped; and among the Phrygians the stealing of an ox was punished with death (Nic. Damascenus, 148, ed. Orelli). Asia Minor, in fact, was a land of cattle-breeding and agriculture, where the ox which drew the plough was held in high esteem; and the bull-god was introduced from Babylonia, the human god accompanied by the animal took the place of the animal alone as an object of worship. The eunicestriform tablets from the Assyro-Babylonic colonies near Kalsarion show that this must be dated at latest in the Hammurâbi age.

It would thus appear probable that Northern Syria was the meeting-place of a twofold Sumerian conception of the bull: as a beneficent guardian of the herdsland, and a malevolent storm-demon—derived in the one instance from the character of the domesticated animal, and in the other from that of the wild bull—and the Hititite worship of the bull-god as the protector of the cultivated land. Sumerian beliefs in regard to the bull were adopted by the Semitic Babylonia, and the association of the bull with the Syrian Hadad would have been the result of foreign influences. Bull-worship, in short, would seem to have been unknown to the early Semites, as indeed must necessarily have been the case when the primitive home was Arabia. It is significant that the Heb. word for 'wild bull' is borrowed from Babylonia, and is not found, at all events in that sense, in Arabic. The custom of hanging up buvernus, or ox-heads, above the doors of houses, a very primitive custom, is derived from the belief in the protecting powers of the divine bull, and, like the Bab. lamassû, of
which they were a survival, the buccherae prevented the entrance of evil spirits into a house, as a horse-shoe is still supposed to do in certain parts of England. The custom was also known to the Nubian settlers in Egypt in the time of the XIXth and following dynasties, from whom the usage, described by Herodotus (ii. 39), of making an ox-head a scaepoagut, may have been derived (see also Di 214-6). In Arabia and Palestine the apotropaic use of the buccheraeum was practically unknown.

LITERATURE.—In addition to the authorities cited above, see Basser, Studien zu Rechtsgegenwart, Leipzig, 1896; A. H. Sayce, Halberst Lectures, London, 1891, pp. 259-93.

BULL (Teutonic).—Plintarch in his life of Marinas (chap. 23) states that the Chinibri took with them on their expedition into Italy a brazen bull, on which they were accustomed to swear solemn oaths. Apart from this, there is little evidence for the sacred character of cattle among the Teutonic races. An important fact is that they were used for sacrifice. A primitive cult of the cow would appear to be reflected in the Edda account of the creation of the world, where the cow Audhumbla exists before either gods or men, and plays an important part in their origin. There is, moreover, in the sagas of Snorri Sturluson, a curious legend, which relates that a certain Ogwald worshipped a cow, which he took everywhere with him, and which at his death was buried beside him in a second cairn. The only addition to these vague indications is the statement of Tacitus (Germania, 40), that the sacred cow of the goddess Herthus was drawn by yoked cows; and it may be noted that in the Middle Ages oxen drew the chariots of the Merovingian kings.

BULL-ROARER.—' Bull-roarer ' is the English name (Germ. Schweirhorz) of a common toy in the country districts of Great Britain and the Continent. It is merely a thin slat of wood, with a hole for the insertion of a string, and is usually either oval or rectangular in shape. It is whirled at the extremities; sometimes the edges are serrated. Tied to a string, and the string firmly held, the bull-roarer is swung round, and produces a kind of muffled roar. The mystical or magical connotations of the bull-roarer in Europe will be noticed later. In the Teutonic races it had a very important part in the religion of the most backward races. It has been most carefully studied among the aborigines of Australia, and its uses are analyzed by Pye P. W. Schmidt in his paper ' Die Stellung der Aranda ' (Arunta), in Z8., 1918, Heft 6.

Beginning with the Arunta, in the exact centre of Australia, we find a people who, in one region described by Spencer and Gillen, have no conception of a sky-dwelling superior being, or ' All-Father ' ; while in the area studied by Strehlow the sky is understood to be tenanted by a magnified man, Altjira, called marra ( ' good ' ), but as indifferent to mankind as they are to him. In this tribe, as in most other tribes, the legendary account of the sky is identical with the idea of a huge, black-fellow. The oldest men, however, the N., told me that this large man was originally a man. Life and death, the rising and setting of the sun, illness and sickness, various other things, were connotated by them in a single manner to the idea of a huge man, who was credited with the duties of the All-Father. It is also evident that the sky-roarers are not the all-powerful deities of the more advanced tribes, but remain in the minds of the commoner folk as the spirits which hearse, to the idea of a huge man, who was credited with the duties of the All-Father. It is also evident that the sky-roarers are not the all-powerful deities of the more advanced tribes, but remain in the minds of the commoner folk as the spirits which brought, and which still bring, death and illness upon the earth.

The boy is told that women of his tribal kin will be slain if he lets them see the bull-roarers. So far, Twanyirika seems to be a mere bogle, in whom the initiated do not believe. Among the tribe next to the north of the Arunta, the Unmatjera, the bull-roarer is used as a terrorizing symbol. The boy will carry him away if he reveals any of the secrets of initiation. After the process of subfuscion he is told to swing the bull-roarer, while in the bush, or else another orukwerta (youth ceremony), and not yet subincubated, walks in the sky, will come down and carry him away. If this orukwerta bears the ' lirungas ' —that is, the noise of the bull-roarer—he says, ' That is all right, and will not harm him. ' 

This idea of a sky-dwelling being, concerned with the initiations, is not found among Spencer's branch of the Arunta; the being of the Unmatjera is not an All-Father; nor are the Unmatjera known to have any belief in an All-Father. This notion of a sky-dweller, however, forms a link with the belief of the Luritja or Loritja tribe, whose lands march with those of the Arunta on the east. They believe in a celestial and powerful being, Tankura, who has no concern with ethics or any interest in men, but does perform ceremonies like those of the tribe, and on the occasion of initiating of celestial young men. Tankura is known to the women, as is Altjira, the sky-dweller of Strehlow's Arunta, or Aranda; but Altjira does nothing but hunt, eat, and amuse himself. Among the Loritja, beings named Maini play the part of Twanyirika; one cuts off the heads of the boys, sticks them on again, and is slain; another receives food from the boys. He has a sharp-pointed leg-bone, like Darrumunlik among the Wiradjuri of the south-east, and Darrumunlik is, with them, the being of the bull-roarer, but subordinate to the sky-dweller, or All-Father, the ethital Baina.

North of the Arunta are the Kaiiti tribe, who are but half-converts to Arunta ideas. They believe in an All-Father, Atmatu, who ' arose up in the sky in the very far back past, ... made himself, and gave his name to the world, and to every one of his (ancestors) he gave a son (y.e.) he drove some disobedient sons out of heaven to earth, whence he dropped down everything which the black-fellow has, ' including bull-roarers. These sons are the ancestors of half the tribe. Two of them became bull-roarers, and, after the second became men, who, making wooden bull-roarers, initiated the round of Atmatu's bull-roarer in the heavens, that is, obviously, thunder. They were named Tumana; they died an ill death; but now the women (who know not Atmatu) believe that Tumana plays the part of Twanyirika among the Arunta. Atmatu himself is an All-Father, insisting on ceremonies and bull-roarers, but unconnected with morals.

The Warramunga have no Atmatu, as far as is known; their bull-roaring being is Martu. Martu, like the Tumana, was killed by a dog, which could not destroy the bull-roarer, martu-marti. The spirit of martu-marti instantly sprang up in certain trees, of whose wood bull-roarers are made.

The N. by E. Spencer and Anne have also, like the dysanths of the Dyaks, a phallic bull-roarer, and to the idea of a huge man, who was credited with the duties of the All-Father. It is also evident that the sky-roarers are not the all-powerful deities of the more advanced tribes, but remain in the minds of the commoner folk as the spirits which brought, and which still bring, death and illness upon the earth.

...
form of the exoteric myth is very common, occurring even among the tribes of the south-east. The S.E. tribes had not the spiritual philosophy of the central and northern communities. In that philosophy primal souls are perpetually re-incarnated, or in some regions spirits, retapota, emanating from the primal totemic beings, are incarnated, and, after one earthly life, retire to the isle of the dead. Among the Western tribes, there is no place of rewards and punishments for souls, while the evolutionary theory (see Alcherina) makes a creative being superluous, though, as Atanata, he survives among the Kaitish.

The S.E. tribes in parts of Queensland, and in Victoria, New South Wales, had not the spiritual and evolutionary philosophy of the northern tribes, or among them it was not dominant, and they believed in a great sky-dwelling anthropomorphic being, the maker of most things, ethical and the source of customary laws, who gives his sanction to morals, and is invoked at the initiatory rites, where a temporary image of him is made. Like Atanata, he is unknown to the women and children. The thunder is his voice, and the bull-roarer, imitating the thunder, is sacred. Like the central and northern tribes, the S.E. tribes give the bull-roarer the belief in a being closely connected with the bull-roarer, but this being is taken more seriously than in the north and centre. He is the son, or 'boy,' practically the deputy, of the superior being, the All-Father. Among the Kurnai he is Tundun (which is also the name of the bull-roarer) ; among the Eunhlayi and Kamarilo he is Gayundi, under Biaame; among the Wiradjuri he is Daramulun, under Biaame; but among the Yuin, Daramulun is himself the All-Father.

Among the Arunta the bull-roarer, being, with the exoteric myth that he swallows the boys and disgorges them, are practically identical with the functions of Twanyirika and Tumana and the rest in the centre and north. The Wiradjuri Daramulun, like the Manitoo of the Lorijla, has a leg which ends in a sharp bone. § There is a seven of these tribes a larger (male) and a smaller (female) bull-roarer are used; among the Kurnai the larger represents Tundun, father of the race, the smaller represents his wife; but the distinction of sex is not always observed. The Cakirra and Turbal; § with the Chepara the small bull-roarer is even given to the initiates are only tokens of initiation. Mr. Howitt thinks, 'but could not be sure,' that the female bull-roarer among the Kurnai indicates ceremonies in which the women take a certain part; § the Parnkalla also use a larger and a smaller bull-roarer; nothing is said of their sex.* Among the Wiradjuri the bull-roarer (mudijjung or bugol) does not, as among the Kurnai, bear the name of the bull-roarer being, Daramulun. * There is an absence in the western tribes of a belief in an anthropomorphic Being by whom the attributes and functions were first instituted. ** These western tribes conform to the ideas of the Dieri, who have no known All-Father, but believe in a multitude of Murra-mura-fabulous primal beings like those of the Arunta. Alcherina. Among them only bull-roarers marked with notches indicating their use at ceremonies are sacred; others are made a joke of. †† Practically they have not been consecrated. 'Changes in custom,' according to Howitt and Spencer-Gillen, 'the changes in the seasons; the changes in the movement of the sea, down from north to south,' from the Arunta and Dieri, the sea at Port Lincoln, among the western tribes. The ideas of Alcherina and evolution appear to be northern and western; the All-Father belief is southern and eastern.

Pere Schmidt, who finds the bull-roarers of sex in the reports of R. H. Matthews* among the Wiradjuri and other tribes (where Howitt found nothing about sex), and of Streelh, in connexion with the maternal totem, has a theory that the large bull-roarer represents Twanyirika, Manitu, etc., as fathers of the race, the small their wives as the mothers or mothers-in-law. He also connects this with the sun and moon myths, and a period of so-called 'matrarchate' among tribes now reckoning descent in the male line, also with the 'sex totems' (animal friends of either sex) of the Kurnai and many other Australian tribes. There is also a theory of Papuan invasions, but the whole hypothesis cannot here be criticized.‡

The bull-roarer is in general use, among the central tribes, for magical purposes, and the spiritual element of their philosophy, as regards conception, is involved, especially in connexion with the stone churinga, with totemic markings, are not found in use among the Australians.

Marett has advanced the opinion that 'the prototype' of the All-Fathers is nothing more or less than the bull-roarer. 'Its thunderous booming must have been eminently awe-inspiring to the first inventors, or rather discoverers, of the instrument, and would not unnaturally provoke the animatistic* attribution of life and power to it . . . a genuine Religion . . . has sprung up out of the Awe inspired by the bull-roarer.'§

But, as we have seen, there are, even in Australia, plenty of bull-roarers where there is no All-Father. Among the Arunta and other tribes there is only the bull-roarer, nor has Ulthana, another sky-dwelling being of the Arunta.* It is usually not the All-Father, but his 'boy,' as Tundun, who manages the bull-roarer. Moreover, it is thunder, not the bull-roarer, which very naturally inspires awe; it is the voice of the All-Father; the bull-roarer only represents that voice. Finally, the All-Father is found all over the world, in places where the bull-roarer is unknown.

The bull-roarer is of more importance in Australian religion, myth, and ritual than elsewhere. Its use at the Greek mystery, and later, in the Dargle mysteries, is explained by the story that it was a toy of the child-god.¶ Two or three bone bull-roarers of paleolithic times have been discovered and published. Like those of the north and central Australian tribes, they are decorated with incised concentric circles or half-circles. Thus paleolithic man may have had a religion akin to that of the Australians.

Bull-roarers in connexion with religion or magic are found in South America, as among the Apache and Zuavi tribes, among the Navaho and Hopi. and Zuni, and among the people of the semi-arid region the implement is used to invoke clouds, lightning, and rain, and to warn the initiated that rains are being performed, in the humid

¶ Loeck, Aphrodisian, i. 700.
* To these tribes he added the Eskimo, Kwasuttii, Arapaho, Ute, Central Californians, Pueblo, and the ancient cliff-dwellers. 'The Hopi, who regard the bull-roarer as a prayer-stick of the thunder or lightning, making noise in the wind that accompanies thunderstorms, make the tablet portion of the bull-roarer from a piece of lightning-rich wood. The Navaho make the bull-roarer of the same material, but regard it as representing the voice of the thunder-bird, whose figure they often paint upon it. The Hopi, and Zuni bull-roarers bear lightning symbols; and while in the semi-arid region the implement is used to invoke clouds, lightning, and rain, and to warn the initiated that rains are being performed, in the humid
bull-roarer being, as in Australia, is said to carry away the young initiate. This fable is, of course, intended merely for the women and children; the heroes, when initiated, discover the absurdity of the fiction. Central Brazil, New Guinea, the Torres Islands, Florida in the Melanesian group, the North-West Solomon Islands, and Sumatra are all familiar with the bull-roarer. For modern Europe, as well as for the lower culture, see A. C. Haddon, The Study of Man, pp. 277–287, and G. R. iii. 424. In Aberdeenshire the cow-herd boys used to swing the bull-roarer as a charm against thunder.

The most astonishing parallel to the Kaitkh speculation is a bull-roarer dropped from heaven to earth by Atanatu occurs in the following note of the present writer, which, fortunately, is dated: 'Bull-roarer in Cantyre' (Argyll) 'Saraman, pronounced Streanthan, the first in this quarter fell from Jupiter.' Macalister, October 26, 1826.' Mr. Macalister was a Gaelic-speaking schoolmaster at St. Mary's Loch, in the parish of Yarrow, Selkirkshire, and was an aged man in 1885, full of vigour and intelligence. The parallel myth of the Kaitkh was not published till 1804. For a drawing of a Maori bull-roarer, from Mr. Macalister, anorther early study of the subject, see 'The Bull-Roarer' in Lang's Custom and Myth, pp. 29–44 (1884 and later editions). For the use of j'aparapi pipes in Brazil, to scare away the women from the rites of the men, see A. R. Wallace, Travels on the Amazon, 1853, p. 299.

LITERATURE.—The literature has been given throughout the article.

A. LANG.

BULLS AND BRIEFS.—Under this heading may be conveniently considered not only those documents of the Papal chancery which are technically so designated, but also the various other classes of apostolic letters which in comparatively modern times have been increasingly employed by the Roman Pontiffs in their most important utterances. For this wider interpretation of the name 'bulls' there is excellent authority. Both bulls and briefs are in their essence Papal letters, and the official collection known as the Bullarium Romanum includes Eucalleus, Motu Proprio, and other similar constitutions which possess just the same force, as sources of the Canon Law, as the bulls, briefs, and decreets which we should primarily expect to find there. The prefatory list appended to vol. i. of the Bullarium of Benedict XIV. For the same reason any calendar of Papal Urkunden, such as the important Regesta Pontificum Romanorum (from the beginning to 1198) of Jaffe-Löwenfeld (continued to 1304 by Pothast), might be correctly described as an abstract of the letter-books of the Holy See; and in point of fact the first authentic document which Jaffé has summarized, or in other words the first Papal bull, in the wider sense, of which the text is appended to us, is the first bull letter addressed by Pope Clement I. (Clemens Romanus) to the Church of Corinth. This, and two other letters of the time of Pope Cornelius, form the only complete specimens we possess of the official correspondence of the Popes down to the end of the 4th cent.

1. Early Papal letters.—Beginning, however, with the time of Pope Julius I. (337–352), a much larger collection of documents becomes available. This fact alone is a certain probability to the conjecture based upon the language of the bull-roarer, that the babies were actually brought up by the infant God. The original organization of the Papal archives took place under this pontificate. We hear of a body of officials (schola notarium) and of a responsible director (primicerius), while only a few years later an inscription of Pope Damasus seems to speak of the construction of a special archivium, later called the aerarium (see de Rossi, 'La Bibliotheca della Sede Apostolica,' in Studi di Storia e Diritto, v. 340).

The natural result of the official registration of documents which all this organization and activity imply must have been to create by degrees a recognized Pontifical chancery, and to establish the use of traditional forms and customs with regard to the drafting, dating, and expediting of Papal letters, which we find fully developed in a later period. Down to the time of Hadrian I. (772–795) our knowledge of these forms is somewhat vague, and in no case founded upon the original documents themselves. For the most part the texts of which we have copies are of an epistolary or legal oratory, an oration in which addresses, salutations, and subscriptions are naturally little regarded. The earliest Papal writings known to us which have any claim to be regarded as legal instruments date from the beginning of the 5th cent., and were addressed by Pope Zosimus to the Bishops of Arles (see Mansi, Concdlia, iv. 359; and H. J. Schmitz in Histor. Jrbhr. xii. (1891) 1 ff.; but cf. Nestiz-Rieneck, ZKT xxx. (1897) 6 ff.). Still, the number of Papal letters of earlier date than the year 772, preserved to us in whole or in part, amounts in round numbers to nearly 2400, and in some cases, notably in that of Pope Gregory the Great, we can argue back to the arrangement of these letters in the Regesta, or letter-books, from which they have ultimately been copied. Even from an early period it seems that the Papal chancery was carefully organized, for already in the time of Gelasius I. (492–496) we find traces of the numbering of the letters in the Regesta, and we know that the primicerius, or head of the archivium, or even one of the most important officials in the Roman Church. He was the Pope's counsellor (consilarius), by which name he is sometimes designated, and during the vacancy of the See he exercised for the time being a supreme authority in conjunction with the aedile, or the archon, or the deacon. We have also reason to believe that the secundicerius, or second in command, was regarded as holding an important post of trust.

As regards the drafting of the documents of this early period, it seems clear that they were all modelled on the type of an ordinary Roman letter. Like a Roman letter, the missive is preceded by an intitulatio, or formal naming of the writer, and an inscriptio, or naming of the addressee, this last being often coupled with a form of salutation. Thus: 'Leo Episcopus, Presbyteris et Diaconibus Ecclesiae Alexandrini, dilectissimi filiis, in Domino Salutem.' In many cases, however, the inscriptio precedes the intitulatio, as, for example, 'Gloriosissimo et clementissimo Filio Justiniano Magnis Apostolicae Sedis Episcopo,' Gregory I. seems to have been the first to employ habitually the formula 'servus servorum Dei' in the intitulatio of his letters, but this style was not at once adopted by his successors. It seems, however, to have gradually won its way back to favour, and in the Papal letters of the 5th cent. it is rarely omitted. The salutation, which was by no means always appended to the inscriptio, takes different forms. In the earlier letters we find simply
BULLS and BRIEFS

'salutem'; under Julius I. (337–352), 'in Domino salutem,' and later on, other amplifications. Pope Adeodatus (672–676) adopted the form 'salutem a Deo benedictionem postea, and this perhaps paved the way for the usual usage 'salutem et apostolicam benedictionem.' At the close of the Papal letter was appended, first, the subscriptio papae, and, secondly, the date. The subscriptio papae was completely different in form, sluggish now a call a signature, i.e. the writing of the Pope's own name, but consisted simply of a word of blessing and farewell. For example, 'Deus te incoluim custodiat, frater carissime,' or, more commonly, 'Bene vale, frater carissime; but from the fact that these sentences were composed of a more formal and legal character rarely had any other subscription than the simple 'Bene vale,' or 'Bene valete.' As for the date, which comes last of all, it was probably never omitted in the originals, though it is so often lacking in the copies which have been preserved to us. Down to the end of the 6th cent. we usually find only the day of the month and the names of the consuls, e.g. 'Data tertia dieus Februarias, Aescardo et Bantone consiliarius;' but from about 490 onwards the names of the consuls, and later, the names of the succeeding consuls, and after that, on invariably, added. With regard to the body of the document, it is easy, especially with the aid of the numerous extant letters of St. Gregory the Great, to recognize the gradual introduction of certain traditional forms and phrases. The occurrence in our copies of such abbreviations as 'secundum morum,' or 'de moro solito,' implies the same, and in the so-called Liber Diurnus a collection of Papal formulaires is preserved to us, the earliest portion of which is believed to have been compiled shortly after St. Gregory's time. We meet also in these early letters, particularly from the time of Leo I. (440–461), a certain rhythmical cadence known as the cursus, which, after falling into abeyance for a long period, re-appears at the end of the 11th cent. (see Duchesne, 'Note sur l'Origine du Cursus,' in the Bib. de l'Ecole des Chartes, vol. i. p. 162), and was then maintained until near the close of the Middle Ages. Finally, the document was probably written on papyrus, and had attached to it a cord, with a leaden seal, the latter, it is to be noticed, was not used in this period remain to us, but we have the leaden seals which must once have been attached to letters of Pope John III. (560–573), of Deusdedit (615–618), and others. These bullae are about an inch in diameter, and bear on one side the Pope's name in the genitive, and on the other the word PAPAE. It is, of course, from this feature that the Papal letters themselves have come to be called 'bulls;' but this designation is not used officially in any early document. The Popes speak of their own letters, or of those of their predecessors, as epistola, pagina, scriptum, or, less generally, as privilege, praescriptum, or auctoritas.

2. From 772 to 1043.—With the accession of Hadrian I. it is convenient to begin a new period in the history of the Papal chancery, and this for two reasons: first, because the name of Bullen, which might be the name of an original bull—then even a mere fragment, seemingly of a letter on papyrus addressed to Charlemagne—belongs to this pontificate; secondly, because some re-organization of the chancery was necessary at this time, which result probably of the improved political status of the Holy See, now strong in the support of Pepin and his son. Already we may begin to trace that broad division of Papal documents into two classes, that is certain or official communications (Papal urkunden, in Meister's Grundriss, i. 198), which is practically perpetuated in the popular location of 'bulls' and 'briefs,' though, perhaps, for these earlier periods it is better to retain the terminology of Bresslau, Diekamp, and Léopold Delisle, and to speak of 'privileges' and 'letters.' The latter class was, as its name imports, simply letters. They were written on sheets of papyrus of smaller size, and elaborate formulas of dating were dispensed with. Their purpose was ephemeral, and as a result the originals have almost completely disappeared, only one entire specimen (of the time of Clement II. (1046–1047)) being preserved to us. Of 'privileges,' however, though these must have been far more rarely issued, a comparatively large number of originals remain, their preservation being the natural result of the great, and sometimes almost historic, interest, title in matters either of property or of jurisdiction. A catalogue of these early Papal documents on papyrus, twenty-three in number, has been given by H. Omont in the Bib. de l'Ecole des Chartes, 1904 (cf. also Meflango in Miscellanea di Storia e Cultura Ecclesiastica, 1905–1907). Concerning these more formal 'privileges,' therefore, to which it is usual to give the names of bulls, we are fully informed, and their peculiarities have often been described. They are made of broad strips of papyrus, and have been decorated, usually, with an inscription as much as 10 ft. long and from 18 to 24 in. broad. A wide margin is left at the top; then follows in large writing the intitulatio and subscriptio, with the form 'in perpetuum.' The body of the document comes next in a ruled column of letters, and beneath it the so-called 'double date.' This consists of two distinct entries, of which the one seemingly has reference to the engrossing of the instrument, for it begins with the words 'scriptum per manum N.N.,' with the day of the month and the indication, the other concerned with its final expedition or delivery, and expressed in the words 'Data' or 'Datum,' with month and day and fuller details of the year, 'per manum N.N.' Between these comes the subscriptio papae, which takes the form of the words 'BENE VALETE: generally written in two lines in uncial letters with a cross preceding and another cross or SS (subscriptio) following. That this was at first written by the Pope's own hand is rendered probable by the fact, first, that of the 74 letters of this period, only 35 always differs from that of the body of the document and of the dates; and, secondly, that in the cases in which we possess more than one original bull of the same Pontiff, the identity of the character of the BENE VALETE seems well established. Further, in certain 'privileges' of Pope Silvester II. (999–1003) we find invariably added to the BENE VALETE a few words in the so-called 'Tironian notes' or short-hand, for example, 'Silvester Gerbertus Romanus episcopus subscripsit, or 'Gerbertus qui et Silvester episcopus' (see Ewald in Neue Archiv, ix. 321 sqq.). Still it would seem that already in the time of Clement II. (1046–1047) the practice was being given up, and that the Pope henceforth was usually content with marking a cross or other private signs beside the BENE VALETE already written there by the engrisser. Finally, the bulla, or leaden seal, was attached to the document, strings of hemp or silk being passed through the lower margin of the papyrus, which was folded once or twice to give greater strength, while it was usually undeciphered, except in the strings. Down to the end of the 11th cent. the bullae bore nothing more than the name of the Pope on one side and the word 'papae' on the other, though the arrangement of the letters, complicated with certain decorative compositions. At this period also, as we may often learn from the details given in the second (or 'delivery') date of the 'privileges' just described, the chief position...
BULLS AND BRIEFS

in the Papal chancery was taken by an official known as the bibliothecarius sacros apostolice sedis, who no doubt was originally no more than the custodian of the archives. By degrees, however, he seems to have taken over the functions of the primicerius notariorum. He was generally a bishop, and soon we find him commonly invested with the title cancellarius. As an illustration of the kind of details given in the second dating clause, the following specimen taken from a bull of Silvester II. of the year 999 may be worth quoting:

```
Data VIII Kal. decembris, per manum Johannis, episcopi sancte Albanensis ecclesie et bibliothecarii sancti apostolice sedis, anno pontificatus domini nostri Silvestri secundi pape primo, impetratos a me, Petro, cancellario ordinis Sanctissimae Matris Dei, nostri pontificatus, namb pontifices, in mensa et indictione suprascripta.
```

Although the year of the Incarnation is not here mentioned, it is to be met with occasionally in Papal documents somewhat earlier than this. Details of this kind, which are often of great critical importance, will be found noted at the head of each pontificate in Jaffé-Löwenfeld's Regesta and in Mas Latrie's Trésor de Chronologie, 1899, pp. 1055-1148.

3. From 1048 to 1198.—After the accession of Leo IX. in 1048, the more stable traditions of the Papal chancery seem to have given place to a period of very rapid development. There was at first a tendency, sharpening in the same period, of dividing in classes, each with characteristics of its own. To begin with the more formal and elaborate documents (the 'privileges'), the era of Leo IX. seems to have introduced the general use of parchment in place of papyrus, and possibly as a consequence of this, the employment of minuscule instead of 'Lombardic' writing; but there were also other changes which may be said to have transformed the external features of the great bulls and to have lasted down to the present day. The subscriptio popne ceases to consist in the writing of the words BENE VALETE, this being now represented by a monogram followed by three dots and a large comma (see, upon this, Pflügk-Harttung in Mittheil. Inst. Oest. Gesch. vi. 1882, 534 et seq.). The conventional dots, which appear but for a short period, probably stood for 'subscripsi.' In place of the BENE VALETE, the Pope's sign manual now took the form of a 'rota' drawn in the blank space below the centre of the document, but a little to the left. The 'rota,' or wheel, derives its name from the two concentric circles, from 2 to 5 in. in diameter, inside which a cross was drawn, with the words 'ses petrae ses paulus' and the Pope's name arranged thus:

```
SCS | SCS
PETRVS | PAVLVS
PASCHALIS | I P II
```

Between the concentric circles was written the Pope's motto—usually a brief text from the Psalms. That of Paschal II., for example, was 'Verbo Domini coeli firmati sunt.' Before the first word a rude cross is marked, and this at least is believed to have been done by the Pope's own hand. Between the two circles is almost always, on the left and above the BENE VALETE monogram standing parallel to it a little to the right, the Pope's name was engrossed in the following or some similar form: 'Ego Paschalis Catholicae Ecclesiae Episcopus subscripsi.' At somewhat later time the attestation of a certain number of Cardinals present there and written below the name of the Pope in three columns, consisting respectively of Cardinal Bishops, Cardinal Priests, and Cardinal Deacons. We may say that the 'rota' and B.V. monogram, which appear first in the time of Leo IX. and which with slight variations have lasted down to the present day, still constitute the most striking external feature of the most solemn kinds of bulls. Of the other changes connected with this period it is only needful to notice that the Scriptum clause, i.e., the date of the engrossing, disappears from all Papal documents, and that the leading bulla, which was, as a rule, appended to the Roman, German, and 'letters,' assumed under Pope Paschal II. (1099–1107) the type which it has retained ever since; that is to say, the obverse of the seal shows the busts of St. Peter and St. Paul facing each other—St. Peter to the spectator's right, St. Paul to the left, with a rude cross between them, while above their heads appear the letters S. P. and S. PE. On the reverse we find the name of the reigning Pope in the nominative, e.g., 'Urbanus PP.' The exact number of these dots for any given pontificate was a point carefully attended to, and was meant to be used as a test of authenticity. There can be no doubt that, like the documents themselves, these were frequently engraved, and were freely fabricated at a later date. Even in the British Museum Catalogue of Seals a number of these early bullae are entered (vol. vi., Nos. 21081–21098), without any indication of the fact that the examples so described are forgeries.

The tendency to reserve the more elaborate forms of authentication with 'rota,' monogram, and signatures, as above explained, for certain very solemn 'privileges' became accentuated even during this early period; and Schmitz-Kullenberg already distinguishes from them a class of 'simple privileges,' which, while of substantially the same nature as regards their inscription and contents, lack these and some other formalities. In the case of the 'letters' also, we may note two kinds, viz., the bulla cum filio cornis (i.e., in which the bulla hung by silken cords) and litterae cum filio canopis (in which hemp was employed). The authority just named also attributes to this period the first appearance of litterae clausae. This does not mean to say that ordinary Papal 'privileges' and 'letters' were sent out bearing these marks that all men could read them, but only that their fastening, which seems to have been effected by the strings to which the bulla was attached, could be undone without mutilating the document. In the case, however, of the litterae clausae the parchment was so folded and the bullae so attached that nothing of the contents could be read without destroying the bulla as an authentication (see Dechamps in Mittheil. Inst. Oest. Gesch. iii. 1882, 565 et seq.). It is possible that the 'fisherman's ring' may also date from this time (cf. Jaffe, Regesta, Nos. 5225 and 5242), but no specimen is now in existence.

4. From 1198 to modern times.—The pontificate of Innocent III. (1198–1216) marks an epoch of the highest importance in the history of the Papal chancery. From this time forward not only do the original documents exist in abundance, but the official Regesta, or letter-books, of which only a few fragments are known before this date, are preserved so carefully that no fragment can be said ever to have been lost. Furthermore, Innocent III., like the great organizer that he was, devoted special attention to this most important matter (Nouveau Traité de Diplomatie, vi. 106 ff.). He built new premises for the chancery, and it was no doubt due to his per-
sonal influence that a strict uniformity and an adherence to certain recognized rules are henceforth observable in all its instruments. With the greatly extended authority of the Holy See and its more frequent intervention in matters other than purely religious, the scope of the many Papal pronouncements is accordingly to be widened. This was emphasized by the distinguished canonist Alexander III. (1159-1181) by his litterae decretales (letters containing decisions of points of law submitted to him) who had already built up a vast edifice of Case Law, which was soon to be published to the world by Pope Gregory IX. in the Book of the Decretals, to be the Bible of Canon Law. This was directed by St. Raymond de Pennafort (1234). The great mass of this material was furnished by the replies of Alexander III., Innocent III., and his two successors, Honorius III. and Gregory IX. himself; and the tone of the law-giver seems insensibly to have been emphasized in all subsequent Papal utterances. Moreover, we now touch upon a period when such documents often seem to be addressed to all Christendom, and no longer consistently observe the form of letters directed to an individual or to a place. In the Bull, the 'great privileges' with their 'rota' and B.V. monogram and their elaborate attestations of Cardinals become less numerous; while, on the other hand, only a few years later, under Innocent IV., we are for the first time confronted with that form of Papal document, the Bull, in which, published as a 'bull,' which is something intermediate between the formal 'privilege' and the simple 'letter.' In this, as in a 'privilege,' the first line is written in tall letters, but it ends not with the abbreviation 'dicit,' but with the phrase 'ad perpetuam rei memoriam' or something equivalent, e.g. 'ad certitudinem perpetuam et memoriam futurorum.' There is often no mention of the person addressed; but the document concludes with certain minatory clauses, 'Nulli ergo,' etc., and 'Sic quis autem,' etc., directed against all who may contravene what is therein laid down, ending, without any other subscription, in a simple date mentioning the place, the year of the Incarnation (but this was a later addition), and the name of the pontificate. To this document the ordinary by-letters and the metatrajectories were attached. It was in this form that many important pronouncements were given to the world during the 13th and 14th cent., more particularly the manifestos of Boniface VIII., e.g. the Ausculta fili, addressed to Philip IV. of France, would suffice to show, many of these utterances were still letters in form and addressed to individuals, but in their scope they appealed to Christendom at large.

In Innocent III.'s days some of these quasi-political documents took the form of 'privileges.' Thus the 'words' acceptata nostrae humanitatis et sanctae innocentiae, and the sacred resistance from their appeal to the authority of 'the two swords' and the consequent claim to far-reaching authority in temporal matters. As the initial words themselves of the bull Ausculta fili, directed to Philip IV. of France, would suffice to show, many of those utterances were still letters in form and addressed to individuals, but in their scope they appealed to Christendom at large.

In Innocent III.'s days some of these quasi-political documents took the form of 'privileges.' Thus the initial words 'acceptata nostrae humanitatis et sanctae innocentiae, and the sacred resistance from their appeal to the authority of 'the two swords' and the consequent claim to far-reaching authority in temporal matters. As the initial words themselves of the bull Ausculta fili, directed to Philip IV. of France, would suffice to show, many of those utterances were still letters in form and addressed to individuals, but in their scope they appealed to Christendom at large.

those of an administrative nature, more expedi-
tious. But though the formalities observed in the
issuance of a consistorial bull, still even in the former the
endorsements of the various officials of the chancery,
mostly entered upon the plicae, or fold of the
parchment, show that it must have passed through
a large number of different hands. The abbreviations
scriptores, registratores, and finally the department of the
bullatores, who affixed the seal (see Baum-
garten, Aus Kitsch und Kommer, Freiburg, 1907).
No wonder we find that under the pontificate of
Benedictus ledean, a new form of Papal letter or
a more summary kind was instituted by the Holy
See, and that henceforth this was commonly
employed in all matters requiring dispatch.
This was known as a 'brief,' and it soon almost
entirely took the place of the earlier mandates.
A brief was a document written upon fine vellum,
and sealed, not with a leaden bulla, but with
a wax seal bearing the imprint of the 'Fisherman's
ring.' It was written in a fine cursive Roman
hand, and at the head occurs simply the Pope's
name standing by itself thus:
EUGENIUS PP. III.
Immediately below this, the Pope greets the
addressee in the vocative, according to his rank
and condition, e.g. 'Dilecte fili,' or 'Carissime in
Christo filius.' The formulae patris et filii, etc.,
with the salutation 'salutem et apostolicam bened-
dictionem.' In constitutions of a more solemn and
permanent character we often find, instead of this
greeting, the formula, also already long familiar in
bulls, 'ad perpetuam rei memoriam.' Another
distinctive feature of briefs is the final clause
expressing the date. It almost invariably takes
this form: 'Datum Romae apud Sanctum Petrum,
sub annulo Piscatoris, die IX Novembris MDXXI
pont. xii. anno primo.' In contradistinction to
the dating of bulls, which generally, though not
invariably, at any rate down to the pontificate
of Innocent XII., is to be referred to the years of
the Incarnation, beginning 25th March, the years
are here to be understood as those of the Nativity.
Beneath the date the name of the Cardinal Secretary
of Briefs is generally written as an attestation of
authenticity.
With regard to the form of instrument chosen,
let us note that this has little to do with the
importance or binding force of any Papal pro-
munication. In the consistory or the decemviral
fabric of Canon Law was largely built up, almost
invariably took the form of lesser bulls, i.e. simple
letters or mandamenti. The first known Bulla
in Coena Domini, containing the 'Reserved Cases'
of the Holy See, issued by Urban V. in 1364, was
a mandamentum. No doubt there was at times
a very natural wish to impart some extraneous
solemnity to documents of dogmatic importance.
For example, the constitution of Benedict XII.,
beginning 'Benedictus Deus' (20th Jan. 1335)—
which was mainly intended to controvert the
controversy regarding the Beatific Vision, and contains the notable formula, 'Haec in
perpetuum valuitua constitutione anctoritata apos-
tolica delinimus'—was issued as a titulus with
imperatorial clauses. The dispensation for the
marriage of Henry VIII., with his brother's widow,
was drawn up first in great haste, and secretly
transmitted to Spain as a brief, while it was after-
wards more publicly expedited as a bull; but the
brief, its authenticity once admitted, was of just
the same force as the bull. So again, the Bull of
Benedict XIV., when compiling the first volumes of his own pontifi-
cal acts, and sending it officially to the University
of Bologna, declares that it contains 'noustras
Constitutiones, videlicet Bullas, et aliquas Brevia,
Litteras Ecyclicas et alia huiusmodi,' making no
distinction between the authority attaching to
these ministrations. So, in more modern times,
the Society of Jesus, by Benedict XIV., with a
brief, was restored by Pius VII. in a bull; while Leo XIII., used a bull to re-establish
the Catholic hierarchy in Scotland, though Pius IX.,
twenty-eight years before, had issued only a brief
to effect the same thing in England. The seal
with the 'Fisherman's ring,' which is the distinctive
mark of the brief, was formerly always impressed
upon red wax within a loop formed by a twisted
strip of parchment, and arranged in such a way
that the entire stamp could then be closely
and securely the folded sheet of vellum to which it was
affixed. The 'Fisherman's ring' is mentioned in
1295 as used by the Pope to authenticate his
private correspondence, and is probably much
older. The earliest existing impression is said to
have been discovered in the treasury of the Santa
Sanctorum at the Lateran. It belongs to the time
of Nicholas III. (1277-1280), and represents St. Peter
fishing with a rod and line; but the identification
seems somewhat doubtful. In the later examples
St. Peter is represented in a boat drawing in the
net.
In quite modern times some notable modifications
have taken place in the rules of the Papal chancery
regarding the issue of bulls and briefs. Since 1842
the issue of bulls is known as the 'Fisherman's ring' upon red
wax attached to briefs has given way to a stamp in red ink
bearing the same device. In the case of bulls, the scrivitura
dealita is engrossed upon great sheets of parchment has for ordinary purposes been
abandoned—this took place at the beginning of the
pontificate of Pius IX. In 1878—and the document is
now written in the same legible Roman hand
which is used for briefs, while the leaden bulla has
given way in most cases to a stamp in red ink that can
more conveniently be sent by post. It is likely
also that the complicated formalities, which till
quite lately attended the ordinary expedition of
bulls by the via di cancelleria, will be much
simplified in consequence of the recent re-organiza-
tion of the Roman Curia.
Other Apostolic Letters. As a further conse-
quence of the delays and complications attending the
issue of bulls, another new kind of instrument
came into use at the end of the 15th century. It
was a species of brief known as a motu proprio, and it was without any authenti-
cation by the pontiff, an instrument which could be a document issued by the Pontiff of his own
initiative, without any instance being made to
him by interested parties. The documents of
done class, which continued to be very common during
the 16th century, closely resembled briefs in their
general features, but there are differences in the
manner of dating, and, of course, there is no
mention of the 'Fisherman's ring.' On the other
hand, the words 'motu proprio' are always intro-
duced, and occur not uncommonly as the initial
words of the document. The words 'motu proprio'
were concerned with the administration,
ecclesiastical or civil, of the city of Rome and
the government of the Papal States, and, in contrast
to the more formal bulls and briefs, were frequently
couched in Italian. From the insistence which their
form seemed to lay upon the Pontifal initiative,
they were regarded by foreign governments, notably
by that of France, with disfavor, and treated as
an encroachment upon the liberties of the Gallican
Church.
In more modern times, the Roman Pontiffs, when
wishing to impart instruction to the clergy and
laity of the Church over which they rule, especially
in matters which require somewhat elaborate
treatment, have most commonly had recourse to an
encyclical.’ As the term imports, this is in form a circular letter intended to be passed on from one to another of a group of persons, but in practice it is a letter addressed to all the bishops in communion with the Holy See, or at least to all the bishops of a single district or province. The term ‘encyclical letter’ was not in use before the 4th century, but it was not commonly adopted for Papal documents before the 18th century. Since then it has come increasingly in favour, and Pius IX., Leo XIII., and Pius X. have issued numerous and very lengthy encyclicals, dealing not only with dogmatic questions, but with civil, moral, social and ethical in their scope. One of the most famous of these encyclicals was that of Pius IX., Quanta cura (28th Dec. 1864), of which the main purport was to condemn the principles of Naturalism (i.e. the exclusion of religion from the government of human society), to denounce Socialism and Communism, and to vindicate the sacred rights of family life; but it is perhaps principally remembered on account of the ‘Syntaxus’ of condemned errors which was published along with it. Leo XIII. has given to encyclicals a more manageable form by issuing a series of encyclicals, dealing with a number of modern questions, e.g. the encyclical Immunitatis (21st Apr. 1878), on the evils of the times; Aeternam divinae sapientiae (10th Feb. 1880), on Christian marriage and family life; Divini illius (21st June 1881), on the origin of civil authority; Immortale Dei (1st Nov. 1885), on the Christian constitution of States; Libertas proconsuetudinem (29th June 1881), on religious unity.

Most of these utterances have been collected and translated, e.g. by J. Wynne in The Great Encyclical Letters of Leo XIII. (New York, 1903), and by W. Eyre, The Pope and the People (London, 1897).

The present Pope, Pius X., has also shown special favour for this form of manifesto, and many of his instructions have taken this shape: e.g. his first letter to the clergy and faithful of France, Vehementer nos (11th Feb. 1906); and the condemnation of Modernism, Pascendi dominici gregis (20th Dec. 1907), has been very much enlarged. In former times an encyclical was simply a letter, which in its inscriptio mentions the Patriarchs, Primates, Archbishops, Bishops, and other local Ordinaries, and concludes with the Apostolic blessing and a simple summary of the duty of the pontificate. The Pope’s name ‘Pius I.’ signifies the fact of the pontificate. It is generally held by Catholic theologians that the mere fact of an encyclical being addressed to the church of Christendom do not constitute it as ex cathedra pronouncement, even if it deals with dogmatic matters. The degree in which the infallible magisterium of the Papacy is involved must be judged from the terms used in the document itself, and from attendant circumstances. This question is discussed with some fullness in Chabás’ Gallia Christiana, Tome IV, p. 375 et seq. and disciplinaire du Saint-Siège (Paris, 1908).

Another form of Papal utterance which calls for notice is the ‘allocution,’ which is an address delivered by the Pontiff to the Cardinals assembled in secret consistory. This address is sometimes printed and published by order of the Pope, who chooses this way of making known his judgment or wishes with regard to questions, often semi-political, which are of pressing importance. But, of course, this pronouncement is not a Papal letter, and cannot be regarded as such.

The remaining words, which are used to describe documents emanating from the Papal chancery, are of a general character, and for the most part rather loosely used. For example, almost any kind of instrument may be described as a ‘rescript,’ but strictly the term should be limited to some form of answer to an application addressed to the Holy See. Such answers in early times often began with the words, ‘Significavit nobis dilectus filius,’ and ended with the formula, ‘Deus te inomnium servet.’ Another very general word ‘constitution,’ and this may be correctly applied to any writing in which certain propositions or decisions submitted, or lays down a rule to be followed.

With reference to the collection of Papal bulls and letters, it is to be noted that all the extant editions of the Bullarium Romanum, so far as regards medieval documents, are of a very unsatisfactory character. The Annals of Urban II., and of John XXII., contain the Papal letters which have been issued since the formation of the Corpus Juris Canonici, and which, though of great importance to students of law, were not, as such, collected in any form. Naturally such a work did not concern itself much with the Papal letters of early ages, but the recent publications which were important for the compiler’s purpose. The various editions which followed greatly enlarged the collection and brought it up to date; but it is the scholarly work of Coquillette, who edited the great Bullarium Romanum (printed in Rome in 32 volumes, between 1759 and 1762), nothing but the most meagre gleanings of the huge mass of documents which have been presented in the form of letters, and in the form of other legible documents, which brought the collection down to 555, but, most conveniently, to the year 1281. The edition of J. Roncifere, issued in 8 volumes, began its publication in 1864, and ended with the reign of Boniface VIII. (1237-1264), containing the papal letters which brought the whole period from the beginning to the 14th century. Special attention has, of course, been paid to the short isolated papal bull. For example, the letters of St. Gregory the Great have been edited with great care in the quarto series of MGH, by F. Ewald and J. Reuther, while the papal letters to Charlemagne and Louis the Pious have been studied by Carl Hampe, and those of Pius IX. under the title Pontificia, a most thorough piece of work has been undertaken by P. F. Rehr in calendaring the ‘privileges’ and other Papal documents connected with the church of Gaul. The Pope must note that the pontificate of Innocent III., from which time onward, as stated above, the Papal Regesta are preserved, marks a period in the Papal history, the later known as the ‘Innocentian’ period, and of Innocent III. and of Honorius III., in part, have been published in the Patrologia Latina, while that of Honorius III. has subsequently been re-edited. None, however, of these Papal Regesta seems to contain copies of all the bulls issued during any pontificate, and it is certain that no fact that any document is lacking in the official register is no sufficient proof of its spuriousness. It is probable that for such registration, as it did, an additional safeguard of authenticity in case of dispute, a fee was demanded, and that registration was denied to those who were unwilling to pay the fee. During the present century a great number of the pontificates have been brought within reach of the students of the Popes of the 13th and following centuries. The chief work has been done by the École Française de Rome with results which are no longer in doubt. A fine collection of Regesta completes the edition.

As regards England, in particular, an important undertaking has been for some years in progress under the title A Calendar of Entries in the Papal Registers relating to Great Britain and Ireland. This work, begun for the late Lord Bligh and continued by J. A. Tevenow, has now extended to nine volumes, bringing the record down to the middle of the 17th century, and it prints short seal copies in English which had documents in the Roman Regesta which have any reference to the British Isles.
Amongst other isolated efforts may be mentioned the collection edition of the Regesta of Clement (1865-1873), and Cardinal Hergenrother’s incomplete calendar of the bulls and other documents ofLeo, from the year 1004. In an earlier period A. Theiner, librarian of the Vatican, published, chiefly from the Regesta, large numbers of Papal bulls, etc., dealing with various problems, e.g., the British isles, Foederal domination, Lithuania, etc., among the number. Special Bulliarum, chiefly collections of ‘privileges’, to which formerly the name Mare Magna was given, were also published by the most of the Great Religious Orders and for some of the Roman Congregations.

LITERATURE.—Regarded as a branch of the science of ‘Diplomatics,’ the subject of Papal bulls and briefs possesses a place of no ordinary importance. A very large number of such documents of this kind have always been in existence, and the detection of these has exercised the acumen of scholars from quite remote periods. The records hereinafter given have been taken from various notices, published or issued, and the collection of the papers by the Penitentiary of the Holy See, Chaptarum Pontificum Romanorum (3 vols., Stuttgart, 1881), and to books and papers by P. Kehr, Tamer, Dickau, Maller, and others. Many of these publications have appeared in the Mittheil. des Instituts f. Österreichische Geschichtswissenschaft, and the rejoicing of many (2000, 1887). The newly founded Archiv für Urkundenforschung, edited by Brand, also contains some most valuable work of this kind. For the later period, the Practicorum Cancellariae Apostolicae, edited by Schmitz-Kallenberg (Munich, 1904); the work of Baumgart, Aus Kaiser und Kanzler (Frankfort, 1876); and the ottenhauser, Regesta Cancellariae Apostolicae (Innsbruck, 1888), are of great importance. Good work of the same kind has also been done by Leander de_SELIG, notably M. de_Selig, de_Selig, and de_Medici and the Comte de_Medici Latrie.

From the first point of view, all the larger treatises which touch on the sources of the Canon Law devote a certain amount of space to the question of Papal bulls and letters. It will be sufficient to mention here (besides the great works of F. Scholz, von Scherer, and Wernz) Maassen, Gesch. der Quellen und Lit. d. can. Rechts, l. (1870); F. von Schulte, Gesch. der Quellen d. lit. d. can. Rechts, 3 vols. (1875-1879); A. Tardif, Histoire des sources d. droit canonique (1857); C. Hergenrother, Gesch. des Pontificium Romanum des vatikanischen Katholizismus (1901). Much useful information about the building up of Roman Canon Law will be found in F. W. Maitland’s history of the Church and the law in the thirteenth century. The Catholic standpoint regarding the pronouncements of such medieval Popes as Gregory VIII, Innocent III, is well shown in the case of the bull Papamur (1216). The virtues of the Church and the Christian State (Eng. tr., London, 1870)—a work which grew out of the ‘Janus’ controversy; or, better, from various articles in St. Loom's Magazine, edited by Hervey, Frederick, edited by Bruder and Backen, the 3rd ed. of which is now in course of publication.

HENRIET THERSTON.

BUNYAN.—1. Life.—John Bunyan, the greatest of all the allegorists, and also the greatest exponent of the Puritan doctrine in popular form, was born at Elstow near Bedford in 1625, and died in London in 1688. His life thus covered the troubled period of the Commonwealth and the Restoration, and ended on the eve of the Revolution. His origin was humble,—‘low and inconsiderable,’ he calls it,—his father being a tinker or itinerant brazier. He himself adopted the same trade. But little is said to read anything or to correspond with the rate of other poor men’s children, but his small stock of education was quickly lost. He seems to have had a somewhat nervous and morbid childhood, disturbed by dreams and fears. About 1646, when he was still but a lad, he served as a soldier. This service does not say much for side but was enrolled, and his biographers have either followed their own fancy in the matter or have been content to regard the point as undecided. But probably Dr. Brown’s carefully considered verdict would now be disputed, based as it is upon a survey of the local circumstances and the ‘strong set of the stream in the Parliamentary direction’;—"It seems clear to me that he think his way to independent conclusions so wide apart from those of his neighbours, break through all the carefully kept lines of the Parliamentary forces... and join the Royalist army with the King." (1)ILT. He was not even engaged to his first wife. She restored to him the slight sum he had lost by divorce; and she brought him his first impressions of practical religion. They were very poor,—not having so much household stuff as a dish or a spoon betwixt us both,—but she brought with great patience and books after another of the titles of these are noteworthy. They are seeds of a harvest. One was The Plain Man’s Path-way to Heaven, Wher’en every man may clearly see, whether he shall be saved or damned, by Arthur Dent. The other was Lewis Haly’s well-known book, The Practice of Pictie, directing a Christian how to walk that he may please God. These little books must have left a deep mark upon the young man’s mind. The former is written entirely in dialogue form. The latter, though somewhat heavy and common-place in style, is a thoroughgoing statesman’s dialogue between Christ and the soul, so simple, tender, and beautiful that Bunyan himself might almost have written it.* We have possibly here the germ of his love for dialogue, both in allegory and in preaching.

After his marriage there came a period of spiritual upheaval lasting about four years, and recorded with wonderful power and skill in his Grace Abounding to the Chief of Sinners (1666). This book is the key to all his other writings; it is his experience compressed; the other books are his experience writ large, for in his case, as in that of St. Paul, doctrine and experience are in continual contact. No summary can do justice to the width of this great little autobiography; and this period of his life, when his soul was in the throes of birth, can suitably described only in his own words. It was a period of many difficulties about such matters as election, the day of grace, the sin against the Holy Ghost; of many sacrifices—leaves of the tree of life, lost in the wilderness, being brought up in the hope of finding peace; of many unsatisfied longings and aspirations.—Oh! I now loved those words that spake of a Christian’s calling! as when the Lord said to one, Follow me. I knew not what to say, another said: oh, thought I, that he would say so to me too: how gladly would I run after him!" It was a period of swift alternations of feeling, ranging from moments of an ecstatic joy—which lasted all too short a time, and was quickly caught again, like Peter’s sheet, to heaven—to moods of mental self-torture, as when voices seemed to tempt him to sell Christ, and he persuaded himself that he had sold his Savior; * He himself admits that there was something distressing and unbalanced in his condition at the time, and premises that there was another one in his dwelling among the tombs with the dead; that *Soule: Lord, wherefore wouldst thou lift up upon a Crown! Christ: That I might lift thee up with me to heaven. S.: That I would be lifted up. Would thee be lifted thither? How can I be lifted abroad? C.: That I might embrace thee more lovingly. my sweet soule. S.: Lord, wherefore was thy side opened with a Spear? C.: That thou mightest have a way to come nearer my heart. S.: Lord, wherefore thou be hurled! C.: That thy sinners might never rise up in judgment against thee."

2. The Meditation upon Day by Day from A Book for Boys and Girls:—‘I left, though it be peep of day, don’t know. Whether to Night, whether to Day or no. I stand myself a little light. But cannot yet distinguish day from night. I hope I may not be put out of my way yet. I am not at a point, the Sim I see not. Them’th with such, who Grace but now possess. They know not yet, if they are cured or blest."
is always crying out and cutting himself with thorns. But the essence of his case did not lie in its moral absurdities, but in a genuine conviction of sin which was the Divine preparation for the comfort of the Cross. Gradually he found his way to peace, the two chief influences being Luther's exposition for his woundings and, for his grief, the doubtless prototype of 'Evangelist'; he helped Bunyan the pilgrim towards the wicket gate and the shining light, and received him into the fellowship of the congregation in 1633. From that year until 1660 the congregation met in St. John's Church at Bedford, for the experiment of a comprehensive national Church was being tried under Cromwell, and Gifford had been presented to the living of St. John's.

In 1653, Bunyan removed from Elstow to Bedford. One year he lost his first wife, and was also called by his brethren to open his lips as a preacher: 'They desired me, and that with much earnestness, that I would be willing at sometimes to take in hand, in one of the meetings, to speak. I humbly accepted, and the Lord gave a message proved immediately acceptable: people came by hundreds to hear him; during the period of tolerance he preached more than once even in parish churches. But the Restoration brought the Act of Uniformity. Even as early as March 1658 there had been trouble. The minutes of the Bedford church mention a meeting 'for consouling what to do with respect to the indictment against bro. Bunyan at ye Assizes for preaching at Eaton.' Nothing seems to have come of that, but 1660 brought his arrest and the beginning of his imprisonment. There has been much uncertainty as to the number and places of his incarcerations, but once more Dr. Brown's careful weighing of evidence must decide the matter, reinforced as it has been by the discovery of the actual warrant of arrest. The first and shortest imprisonment in the end of 1675. The first imprisonment was in the County Gaol at Bedford, and lasted for twelve years, with a break in the middle, and with a considerable amount of liberty at times, varied with periods of constant prison play for his own support; wrote Grace Abounding and several other books; and preached in the gaol, and occasionally outside it. The second was in the Town Gaol on Bedford Bridge: it lasted six months, and produced the first part of The Pilgrim's Progress. When the first imprisonment drew to a close, the prisoner found new and enlarged service waiting for him. The following appears in the records of the Bedford church for 21st Jan. 1672:

'After much seeking God by prayer and sober conference found us a meeting place in the town of Bedford with several consent (signified by solemn lifting up of their hands) call forth and appoint our brother John Bunyan to the pastoral office of elder, and charge him, accepting the call, to set up himself to serve Christ and his Church in that charge; and received of the Elders the right hand of fellowship.'

An orchard was purchased, and a barn that stood upon it was converted into a meeting-place, which was the home of the congregation until long after Bunyan's death.

From this point onwards his fame as a preacher, aided by his growing popularity as a writer, spread far and wide. He was known as Bishop Bunyan, and travelled in many directions through England. He was often in London, where crowds would gather to hear him even at 7 o'clock in the morning. Some of the secrets of his success as a preacher may be guessed from his printed sermons, even though those in their revised and enlarged form may differ somewhat from the spoken word. He used strong and simple language, —his whole mind being saturated with the English Bible. He spoke with intense conviction, especially at first, upon the guilt and power of sin: 'I preached what I felt, and what I felt I felt for my wounded conscience,—and the ministry of John Gifford. This man had formerly been a loose liver and an officer in the Royalist army, then a physician in Bedford; finally from 1650, being now a changed man, he became the pastor of the newly formed Nonconformist congregation. He 'felt, as he did, the doubtless prototype of 'Evangelist'; he helped Bunyan the pilgrim towards the wicket gate and the shining light, and received him into the fellowship of the congregation in 1633. From that year until 1660 the congregation met in St. John's Church at Bedford, for the experiment of a comprehensive national Church was being tried under Cromwell, and Gifford had been presented to the living of St. John's.

In 1653, Bunyan removed from Elstow to Bedford. One year he lost his first wife, and was also called by his brethren to open his lips as a preacher: 'They desired me, and that with much earnestness, that I would be willing at sometimes to take in hand, in one of the meetings, to speak. I humbly accepted, and the Lord gave a message proved immediately acceptable: people came by hundreds to hear him; during the period of tolerance he preached more than once even in parish churches. But the Restoration brought the Act of Uniformity. Even as early as March 1658 there had been trouble. The minutes of the Bedford church mention a meeting ‘for consouling what to do with respect to the indictment against bro. Bunyan at ye Assizes for preaching at Eaton.’ Nothing seems to have come of that, but 1660 brought his arrest and the beginning of his imprisonment. There has been much uncertainty as to the number and places of his incarcerations, but once more Dr. Brown’s careful weighing of evidence must decide the matter, reinforced as it has been by the discovery of the actual warrant of arrest. The first and shortest imprisonment in the end of 1675. The first imprisonment was in the County Gaol at Bedford, and lasted for twelve years, with a break in the middle, and with a considerable amount of liberty at times, varied with periods of constant prison play for his own support; wrote Grace Abounding and several other books; and preached in the gaol, and occasionally outside it. The second was in the Town Gaol on Bedford Bridge: it lasted six months, and produced the first part of The Pilgrim’s Progress. When the first imprisonment drew to a close, the prisoner found new and enlarged service waiting for him. The following appears in the records of the Bedford church for 21st Jan. 1672: ‘After much seeking God by prayer and sober conference found us a meeting place in the town of Bedford with several consent (signified by solemn lifting up of their hands) call forth and appoint our brother John Bunyan to the pastoral office of elder, and charge him, accepting the call, to set up himself to serve Christ and his Church in that charge; and received of the Elders the right hand of fellowship.’

An orchard was purchased, and a barn that stood upon it was converted into a meeting-place, which was the home of the congregation until long after Bunyan’s death.

From this point onwards his fame as a preacher, aided by his growing popularity as a writer, spread far and wide. He was known as Bishop Bunyan, and travelled in many directions through England. He was often in London, where crowds would gather to hear him even at 7 o’clock in the morning. Some of the secrets of his success as a preacher may be guessed from his printed
in a phrase in *The Heavenly Footman*, when, after bidding his readers beware of Quakers, Ranters, Freewillers, he adds, 'Also do not have too much company with some Anabaptists, though I go under that name myself.' It is a little surprising to find that in the name "Anabaptist" should have two of his children christened after his own immersion—one at Elstow in 1654 and one at St. Cuthbert's, Bedford, in 1672. Can it mean that neither Bunyan's first wife, nor his second, whom he married in 1690 and who proved herself during her lifetime to be a woman of some courage and character, shared his personal view, and that he did not care enough about the matter to insist upon his own preference?

2. Works. — According to the list given by Dr. Brown, based upon that of Bunyan's friend, Charles Doe, Bunyan produced in all 60 works, one for each year of his life. But this includes such items as *A Map of Salvation*, and various tracts and poetical pieces of small bulk, as well as the longer controversial, evangelistic, and allegorical works. *Grace Abounding* is referred to above. Of the others, apart from the three greatest, the most noteworthy are: *Some Gospel-Truths opened*, interesting now chiefly as Bunyan's first book, published in 1656, a fiery protest against Quaker Meetinghouses. Other are, in his style and orderly in their arrangement, but giving a hint only in an occasional phrase of the greater riches that were to come; the various books, such as *Come and Welcome to Jesus Christ, The Jerusalem Schoolmaster*, and *The Heavenly Pilgrim*, which preserve for us the style and substance of Bunyan's actual preaching; his Catechism, *Instructions for the Ignorant*; and *A Book for Boys and Girls, or Country Rhymes for Children*. This last is quaint and valuable in itself, and is perhaps the only one of Bunyan's works that has been suspended by later generations, and has not yet spent itself—witness *The Child's Garden of Verses*. Probably the modern child, accustomed to the skillful and dainty entertaining of R. L. Stevenson and others, would count Bunyan's verses, except in one or two cases, somewhat heavy and didactic. Yet to the boys and girls of the 17th century, these 'rhymes' may have been almost as much of a relief and joy as R. L. S. and Edward Lear to the happier children of the later century.

Bunyan's poetry has been severely criticized. It may be admitted that in verse he seldom found his liberty, and that his metre is often neglected. Yet the region Bunyan is better worth knowing than the critics would have us believe. Many of his verses are at least melodious, pithy, and memorable. And something is to be said for the poetic quality of the man who wrote the song of the Shepherd Boy, and these lines Upon the Snow:  

"This pretty Bird, Oh! how she flies and sings!  
But could she do so if she had not Wings?  
Her Wings bespeak my Faith, her Songs my Peace:  
When I believe and sing, my Doubtings cease."

The first part of *The Pilgrim's Progress* was published in 1678, the second part about seven years later. The book was an immediate and amazing success. Three editions of the first part were sold in a year, and in the second and third of these the original scheme was widely added to. Worldly Wiseman, Mr. By-end's relations, and Giant Despair's wife being among these happy afterthoughts. In Bunyan's lifetime 100,000 copies were sold, in the greatest of four editions. It was the fine flower of Paritan theology and experience. It may be called the first great English novel. 'John Bunyan may pass for the father of our novelists,' says Hallam. Into it, with a pen that had been sharpened and made to cut, he put all his marvellous powers of observation: the man who has given us Mr. Talkative and Mr. Fearing went about the world with his eyes and ears open. Into it he also put all his own experience, so rich in sorrows and in joys. The temptation is strong to suggest originals for the allegorical scenes and personages. Was Elstow Abbey the House Beautiful, and was the Slough of Despond suggested by the miry fields near Bunyan's birthplace? Was Judge Hadgeweed? Was Bunyan himself Judge Hadgeweed? Could he imagine a man so wise and strong and kind and gentle as the figure of Mr. Micawber? But Mr. Froude's severe disparagement is entirely misleading, if only because of the extraordinary richness of the second part as a book of character. Mr. Brisk, Mr. Honest, Greatheart, Mercy, Mr. Pearing, Mrs. Pearing, the Much-Abused Mother, the Doughty Captain, are all vital, real, and immortal. But, indeed, criticism of *The Pilgrim's Progress*, if it be based on sympathy, soon loses itself in affectation. Sir Walter Scott speaks for the multitude of Bunyan's readers when he says:  

'John Bunyan's parable must be dear to many, as to us, from the recollection that in youth they were engaged with permission to peruse it at times when all studies of a nature more noble or entertaining were prohibited (Quart. Rev. 1853, p. 326).'

No other book except the Bible unites the hearts of young and old, learned and simple, the lover of beauty and the lover of sanctity. In *The Life and Death of Mr. Badman*, published in 1680, Bunyan made an attempt to tell the opposite story, and describe a pilgrimage from bad to worse. The attempt is not very successful. It is retarded by being cast in dialogue form throughout; it is weighted with amusing anecdotcs, which, however interesting from their mere incredibility, distract from the direct effect of the book itself in tedious discussions, e.g., on the difference between cursing and swearing. But the pen that created the Pilgrim had not lost all its cunning. There are many passages acute in observation and happy in their application. Mr. Badman's 'mournful, sugared letters' to his creditors; and the book is full of Bunyan's keen observation and knowledge of life: 'I think I may truly say that, to the best of my remembrance, all the things that I here discourse of, I mean as to matters of fact, have been acted upon the stage of this world, even many times before mine eyes.' And the book has value still as a picture of the rougher and uglier side of English life in Bunyan's time. Bunyan's own love of his author's art is clearly exhibited never more clearly than in giving Mr. Badman a quiet and peaceful deathbed.

In *The Holy War* (1682) Bunyan rose again to his own loftiest level, and created another allegory second only to *The Pilgrim's Progress*. The task of this case was more difficult. Though there is more Biblical foundation for the figure of a war than for that of a pilgrimage, the former is less easy to draw out into a connected story. Defects and inconsistencies are easily observable, e.g., Mansfield Bunyan is now the soul of mankind, the soul of humanity. It is dangerous also to bring

"*Cf. Macaulay in his Essay on 'John Bunyan': 'That wonderful book, while it obtains admiration from the most astonished critics, is loved by those who are too simple to admire it.'"
the Persons of the Trinity into action and dialogue. But if there be defects in construction, there is not a point in the actual writing that the style throughout seems mysteriously to take on a quality kindred to its theme—something of the strength of a rampart, something of the sound of a trumpet. Once more observation and experience are manifest controls upon Bunyan's authorship. The whole serves him well in his battle scenes. His heart remembers how this sort of thing is done: the evolutions of Emmanuel's army, 'the handling of their arms and managing of their weapons of war, were marvelously taking to Mansoul and me. The new moulding of the town, the changes that were compulsorily brought about in the civic arrangements of towns like Bedford as Common-wealth or Monarchy got the upper hand. The setting up of a ministry in Mansoul is also full of echoes of times when the ecclesiastical foundations were unsettled, and contending ideals enjoyed alternate periods of supremacy. Bunyan handles all this with exhaustless skill and ingenuity: e.g., there is a whole analysis of persecution, clear and complete, packed into one corner of the plot. Where the Pilgrim's Progress were taken, they were had before the Prince, and

he found them to be of several counties, though they all came out of one land. One sort of them came out of Blindman-shire and they were called as did ignorantly they did. Another sort of them came out of Blindzealashire, and they did superstitiously what they did. The third sort of them came out of the town of Blacce, in the county of Envy, and they did what they did out of spite and implacableness.

In the scheme of this allegory, there is naturally less room for character-drawing than in the other; yet who can forget that deaf and angry man, old Mr. Prejudice, or the darling of Diabolus, Captain Anything? Moreover, in the dealings between Emmanuel and Mansoul there appears, as in all Bunyan ever wrote, his passionate love for his Lord, and the Lord's love and pity for his sinful but aspiring servants.

3. Place and influence.—Bunyan's influence was immediate and enormous, not in his own denomination only, not in his own country only. The Pilgrim's Progress was translated into Welsh in 1688, into Dutch in 1692, into German in 1698, into French in 1685. Bunyan's empire has grown steadily with the passing generations, mainly through this his best known book: perhaps the best criterion of its extent to-day is the fact that in the summer of 1914 the Pilgrim's Progress was reprinted in 122 different languages and dialects. Even such an edition as that produced by J. M. Neale in 1853, with insertions and alterations in the worst possible taste, designed to make the book teach a different scheme of doctrine from that of its author, is a proof of Bunyan's wide sovereignty and of the appeal he makes to minds of many different types. In addition to the qualities alluded to incidentally above—his pictorial style, uniting the young and the old; his strong, simple, Biblical English, uniting the educated and the unlearned; his knowledge of life; his faithfulness to his own deep experience; his historical position as our great exponent of Puritanism at its best—the following may be mentioned as among the causes of an influence so wide and enduring:

(c) Bunyan's real originality. The quality

'Hallam, 'that saggard of apparel,' has this: 'His success in a line of composition like the spiritual romance or allegory, which is not to be copied, but to be written, in the instances where it had been attempted, is doubtless enhanced by his want of all learning and his low station in life. He was thoroughly in earnest at first, but the more he endeavored to imitate the rules. Bunyan possessed in a remarkable degree the power of representation; his inventive faculty was considerable, but the other qualities of excellence. He, therefore, in some measure to see, what he describes; he is circumstantial without prolixity, and, in the various frequent change of his incidents, never loses sight of the unity of his allegorical tale' (Lit. Hist., iv. 351).

may be claimed for him even apart from the question of borrowed materials. Shakespeare can be original even when he is working over the story of some old chronicler: resurrection can be so managed as to be equivalent to creation. Much ingenuity, however, has been expended on the attempt to find a source for the Pilgrim-story. Guillaume de Guivelle's Le Peintre Romans de l'Homme in Lydgate's version; Bernard's The Late of Man, or the Legal Proceedings in Manshires against Sin; and other existing allegories or romances have been suggested as the source of Bunyan's inspiration; or it is alleged that he found his seed-thought, say, in Another Betrayal of the Plaine and Desolate Country of the Holy Ghost, an Italian martyr in Foxe's Book of Martyrs, which says, 'I will travel up to the New Jerusalem. . . . Behold, I have entered already on my journey.' Probably Bunyan gathered seed-thoughts everywhere, and plagiarized prodigiously from the open book of life. But the question of his literary originality is very carefully examined in the preface to Furnivall's edition of Lydgate's de Guivelle, and the wise conclusion reached is this: 'In one Book alone, the Bible, supplemented by Bunyan's own experience, may truthfully be said to have been necessary for the construction of The Pilgrim's Progress.'

(b) His practical sagacity and ethical force. Bunyan the evangelist does not altogether hide Bunyan the moralist: the writer who was securely weighted with unwavering ballast, the ballast of common sense. The story of Mr. Badman's fraudulent bankruptcy shows how Bunyan had an eye for the insignicences and corruptions of the commercial world. Some of his counsels are startlingly close to modern problems of commercial morality: 'Art thou a seller and do things grow cheap? Set not thy hand to help or hold them up higher. Art thou a buyer and do things grow dear? Use no cunning or deceitful language to pull them down.' There is no thought more characteristic of Bunyan, in spite of his lurid pictures of the agonies of the lost, than this—that sin is hell; sin is the worm; sin is the fire; it would be better to be sinless in hell than to be a sinner in heaven.

(c) His broad, popular, and universal humanity. This shows itself in many ways,—not least in his kindly and hearty humour,—his portraits, such as those of Mr. Brisk, Talkative, Sir Having Greedy, Christiana and her comrades dancing over the fate of Giant Despair, infallible in invention and delight in the delightful names, and his way of poking fun at those whom he would gently rebuke. Still more strikingly does his breadth of humanity come out in his whole management of the Pilgrim's story. There are so few ecclesiastical waymarks that one would never guess the author's own position, and when Giant Pope is omitted the book can be used with profit and pleasure by Catholic readers. He avoids the temptation to which religious teachers of strongly marked experience often yield—the temptation of being infallible in their steps that all may walk in their footsteps in order to be safe. This is finely brought out in the contrast between the experiences of Christian and Faithful in the first part, and in the room that is found in the second part for a rich variety of character and experience.

(d) The note of the Evangel. The most intimate and enduring secret of the hold that Bunyan has over multitudes of men is this, that he was so great a lover of men, and so passionately loyal to the supreme Lebanese ideal, that all men—those who call him a 'great convert'; and, because he was so great and so thorough a convert, he is a great exponent of the motives that have supreme converting power. Hence The Pilgrim's Progress is, as Coleridge calls
it, 'Summa Theologicae Evangelicae.' And, in spite of the many changes of standpoint and vocabulary since Bunyan's day, he will still be for many generations come the teacher and the friend of those who have no other explanation of their own deliverance than this: 'He hath given me rest by his sorrow and life by his death.'

LITERATURE.—The literature of this subject is now enormous. Among the biographies, that by John Brown (London, 1885; new ed. 1902) stands alone in its completeness, and in its wealth of extracts from historical sources such as the minutes of Bunyan's church. Among smaller biographies and critical studies there may be mentioned: Macaulay, Essay, 'John Bunyan' (1881); J. A. Froude in the 'English Men of Letters' series (1887); 'Mark Rutherford' in the 'Literary Lives' series (1895); Lives by Southey (1831) and Canon Venables (1838); lectures by Dean Howson in 'Companions of the Devout Life' (1857), and by W. Robertson Nicoll in the 'Evangelical Successions' series (1884). There is also a large literature of exposition, devoted mainly to The Pilgrim's Progress. In addition to the older books, such as Cheever (1844), there are Kerr Bain's two volumes on The People of the Pilgrimage (1887) unique in their thoroughness and in the almost too great weight of learning they bring to their task. The lecture-sermons of A. Whyte (two volumes on The Pilgrim (1893, 1894), one on The Holy War (1895), one on Grace Abounding (1900)), are also the product of deep knowledge, sympathy, and enthusiasm, and have done much to create a new public for Bunyan. A series of papers on The Pilgrim has recently been contributed by J. Kelman to The Repository Times (1905). Among earlier fugitive pieces, Sir Walter Scott's review of Southey's Life in the Quarterly Review, Oct. 1830, is interesting, especially for its comparison and contrast between Bunyan and Spenser. The best vindication of Bunyan's originality is that alluded to above, in 10 pp. of the introduction to Fournival de Guiseville. Bunyan's Complete Works have been edited by G. O. Orme and R. Phillips, 8 vols., London, 1853 (new ed. 1865); and there are critical texts with notes and glossaries issued by the Clarendon Press, Oxford, and (the text alone) by the Cambridge University Press.
